The Bonners Ferry Lumber Co. is enjoying the best of success in the handling of summer logging this season. Logging Superintendent J. W. Stewart states the company is working a camp east of Moyie where 6,000,000 feet of timber will be cut. A crew of 50 men is working at this camp. The company has logging contractors getting out timber in three other camps. One is on Lake Creek, Mont., with Bob Holmes in charge. Mr. Holmes is now completing a contract for nearly 4,000,000 feet. P. J. Wilson is about half through working on a contract for getting out 5,000,000 feet on the Moyie river. He has a large crew at work and is shipping the logs to the mill over the Spokane International railway. John McLana has a camp two miles west of Troy, Mont., and is about half through with a contract to cut 3,000,000 feet of logs. These are being floated to the mill on the Kootenai river.

Pacific Coast News

TACOMA, WASH.

Tacoma, Wash., Sept. 5.—A fire of unknown origin completely destroyed the plant of the Midland Lumber Co. the night of August 31. The mill was located at Midland, five miles from Tacoma, on the Tacoma Eastern Railway. The sawmill, planing mill, dry kilns and sheds were burned, and more than 1,500,000 feet of piled lumber was destroyed. The loss was estimated at $75,000 by D. H. Swan, the owner of the mill.

An inquiry for more than 8,000,000 feet of lumber for foreign shipment was received on September 2 by the Tacoma water front mills, which are figuring on the business. The order is somewhat of a mystery, as the exact destination of the lumber is unknown. Most of the material required is for car manufacture, and this, with other indications, has caused local manufacturers to believe the order emanates from Russia. The order came in by wire, and further details are expected in a few days.

Building permits in Tacoma for the month of August showed a tremendous gain over those for the same month last year. This year in August there were 154 permits issued for a total of $180,675, while in August, 1915, the permits were valued at only $54,378. This is a gain of 333 percent.

Major Everett G. Griggs, president of the St. Paul & Tacoma Lumber Co., returned September 1 from a trip through northern Washington and British Columbia. Major Griggs reports a marked improvement in the lumber business, especially on the Canadian side of the line, where the mills are busy getting out many large orders.

* * *

SAN FRANCISCO, CAL.

San Francisco, Cal., Sept. 4.—The recently organized California Redwood Association has installed a splendid display of this wood in its offices in the Newhall building on California Street, San Francisco, showing various uses to which it can be put and different ways in which it may be finished.

The shipping situation is largely without change, there being but little lumber leaving California ports for foreign countries, due to the scarcity of available charters and the high freight rates prevailing. There are many inquiries for lumber, indicating that stocks at foreign ports are low, but only a few of these develop into actual sales.

The Board of Public Works of San Francisco, Cal., has awarded a contract for the paving of Battery Street; from California to the Embarcadero with wooden blocks to the Pacific Creosote Co. The first two blocks on this street were paved with wooden blocks recently and this pavement has proved so satisfactory that the property owners further down the thoroughfare insisted on a similar type.

The E. K. Wood Lumber Co. of San Francisco has just completed the construction of a motor lumber carrier, the Sierra, with a cargo capacity of 1,225,000 feet.

* * *

SEATTLE, WASH.

Seattle, Wash., Sept. 5.—To make permanent the open shop conditions that have prevailed in loading cargoes of lumber in Puget sound ports since early in June, and at the same time to bring about greater co-operation in the work, cargo mills and stevedoring companies have completed the organization of the Puget Sound Stevedoring Co., with headquarters in Seattle. The stockholders of the company consist of the cargo mills at Seattle, Everett, Mukilteo, Bellingham, Tacoma, Port Ludlow, Port Blakeley, Port Angeles and Port Gamble, and the Washington Stevedoring Co. and Griffiths & Sprague, stevedores. The new stevedoring firms will handle all loading of lumber and lumber products in Puget sound ports on an open shop basis, and in thus adopting the plan that has been followed in Grays Harbor for the last four years and in Port Angeles since the plant of the Puget Sound Mills & Timber Co. has been in operation.

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., Sept. 8.—Demand is good for southern hardwoods and members of the trade are looking forward to an unusually active business this fall and winter at full quotations.

The shortage of cars is a handicap with which lumber interests are having to contend throughout most of the hardwood producing territory. At large railroad points, like Memphis, there is comparatively little trouble so far but at outlying points in the valley states where there is little railroad competition great difficulty is already being encountered in getting cars and having them removed promptly after they are loaded.

F. B. Robertson, sales manager of the lumber department of the Anderson-Tully Co. since 1907, will be associated with Earl Palmer, of the Ferguson-Palmer Co. at Memphis, after October 1.

* * *

NASHVILLE, TENN.

Nashville, Tenn., Aug. 23.—H. B. Bond, wholesale dealer in yellow pine, has received notice that he has been the successful bidder for supplying the United States navy department with about 1,000,000 feet of yellow pine lumber. Mr. Bond has figured in a number of large deals in yellow pine.

The Interstate Commerce Commission has sustained the complaint of Count R. Boyd against the Alabama, Tennessee & Northern Railroad, alleging that the rate of 20 to 25 cents on yellow pine lumber from Climax, Ala., to Nashville, was excessive. The commission has ordered a rate of 16 cents, effective Oct. 16.

Southwestern News

KANSAS CITY, MO

Kansas City, Mo., Sept. 7.—Lumber dealers here who know that their prosperity is largely dependent on the financial condition of the agricultural districts of the middle and southwest are much pleased with the report of W. W. Bowman, secretary of the Kansas Bankers' Association. His figures show total deposits of $252,238,397.15, a gain of nearly $5,000,000 over the March reports, which at that time had reached the high deposit mark. Deposits in Kansas state and national banks are also in excess of $250,000,000, the record for the state.

These figures lumbermen say reflect the general prosperity of this entire section of the country.

Lumbermen are also flattered at the news that one of their number, F. J. Bannister, owner of the La Cima Farm near this city and vice-president of the Long-Bell Lumber Co., has the honor of owning the premier Jersey cattle herd of the United States.

* * *

SHREVEPORT, LA.

Shreveport, La., Sept. 7.—The mills are still curtailing under the precautionary steps taken by the bulk of them months ago in order to guard against accumulation and it is stated that the curtailment will be continued until the market justifies normal conditions at the mills.

The local building situation is quite favorable. During the month of August permits were issued for building operations costing $84,204 against only $34,670 during July. The total since January 1 has been $634,227, making the monthly average about $80,000. August showed better than the monthly average.

The car shortage has become serious with a number of companies. Many orders have been rejected and are still being turned down because the mills have no assurances that they can get the necessary cars for shipping.

Digitized by Google

The Current Trend of the Lumber Market

General Market Review

The general lumber market has been rather choppy for several weeks, due to numerous trade uncertainties, lack of ballast, magnetic variation, freight entanglements and a series of peculiar contingencies permeating all business calculations. Even yet, with the labor strike temporarily settled and with more conservative sentiment prevailing generally, the lumber market does not seem to have found its bearings, although the tendency is in the direction of an early simmering down of many of the boiling over features of the last few months.

Taken as a whole, the lumber market seems to be in good condition for increased business, as well as a fairly well maintained schedule of prices. The supply of dry lumber is not large in either the north or south. In practically every variety of lumber for which statistics have been obtained, the percentage of production, as compared with last year, is far below normal. In the north a scarcity of men has been the contributing factor to a decided shortage of log and lumber production. In the south adverse weather, as well as other natural handicaps, has contributed to a reduced output. The upper grades of lumber in almost every lumber item, north or south, are below normal in visible supply. The lower grades in the same varieties of lumber are above the normal supply. The problem has been and continues to be the moving of the lower grades at anything like a profitable price.

Unfortunately, during the last several months there has been a steady accumulation of low grade stock. This, to some extent, has been checked, but as a rule, the surplusage of low grade is a drag on the industry at large. Within recent weeks developments have arisen which lead to the expectation that there will be a livelier movement of low grade lumber within the next few weeks. In fact, this movement has already begun, and it would not be surprising if before the close of September there would be an old time revival of demand for No. 3, with corresponding rising of prices.

In both sections of the country a scarcity of cars has developed. This is likely to be the crown sheaf of all the troubles that have heretofore arisen. It is to be expected that within the next month or so what is to be probably the most serious car shortage of modern times will develop. Efforts to ameliorate or in some way to evade this inexorable feature are being constantly made, but there is little prospect that they will be of material avail.

NORTHERN AND WESTERN PINE.

The demand has been somewhat unsettled throughout the northern territory, but this week it seems to be of a more dependable character. Sales of northern pine have been effected in round quantities, and at profitable figures, the price at which sales are now made being a substantial guaranty of the stability of the market. Stocks of pine are severely broken in all territories. Many of the western manufacturers are reporting that their assortments are inadequate to the filling of large orders, while in the California field the same situation is developed on the two varieties there produced. Northern white pine manufacturers appear to be rather independent of the conditions prevailing elsewhere, and their stock is moving with delightful regularity, and at quite satisfactory prices. There is no surplus of either uppers or low grade in the northern fields. In fact, the supply of the shop and select grades are hardly up to the market possibilities. Prices on shop lumber are maintained, and there are some who are asking a dollar or two more a thousand than they were early this summer, and most of them are getting it.

SOUTHERN PINE.

No violent eruptions have occurred in the yellow pine market during the last fortnight, and there is not much probability of anything of an explosive character in the near future. The market has been, and continues to be steady, based on actual conditions of manufacture and demand, and is fairly well regulated as to these essentials. No large orders have appeared that would create undue enthusiasm in prices, nor, on the other hand, has there been any serious lack of orders to admit of pessimism.

The yellow pine situation, as a general thing, has been satisfactory to a large majority of the mill men, but none the less they are looking confidently forward to the fall months for a confirmation of their optimistic ideas. From all reports they are not likely to be disappointed, as the demand is keeping up uniformly, a good trade is coming from the country territory, and the cities are furnishing an occasional large order for the encouragement of the trade and for sustained values.

As far as can be learned, the usual discounts on dimension are not far from $7 to $9 off the list, which is a considerable steadying of values as compared with the midsummer demoralization.

Railroads are coming into the market very generally, and this trade is apt to constitute a most important feature of the yellow pine demand this fall. Yard trade is good in every direction. While the crops have not been all that could be expected, the section where there is a complete failure of all crops is not to be found. For instance, where wheat was a failure, corn, oats and hay have proved to be above the average, and in some cases the reverse of the proposition has been shown.

NORTHERN AND SOUTHERN HARDWOODS.

Chicago wholesalers and manufacturers report a steady but not particularly urgent movement in the staple hardwoods. The factories of the city are well supplied with orders for furniture, mouldings, interior trim and other staple lines. They are buying in a restricted way, however, and will not probably enlarge their requirements until later in the fall, when they will be apt to see a hardening of mill values.

In the north there is no doubt of an advance in hardwood prices, owing to the shortage in the log input and the inability to get men for even normal operation. There is no question as to the substantial character of prices on the upper grades. As to the lower grades, the situation has been rather desperate for several months, but in the last three weeks has shown a marked revival. No. 3 maple has been one of the most neglected woods, but is now coming into its own. As for No. 3 birch and basswood, the prices now being asked are generally based on $11 at the mill, which is an advance of at least $1 over the going prices of a month ago.

As to the southern hardwoods, the demand for plain oak, red and white, continues unabated. Prices are being carefully maintained around $55 to $57 for Chicago delivery on inch firsts and seconds; in some cases even higher prices than these are involved.

No. 1 common oak is not as firm as the situation would seem to justify, sales being made around $34, with the prospect that this may be increased at an early period. Red gum is holding its own, sales being effected on the basis of something like $42 for firsts and seconds, Chicago, and $24 to $26 for No. 1 common. Sap gum is selling around $28 for firsts and seconds and $22 for No. 1 common, these being the prices at which most of the transactions are concluded.

The situation of the hardwood market is favorable as regards both demand and price and there is general expectation that the early fall will witness some pronounced changes in both of these features.

CYPRESS.

The conditions surrounding the cypress market are slightly different from those affecting any other lumber commodity. The latest advices from the cypress mills are that they are running on full time and are considerably behind their orders for dry stock, a condition that might be almost regarded in normal times as ideal. Besides, prices are being maintained on the basis of the uniformly accepted list and there is no menacing feature in any quarter. In fact, the position of the cypress market is one that is envied by manufacturers of all other woods. In Chicago territory the cypress men are having a good demand from not only the yards, but from the factories. Cypress tank material is in fair request and the other channels of staple use are active.

HEMLOCK.

The hemlock demand has not been particularly heavy in the last few weeks, but it has grown and is likely to reach normal proportions by the passing of the autumnal equinox. Hemlock stocks are decidedly low because of conditions that have confronted the hemlock manufacturers during the past several months, consisting principally of a scarcity of woodsmen and a consequent inability to get logs.

A more vigorous campaign of education is being waged in the natural hemlock territory, so that consumption is being more fully maintained, to the resultant disadvantage of its principal competitor, yellow pine. For some time past the market on hemlock has not shown scarcely any variation, the uniform quotation of $2 off the list being hardly varied from. Holders are well satisfied with the situation, excepting that they are not as well provided with dry lumber as they would like to be. It would be strange, indeed, if there were no improvement in hemlock prices during the coming few weeks.

SHINGLES AND LATH.

The demand for red cedar shingles has not been altogether satisfactory thus far this month, but has been fairly good as compared with the supply. Buying is still irregular and there is no general disposition to stock up. However, there is a more favorable prospect for fall requirement and this embraces the British Columbia mills, as well as those in the Puget sound district. Stocks are reported rather above normal, especially in clears, but these are likely to be absorbed with the natural increase of demand usually visible in September and October. According to the latest reports sales of red cedars are made on the basis of $3.04 for clears and $2.59 to $2.64 for stars, Chicago delivery.

White cedar shingles are selling moderately well, but there is no change in the general conditions. Sales of extras are made around $2.90 and of standards at $2.40.

Lath are in fairly good request with no great surplus available. Prices on No. 1 hemlock and No. 1 mixed are well maintained.

New England Markets

BOSTON, MASS.

A lumberman of Boston writes us of the general conditions of trade in New England, as follows: "Business in New England in all lines is good. Lumber dealers have little to complain of, except the difficulty of securing sufficient men for their work and holding them against the higher wages offered by other industries.

"This has been a record year in building throughout New England, and the building activity will continue late in the season. In addition to heavy orders from builders on the lumber yards, the rushing business at the shipyards has furnished a heavy demand for several kinds of lumber."

* * *

PROVIDENCE, R. I.

A well known lumberman writes us from Providence as follows: "The demand for lumber has been good in New England all year. Our industries are fully employed, and it would seem as if prices should have been fully maintained. On the other hand it seems as if there are so many mills in the country, that when prices advance materially, as they did with North Carolina pine, production can be increased enough to more than offset the advantage gained, and the answer is a surplus of stock. During the last sixty days the market went to pieces badly, but is now recovering somewhat.

"The same thing applies to spruce. Unfortunately most of the mills receive their river logs and all start up at the same time, and with an increase in price the rail mills increased their capacity, and we had a set back in the spruce market.

"The hardwood proposition, however, is entirely

different, as the lumber can be placed on sticks and carried for a long period, and while there has been no great advance in hardwoods and no chance for any great reaction in prices, the market is held firm and has not broken with the soft woods.

"Other productions have held fairly well with the exception of long leaf pine, and the same conditions exist in this industry as in the short leaf pine and spruce, but it is quite evident the manufacturers of long leaf pine realize the conditions and are governing themselves accordingly, so that we now have a firm market. We look for considerable activity all fall.

"There would be a great deal more doing if labor could be secured. There is a great complaint as to the scarcity and inefficiency of labor at the present time."

Pacific Coast Markets

TACOMA, WASH.

We have received this report of the Tacoma lumber market: "Considerable weakness was manifested in the Tacoma lumber market last week, though there was little change in prices recorded. Local mills have been getting plenty of business, but the fear of a general railroad strike and the desire to dispose of as much lumber as possible before traffic was tied up, caused recessions in the price list on many orders. As this is written the strike seems to be off for the moment, and the reaction is expected to lead to a substantial advance in prices after Labor day.

"Cargo business has been very light, and the water front mills are not taking much new business on at present prices. The demand for car material is good, and the building operations throughout the west show a gain.

"Shingles have held the advance registered two weeks ago, and the market is still strong. Shingle manufacturers look for a further advance, rather than any recessions in the price list."

* * *

SAN FRANCISCO, CAL.

A correspondent well informed on local conditions, writes from San Francisco as follows: "The California lumber market is in a very demoralized condition and sales are much lighter than is ordinarily the case at this season of the year. The threatened strike of railroad workers and local labor troubles are heavy contributing factors to this condition and most of the industries which consume large quantities of lumber are directly affected..

"Another strike of lumber handlers is under way at San Francisco and building operations are being seriously curtailed throughout the bay region as a result. When the longshoremen went on a strike last June most of the lumber yard owners of this city closed their places of business and refused to make sales as long as the trouble lasted. As a result of this strike the Retail Lumber Dealers' Association perfected its organization, with the open shop for a slogan, and the workers have now gone out again. The American Stevedoring Co. has been formed to furnish help for lumber yards and thirty-eight members of the retailers' association are now being supplied with all the labor needed. The strike affects practically all lumber dealers doing coastwise business out of this port, which means almost every firm in the business.

"The demand for redwood lumber continues to be relatively better than that for pine, due largely to the energetic selling and advertising campaign now under way."

* * *

SEATTLE, WASH.

The Seattle market is thus reported: "In the last two weeks the mills of the Pacific northwest have been making every effort to move as much of their product as possible, owing to the prospect of a railroad strike. As a direct result, production for the first time in several months reached normal capacity. Although shipments were slightly in excess of the previous week, they were still below production by about 13 percent. This condition is declared to be due to a freight car shortage in some Oregon districts.

"Orders at 116 mills increased 12.617,405 feet over the report of 112 mills for the previous week. This does not include an order placed this week by the Burlington railroad for upwards of 5.000.000 feet, or about 1,786,000 feet placed by the Great Northern.

"As to prices it is declared by the manufacturers that the market is rather weak, and concessions have been made in order to move stocks.

"For the first time in several weeks the orders have exceeded the shipments. The balance of unshipped rail orders at 116 representative mills is now 161,325,000 feet. In the cargo trade there was little encouragement. Only 2,156,000 feet was ordered for the foreign trade and 7,966,805 feet for the domestic trade. The balance of unshipped export business was 49,824,512 feet and for coastwise delivery 43,770,384 feet.

"Red cedar shingles show little change with stars quoted at $1.55 and clears at $1.80."

Gulf Coast Markets

NEW ORLEANS, LA.

The market situation is described as follows: "Reports from various quarters here indicate that the yellow pine market, which has been on the upgrade for some weeks, is now practically at a standstill, with no very strong move apparent toward securing staple conditions. Much of the recent crowding of the market is believed to have been due to hurry orders placed in view of the then prospective and now very real car shortage.

"The market situation is on the whole satisfactory. Timbers and No. 2 boards are strong. Prices average $1 higher than 30 days ago. The fact that the Cuban market is using many No. 3 boards is believed to have had considerable influence on this item recently.

"Export freights seem to be on a decline, though a little more tonnage is being offered at reduced prices. No inquiries for yellow pine are coming from Europe, though European governments which have been buying during the past few months still have a considerable amount of lumber on this side, which will go forward between now and the end of the year.

"Cypress shingles are in exceptional demand, and prices are up. There is also a strong call for cypress lath, prices being about the same that have prevailed for the past few weeks. Stocks are so short that only part cars are available. Demand has been so strong that there are scarcely any thick cypress plank first and second 2½, 3 and 4-inch stock left, and the dry stock is all gone.

"The labor situation is a bit tight, though no mills are said to have been greatly inconvenienced by the scarcity, and none at all have shut down. The car shortage is becoming more serious.

"Local hardwood dealers report a steadily increasing demand for gum and ash, coming principally from the furniture factories of the north, which are turning out full products at the present to meet the increased demands for furniture which have developed as a result of the great era of prosperity now existing over the country. Automobile factories are also purchasing considerable quantities of ash and elm. Oak is bringing good prices, with stocks depleted.

"Hardwood men are anticipating a brisk fall and winter business. The market has to a large extent overcome the extreme dullness which prevailed during mid-summer. A generally optimistic spirit pervades the trade."

* * *

BEAUMONT, TEX.

These comments on the lumber situation came to us in a letter recently received from a prominent Texas lumberman: "We are frank to say that we do not altogether understand the present lumber situation. There is a splendid timber business; there is a heavy volume of business from miscellaneous sources, such as industrial plants, oil fields, government requisitions and factory trade, but there seems to be very little activity among the retail dealers considering the time of year, and this is the feature that we do not comprehend.

"Less of our lumber has gone to retail lumber dealers in the last three months than for any similar period in our history. Aside from this one factor, business is very satisfactory, and, even in spite of the lack of retail volume, we observe the tendency of prices is upward, and we are getting more money for lumber than we were thirty days ago.

* * *

NAPOLEONVILLE, LA.

A well known cypress manufacturer expresses these opinions: "Regarding business, will state that it has been a little quiet during June and the first half of July, but since the middle of July there has been quite a little improvement.

"We believe existing conditions warrant the ex-

Digitized by Google

pectation of good business during the fall months, and that is about as far ahead as one can figure these days."

Northern States Markets

MINNEAPOLIS, MINN.

The lumber situation in Minneapolis is described in a letter just received. "Stagnation instead of renewed activity marked the opening of the autumn season in the lumber trade in this section of the country. Several reasons are advanced for it, chief among them being the damage to the wheat crop in the Dakotas, but most dealers are hopeful that high prices for grain will in a measure make this up to the farmer, the big factor in fall buying of lumber.

"Retailers are getting over some of their timidity and are stocking up better on northern pine. The factories are making inquiries and future business will be booked. Box and crate makers have taken up practically all the low grade pine and hemlock of northern mills. Manufacturers are holding firm to list prices and there seems no reason why they should not do so in face of labor scarcity and with all other products skyward aimed.

"Sash and door business has had no dull season this year. Considerable fall business has been booked by local factories. City trade is ahead of that from the country, but farmer trade is expected as the crop yield curtailment is somewhat offset by better prices.

"In the hardwood lines the demand for wagon stocks and furniture has been good. Yard demand has picked up as most yards were low. Some firms have already booked orders for shipments to be made early next year, certainly a good sign. Prices of both northern and southern hardwoods are holding firm."

* * *

MENOMINEE, MICH.

A good fall trade is predicted in this letter, received a few days ago from a prominent manufacturer of Michigan: "In regard to the market outlook in this vicinity we are hardly able to think of anything at this time but the threatened railroad strike. If it were not for this cloud in the horizon and the low prices prevailing on No. 3 hardwoods we would not have any complaint to make about the present lumber market. We have enjoyed a good trade thus far during 1916 on the better grades of hardwood, although the prices on the No. 3 have been very low.

"We have no surplus of dry hemlock piece stuff at this time, nor have we had during the year, stock moving on the basis of $19 f. o. b. mill point. We are looking for a good fall trade if the railroad strike does not put us out of business altogether."

Ohio Valley Markets

EVANSVILLE, IND.

This report of conditions in the Evansville market has been received: "The local hardwood manufacturers report that business is unusually good for this time of year. Orders and inquiries are coming in, and the only thing that has worried the manufacturers has been the much talked of railroad strike, for in that event they would have been unable to get cars to handle the output. This held things back somewhat and has tied up the manufacturers. Prices are strong, and the business outlook is bright for Indiana hardwood manufacturers.

"Wood consuming factories here are being operated on full time. Building operations remain active, and architects and contractors have plenty of work on hand."

* * *

LOUISVILLE, KY.

We are in receipt of the following report of the Louisville market: "Market conditions in this vicinity have become far more satisfactory during the past two weeks, and local lumbermen are in receipt of heavy future orders for gum and other hardwoods. The east has been especially active in local buying of late, and while there is no accumulation of dried stock to speak of on hand at this time, the local yards will be in position to supply first class stock on future orders to be delivered between now and the first of the year.

"Prices on plain and quartered oak are showing very little change, and the demand is fair only. The gum market, however, is very active, with prices somewhat higher, and an especially good demand for thick stocks. The veneer mills are also hitting into an active season, there being an excellent demand from furniture factories. Walnut, chestnut, ash and elm are all holding up well, and getting a fair run, with August business upon all lines showing an increase over July, and also August of last season.

"Building operations are holding up well, and there is an excellent demand for certain grades of hardwood from the retailers and builders in this district."

* * *

CINCINNATI, OHIO.

A correspondent well informed on conditions in the Cincinnati market writes: "An increased movement has been noted recently in practically all grades of yellow pine stock, the general situation in this lumber being considerably improved. Actual ordering has not reached any voluminous stage however, but indications are that soon after the first of September a general upward trend will set in, not only in yellow pine, but other lumber as well.

"The hot weather cypress trade has held up in a gratifying manner, and indications point to a revival early in the fall. In fact, cypress dealers are preparing for an unusually busy season.

"The building industry promises to open up in a very healthy manner this fall, although the rural trade has suffered considerably owing to the dry spell which kept the farmers from thinking of building until they knew how their crops would turn out. The country yard trade, therefore, can not be expected to materialize until after harvest.

"A nice improvement is noted in the hardwood trade, the furniture demand picking up considerably after the big expositions and the factory trade in general showing signs of renewed activity. Oak, both plain and quartered, is moving in increased volume and prices are strengthening steadily. Gum is in better demand and some material price increases are reported in several items. Stocks of birch are pretty badly broken, with the call keeping up well resulting in some increases in prices. Walnut and ash are moving in fair volume, with inquiries indicating a big fall business. Poplar, in the better grades, is moving in good volume and in some cases is reported to be the leading seller in the hardwood list, although the oaks probably retain the head in this respect. Poplar prices are advancing in some items.

"The flooring concerns report a good run of business throughout the heated term, with the call for maple flooring being especially brisk."

Inland Empire Market

KALISPELL, MONT.

This report of satisfactory conditions in the Inland Empire has been received: "The manufacturers of lumber of this district are enjoying a splendid business. During the last ten days they have been unable to supply the demand, and many concerns have called in their traveling men, so as to give them an opportunity to catch up with their orders.

"The outlook for a strong fall trade is very encouraging, and it is believed that in prices there will be sharp advances on practically all items within the near future.

"The sawmills of the district will operate to full capacity, the majority of them on a day and night shift. Sufficient logs are in storage to keep the mills in operation as late in the season as weather conditions will permit."

South Atlantic Market

JACKSONVILLE, FLA.

A lumberman writes us of the Jacksonville market as follows: "There has been a marked improvement in the lumber market during the past two weeks. The call for planing mill stock has been especially heavy, with a corresponding increase in price. Most of the orders have been for quick shipment, and the mills with good rail facilities have had the advantage over those depending on water shipment.

"Reports of a heavy fall demand are coming in, and all the mills are busy."

The Lumbermen's Headquarters

Central Southern Markets

MEMPHIS, TENN.

The lumber market of Memphis is reported as follows: "Lumber interests here are very much pleased with the settlement of the threatened railroad strike which looked at one time as if it would tie up every industry, including that in which they are engaged. Some dissatisfaction is expressed over the manner in which the settlement, or postponement, was effected but it is regarded as fortunate for their business that there is to be no strike.

"There is also a scarcity of labor for work at some of the mills as well as for cutting and handling timber in the woods. This, with the car shortage, the worst in years, threatens to trouble the mills for some time. In the meantime, lumbermen are of one accord in the agreement to load all cars to full capacity and to load and unload with promptness. It is believed by both the lumbermen and traffic men that this co-operation between the lumbermen and the railroads will very greatly ameliorate conditions with respect to car shortage."

• • •

NORFOLK, VA.

A lumberman of Norfolk writes us as follows: "We are optimistic of a good fall trade, as reports of increased activity in markets in which we sell our products are coming in daily.

"There has been increased activity all through this manufacturing district the last week. The demand has been general in character, and prices are holding up well, with an upward trend.

"As a rule mill men are looking forward to better business."

• • •

NASHVILLE, TENN.

A lumberman expresses these sentiments concerning the Nashville trade: "We are selling more lumber than is usual at this season of the year. Lumbermen in general have the same thing to say of their business; the market is steady and shows no sign of weakening.

"Furniture and automobile factories are buying well. Oak, walnut, ash and poplar are in steady demand at satisfactory prices."

Middle States Markets

NEW YORK, N. Y.

The metropolitan lumber market is described as follows: "There is little change in demand in the past fortnight. Yards and consumers are still slow in stocking up, but they cannot delay much longer and dealers are preparing for a good fall trade.

"Prices are steadily increasing, and are sure to continue to advance with the fall demand.

"Building continues active in the city and suburbs, and will be so long as the weather permits, labor and shipping conditions and the high price of steel products having delayed the beginning of many structures."

• • •

BUFFALO, N. Y.

We are in receipt of this report of conditions in the lumber market of Buffalo: "The lumber market has been quiet of late, though some increased inquiry was stimulated by the rise in the prices of yellow pine and a fair amount of ordering resulted. But for the most part retailers have been content to hold off their purchases until this month and the fall outlook seems to be quite favorable. Farmers have been getting high prices for their wheat and most other crops. Building is going ahead at a good scale in the towns and cities and quite a number of large concerns have been expanding their plants. The chief drawback to business is a shortage of labor, which affects all industries.

"The curtailment which has been going on for some weeks in the yellow pine producing sections is having a good effect upon prices and wholesalers say they are getting a good many more inquiries than a month or two ago. Some grades have not advanced much, but others are up about $1 a thousand.

"Other building woods are not much changed in price Hemlock has been holding quite firm and is in seasonable demand, building in this section having been fully as active this summer as a year ago. The stocks of hemlock arriving by lake have been less than ordinary, owing to the excessive freight rates, as well as the scarcity of labor for loading and unloading lumber. White pine activity has been largely in the lower grades, which have held firm. It is difficult to sell the higher grades, because of the competition of a number of other woods, including Idaho pine.

"The hardwood trade has been fair for the time of year, but the wholesalers have not been at all rushed in the past few weeks. They have been selling about as much maple, oak and ash as anything and dealers making a specialty of mahogany have done a fair trade, while prices have remained firm. Oak is said to show less firmness than maple and the latter wood is called for largely in the flooring trade, while prices are firm, with a good quantity of business on the books."

Southwestern Markets

KANSAS CITY, MO

A correspondent writes to us from Kansas City as follows: "There is now a good deal of talk, some of it apparently on good authority that the railroads which had been holding off on orders owing to the danger of the strike of the trainmen's brotherhoods, would soon be in the market for large quantities of lumber.

"Locally there is more creosoted wooden block paving going on than ever before. That pavement has demonstrated its reliability where durability and an easy riding surface are required.

"Yellow pine generally is in excellent request, both yard stock, factory business and timbers Prices are perhaps $1 higher on the average than two weeks ago. The greatest advances are in common lumber.

"West coast goods are in moderate request but bring strong prices. Cypress is selling well mostly in mixed cars at firm prices.

"There is better than a seasonable demand for hardwoods here."

• • •

LITTLE ROCK, ARK.

The lumber situation in Arkansas is reported as follows: "The demand for yellow pine lumber in this section has been fairly brisk during the past two weeks. Prices on all items remain firm, and in several instances small increases have been made. This condition is probably due to the general policy among the larger manufacturers to curtail their outputs, and keep production below shipments made. Most of the mills have orders booked in advance of production and shipments, and local conditions tend toward the belief that prices will advance further.

"The Arkansas mills, like manufacturers in most sections, are having their troubles in securing the needed cars in which to make shipments that are demanded. In most cases the mills are unable to secure anything like the quantity of cars needed, and many report that they can get only about forty percent of the required number. No relief along this line is promised by the railroads, who regard the present car shortage the worst in the history of railroading. It is freely predicted that the condition will grow worse as the season for shipping the fall crops advances."

• • •

SHREVEPORT, LA.

A correspondent well posted on lumber conditions in his territory writes us as follows: "During the past few weeks the yellow pine market in this territory has enjoyed splendid improvement, and a heavy fall trade seems assured. There has been sharp advance in demand, with unusually brisk call for yard stocks, and prices have been stimulated encouragingly by the decrease in orders. Inquiry is strong and general prospects excellent, with the expectation, from the mill standpoint, that some more sharp advances are to be enjoyed.

"Owing to the splendid increase in demand lately, some mills have their order files loaded up and are practically out of business temporarily, insofar as accepting new orders is concerned. A number of buyers are trying to place big orders for future requirements, afraid of the future developments, and some of them have placed such orders, including a line yard in Texas, which recently placed an order for 600 cars of yard stock. The Texas buying is a feature of the market situation. It has been tremendous of late.

Positions

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care LUMBER WORLD REVIEW.

WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open in August, 1916. Correspondence invited. Address "T. M." care LUMBER WORLD REVIEW, 1740 Transportation Building, Chicago, Ill.

WANTED—POSITIONS FOR SALESMEN.

Lumber concerns desiring traveling salesmen will do well to correspond with T. H. Nelson, secretary Central Association of Traveling Lumber & Sash & Door Salesmen, State Life Building, Indianapolis, Ind.

A KIRBY LUMBER CO. DEAL OF GREAT IMPORTANCE.

Houston, Tex., Sept. 2.—What is declared to have been the second largest deal of the kind ever made by any concern is that just consummated by the Kirby Lumber Co. of this city, which has entered into a service contract with the New York Central railroad to furnish that road with all the ties it will need for a number of years. Announcement is the deal was made today by B. F. Bonner, vice-president and general manager of the Kirby company.

The Kirby company also holds the largest tie contract ever signed, a similar agreement with the Santa Fe system. The new contract will involve the delivery of millions of ties yearly, and will prove a stimulus to the tie industry throughout the southern states.

An office especially for supplying the needs of the New York Central will be established by the Kirby Co. at 836 City Bank building, Mobile. A branch office is already in operation in Hattiesburg, Miss., as well as one in New Orleans. The tie operations will be conducted in Louisiana, Mississippi, Alabama, Arkansas and Texas. Long leaf yellow pine and hardwood will be utilized in furnishing the ties, which will be hewn. Delivery of the ties has already begun.

ACTIVITIES ABOUT WASHINGTON.

Centralia, Wash., Sept. 1.—Several large lumber inquiries from transcontinental railroads have been received by local lumbermen during the past week and the local mills are figuring on the contracts and expect to get a share of the business. Included in the new inquiries is one for 1,500,000 feet from the Oregon Washington Railroad & Navigation Co., which was a large buyer of lumber early in the season. The Great Northern Railway is also in the market for 2,000,000 feet of large timbers. Several other roads are out with inquiries for smaller amounts of timber.

The McKenna Lumber Co. of McKenna is cutting between 185,000 and 200,000 feet of lumber a day at its mill.

One of the biggest logging deals in the history of Gray's Harbor was consummated last week when Geo. L. McPherson of Portland, appointed by Federal Judge Cushman as receiver for the Slade interests there entered into a contract with the Humptulips Logging Co. for the removal of the timber from the Slade lands. The land is located about thirty miles west of Aberdeen and consists of 4,800 acres and contains about 500,000,000 feet of timber. According to Mr. McPherson the timber will be sold in the open market and it is expected the revenue will be sufficient to pay off the company's obligations, and leave a large margin of assets in Mr. Slade's hands. It will require some time to prepare for the work.

50 H-P G.-E. Motor Driving Trimmer and Transmission Booth-Kelly Lumber Co., Springfield, Ore.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

General Electric Company

General Offices: Schenectady, N. Y.

District Offices in:

Boston, Mass. — New York, N. Y.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

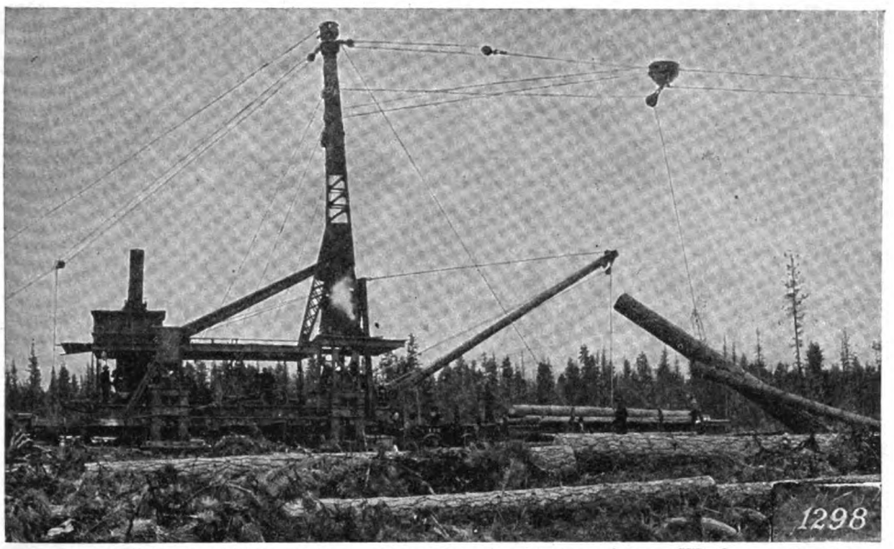
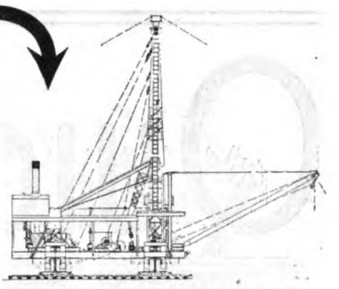
LIDGERWOOD SKIDDERS





The above drawing represents the new Lidgerwood Cableway Skidder with Swinging Loading Boom which is being built for the Shevlin-Hixon Lumber Company, Bend, Ore. This machine will be larger, but of the same type as they are using at Bend, Ore., shown herewith.

Three Exclusive Advantages OF THE LIDGERWOOD Cableway Skidders

Multiple Skidding Lines. Save time hooking on logs. While one load is coming in, the next load is being hooked on. Skidder runs continuously. Mechanical Slack Puller. Engine pays out slack in skidding line, saves men's time hauling slack and permits side lining to a greater distance than any other machine.

Two speed interlocking device gives power to haul in loaded carriage, and high speed outhaul. Covers more ground at each setting than any other machine.

That these are practical advantages and not mere selling points is proven by the fact that the Shevlin interests have just ordered their thirteenth Lidgerwood Cableway Skidder.

LIDGERWOOD MFG. CO., 96 Liberty St., NEW YORK, N.Y.

63-65 Columbia St., Seattle — New Orleans: Woodward Wight & Co., Ltd.

FAST SAWING

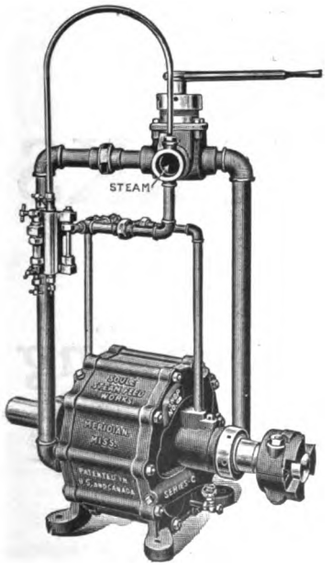
That's the thing that counts in the month's profits. The faster lumber is cut the sooner the order is filled, and the more orders can be filled.

Then there's the prompt shipment—a pleased customer, "the best asset!"

A SOULÉ STEAM FEED will enable you to do this, double up your output.

It has for others, and the increase paid for the machine right now.

See what others say about it. Catalog free.



Soulé Steam Feed Works
Meridian, Miss.

"This has increased the capacity of our mill fully thirty per cent, with no excessive steam consumption. We found the machine exceedingly simple and easy to install, and we feel that we made one of the best investments in machinery that we ever made when we bought this Feed from you."

Horwood Lumber Co.
St. Johns, Nfld.

"Your Steam Feed No. 2 was installed at this plant in the latter part of December, 1908.

"Since we installed this feed our mill cut has increased about 50% and the difference in the amount of steam required has been un-noticeable."

Bartow Lumber Co.
Cartersville, Ga.

WM. E. HILL CO.

KALAMAZOO MICHIGAN

This New Book

FREE—

EVEN though you may not now be contemplating the purchase of new equipment, this new book on Band Sawing Machinery will prove interesting and helpful.

It's the most complete treatise on Band Sawing Machinery in print.

It's more than a mere catalogue—it's an authoritative standard of reference that you need always within reach.

Its distribution will be limited strictly to those who can use it.

If you ask for a copy on your firm's regular stationery, indicating your official position, we'll send it free.

GOOD WILL IS ESSENTIAL IN BUSINESS

THERE'S nothing like a common interest in a worth-while cause to make men pull together and pull hard.

We believe in co-operating with the lumber yard proprietor, giving him the best possible service, so that he, in turn, may satisfy his customers and retain their patronage.

Many years of satisfactory service to lumber dealers have proved our methods of exceptional merit. You, too, can get up-to-the-second service by dealing in Frost-Johnson yellow pine lumber. We charge only for the lumber. The fine service and square deal methods are gratis.

It costs you no more in the beginning and it's cheaper in the end.

Frost-Johnson yellow pine lumber brings to the enterprising dealer substantial advantages. It has a widespread and well-deserved reputation backed by national advertising. The lumber is manufactured from the finest grade timber grown in Texas, Louisiana and Arkansas. And the special efforts made by this company to co-operate with the dealer make a unique appeal to the best class of dealers everywhere.

Our system of assorting and grading, together with our excellent facilities for loading and shipping promptly, have minimized lumber disappointments for our customers.

Our price list is different from other price lists and you should send for your copy today.

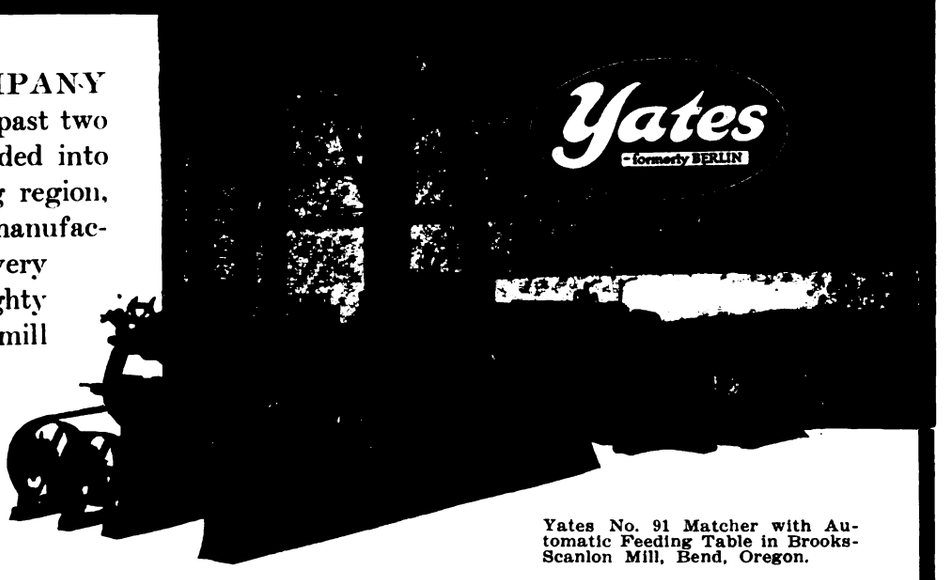
The Invariable Choice of the Man Who Knows

A GREAT LUMBER COMPANY that has operated mills for the past two decades—whose activities have extended into nearly every great lumber producing region, and whose experience includes the manufacture of lumber from practically every variety of timber, should be a mighty good judge of real merit in planing mill machinery.

—And when that company after purchasing not less than fifteen Yates (formerly Berlin) Matchers during the past ten years, selects a



Yates No. 91 Matcher with Automatic Feeding Table in Brooks-Scanlon Mill, Bend, Oregon.

Yates Planer and Matcher

for its latest operations in the famous new lumber center at Bend, Oregon, there must be something exceptionally meritorious about Yates Matchers.

The name of the Brooks-Scanlon Lumber Co. is as familiar in Lumberdom as that of Carnegie in the iron and steel industry. Read what Mr. J. P. Keyes, general manager of Brooks-Scanlon interests at Bend says about their latest Yates Planer and Matcher shown above.

Gentlemen:

In reply to yours of the 18th, we are pleased to state that the No. 91 Matcher is giving excellent results in surfacing stock two or four sides at a feed of 250 feet per minute and in running pattern stock, such as shiplap, drop siding, etc., at 150 lin. feet per minute. The machine has been giving us no trouble in operation and its work, at the speed mentioned, is, we think, beyond criticism.

Yours truly,
BROOKS-SCANLON LUMBER COMPANY,
J. P. Keyes, Gen. Mgr.

To P. B. Yates Machine Co.

Note particularly that Mr. Keyes reports that the "91" "Gives us no trouble in operation." That means a lot in the operation of high speed matchers, where every minute's delay means hundreds of feet loss in production.

Write for our circular "No. 91". It tells why the Yates is the best buy in the Matcher field.

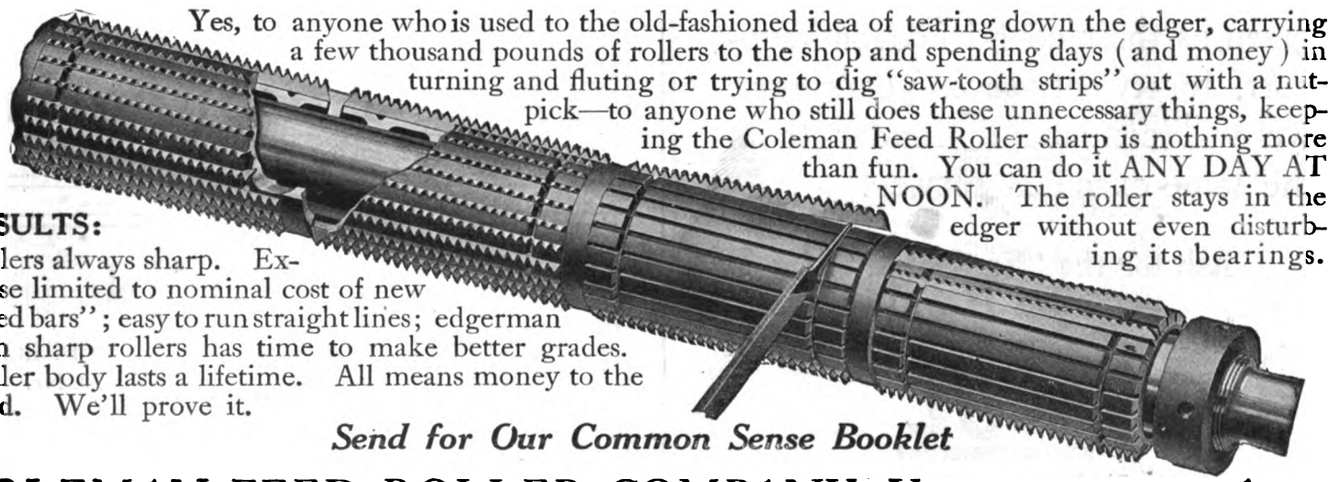
Sharpening the Coleman is an indoor sport

COLEMAN FEED ROLLER
(that never wears out)

To prove up on this: 30 days' FREE TRIAL on your edger



Yes, to anyone who is used to the old-fashioned idea of tearing down the edger, carrying a few thousand pounds of rollers to the shop and spending days (and money) in turning and fluting or trying to dig "saw-tooth strips" out with a nut-pick—to anyone who still does these unnecessary things, keeping the Coleman Feed Roller sharp is nothing more than fun. You can do it ANY DAY AT NOON. The roller stays in the edger without even disturbing its bearings.

RESULTS:
Rollers always sharp. Expense limited to nominal cost of new "feed bars"; easy to run straight lines; edgerman with sharp rollers has time to make better grades. Roller body lasts a lifetime. All means money to the good. We'll prove it.

Send for Our Common Sense Booklet

He Who Looks Before He Leaps

There are two things which stick out pretty strongly in the present CYPRESS-OK situation, one being that more business is offered than the present car supply will take care of, and the other being that prices are on the upward trend.

Despite the fact that most people have not considered 1916 a brilliant lumber year, there has been more CYPRESS-OK sold than has been manufactured, as the people now know enough about CYPRESS-OK to insist upon it for those purposes where CYPRESS-OK is best. This condition has resulted in a gradual advance in prices, which during the past few weeks is apparently more radical, with the indications pointing to further advances in the near future. Stocks of some items are rather depleted and the manufacturers are inclined to pick and choose among those orders which are offered, there being no desire to accept at any price more business than can be easily handled.

While any lumber manufacturer feels a lot of satisfaction when he knows he is in an independent position, he feels also when stocks are declining and a car shortage prevails, that some good friend is doomed to disappointment in that he will not secure with reasonable promptness the CYPRESS-OK he has counted upon. This situation hurts us as much as it does the retail dealer and it is for this reason that we are so insistent upon warning our friends of the consequence to themselves if they do not order early.

And let us state one other thing. Have your order specify and insist upon trade-marked CYPRESS-OK, as our trade-mark campaign to the consumer is almost ready to launch. Before many months have passed you will find this trade-mark a great asset.

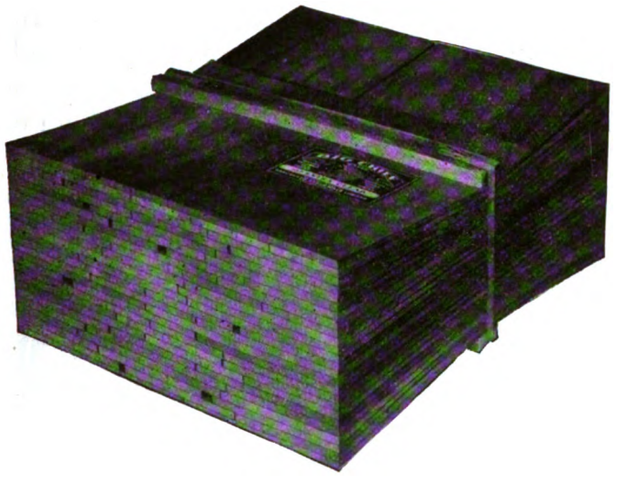
BIG

CHIEF

THE BEST SHINGLES IN THE WORLD

When you order BIG CHIEF brand British Columbia Red Cedar Shingles, you will receive shingles not equaled in quality by any other brand of shingles manufactured anywhere.

BIG CHIEF brand Shingles are DRIED—NOT COOKED—and are otherwise prepared so that when finished, they are as nearly perfect as experience, skill and equipment can make them.



Note the packing and uniform thickness

BIG CHIEF
BRAND
BRITISH COLUMBIA RED CEDAR SHINGLES

SPECIFICATIONS: 16 inches long; 5 butts measure 2 inches and each bundle measures full 10 inches in thickness when dry, and they are 100 per cent vertical grain, 100 per cent clear, 100 per cent heart and 100 per cent covering efficiency. Contain positively no sap; random widths, but no shingle less than 3 inches wide. Smoothly sawn, squarely jointed, and otherwise perfectly manufactured.

Straight cars always enroute to Minnesota Transfer and available for diversion to points taking through rate from there. Mill shipments to any point can be made on 24 hours notice.

DO IT NOW

TWO questions are involved in the achievement of SUCCESS—WHAT to do, and WHEN to do it?

The time has arrived in the lumber game when you must decide these two points if you are to succeed. We can help you to a right conclusion.

Answering the second question first we say that NOW is the time to buy. The bottom has been touched and lumber is on the upward trend; demand is increasing, prices have already advanced; cars are scarce and becoming scarcer; there will be great difficulty getting cars for lumber shipments this Fall; therefore the sooner your orders are entered the more apt you will be to get the lumber.

The question as to WHAT to do is more easily answered:—Buy the best General Utility wood,

NORTH CAROLINA PINE

It is good for all house building purposes—especially for interior woodwork and floors. For stained finish it has no superior, by reason of its innate beauty of grain; but if White Enamel finish is preferred N. C. PINE forms a perfect base for it; holds the paint and retains its whiteness for years. You will make no mistake in urging your customers to use this wood. It's the wood that makes Good.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four thousand, three hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into not one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it makes.

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

The Long-Bell Lumber Company

KANSAS CITY, MO.

The Hazard of Raised Grain

Is one which some architects still use as an argument against any southern pine for white enamel treatment. This is due to their apparent belief that all yellow pine at least, is alike.

Raised grain however, is a contingency only when the enamel is put upon pine of heavy resinous content which must necessarily be shellaced before the priming coat of lead and oil is applied. When the shellac comes in contact with the rosin streaks, it causes the latter to raise, which brings about the undesirable final effect.

Arkansas Soft Pine

Interior Trim is virtually free from rosin, has a tough fibre and fine grain and *does not* require preliminary shellacing. Instead, after proper sanding, the lead and oil priming coat is applied direct to the raw wood so that a perfectly even absorption takes place. *No raising of the grain occurs.* When the enamel undercoating and finishing coats are finally completed and rubbed, the ultimate effect is a mirror-like surface which will satisfy the most exacting architect or home-owner.

Dealers who are alert to their opportunities will see that their trade is supplied with Arkansas Soft Pine Interior Trim.

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

ON WHAT SHALL WE QUOTE?

Arkansas Land & Lumber Co	*Malvern, Ark.*
Arkansas Lumber Co	*Warren, Ark.*
Cotton Belt Lumber Co	*Bearden, Ark.*
Crossett Lumber Co	*Crossett, Ark.*
Eagle Lumber Co	*Eagle Mills, Ark.*

"You furnished the Pole and We got the Fish"

That's the way the first dealer who used the local newspaper advertising which we furnish free, summed up the results of his spring campaign. Read these two extracts from his letters to us. They tell the story.

"My competitors on either side are tearing themselves to pieces in a vain endeavor to head off the tide of patronage which has turned to this yard for the old reliable WHITE PINE."

"It is with a great deal of pleasure that we can advise you WE HAVE RECEIVED POSITIVE AND ACTUAL RESULTS from this campaign. We have enjoyed a very nice trade on our WHITE PINE and just yesterday we were still more gratified by selling a party in ****, a point where there is no yard and which is eleven miles west of here, a bill totaling $1,200. This man knew what he wanted and sent a carpenter who, when he looked over the stock and saw how we were hooked up, did not take long after his return to conclude the deal. Certainly in this campaign the expenditure has been justified and we wish to share our pleasure and good feelings over the outcome with you. *You furnished the pole and we got the fish.*"

We have plenty more "poles" and there are plenty of "fish" in your territory. Write today and ask us about our advertising helps for dealers. They get the business.

If your WHITE PINE stock is low any of the following members of the White Pine Bureau will give your order careful and immediate attention.

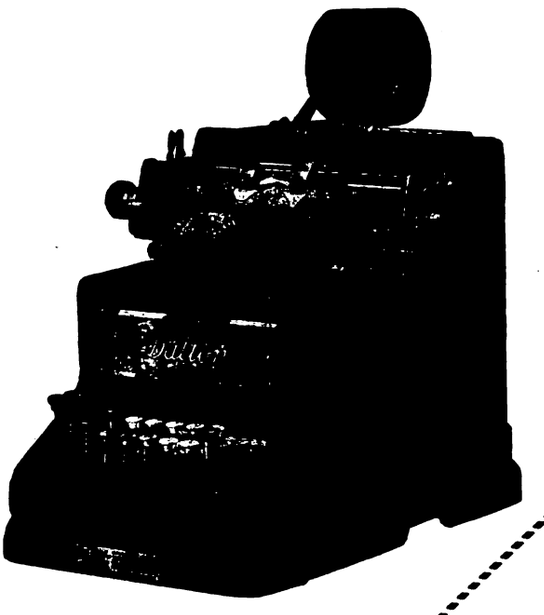
Speed in the Lumber Office

is as essential as speed in the yard or mill—only more so in that office labor costs more to start with and in most offices a whole lot more than it should at the finish. But whatever your objections may have been in the past toward mechanical aid you can't afford now to overlook the



Dalton Adding, Listing and Calculating Machine

In actual practice it has demonstrated its efficiency in the lumber office not only in addition, but in the auditing of invoices requiring multiplication. For example it took an ordinary operator on the Dalton but **67 seconds** to audit the following invoices:

464 pcs. 1x8—16 No. 2 Com. Y. P. S2S	4,949	
763 pcs. 1x8—18 No. 2 Com. Y. P. S2S	9,156	
134 pcs. 1x8—20 No. 2 Com. Y. P. S2S	1,786	
206 pcs. 1x8—24 No. 2 Com. Y. P. S2S	3,296	
Weight 2,082 lbs. M.	19.187 ft. @ $14.45 M.	$277.25
39,947 lbs.		
Rate 14.25 cwt.		$ 56.92
Total at destination		$334.17

How Long Would It Take You To Do it?

The Dalton Adding Machine Co.

Norwood, Cincinnati, Ohio

Fill out coupon attached and mail today for further information regarding use of the Dalton in the lumber office.

I should be glad to know more about the DALTON adding machine and welcome some further information on the subject, without obligation to us.

WE ARE GOING TO DO SOMETHING that we have never done before and which may or may not prove an interesting experiment. It will be, however, a COURTEOUS event at ALL hazards.

We are going to permit two of our warm personal friends to sit up in our "Wide East Window Seat" and actually do the talking.

Many a man has made jocular reference to our "Wide East Windows" by word of mouth and by simple mention in correspondence and we have reason to believe that this department of the LUMBER WORLD REVIEW is read by several people each time the issues of our paper are distributed—people who boldly subscribe for the paper and pay $2 for the privilege—and people who advertise in it and thus help to furnish the sinews of war.

As this department of the LUMBER WORLD REVIEW is written entirely to please the editor, it seems a marvelous thing to us that some exception has not BEFORE been taken to the many radical principles about which we have built up our "Wide East Window" optimism.

We have never written this department to get even with anybody, nor to shock anybody; nor has it been written especially to instruct anybody. We are always reasonably sure of our facts; after which the department is WRITTEN and printed AS written. In our issue of September 10 we paid our respects to the Editor of the St. Louis Republic, who wrote that wonderful editorial, "Let The Rivers Feed Us," and paid our respects to Senator LaFollette who alone is responsible for having side-tracked the Webb bill. Now on account of those two editorials we will invite two gentlemen from Wisconsin to come straight up into our "Wide East Windows" and tell us where we are wrong. Of course we are not wrong, but we would be if we did not permit them to have their say—and we DO that.

Our first friend says:

"I noticed in your September 10 issue an editorial headed "Believe the Strike Should Have Occurred." You quote a St. Louis paper in saying that they could procure supplies by river. So they could to a limited extent, but rivers need boats, the same as railroads need cars and locomotives, and where are they? I remember when there were over 100 steamers plying the Mississippi above St. Louis. Probably now if you can hunt up a dozen, including excursion boats, you would fill your list. And where would they get supplies; from along the banks of the river? Nay, the farms are not on the river banks, and you still need the railroads to bring the food to where the boats could get them.

"The Chicago and Milwaukee papers had this same sort of stuff,

which I surmise was printed to help keep up the hopes and spirits of the people, but Lake Michigan brings in food from towns and cities only where it is brought in by rail or trolley, and there are no wheat fields or flour mills on the banks of the lake.

"I feel that the strike should not have occurred, and that the damage that would have been done in one week would cover the cost of increase of the railroad men for years to come. I do not think that the men were entitled to ten hours' pay for eight hours' time, but if the railroad managers cannot find a way to get ten hours' work done in those eight hours, then I miss my guess. There is no piece work in the railroad business. The men are not like a bricklayer, limited to so many brick per day.

"If the railroads are given a slight advance, of 2 or 3 or 5 percent, in rates, it is not going to do the lumber business any harm. For every dollar that they gain from the lumber industry, they will expend two dollars in purchasing lumber, and raising the price, so that we will benefit, rather than lose by a raise in rate. A 5 percent raise on lumber rates for the state of Wisconsin would amount to something like 12 or possibly 15 cents per thousand feet. Is it not true that this would stimulate the purchasing agents of the railroads and the stockholders with their dividends, to buying more freely and thus causing the general advance of commodities, of which lumber is one? This is my opinion, at any rate.

"I do not believe in an 8-hour day, as there are not men enough to do the world's work in eight hours. I do believe, however, that the president was right in staying the strike till investigations could be made and till some sort of law could be passed to govern the situation. The United States was in no position to stand a general strike and no business man was in favor of one."

Our second friend says:

"I would like to write you fully concerning your editorial on La-Follette. Mr. Jeffris would, in my opinion, have received the nomination at the primaries had it not been for Democratic LaFollette support. I do not understand how you can attack Senator La-Follette when he is such a good Democrat, and you have so many warm friends in the south of that persuasion!"

And there are people who speculate on the probable length of life of this republic!

We Will Yet Get the Webb Bill.

WHOEVER MAY BE THE NEXT PRESIDENT of these United States —a fact which the morning papers of November 8 will very likely announce—we, who gain our livelihood through industry, must all remember that the Webb bill is by no means a dead issue.

There never was a session of congress presided over by any president, however forceful he might have been, which did not leave some "unfinished business."

The Webb bill was just one of the things that was left over and all of the carping of the Chicago Evening Post of September 11 is a political vaporing utterly without foundation.

The Chicago Evening Post says: "President Wilson told delegations of business men that he favored such an amendment. He seemed to be impressed thoroughly by the fact that the Clayton measure had put American business at serious disadvantage in holding its own against the rivalry of European trusts; but the Webb bill went into the discard when congress adjourned and no substitute has been enacted. So far as we know the fair words of the president were followed by no effort to remedy an ill the grievous nature of which he admitted."

Continuing in its tirade against the president and his alleged lack of sincerity, the Post proceeds to calm and salve the feelings of its readers by making what it seems to believe a REAL PROMISE. It desires to assure us that "the error is one that a Republican congress and a Republican president will correct speedily." That—we take it—gives us exactly two chances that the Webb bill will pass early in December, one which we already know about—believing in President Wilson's sincerity in this matter—and another, which the Chicago Evening Post promises us—providing Mr. Hughes is invited to a place on the bridge of the Ship of State.

Either way we win. We are obliged to the Chicago Evening Post for closing the incident so auspiciously.

National Drainage Congress Will Prevail.

EVERY LUMBERMAN, BE HE RETAILER, wholesaler or manufacturer—who lives between the two ranges of mountains known as the Alleghanies and the Rockies, should be very deeply interested in all of the propaganda of the National Drainage Congress which first met in Chicago in 1911, at New Orleans in 1912, at St. Louis in 1913, at Savannah in 1914, at San Francisco in 1915, and at Cairo, Ill., in January, 1916. We have seen the records of the proceedings of many national congresses in the last four and a half years as they flowed over the editorial table in a ma[illegible]red stream, but nothing that was quite so comprehensive or w[illegible] more sustained purpose or a greater faith in the ultimate triumph of its ideals or which contained more real information of particular interest to the average citizen than the "Official Proceedings of the Sixth Annual Meeting of the National Drainage Congress."

It is a little book which we are glad to lay away in the archives after careful reading, and one which all our readers should possess and possibly might secure; for Frank B. Knight, consulting engineer of the Lidgerwood Manufacturing Co., with offices at 1907 Fisher building, is at the head of the congress this year and surely lumbermen all over the land should show an interest in the effort of this body of earnest scientists on that account alone.

This national association has laid the foundations for a great work and the lumbermen of the country should volunteer to help it in every possible way, for this is one crutch which should be used to help us on our way to better things.

If he deserves commendation who makes two blades of grass grow where one has grown before, surely he who seeks to reclaim from miasma and jungle 74,000,000 and more acres of arable land and place it in productiveness, deserves some assistance from ALL THE PEOPLE.

And the "Wooden Car" Is Coming Back.

IT IS AN OLD SIMILE, THAT OF THE pendulum and its habit, in which it will not be necessary to indulge except by inference. Really now, the wooden car is coming back.

We are right glad that we have held to our faith throughout the years in this matter of the advocacy of the usefulness and necessity of the wooden car.

There is not an engineer who really knows, who would not have endorsed the wooden car almost any time in the last four years and many of them have done so.

Three years ago the Pullman Company, of Chicago, had no hesitancy in letting its expert in such things father an article upon this subject, which was printed in the LUMBER WORLD REVIEW, and just now it really seems that there will be a great revival in the building of wooden cars with steel underframes.

Back as far as August 25 several of the car building institutions announced the possibilities of wooden freight car building.

Chief among the railroads that have no hesitancy in coming out in the open to discuss this matter we might mention the Great Northern railroad, which believes "that wooden freight cars with properly distributed metal parts would save the railroads millions of dollars a year annually in coal consumption, wear on wheels and other parts of the under portions, and in avoiding the hauling of unnecessary weight."

Ralph Budd, assistant to the president of the Great Northern railroad, says further in this connection:

"Like many new ideas the heavy all-steel car swept like a tidal wave over the country, and when the wave rolled back, time and experience had developed many disadvantages. From an operating standpoint a locomotive will handle 100 cars weighing 30,000 pounds empty, as easily as it will fifty cars each weighing 60,000 pounds empty. There is no reason why cars should be built to weigh 100,000 pounds in which to carry goods of which you could not possibly load more than 20,000 pounds. Cars should not weigh more than the load they carry.

"General merchandise averages only five to eight tons per car and to build cars of 80,000 pounds capacity to carry from five to eight tons seems absurd. Increasing weight and size of a freight car does not increase its strength."

One railroad last week issued an inquiry that when placed will consume 5,000,000 feet of lumber, from which it will build 1,000 freight cars.

Here's to the "Land Bank."

TO THE EDITOR OF THE LUMBER WORLD REVIEW no movement for the public good has progressed in the United States during the last four and a half years which is one-half so interesting as the movement in the direction of straightening out rural credits.

Less than four years ago one of the leading lumbermen of the United States accused this writer of being muddled mentally on account of his protestations for a reform of rural credits and the statement that he, the editor, believed such a thing necessary and probable. The prominent lumberman, however, settled the matter conclusively and for himself, by the statement suggested.

We ALL, however, have lived to see this whole matter worked out, and while we are delighted that Herbert Quick, the author of the "Good Ship Earth" and other sociological studies, is at the head of the commission that will handle this matter, we are indeed puzzled that W. S. Goodwin, a congressman from Arkansas and David Lubin, of the International Congress of Agriculture at Rome and Senator Fletcher are not of this commission and prominent in the days of victory; but that is EVER the fate of the Pioneer! His to win a new country, but not his—OFTEN—to enjoy the laurels of the victor, but most usually his to emulate the fate of Moses by simply being permitted to gaze down INTO and not to actually participate IN the glory of the Land of Canaan.

Studies in the Extraction of Rosin from Wood

Experiments Using a Petroleum Solvent, Described by R. C. PALMER, Chemist in Forest Products, Forest Products Laboratory, Madison, Wis.

From a technical viewpoint, the process of extracting rosin from wood with chemicals offers a promising possibility for the utilization of "fat" stumps and other waste resinous wood. In the simple steam distillation process only the volatile constituents of the wood are recovered and this method is no longer industrially feasible on this account. In the destructive distillation process, the products are charcoal, tar, and a turpentine more or less contaminated with products from the destructive distillation of the rosin and wood substance. This turpentine, at best, does not bring as high a market price as steam distilled wood turpentine, although the recent introduction of temperature controlled processes has removed this objection to a large extent. Compared to these two processes, the so-called solvent, or extraction process affords the recovery of wood turpentine and pine oil comparable in quality and value with the oils from steam distillation and also a medium grade rosin whose market value, under normal conditions, is practically equal to the combined value of charcoal and tar from the destructive distillation process. However, the market value is less likely to fluctuate for tar and charcoal than for rosin. Strictly speaking, the extraction and distillation processes are not comparable, because the products are quite different. These processes represent the two types which cover most of the possible products to be obtained from resinous wood.

Of the several different processes proposed for treating wood, the destructive distillation method, which is by far the oldest, is also at the present time apparently the best established from the standpoint of profitable commercial operation.* The principal difficulties that have been encountered in the extraction process have been, (1) an unstable market price for rosin, and (2) high cost of operation due largely to an excessive loss of solvent.

PURPOSE OF THE WORK.

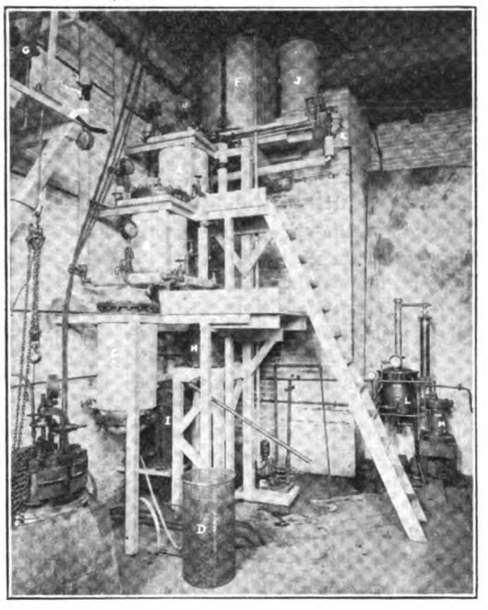
In attempting a solution of these difficulties, there are then at least two lines of attack which may give this process a better opportunity for commercial success: (1) Obtaining another product which would not be subject to very great market variations; and (2) decreasing the operating cost. The use of the extracted wood as a raw material for paper pulp has been suggested several times as a possible solution of the problem of obtaining another product. Extraction by the usual method requires wood so finely divided (shredded wood) to yield a high proportion of the rosin that the extracted material is not suitable for pulp. If the wood is large enough for pulp, the yield of rosin is decreased. Considering the high operating costs as due largely to the loss of solvent, it would seem that the problem here is largely mechanical, and its solution should not offer very great difficulties.

With these ideas in mind, it was felt that a careful study should be made of some of the fundamental operating variables of the process.

The experiments were carried on at the Forest Products Laboratory, Madison, Wisconsin. The material consisted of long-leaf pine stumps from Louisiana, donated by the Long-Bell Lumber Co. of Kansas City, Missouri. Acknowledgment is made to S. D. Wells, engineer in Forest Products, of the section of pulp and paper, for making the experiments on the suitability of extracted chips for pulp.

DESCRIPTION OF PROCESS.

About fifteen patents have been granted in the United States for the extraction processes and apparatus since 1909, and one or two plants were built and had been operated before that time. The different patents vary chiefly in the treatment of the wood before and after applying the solvent, in the manner of applying the solvent, and in the solvent itself. In general, the process, as carried out in the commercial plant, consists in first steaming the finely divided wood to recover the volatile constituents, turpentine and pine oil, followed in some cases by evaporating out of the wood as much of the condensed steam as possible. The solvent is then applied to the wood to dissolve out the rosin. After extraction, the wood is treated to recover the solvent adhering to, or absorbed by the chips. Evaporation of the solvent leaves the rosin as a residue, the solvent being recovered for subsequent extractions.



APPARATUS USED IN THE EXPERIMENTS DESCRIBED.

APPARATUS USED IN EXPERIMENTS.

The apparatus used in the experiments was an extraction battery composed of three retorts, A, B, and C, shown in Figure 1. The chips were placed in the perforated baskets D, each retort holding from thirty to thirty-five pounds of wood. The battery was so arranged that the solvent could be forced by means of a pump E to a storage tank F, from which it flowed by gravity into any one of the retorts and from that retort to each one below it. Each unit was independent of the others, so that different operations could be carried on at the same time. Each retort was also connected to a vacuum pump G, through a condenser H and receiver I. They were each equipped with an open coil for direct steam and closed coils for heating the solvent.

As it was desired to boil the solvent in contact with the chips the apparatus was so arranged that this could be done without decreasing the solvent by evaporation. This was accomplished by connecting the vapor outlet line of each unit to a condenser J and receiver or trap K placed above the battery. The trap was connected to the bottom of each retort and thus allowed the vaporized solvent, after it was condensed, to flow continuously back into the retort as in a reflux condensing apparatus. By connecting the top of each retort to the top of the trap, the vapor conditions were equalized and the solvent was prevented from backing up. With these "equalizers" open, the solvent in any retort could be boiled under pressure for any desired length of time with a constant reflow of the condensed vapors.

The simple still L was used for the evaporation of the saturated solvent to recover the rosin. The still was equipped with a steam jet and was connected through the receiver M to the vacuum pump to facilitate the removal of water and heavy oils from the rosin.

Since a petroleum distillate has been most frequently used commercially, this solvent was selected for the experimental work.

SCOPE OF EXPERIMENTS.

The experiments in this first series included a study of the more important fundamental operating variables on the efficiency of the extraction. These were the effect of (1) time, (2) pressure, (3) size of material, (4) moisture, and (5) rosin content on the percentage yield of rosin, based on the amount originally present. The tests also included a preliminary study of the suitability of the extracted material for paper pulp. Two sizes of chips, averaging $\frac{3}{16}$-inch and $\frac{5}{8}$-inch with the grain of the wood, were selected for the tests. The $\frac{3}{16}$-inch chip is larger than the usual commercial chip used in the extraction process, but is considered the minimum size for making pulp. The material was prepared in a semi-commercial pulp chipper. The wood in each case comprised the whole of the stump including the outer bark. All of the stumps had the roots removed and were practically free from earth and sand.

THE EFFECT OF TIME.

The results of the runs showing the effect of time are given in Table 1.

Table 1.—Showing Effect of Time.

Run No.	Time of Extraction Minutes	Size of Chip Inches	Pressure of Extraction Lbs.	Rosin in Wood Percent	Yield of Rosin Percent
1	15	$\frac{3}{16}$	0	29.92	72.6
2	45	$\frac{3}{16}$	0	25.10	75.0
3	15	$\frac{3}{16}$	30	23.00	91.60
4	45	$\frac{3}{16}$	30	25.92	93.70
11	15	$\frac{5}{8}$	30	12.90	68.5
12	45	$\frac{5}{8}$	30	12.23	68.9

*J. Ind. & Eng. Chem. Vol. 6, No. 2, p. 151.

Digitized by Google

It will be seen that the effect of increasing the time from 15 to 45 minutes is slight for the three sets of conditions used, and for practical purposes 15 minutes is evidently the maximum time necessary.

EFFECT OF PRESSURE.

The results of the runs showing the effect of pressure are given in Table 2.

Table 2.—Showing Effect of Pressure.

Run No.	Pressure of Extraction Lbs.	Size of Chip Inches	Time of Extraction Minutes	Rosin in Wood Percent	Yield of Rosin Percent
1	0	1/8	15	29.92	72.6
6	30	1/8	15	27.43	94.3
5	55	1/8	15	29.35	85.3
2	0	1/8	45	25.1	75.0
4	30	1/8	45	25.92	93.7

The table shows that the rosin recovered was increased from 72.6 percent to 94.3 percent by increasing the pressure from 0 pounds to 30 pounds. At 55 pounds pressure there is a decided decrease in percent recovery as compared with 30 pounds pressure. In a study of the penetrance of creosote in longleaf pine heartwood at the Forest Products Laboratory* a decided decrease was noted as the pressure was increased from 50 to 75 pounds, so the cause of the decreased efficiency of extraction may be a physical one. It seems more probable, however, that the explanation is more of a chemical nature and may be due to an increase of the insoluble constituents of the rosin at the higher temperatures, although there was no apparent effect of the higher temperatures on the quality of the rosin recovered. The effect of increasing the pressure in the 45 minute extraction was practically the same as for the shorter time.

EFFECT OF SIZE OF CHIP.

Comparisons of the results of extracting 1/8-inch and 5/8-inch chips are given in Table 3.

Table 3.—Showing Effect of Size of Chip.

Run No.	Size of Chip Inches	Pressure of Extraction Lbs.	Time of Extraction Minutes	Rosin in Wood Percent	Yield of Rosin Percent
9	1/8	30	15	10.73	88.8
11	5/8	30	15	12.9	68.5
4	1/8	30	45	25.92	93.7
12	5/8	30	45	12.5	68.9

Increasing the size of the chip to 5/8 inch decreases the efficiency of extraction from approximately 90 to about 70 percent, and the result is practically independent of the time of extraction. In the studies of penetrance of creosote in longleaf pine heartwood referred to above, it was also shown that the ratio of longitudinal to radial penetration was 26 to 1, and of longitudinal to tangential was 100 to 1. For practical purposes the action of the solvent is, therefore, almost entirely in the longitudinal direction, which is also the same direction as most of the resin ducts, that is, with the grain of the wood. The decrease in the rosin removed from the longer chips is then undoubtedly a question of decreased penetration of the solvent into longer resin ducts. Since giving the solvent a longer time to penetrate does not increase the yield, as seen in runs 11 and 12**, it seems safe to predict that additional pressure is necessary to penetrate to the center of the longer chips. A continuation of these studies will determine the accuracy of this supposition.

*Bulletin of the U. S. Dept. of Agri. No. 101, "Relative Resistance of Various Conifers to Injection with Creosote."

**The more pronounced effect of increasing the time used in run 4 to that used in run 9 may be largely explained by the higher rosin content of the wood used in run 4.

THE EFFECT OF ROSIN CONTENT.

These tests on the effect of different variables were made on samples of quite different rosin content, one lot being comparatively rich and varying from 23 to 30 percent rosin, and another lot being comparatively low in rosin and varying from 10½ to 13½ percent. An analysis of the data from runs made under the same extraction conditions but with chips of different rosin content is of interest. These data are given in Table 4.

Table 4.—Showing Effect of Rosin Content.

Run No.	Size of Chip Inches	Pressure of Extraction Lbs.	Time of Extraction Minutes	Rosin in Wood Percent	Yield of Rosin Percent
7	1/8	0	15	13.32	70.8
1	1/8	0	15	29.92	73.6
9	1/8	30	15	10.73	88.8
3	1/8	30	15	23.00	91.6
6	1/8	30	15	27.43	94.8

It is seen from the table that a higher percentage of rosin is recovered from woods of greater rosin content and the higher recovery is evident throughout the progress of the extraction. This is probably due to the fact that there is a larger proportion of the rosin which has saturated the cells surrounding the resin ducts proper in the richer wood and this rosin is, therefore, made more accessible to the action of the solvent. The wood containing 13.5 percent rosin is about as low in rosin as could be extracted commercially.

SUITABILITY OF THE EXTRACTED CHIPS FOR PULP.

Only preliminary experiments have been made with the extracted chips. It was desired first to determine the quality of pulp that could be obtained from the 1/8-inch chip although it seemed that this size would give too short a fiber length for good pulp. By using the sulphate process the unscreened chips from runs 6 and 9 were cooked in a semi-commercial digester. The time of cooking was one hour in getting up the pressure, and two hours at 100 pounds pressure. The cooking liquor contained 15.7 pounds of NaOH and 7.5 pounds of Na_2S per 100 pounds of wood. The pulp yield was 43.2 percent of the dry chips. Two beater treatments were made on the "half stuff," the duration of beating being five hours in each case. In one run the beater roll was hard down during the last hour, while in the second run the stock was much more dilute and the roll was set so as to give a comparatively light brush. The pulp was run over the machine and the sheets from the two beater treatments gave the following strength tests. The figures for what may be considered a No. 1 Kraft are given for comparison.

	Strength factor points per lb.	Schopper Test (Breaking length in meters)	Folding Test and weight per ream
No. 1 Kraft	1.00	6000	1500 (40 lbs.)
Beater Run No. 1	.72	5425	800 (40 lbs.)
Beater Run No. 2	.65	4730	367 (38 lbs.)

While run No. 1 was stronger, the second run gave a softer sheet. Both were a very fair grade of No. 2 Kraft. Further tests will be made by using the larger chips but since the small chip gives such promise of being suitable for pulp, they are more desirable, since it is possible to get so much higher yields of rosin from them by extraction.

CONCLUSIONS AND THEIR COMMERCIAL APPLICATION.

The results of these experiments seem to indicate that a solution of the problem of obtaining another product in the extraction of resinous wood by the solvent process may be found in using a larger chip, whose minimum size is 1/8 inch, and extracting under a maximum pressure of 30 pounds by using four washes of 15 minutes each. A closed type of battery in which the vaporized solvent can be returned continuously to the retort is advantageous for extracting under pressure. Extraction under pressure for a short time is shown to give much higher yields of rosin than no pressure for a longer time.

In the results given above, the yields by petroleum extraction are based on control analyses made by using chloroform as solvent; it should be also noted that certain constituents of the rosin are insoluble in petroleum but are soluble in chloroform. Since it is also shown that increasing the time has no appreciable effect at 30 pounds pressure and since 94.8 percent were recovered under those conditions, it would seem possible that practically all of the petroleum soluble rosin was extracted at this pressure. It is probable, therefore, that a lower temperature would be as efficient as 30 pounds.

Chips as small as 1/8 inch are apparently suitable for paper pulp, as they gave a good grade of No. 2 Kraft by the sulphate process. Chips of this size could probably be most advantageously cooked commercially in a rotary type of digester. A plant extracting wood yielding about 250 pounds, or 1.08 barrels of "F" grade rosin per ton (89 percent yield of 14.0 per cent rosin), which is about the minimum for practicable commercial operation, would produce extracted chips suitable for making about 750 pounds of pulp per ton of wood. A 50-ton extraction plant would then supply a 20-ton pulp mill, or since an extraction plant might require about three-quarters of its extracted chips as fuel in case it were not advantageous to buy other fuel, a 200-ton plant would have chips for fuel and still could supply a commercial pulp mill of practicable size.

COST ESTIMATE PER TON ON 200 TON EXTRACTION PLANT.

It is difficult to give cost figures to cover the variety of contingencies met with commercially, but the following estimates of average practice show clearly the effect on the net returns of obtaining extracted chips as an additional valuable by-product.

Cost of Operation.

Wood	$2.25	
Solvent, 7½ gals., @ 12c	.90	
Fuel, ¾ ton extracted chips at no cost	0.00	
Cooperage	.65	
Superintendence and labor	.87	
Selling and shipping, including freight	.72	
Taxes, insurance and depreciation	.35	
Repairs and miscellaneous	.18	
Total		$5.92

Returns.

At average prices for past 15 years.

6 gals. turpentine and pine oil @ 40c	$2.40	
250 lbs. rosin at 1.5c ($3.77½ per net bbl. of 230 lbs.)	3.75	
Total		$6.15
Cost of operation		5.92
Net profit		$0.23
Selling price 250 lbs. extracted chips @ $1.00 per ton		.25
Net profit with chips as by-product		$0.48

The plant would pay 5.5 percent on an investment of 250,000 pounds without the chips and 11.5 percent assuming the chips to be worth $1 per ton for pulp, which is a low estimate since the material would be in condition for immediate pulping.

Observations in the Realm of the Retailer

A Five Room Bungalow to Cost About $2,000

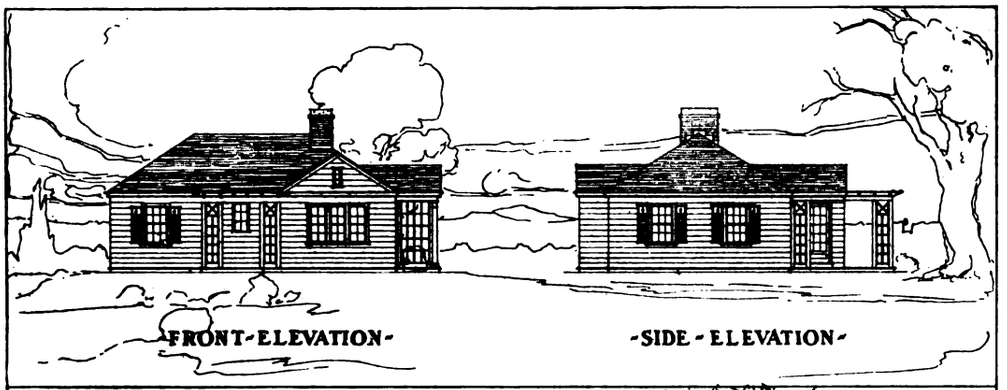
A SERIES OF ARCHITECTURAL DESIGNS OF HOUSES PLANNED TO BE BUILT OF ARKANSAS SOFT PINE.

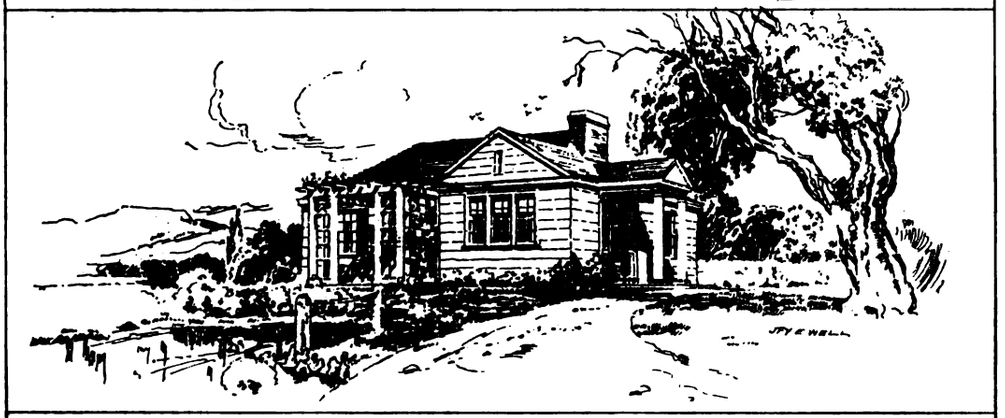
Recently the Arkansas Soft Pine Bureau issued through the medium of the press of the American Lithograph Co., one of the most beautiful architectural books which has ever been given out to the lumber trade of America, entitled "NOT A HOUSE BUT A HOME."

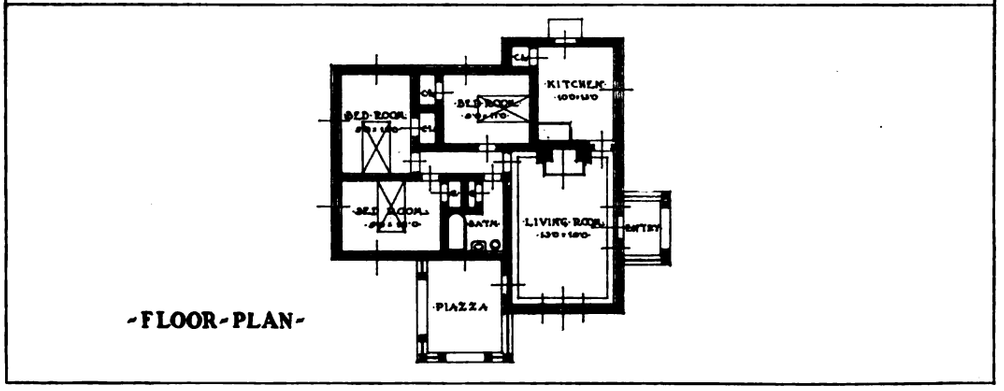
Through the courtesy of R. H. Brooks, who has charge of the advertising of the Bureau, we have secured the privilege of republishing these articles in the LUMBER WORLD REVIEW, and we are running them in our general department, "Observations in the Realm of the Retailer," believing that if there is one thing in which all retail lumbermen MUST be interested it is in SUCH a series of PLANS, and we want to suggest that every retail lumberman who receives the LUMBER WORLD REVIEW file away the copies which contain these plans.

We do not know whether "Not a House But a Home" is out of print or not, but it probably is; and if that be true this may be the only opportunity there is to secure these etchings of the house plans.

EDITOR.







This five-room bungalow is assumed to be built on brick foundation walls, the house walls of 2 inch x 4 inch studs, covered with sheathing paper and clapboards; the roof of shingles; chimney of brick. The rooms to be plastered throughout the interior, both walls and ceilings, the piazza to have a nearly flat top, with beam ends projecting like a pergola.

The plan is so arranged that the house might face in either of two ways, but the ideal situation for this type of building is on a large piece of land, or a farm, where the entrance road comes up to the entry porch, and the piazza is toward the view. There is no separate dining-room in this house, it being assumed that meals would be eaten either in the kitchen or in one end of the living-room, which is customary in most houses of this size and presumed cost.

The exterior can be either painted white with green blinds, or the walls could be stained, and the roof left natural. Good colors for the exterior would be dull light brown, buff or gray, with blinds and roof in colors to harmonize. The appearance of the pergola and trellises and projecting beam ends, when covered with flowering vines, is delightfully picturesque, and is in distinct contrast to the formal entry porch.

There would be a certain amount of storage space in the attic, which could be reached by a hatchway or a ladder, or perhaps a steep staircase, hung on a counter balance, might be put in the hall between the bedrooms, so it would fold up out of the way when not in use.

TABLE OF CARPENTER MATERIAL.

NOTE—All amounts given are without allowance for waste. Where there is doubt about widths of material, the areas to be covered are given in square feet. Trims should be allowed for all openings both sides.

Lumber.

*Framing (joists, studding, etc.)..	6,000 ft. B. M.
*Sheathing and rough flooring....	2,200 sq. ft.
*Clapboards	1,270 sq. ft.
Or wall shingles	8,000
*Flooring (rooms)	845 sq. ft.
*Flooring (porches)	190 sq. ft.
*Ceiling (porches)	190 sq. ft.
*Shingle strips	2,736 lin. ft.
Shingles (roof)	10,000

Mill Work.

*Main cornice	130 ft.
*Rake cornice	36 ft.
*Water table	130 ft.

*Porch posts, six, 6 in. x 6 in. x 8 ft.
*Porch columns, four, 7 in. round x 8 ft.
*Porches, sawn beams, eleven, 14 ft. 6 in. long.
*Porches, 7 pieces of lattices.
*Porches, 4 pilasters.
Windows, 1 triple casement.
Windows, 6 D. H., 6 pairs shutters.
Windows, 1 casement.
Windows, 2 side lights.
Doors, 3 exterior, 3 ft. x 7 ft.
Doors, 10 interior, 2 ft. 8 in. x 6 ft. 8 in.

*Base	275 lin. ft.
*Picture mold	175 lin. ft.

Fitting Up.

*Shelving for 5 closets.

*Mantel	1
*Dresser	1
Drainboard	1

**Materials noted with asterisk should be of Arkansas Soft Pine.*

SUMMARY ESTIMATE.

Excavation	$ 60.00
Mason work	250.00
Plastering	260.00
Rough carpenter work	685.00
Finish carpenter work	390.00
Painting	140.00
Tin work	40.00
Plumbing	175.00
Total	**$2,000**

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

There is a pronounced increase in the sash and door movement over the country, thus heralding the advent of a large fall trade at the principal manufacturing and distributing centers of the country. Not only are general trade conditions fairly favorable for this, but the industry itself is on a more substantial and encouraging foundation. The factories are running on a full basis of output and have an abundance of orders ahead. The jobbing element is busily occupied in figuring on estimates and is getting a large number of orders and inquiries for local shipments. Special work is in splendid demand and is keeping everybody busy, while stock sizes are moving actively. One of the leading Chicago distributers says that he has all the business he is able to handle and is looking for a further pressure of demand.

While the volume of business is of encouraging proportions many of the wise men of the trade say that they are expecting a considerable gain in business through this month and next. There is even considerable carload inquiry and small jobbers and retailers who have long held aloof from the bulk market seem to be now disposed to figure rather heavily on stocking up.

Good Trade in Shop Lumber.

One of the best features of the situation is the active demand and steady prices for shop and better lumber. While the production is large, it has not been more than sufficient for the current needs of the market and manufacturers are shipping to eastern points actively. Some contraction of east bound deliveries is seen, however, owing to more or less car shortage in various localities. In the main, however, the car shortage has not yet become acute at very many western points.

Reduced Crops a Factor.

The reduced wheat crop has not imparted as much of a blow to the western lumber trade as had been feared. There was no complete failure of crops in any locality and the farmers are getting splendid prices for whatever they have to sell. A considerable shortage in the potato and bean crops in Michigan has affected sash and door demand in that territory adversely. The political campaign is waxing hotter and this may serve to put a little check on business before election day, but so many things have happened to injure business in the past two and a half years that a hot presidential contest may be now regarded as a minor disturbance.

Active Building Operations.

If the sash and door market depended to any extent upon the volume of building operations, as indicated by the monthly report for August from 112 cities throughout the United States, the most active market in the history of the trade could be looked for. Unfortunately, however, even the most flattering of reports of building permits issued does not become effective unless actual operations on those permits are started. For instance, the total value of permits issued in 105 cities in July was $112,655,752, whereas in July, 1915, the total value in the same cities was $67,062,722, which shows an increase of [illegible]nt. A large part of this increase, it should be said, is due to the fact that the city authorities of New York recently revised their building regulations, which restricted the height of buildings after July 25. The New York permits in July included twenty-three tenements at a cost of nearly $12,000,000· eleven hotels at a cost of $10,000,000; office buildings at a cost of $7,581,000; stores and shops at a cost of $9,500,000, and ten factories with an estimated cost of $2,670,000. The August building report from 112 cities shows a total value of permits issued of $72,397,168, as compared with $71,449,039 in the same cities in August, 1915, an increase of only 1 percent. New York city showed the considerable falling off of 42 percent in August from the same month last year while Chicago showed a falling off of 39 percent, Cincinnati 56 percent, Milwaukee 38 percent and Rochester 28 percent, these being about all of the large cities that show any loss, practically all of the others, including Baltimore, Philadelphia, Washington, Cleveland, Pittsburgh, Detroit, Toledo, Indianapolis, St. Louis, Minneapolis, Portland and San Francisco showing decided gains.

Current Discounts Are Higher.

The market on doors and mill work has been holding steady for several months, but on September 1 there was a pronounced advance and there is a firmer sentiment now visible, with prospects for a still further advance. The ruling discounts on less than 100 openings, deliverable in Chicago territory, are as follows: No. 1 and No. 2 doors, 69 percent; No. 3 doors, 64 percent; No. 4 and painted doors, 64 percent; glazed sash, 74 per cent; white pine mouldings, 55 percent. It is reported that glazed sash will be advanced to 73 percent October 1.

Northwestern Door Trade.

The midsummer lull is over as far northwestern sash and door trade is concerned. Reports from St. Paul and Minneapolis indicate that a great deal of figuring is going on and that country trade is beginning to pick up, now that the actual condition of the crop is known, as the high prices partially offset the small crop. There is a pronounced optimism visible among the manufacturers and distributers at the twin cities, and a good fall trade is confidently looked for. Building operations in Minneapolis, especially, are considerably heavier than a year ago, and the local outlook is excellent, with prices holding steady.

The Window Glass Market.

The market for window glass is active and the stocks are low and undoubtedly will be pretty well cleaned up by the time the factories start up in the late fall. It is believed that the higher wages paid the window glass factory employees will contribute to a renewed firmness in prices, and to this there is also added the higher cost of raw material. The current discounts are around 90 percent on single strength first three brackets and 87 on the other brackets, while double strength is quoted at 90 percent all brackets.

Lower Mississippi Conditions.

A report received from the Memphis Sash & Door Co., of Memphis, Tenn., indicates that the sash and door market in that section was never stronger than it is at the present time. J. A. McAlister, president of the company, says: "With the outlook for a magnificent volume this fall, it is the height of folly for distributers to shade their card prices in any instance, and it equally is absurd to load up on car business." He stated that in his opinion his company will have all the business it can take care of in local shipments this fall and will continue to prefer orders of that character.

Features of Eastern Trade.

I. J. Miley, manager of the Baltimore Sash & Door Co., of Baltimore, Md., reports the volume of business good, with a fair incoming of inquiries from points within a radius of 300 miles. He states that: "The midsummer lull did not make much difference in the volume of orders. Some difficulty occurred in securing lumber from the southern states, especially cypress, owing to recent floods and other congestions.

"While it is difficult to obtain any material advance in prices, there are some items which show a substantial advance. Seemingly the business outlook is excellent and the necessary betterment of prices must come with all the advanced prices of lumber, labor and the cost of material necessary to the manufacturing business."

J. A. Cheyne, president of the Pennsylvania Door & Sash Co., Pittsburgh, reported trade seasonable, but said that it has not been as heavy as it should be. He states that recent trade is more encouraging.

J. J. Wemple, of Cleveland, Ohio, for many years manager of the Ohio Sash & Door Co., and now representing the Paine Lumber Co., Ltd., in that territory, states that some of the jobbers have been complaining of the small volume of trade in that territory, yet he believes that on the whole there is a larger business than was visible a year ago.

Supplement to the Missouri River Freight Tariff.

L. S. McIntyre, traffic manager of the West Coast Lumbermen's Association, Seattle, Wash., advises of the filing of tariff supplements on the rates on mixed carloads from the coast to Missouri river territory. The supplements are effective September 25. They contain a mixed carload provision on doors and veneered panels manufactured from cottonwood, fir, hemlock, larch, pine or spruce lumber, with cedar articles, such as shingles and siding. The practice has been in shipments of this kind that doors and panels were taken at the carload rate for each article when mixed in carloads with fir products. Under the new arrangement doors and panels will be subject to actual weight at the carload rate of each which is ordinarily five cents more than the regular fir rate, and the cedar products also will be subject to actual weight certified to by the shipper on the shipping receipt, being assessed on the regular carload cedar rate. The remainder of such a shipment will be on the rate provided for fir lumber. The entire shipment will be subject to fir minimum weights, and when the contents of the cars do not equal the tariff minimum on fir lumber, the difference will be charged at the rate applicable for fir.

Shall We Invite the "Shingle Weavers' Union" Into Partnership With Us and Thus Capitulate to Labor and Its Eight-Hour Day? If You Think So, Say So in a Letter to Us

On August 25 we printed in our news section a startling piece of information, covering the activities of Lester W. David, of Seattle, Wash., which, strange to say, has elicited to date but one written protest, a warning note from A. T. Gerrans, of New Berne, N. C. We reprint the article, wondering how long it will take to wake up the lumber world to the situation which would follow the successful launching of Mr. David's project. Here is the article:

INTERNATIONAL SHINGLE WEAVERS' UNION BEGIN NATIONAL ADVERTISING CAMPAIGN.

"Seattle, Wash., Aug. 19.—Plans of the International Shingle Weavers' Union to create a special market for the red cedar shingles of the Pacific northwest through the use of its special label have assumed definite form. The international officers of the union and the Lester W. David Lumber Co., of Seattle, have entered into a two-year contract under which a nation-wide campaign will be started to advertise and sell Washington shingles manufactured under union conditions. The David company agrees to become the selling agent of all mills that will agree to use the shingle weavers' label on their product and to conduct a systematic selling campaign, while the officers of the union agree to conduct an advertising campaign among the union carpenters of the country numbering almost a quarter of a million and among other members of organized labor. The signing of this contract is regarded by the officers of the union as epoch making in that never before has any extensive effort been made to build up the weavers' organization by appealing to the purchasing power of organized labor through the use of the union label. If the campaign proves as successful as it is expected to be, it is believed it will go a long way toward solving the problem of meeting the competition of British Columbia shingle mills now employing cheap Oriental labor and without the aid of a protectve tariff.

"J. G. Brown of Seattle, president of the international union, has been working on plans to meet this competition for years and at various national conventions of labor has urged the leaders in the building trades to discriminate between shingles produced by well paid American labor and coolie labor products of the Canadian mills. The stumbling block always encountered was that carpenters and others interested in the shingle weavers' case had no means of identifying the shingles made by union men, mill brands being little advertised or used and shingles made by Oriental labor selling for the same price as similar grades made by union workers.

"According to the agreement the union will withdraw the use of the union label from any manufacturer should it be shown upon inspection that shingles and other cedar products manufactured by them bearing the label are more than 3 percent below the grades as shown by brands thereon according to the grading rules now in effect or that may thereafter be adopted by the West Coast Lumbermen's Association. It is also agreed that no shingle manufacturer who shall agree to conform to the conditions set forth in the agreement shall be denied the use of the union label.

"The David company agrees to pay the full wholesale market price for the shingles, plus fifty percent of whatever premiums may be obtained as a result of the joint efforts of the company and the union."

WE DETERMINE TO SECURE SOME INFORMATION.

A few days ago, after waiting patiently for nearly three weeks for protests on this subject from our readers, we concluded to see if it would be possible to stir up a few presidents and secretaries of the leading lumber associations of the United States and for that purpose we addressed the following letter to these prominent officers and trust there will be some result that we may chronicle later:

"I have been hoping to have some expression from you in regard to an article which was printed in a prominent department in the August 25 issue of the LUMBER WORLD REVIEW, but as yet nothing has come to hand. I refer to the item entitled, 'INTERNATIONAL SHINGLE WEAVERS' UNION BEGIN NATIONAL ADVERTISING CAMPAIGN,' in which is set forth an arrangement which Lester W. David has made with the International Shingle Weavers' Union.

"It would seem to the writer that in this direction lies a great danger which threatens the whole trade-marking proposition. It is a recognition of the unions which may have some very unfortunate possibilities. The first thing we know we are liable to have union carpenters and builders striking about using trade-marked shingles and lumber to retaliate for our 10 or 11-hour day.

"It hardly seems possible that the item which we printed so conspicuously could have failed to catch your attention, as we hoped it would. Are we wrong in believing that this is a matter which we should look carefully to?

"Attached is a copy of the item in question, in case you have not seen it.

"Please let me hear from you on the subject."

WORK OF THE FOREST PRODUCTS LABORATORY.

The Forest Products Laboratory, at Madison, Wis., is continuing its studies of the lumber industry and its tests of woods and various wood preservatives, and the amount of work it does is really phenomenal. Its activities in July, 1916, or, in fact, of any other month, are too voluminous for detailed mention here, but an idea of what it is doing may be derived from its monthly report for July, of which a brief summary is given.

C. H. Teesdale visited St. Paul, Minn., at the request of the Association of Commerce there, to advise on changes in the city's specifications for wood paving blocks.

Arthur Koehler delivered an address before the World's Salesmanship Congress at Detroit on "The Value of Technical Knowledge in the Sale of Lumber."

A number of articles on various live subjects relative to the lumber trade were printed, among them being a series of papers on "Circulation in Dry Kilns," by Harry D. Tiemann, and appearing in the LUMBER WORLD REVIEW.

A specimen of wood was submitted to the laboratory, which, on test, showed that eucalyptus had been sought to be used as a substitute for lignum vitae.

Five sugar pine logs were received from San Francisco for experiments on prevention of brown stain. The logs were sawed into 2-inch and 2½-inch lumber, and are being treated in the laboratory kilns with the purpose of eliminating the defect.

Kiln drying of green red gum inch lumber was completed, and proved a success. No loss was shown from checking, and only a very small loss from warping.

Sixty-one tests were made upon structural timbers taken from a so-called mill-constructed building in Chicago. Rot was caused by placing green timbers and cutting off ventilation from them. It is found by test that many timbers were of poor quality, and would scarcely have sustained the maximum loads they were supposed to carry, 1,300 pounds per square inch. Most of these timbers were found to be loblolly.

The effectiveness of sodium fluoride for preventing sap stain is being investigated at a sawmill plant in nortern Wisconsin under the supervision of the Forest Products Laboratory.

Experiments on the treatment of some mountain Douglas fir ties, which had been seasoning in the laboratory yard for four and a half years, were completed. These ties proved resistant to treatment, no way being found to get a satisfatory penetration with creosote. However, a partial success was derived in perforating the heart faces and giving the ties a long-time high pressure treatment with zinc chloride, by which a uniform penetration of the liquid of about one inch was secured.

Many tests are under way regarding cedar shingles cut from dead and live timber.

"YOU CAN'T BEAT WOOD."

A gentleman in a small town in Ohio has written to the trade extension department of the National Lumber Manufacturers' Association that he has just built a large colonial house, with wide siding and green shutters, on a street where every other house is brick. He says: "People stop and look at my place, and give the others scarcely a second look. For beauty, comfort and 'homey' look you can't beat wood."

THE CHIEF BUILDING WOODS.

Hoard's Dairyman recently sent out a letter to 1,952 of its subscribers, selected indiscriminately, and distributed equally in the eight leading dairy states, asking this question: "What are the principal kinds of lumber used in your building operations?" There were 1,528 replies received, and twenty-six kinds of lumber were named, the relative use of which was as follows:

Pine	1,255	Basswood	21
Hemlock	562	Ash	16
Oak	411	Poplar	16
Yellow pine	211	Tamarack	14
White pine	161	Walnut	9
Maple	63	White oak	8
Elm	49	Hickory	5
Beech	48	Red Oak	3
Spruce	42	Cottonwood	3
Natural	37	Gumwood	3
Cypress	33	Birch	2
Cedar	31	Butternut	2
Fir	29		

WEST COAST WATER SHIPMENTS.

Seattle, Wash., Sept. 17.—The cargo mills of Washington and Oregon shipped in August to foreign countries, including Hawaii and Alaska, 21,915,760 feet. The shipments to Hawaii were 5,673,896 feet, and to Alaska 2,855,391 feet. Next to Hawaii was Australia, which took 4,668,002 feet. Normal shipments for August in the years immediately preceding the European war averaged about 6',000,000 feet.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

There is a pronounced increase in the sash and door movement over the country, thus heralding the advent of a large fall trade at the principal manufacturing and distributing centers of the country. Not only are general trade conditions fairly favorable for this, but the industry itself is on a more substantial and encouraging foundation. The factories are running on a full basis of output and have an abundance of orders ahead. The jobbing element is busily occupied in figuring on estimates and is getting a large number of orders and inquiries for local shipments. Special work is in splendid demand and is keeping everybody busy, while stock sizes are moving actively. One of the leading Chicago distributers says that he has all the business he is able to handle and is looking for a further pressure of demand.

While the volume of business is of encouraging proportions many of the wise men of the trade say that they are expecting a considerable gain in business through this month and next. There is even considerable carload inquiry and small jobbers and retailers who have long held aloof from the bulk market seem to be now disposed to figure rather heavily on stocking up.

Good Trade in Shop Lumber.

One of the best features of the situation is the active demand and steady prices for shop and better lumber. While the production is large, it has not been more than sufficient for the current needs of the market and manufacturers are shipping to eastern points actively. Some contraction of east bound deliveries is seen, however, owing to more or less car shortage in various localities. In the main, however, the car shortage has not yet become acute at very many western points.

Reduced Crops a Factor.

The reduced wheat crop has not imparted as much of a blow to the western lumber trade as had been feared. There was no complete failure of crops in any locality and the farmers are getting splendid prices for whatever they have to sell. A considerable shortage in the potato and bean crops in Michigan has affected sash and door demand in that territory adversely. The political campaign is waxing hotter and this may serve to put a little check on business before election day, but so many things have happened to injure business in the past two and a half years that a hot presidential contest may be now regarded as a minor disturbance.

Active Building Operations.

If the sash and door market depended to any extent upon the volume of building operations, as indicated by the monthly report for August from 112 cities throughout the United States, the most active market in the history of the trade could be looked for. Unfortunately, however, even the most flattering of reports of building permits issued does not become effective unless actual operations on those permits are started. For instance, the total value of permits issued in 105 cities in July was $112,655,752, whereas in July, 1915, the total value in the same cities was $67,062,722, which shows an increase of 83 percent. A large part of this increase, it should be said, is due to the fact that the city authorities of New York recently revised their building regulations, which restricted the height of buildings after July 25. The New York permits in July included twenty-three tenements at a cost of nearly $12,000,000 eleven hotels at a cost of $10,000,000; office buildings at a cost of $7,581,000; stores and shops at a cost of $9,500,000, and ten factories with an estimated cost of $2,670,000. The August building report from 112 cities shows a total value of permits issued of $72,397,168, as compared with $71,449,039 in the same cities in August, 1915, an increase of only 1 percent. New York city showed the considerable falling off of 42 percent in August from the same month last year while Chicago showed a falling off of 39 percent, Cincinnati 56 percent, Milwaukee 38 percent and Rochester 28 percent, these being about all of the large cities that show any loss, practically all of the others, including Baltimore, Philadelphia, Washington, Cleveland, Pittsburgh, Detroit, Toledo, Indianapolis, St. Louis, Minneapolis, Portland and San Francisco showing decided gains.

Current Discounts Are Higher.

The market on doors and mill work has been holding steady for several months, but on September 1 there was a pronounced advance and there is a firmer sentiment now visible, with prospects for a still further advance. The ruling discounts on less than 100 openings, deliverable in Chicago territory, are as follows: No. 1 and No 2 doors, 69 percent; No. 3 doors, 64 percent; No. 4 and painted doors, 64 percent; glazed sash, 74 per cent; white pine mouldings, 55 percent. It is reported that glazed sash will be advanced to 73 percent October 1.

Northwestern Door Trade.

The midsummer lull is over as far northwestern sash and door trade is concerned. Reports from St. Paul and Minneapolis indicate that a great deal of figuring is going on and that country trade is beginning to pick up, now that the actual condition of the crop is known, as the high prices partially offset the small crop. There is a pronounced optimism visible among the manufacturers and distributers at the twin cities, and a good fall trade is confidently looked for. Building operations in Minneapolis, especially, are considerably heavier than a year ago, and the local outlook is excellent, with prices holding steady.

The Window Glass Market.

The market for window glass is active and the stocks are low and undoubtedly will be pretty well cleaned up by the time the factories start up in the late fall. It is believed that the higher wages paid the window glass factory employees will contribute to a renewed firmness in prices, and to this there is also added the higher cost of raw material. The current discounts are around 90 percent on single strength first three brackets and 87 on the other brackets, while double strength is quoted at 90 percent all brackets.

Lower Mississippi Conditions.

A report received from the Memphis Sash & Door Co., of Memphis, Tenn., indicates that the sash and door market in that section was never stronger than it is at the present time. J. A. McAlister, president of the company, says: "With the outlook for a magnificent volume this fall, it is the height of folly for distributers to shade their card prices in any instance, and it equally is absurd to load up on car business." He stated that in his opinion his company will have all the business it can take care of in local shipments this fall and will continue to prefer orders of that character.

Features of Eastern Trade.

Shall We Invite the "Shingle Weavers' Union" Into Partnership With Us and Thus Capitulate to Labor and Its Eight-Hour Day? If You Think So, Say So in a Letter to Us

On August 25 we printed in our news section a startling piece of information, covering the activities of Lester W. David, of Seattle, Wash., which, strange to say, has elicited to date but one written protest, a warning note from A. T. Gerrans, of New Berne, N. C. We reprint the article, wondering how long it will take to wake up the lumber world to the situation which would follow the successful launching of Mr. David's project. Here is the article:

INTERNATIONAL SHINGLE WEAVERS' UNION BEGIN NATIONAL ADVERTISING CAMPAIGN.

"Seattle, Wash., Aug. 19.—Plans of the International Shingle Weavers' Union to create a special market for the red cedar shingles of the Pacific northwest through the use of its special label have assumed definite form. The international officers of the union and the Lester W. David Lumber Co., of Seattle, have entered into a two-year contract under which a nation-wide campaign will be started to advertise and sell Washington shingles manufactured under union conditions. The David company agrees to become the selling agent of all mills that will agree to use the shingle weavers' label on their product and to conduct a systematic selling campaign, while the officers of the union agree to conduct an advertising campaign among the union carpenters of the country numbering almost a quarter of a million and among other members of organized labor. The signing of this contract is regarded by the officers of the union as epoch making in that never before has any extensive effort been made to build up the weavers' organization by appealing to the purchasing power of organized labor through the use of the union label. If the campaign proves as successful as it is expected to be, it is believed it will go a long way toward solving the problem of meeting the competition of British Columbia shingle mills now employing cheap Oriental labor and without the aid of a protectve tariff.

"J. G. Brown of Seattle, president of the international union, has been working on plans to meet this competition for years and at various national conventions of labor has urged the leaders in the building trades to discriminate between shingles produced by well paid American labor and coolie labor products of the Canadian mills. The stumbling block always encountered was that carpenters and others interested in the shingle weavers' case had no means of identifying the shingles made by union men, mill brands being little advertised or used and shingles made by Oriental labor selling for the same price as similar grades made by union workers.

"According to the agreement the union will withdraw the use of the union label from any manufacturer should it be shown upon inspection that shingles and other cedar products manufactured by them bearing the label are more than 3 percent below the grades as shown by brands thereon according to the grading rules now in effect or that may thereafter be adopted by the West Coast Lumbermen's Association. It is also agreed that no shingle manufacturer who shall agree to conform to the conditions set forth in the agreement shall be denied the use of the union label.

"The David company agrees to pay the full wholesale market price for the shingles, plus fifty percent of whatever premiums may be obtained as a result of the joint efforts of the company and the union."

WE DETERMINE TO SECURE SOME INFORMATION.

A few days ago, after waiting patiently for nearly three weeks for protests on this subject from our readers, we concluded to see if it would be possible to stir up a few presidents and secretaries of the leading lumber associations of the United States and for that purpose we addressed the following letter to these prominent officers and trust there will be some result that we may chronicle later:

"I have been hoping to have some expression from you in regard to an article which was printed in a prominent department in the August 25 issue of the LUMBER WORLD REVIEW, but as yet nothing has come to hand. I refer to the item entitled, 'INTERNATIONAL SHINGLE WEAVERS' UNION BEGIN NATIONAL ADVERTISING CAMPAIGN,' in which is set forth an arrangement which Lester W. David has made with the International Shingle Weavers' Union.

"It would seem to the writer that in this direction lies a great danger which threatens the whole trade-marking proposition. It is a recognition of the unions which may have some very unfortunate possibilities. The first thing we know we are liable to have union carpenters and builders striking about using trademarked shingles and lumber to retaliate for our 10 or 11-hour day.

"It hardly seems possible that the item which we printed so conspicuously could have failed to catch your attention, as we hoped it would. Are we wrong in believing that this is a matter which we should look carefully to?

"Attached is a copy of the item in question, in case you have not seen it.

"Please let me hear from you on the subject."

WORK OF THE FOREST PRODUCTS LABORATORY.

The Forest Products Laboratory, at Madison, Wis., is continuing its studies of the lumber industry and its tests of woods and various wood preservatives, and the amount of work it does is really phenomenal. Its activities in July, 1916, or, in fact, of any other month, are too voluminous for detailed mention here, but an idea of what it is doing may be derived from its monthly report for July, of which a brief summary is given.

C. H. Teesdale visited St. Paul, Minn., at the request of the Association of Commerce there, to advise on changes in the city's specifications for wood paving blocks.

Arthur Koehler delivered an address before the World's Salesmanship Congress at Detroit on "The Value of Technical Knowledge in the Sale of Lumber."

A number of articles on various live subjects relative to the lumber trade were printed, among them being a series of papers on "Circulation in Dry Kilns," by Harry D. Tiemann, and appearing in the LUMBER WORLD REVIEW.

A specimen of wood was submitted to the laboratory, which, on test, showed that eucalyptus had been sought to be used as a substitute for lignum vitae.

Five sugar pine logs were received from San Francisco for experiments on prevention of brown stain. The logs were sawed into 2-inch and 2½-inch lumber, and are being treated in the laboratory kilns with the purpose of eliminating the defect.

Kiln drying of green red gum inch lumber was completed, and proved a success. No loss was shown from checking, and only a very small loss from warping.

Sixty-one tests were made upon structural timbers taken from a so-called mill-constructed building in Chicago. Rot was caused by placing green timbers and cutting off ventilation from them. It is found by test that many timbers were of poor quality, and would scarcely have sustained the maximum loads they were supposed to carry, 1,300 pounds per square inch. Most of these timbers were found to be loblolly.

The effectiveness of sodium fluoride for preventing sap stain is being investigated at a sawmill plant in nortern Wisconsin under the supervision of the Forest Products Laboratory.

Experiments on the treatment of some mountain Douglas fir ties, which had been seasoning in the laboratory yard for four and a half years, were completed. These ties proved resistant to treatment, no way being found to get a satisfatory penetration with creosote. However, a partial success was derived in perforating the heart faces and giving the ties a long-time high pressure treatment with zinc chloride, by which a uniform penetration of the liquid of about one inch was secured.

Many tests are under way regarding cedar shingles cut from dead and live timber.

"YOU CAN'T BEAT WOOD."

A gentleman in a small town in Ohio has written to the trade extension department of the National Lumber Manufacturers' Association that he has just built a large colonial house, with wide siding and green shutters, on a street where every other house is brick. He says: "People stop and look at my place, and give the others scarcely a second look. For beauty, comfort and 'homey' look you can't beat wood."

THE CHIEF BUILDING WOODS.

Hoard's Dairyman recently sent out a letter to 1,952 of its subscribers, selected indiscriminately, and distributed equally in the eight leading dairy states, asking this question: "What are the principal kinds of lumber used in your building operations?" There were 1,528 repies received, and twenty-six kinds of lumber were named, the relative use of which was as follows:

Pine	1,255	Basswood	21
Hemlock	562	Ash	16
Oak	411	Poplar	16
Yellow pine	211	Tamarack	14
White pine	161	Walnut	9
Maple	63	White oak	8
Elm	49	Hickory	5
Beech	48	Red Oak	3
Spruce	42	Cottonwood	3
Natural	37	Gumwood	3
Cypress	33	Birch	2
Cedar	31	Butternut	2
Fir	29		

WEST COAST WATER SHIPMENTS.

Seattle, Wash., Sept. 17.—The cargo mills of Washington and Oregon shipped in August to foreign countries, including Hawaii and Alaska, 21,915,760 feet. The shipments to Hawaii were 5,673,896 feet, and to Alaska 2,855,391 feet. Next to Hawaii was Australia, which took 4,668,002 feet. Normal shipments for August in the years immediately preceding the European war averaged about 6[illegible],000,000 feet.

General News of Associations and Clubs

REDWOOD'S TEST BY FIRE.

San Francisco, Cal., Sept. 20.—The California Redwood Association has issued its first piece of permanent literature that is to be used in the educational campaign to promote an increased sale of redwood. This is captioned "The Test By Fire" and presents the slow burning or fire resisting quality of redwood.

This folder is tastefully gotten up, with a colored cover showing redwood logs burning in the "slash." In preparing this literature, Edwin E. Myers, the secretary-manager, has seized upon the custom of the redwood loggers in burning off their "slash" before moving the logs, as an evidence of the fire resisting quality of redwood. It is not generally known, even among lumbermen, that this practice is applied in logging redwood. The redwood logs are extremely heavy, butt cuts ranging in weight from 30 to 50 tons, for a 16-foot log, according to the diameter of the tree. Redwood logs are allowed to lay in the woods after felling, from 6 to 8 months, during which period the bark, tops and undergrowth thoroughly dries for the "firing." These "slash" fires burn from 8 to 10 hours, and the immense redwood logs go through this baptism of fire with only a surface char.

The little folder, of which hundreds of thousands of copies will be distributed, contains 8 pages, and photographic evidence of redwood's fire resistance. Note its slow burning quality and the ease with which redwood buildings ved when afire.

The first distribut' 'tle fire resisting folders was made at the California State Fair, at Sacramento, during the week of September 2 to 9. On the opening day of this fair, which is the biggest institution of its kind in California, the immense exhibition hall which had been built of wood, but not redwood, was destroyed by fire. This made the fire ruins a particularly interesting scene for the rural visitor and while he had fire on his mind, the little folder was placed in his hands to burn indelibly into his memory the fact that redwood is a fire insurance as well as a service.

The fire folder is designed as an envelope enclosure and reveals the intention of the California Redwood Association to side-step long-winded and flowery booklets and present the arguments in favor of redwood in brief pamphlets, with a "punch" and fortified with excellent pictorial arguments. A similar folder, in color, will be issued in the near future on the rot resisting feature of redwood.

There is now in preparation for general distribution, books on the use of redwood in general, and the use of redwood on the farm. These little volumes will, like the fire folders, be brief, and strikingly convincing presentations of the reasons why redwood is particularly serviceable, adaptable and preferable for the uses outlined will be given.

SOUTHERN PINE TRADE BAROMETER.

The weekly barometer of the Southern Pine Association, issued September 18, gave the figures for the week ended Friday, September 15, from 164 mills, as follows:

	Cars.	Feet.
Orders on hand	23,608	477,424,584
Orders received during week	5,430	109,810,890
Total	29,038	587,235,474
Shipments during week	4,916	99,416,268
Balance orders on hand	24,122	487,819,206

This showed that the production was less than the shipments during the week by 7,694,939 feet, or 8.39 percent; that the production was less than the orders received during the week by 18,089,561 feet, or 19.72 percent; and that the shipments were less than the orders by 10,394,622 feet, or 10.46 percent. The increase in orders compared with the report of the week ended September 8 was 10,394,622 feet, or 2.19 percent.

The reports for the months of July, August and September up to and including that for September 15, are as follows:

Week Ended	Mills Reporting	Average Orders Feet	Average Shipm't Feet	Total Unfilled Cars
July 7	147	401,980	383,801	16,444
July 14	147	539,383	531,275	16,379
July 21	150	697,933	504,758	18,180
July 28	158	894,095	617,704	20,590
Aug. 4	154	687,671	638,443	30,552
Aug. 11	165	703,996	643,840	23,020
Aug. 18	162	704,955	641,079	22,674
Aug. 25	164	669,024	659,150	23,487
Sept. 1	152	625,570	610,499	19,962
Sept. 8	157	538,353	565,145	23,284
Sept. 15	164	669,579	606,197	24,122

CONVENTION DATES.

October 18-19—Appalachian Logging Congress, Atkin Hotel, Knoxville, Tenn. Fall meeting.
October 24-25—Western Forestry & Conservation Association, Portland, Ore. Annual forestry industrial conference.
October 25-26 27—Southern Logging Congress, New Orleans, La. Annual meeting.
October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.
October 26—North Carolina Pine Association, Charleston, S. C. Monthly meeting.
November 11—Southern California Retail Lumber Dealers' Association, Los Angeles, Cal. Annual meeting.
January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

NEW INSPECTION RULES COMMITTEE.

President John M. Woods, of the National Hardwood Lumber Association, has announced the personnel of the new inspection rules committee of that organization. The selection of this committee has been made a matter of particular care by President Woods, and it is seen by the names of its members that it is a most capable committee. In the opinion of many lumbermen, President Woods has made a splendid stroke of policy in naming the members of this committee, as it is a truly representative group of experienced and prominent lumbermen. The names follow:

J. W. McClure, Memphis, Tenn., chairman; Geo. H. Chapman, Stanley, Wis.; W. L. Saunders, Cadillac, Mich.; J. L. Benas, St. Louis, Mo.; M. G. Truman, Chicago, Ill.; M. J. Fox, Iron Mountain, Mich.; E. B. Ford, Louisville, Ky.; D. H. Day, Glen Haven, Mich.; F. R. Gadd, Chicago, Ill.; T. B. Coppock, Fort Wayne, Ind.; Otis A. Felger, Grand Rapids, Mich.; J. B. Ferguson, Baton Rouge, La.; A. E. Clark, Toronto, Canada; H. C. Fowler, Macon, Ga., and W. H. Lear, Philadelphia, Pa.

CHARTS ILLUSTRATING SOUTHERN PINE DENSITY RULES.

New Orleans, La., Sept. 20.—On request of a number of subscribers the Southern Pine Association has prepared copies of a large chart, illustrating the density rule made by the association for permanent exhibition, in such places as the permanent building exposition at Chicago, the National museum at Washington, and the headquarters of various engineers' and architects' associations, which the Southern Pine Association is selling at $25 each.

These charts show samples illustrating the proportion of summer and spring wood, or light and dark rings, on which the density rule is based, various knots and defects and sample beams. The charts are 4 x 6 feet, mounted on an easel, and handsomely lettered.

WEST COAST ORDER FILE.

The last weekly report of order file and shipments received from the West Coast Lumbermen's Association was published September 12 and gave the figures from 117 mills in the rail trade for the week ended September 9 as follows:

	Cars.
Unfilled orders week ended Sept. 2	6,690
Orders accepted week ending Sept. 9	1,688
Total	8,378
Orders shipped week ending Sept. 9	1,591
Balance of unshipped orders	6,787

Rail orders exceed rail shipments.....2,425,000 feet, or 5.75 percent

For the cargo trade the following figures were compiled:

	Domestic, Feet.	Export, Feet.
Unshipped orders September 2	45,806,720	57,808,339
Orders accepted September 9	3,682,567	9,458,260
Totals	49,489,287	67,266,599
Shipments week ended Sept. 9	6,516,566	4,906,390
Balance unshipped orders	42,972,721	62,360,209

Cargo orders exceed cargo shipments, 1,717,871, or 13.07 per cent.

ANNOUNCEMENT OF FIFTH ANNUAL LOGGERS' WELFARE DINNER.

"Human betterment in the lumber industry" will be discussed by delegates to the Pacific Logging Congress and Western Forestry Conservation meeting at the fifth annual Loggers' Welfare Dinner at the Portland Hotel, October 26.

The Welfare dinner program will be in two divisions: One subject being that of first aid work which is being done in the mills and camps on the Pacific coast and in the Inland Empire by the American Red Cross Society in co-operation with the West Coast Lumbermen's Association and the Western Pine Manufacturers' Association.

The second feature will be that of recreation clubs, loggers' Y. M. C. A.'s and all forms of camp comfort for the men. There will be exhibits showing pictures of improved camp equipment, new club buildings, etc., and reports will be received from employers who are using these improved features.

HOO-HOO HOLD TWENTY-FIFTH ANNUAL

Memphians Accord Members of Order Royal Reception—Julius Seidel, of St. Louis, Given Unprecedented Honor in Re-Election as Snark—Order Now on Solid Business Basis

Memphis, Tenn., Sept. 15.—One of the crises which organizations of every description must pass through at some time in their history has been safetly negotiated by the Concatenated Order of Hoo-Hoo, which held its twenty-fifth annual session at the Hotel Chisca, in the city, last Saturday, Monday and Tuesday.

One of the most advanced forward steps was taken by the order last year, when Julius Seidel, the eminent lumberman, of St. Louis, a man of remarkable business ability and indefatigable energy, was prevailed upon to accept the highest office in the gift of the order. So satisfactory has this arrangement proved that the order took on new life during his incumbency, and gained such strength, in both numbers and financially, that Mr. Seidel was again unanimously chosen at this session to round out the work which he had so ably started.

Something of the same sentiment was observed in the case of Emerson D. Tennant, the secretary-treasurer, who served well and faithfully, and was again called upon to look after the welfare of the order in a detailed way. That the members of Hoo-Hoo can command the services of two such capable men is of itself a guarantee of the future. The honor accorded to Mr. Seidel was in response to the general demand of the members of the order wherever located, and breaks the time-honored custom of giving the Snark of the Universe but one term. Circumstances, however, seemed to require this innovation, and it has been everywhere hailed with great satisfaction.

THE FIRST DAY'S SESSION.

The calling of the twenty-fifth annual session to order was made at the constitutional time of 9 minutes past 9 on the ninth day of the ninth month. There was a good attendance of the members of the order from various sections of the country, and the Memphis contingent was well represented by lumbermen and their wives when Snark Seidel rapped for order. He called upon Rev. William Crowe, of the Idlewild Presbyterian Church, Memphis, for an invocation. An address of welcome was made by Leo Goodman, a member of the city commission, who represented the mayor of Memphis. A further address of welcome was made by President R. L. Jordan, of the Memphis Business Men's Club, who extended the privilege of the club rooms to the members of the order. Arthur C. Ramsey, of Nashville, Ark., responded to Mr. Jordan's welcome in the absence of Harry J. Miller, of Seattle, Wash., who was on the program, and who did not arrive until a later train.

A third address of welcome was made by S. M. Nickey, president of the Memphis Lumbermen's Club, and this was responded to by J. F. Wilder, of Hattiesburg, Miss.

THE SNARK'S ANNUAL ADDRESS.

In his annual address Snark Seidel covered fully the activities of the order during the year. He reviewed the history of Hoo-Hoo and said that its active influence was needed in the lumber trade as much today as ever before. In his opinion there was a lack of co-operation, and he believed that the lumber trade would be made stronger commercially by being stronger fraternally. Representation of the different branches of the lumber trade is found only in Hoo-Hoo, which is the ideal association for lumbermen. When he took hold of the order his idea was to restore the confidence of members in the organization. He found that the by-laws and the ritual were up-to-date and needed no revision. A determined effort had been made to interest former prominent members of the order in its work, and by personal appeal wonderful results had been obtained. During the year the order has been run without incurring any debts, and has been self-sustaining. In his opinion the forced expansion of the membership of Hoo-Hoo had been a detriment, and it was more desirable to have a smaller number of members, who are aggressive and imbued with a purpose, than to have an organization of large numbers without any aim.

The past year had been devoted to constructive work and with an eye to the future of the order. Approximately 4,000 fully paid up members are now on the books, and there is no question about their loyalty. More attention had been paid to the reinstatement of old members than to the securing of new members, but there have been some considerable additions to the order of men of standing. In his opinion, the possibilities of the order are immense.

The Snark recommended that the membership of the order be limited to 9,999, and that a waiting list be maintained. He recommended also that the Cloister degree be given to every member. He spoke of the insurance feature, which he regarded as a great forward movement, and approved the idea that the dues for the year be paid before October 9, in order that members preserve the insurance feature.

Snark Seidel referred to the many prominent members of the order who had died during the year, noting especially William Eddy Barns and George K. Smith, of St. Louis; Charles D. Rourke, of Urbana, Ill.; Cecil A. Lyon, of Texas; Leonard Bronson, of Chicago; Arthur L. Holmes, of Detroit; Colin McLean, of Philadelphia, and George A. Murray, a past member of the Supreme Nine.

JULIUS SEIDEL, OF ST. LOUIS, MO.,
Re-elected Snark of the Universe.

He recommended that there should be one general meeting of the Supreme Nine called for the ensuing year, for the purpose of outlining the policies of the order, and that their traveling expenses be paid. He recommended that relief be given to the Snark and secretary-treasurer, as the work imposed upon them now is too great to be easily shouldered. In conclusion, he paid a high tribute to the unselfish labor of Secretary-Treasurer Tennant, not only during the past year, but during his occupation of the office of Snark in a most trying period.

SECRETARY-TREASURER TENNANT'S REPORT.

Secretary Tennant presented the financial statement, which had been properly audited, and showed a cash balance on hand of $1,229.49.

Regarding the work of the past year Secretary-Treasurer Tennant stated that there were about 4,000 members, comprising some of the best men in the order, who are giving to Hoo-Hoo active support, but he believed that there should be reinstated at least 2,000 more of the old members during the coming year, and by doing this the outstanding liabilities of the order could be taken care of. He said: "While it is true we have initiated over 29,000 members during the last twenty-five years, I found, by making an exhaustive examination into our old records, that about half of these were only one year men. They joined the order as a result of strong solicitation at conventions or gatherings where a concatenation was being held. They never realized what Hoo-Hoo stood for, and never tried to find out. Hundreds of them were not interested in the lumber business, and, therefore, speedily dropped out of the order. The principal reason why such a large number of disinterested members got into the order only to drop out again was the result of a campaign that was carried on for a number of years to get members. It was simply another case of too much output without any regard for quality or consequences."

Secretary Tennant approved of the proposition to limit the membership to 9,999, and have a waiting list. It had been suggested to him that if the membership limit is reduced, the shape of the button be changed, so that a member in good standing under the new arrangement would know when meeting a member wearing a new button that he was one who had a right to wear it. Owing to the laxity in the past, hundreds of Hoo-Hoo buttons are in the possession of men not entitled to wear them and who make use of the button to advance their own interests or impose on members. This has caused scores of the most loyal members to refrain from wearing their buttons.

Regarding the proposition to have all of the members of the order join the Cloister, Secretary Tennant suggested that every member of the order who has been in good standing for a period of two years should be allowed to take the Cloister degree; that the Cloister dues would be abolished, but the initiation fee of $10 or whatever amount might be agreed upon, should be maintained; that the high priests of the Cloister be elected one from each jurisdiction, but that the Cloister as a separate organization be done away with.

The arrangement made by the order with the Missouri State Life Insurance Co. to carry $100 on the life of each member, the premium for which would be paid out of the annual dues of $3.65, was gone into in detail.

In view of the fact that the members who are sixty-five years of age or over do not get the benefit of the insurance, Secretary Tennant recommended that their dues be reduced to $2.40 a year. Other features of the insurance plan were fully explained.

Another benefit secured for the order by Secretary Tennant was the reduction in hotel rates of 10 percent, made by a number of leading hotels throughout the country. The discount of 10 percent can be obtained from these hotels on presentation of the current year's membership card.

In conclusion, the secretary thanked Snark Seidel and other members of the Supreme Nine and loyal members of the order throughout the country for their support in the work, and he asked that the best efforts of the members be put forth to aid in the upbuilding of the order during the coming year. In his opinion, it could be made the most powerful instrument for good of any organization in the lumber industry.

The report showed that there have been thirty-nine concatenations held during the past year, at which there were admitted 338 members, which gave to the order a revenue of $4,666.58. The total of members who have paid their 1916 dues was 3,900, and there were 2,739 members who paid their 1915 dues.

MONDAY'S SESSION.

The first order of business at the opening of the session on Monday morning was the report of the committee on the good of the order by J. F. Wilder, of Hattiesburg, Miss., chairman. This report follows:

We, your committee on good of the order, beg leave to submit the following recommendations:

First: In view of the great service rendered the order during the past year, at the most critical time in its history, by our worthy Snark, Julius Seidel, who threw his grand personality into the work of Hoo-Hoo, and devoted so much of his energy and ability to its rehabilitation, be it, therefore, recommended that we extend to him our sincere thanks and recommend that he be unanimously selected as Snark for the ensuing year.

Second: We extend to Emerson D. Tennant, secretary and treasurer, our sincere thanks for the efficient and capable manner in which he has ad-

Digitized by Google

ministered the affairs of his office for the past year, enabling our order to live within its income.

Third: We recommend that Article XI of the by-laws be amended to limit the active membership to 9,999, instead of 33,999, as at present.

Fourth: We further recommend that no change in the system of numbering the membership be made at this time.

Fifth: We recommend that delinquent members be given time during the year 1917 to be reinstated for five dollars. After the year 1917, delinquent members desiring to be reinstated to be charged the regular initiation fee.

Sixth: We recommend that the priests of the Cloister assist the Snark in establishing vicegerencies.

Seventh: We recommend that the Snark select a committee of five or more in each jurisdiction to choose from their number a Vicegerent Snark; this committee also to select the official nine for their jurisdiction.

Eighth: (a) We recommend that the committees in each jurisdiction arrange for at least four get-together meetings in each year. (b) We also encourage the assistance of an auxiliary ladies' committee for the further promotion of Hoo-Hoo.

Ninth: After carefully considering all plans submitted for the liquidation of the old indebtedness against the order, we recommend the one best fitted to our present development to be the inauguration of a campaign to secure the reinstatement of desirable delinquent members and the initiation of new members.

Tenth: We recommend that dues of members not eligible to insurance be reduced to $2.40 per year.

Eleventh: We recommend that hereafter the Supreme Nine meet the morning of September 8, and that the Osirian Cloister meet the afternoon of September 8.

The report was warmly received by the members and was unanimously adopted.

S. C. Judd, of St. Louis, expressed his opinion that the reinstatement of the members whose membership had lapsed owing to nonpayment of dues was a very important thing, and he urged upon the members to each secure at least one reinstatement during the coming Hoo-Hoo year.

SELECTION OF PLACE OF MEETING.

The order of business announced by Snark Seidel was the selection of a place of meeting of the next annual.

A. A. Zimmer extended an invitation to the members to meet in 1917 in New York city.

George W. Funck, president of the St. Louis Lumbermen's Exchange, extended an invitation to meet at St. Louis. Telegrams and letters from various business organizations and individuals were read inviting Hoo-Hoo to hold the 1917 annual at Chicago, Columbus, Portland, Ore., San Francisco and Grand Rapids, Mich.

C. J. Kammer, of Astoria, N. Y., read a large number of telegrams from various business organizations of New York, urging that his city be made the next meeting place. He pledged a fund of from $6,000 to $10,000 for entertainment.

G. R. Elbert, also of New York, said that the eastern members of the order were entitled to the next annual meeting, and believed that Hoo-Hoo would be greatly strengthened in that section if it were held in New York. He stated that the best suites in the Hotel McAlpin had been offered by the hotel management for the accommodation of the Snark of the Universe and secretary-treasurer without cost to the organization.

R. A. McLaughlan of New Orleans, stated that he had intended to invite the organization to come to his city next year, but in view of the strong desire shown by the New Yorkers he would waive his desire, and would be in favor of New York. He suggested, however, that for the 1918 annual St. Louis be chosen, as that is the home of the Snark and headquarters of the order.

Upon a vote being taken the members decided almost unanimously in favor of New York for 1917. The Hotel McAlpin was unanimously voted as Hoo-Hoo headquarters.

Dr. Stanley L. Krebs, of Philadelphia, delivered a lecture, having for his subject "The Composite and the Secret of Law and Loyalty, Co-operation and Solidarity in an Organization of Trade Members." Dr. Krebs delivered one of the most forceful speeches that the members had ever heard, and at its conclusion he was given the Hoo-Hoo yell.

Harry J. Miller, the poet laureate of the Hoo-Hoo order and a former Snark, addressed the meeting and gave a characteristic talk.

COMMITTEE ON RESOLUTIONS.

The report of the committee on resolutions was presented by Chairman L. E. Glass, of Memphis. The report recited the deaths of prominent Hoo-Hoo during the year, and expressed the sorrow of the members at their loss, and extended sympathy to the families of the deceased brethren.

Thanks were also extended to the lumbermen and Hoo-Hoo of Memphis and to the Lumbermen's Club, the Business Men's Club, the management of the Hotel Chisca, the management of the Memphis Hotel Co. and the various social clubs throughout the city for courtesies extended. J. D. Allen, jr., and the committee of local lumbermen were especially named. Thanks were also extended to the committee on entertainment and the Memphis ladies who contributed to the enjoyment of the visiting ladies.

To the E. C. Atkins Co. for the handsome official badges; to Dr. Stanley L. Krebs for his entertaining address; to the daily press of Memphis for the publicity given to this meeting, and also to Julius Seidel, the Snark of the Universe, and Secretary-treasurer E. D. Tennant for their efforts in behalf of Hoo-Hoo during the past year.

EMERSON D. TENNANT, OF ST. LOUIS, Re-elected as Secretary-Treasurer.

ELECTION OF OFFICERS.

A. A. Zimmer, of New York, chairman of the nominating committee, reported on behalf of his committee on the Supreme Nine for the ensuing year:

Snark of the Universe, Julius Seidel, St. Louis.
Senior Hoo-Hoo, W. P. Lockwood, Seattle, Wash.
Junior Hoo-Hoo, Charles J. Kammer, New York.
Bojum, Stacy C. Bennett, Chicago.
Scrivenoter, W. Frazier Jones, Jacksonville, Fla.
Jabberwock, Harry T. Kendall, Houston, Tex.
Custocatian, J. G. Robson, Canada.
Arcanoper, J. F. Gresley, Omaha, Neb.
Gurdon, Robert McArthur, San Francisco, Cal.

The report of the nominating committee was received with lively expressions of enthusiasm, and resulted in Snark Seidel being called upon to respond, which he did in a few sincerely spoken words of acknowledgement.

Max Sondheimer moved that the nominations be closed and the secretary be instructed to cast one ballot for the report of the committee. Snark Seidel requested, however, that Mr. Sondheimer be appointed for that duty, and it was so arranged, and Mr. Sondheimer cast the unanimous ballot of the convention.

Secretary-Treasurer Tennant pledged his best efforts to promote the interests of Hoo-Hoo as in the past.

PRESENTATION OF THE SNARK'S RING.

Harry J. Miller, of Seattle, Wash., was called upon to present the Snark's ring, and said: "We owe to two men the existence of Hoo-Hoo today. In re-electing Mr. Seidel we have conferred upon him the highest honor within the power of Hoo-Hoo to bestow. No other man ever served twice in that exalted office; no other man ever will be so honored. We present this ring in the knowledge and in recognition of good work well done."

TUESDAY'S SESSION.

Dr. Stanley L. Krebs delivered his second lecture on Tuesday morning, his subject being "The Secret and Pull of Suggestion in Lumber Advertising Salesmanship and Business Building." Dr. Krebs' lecture was received just as enthusiastically as his talk on the preceding day, and at its close he was given a rising vote of thanks.

THE OSIRIAN CLOISTER.

The meeting of the Osirian Cloister was held Tuesday afternoon, at which the following members served in the various positions:

High Priest of Osiris, E. D. Tennant, St. Louis
High Priest of Ptah, H. B. Darlington, Chicago
High Priest of Ra, J. B. Wall, Buffalo.
High Priest of Isis, R. Hendrickson, San Francisco.
High Priest of Shu, J. B. McNalty, Hammond, La.
High Priest of Thoth, W. A. Priddie, Beaumont, Tex.
High Priest of Hathor, Homer P. Allen, Kansas City.
High Priest of Sed, W. B. Huston, Omaha.
High Priest of Anubis, Frank H. Mitchell, Winnipeg.

Those who were made members of the Cloister were the following:

Julius Seidel, St. Louis; Stephen J. Gavin, St. Louis; M. M. Elledge, Corinth, Miss.; S. C. Bennett, Chicago, and Charles J. Kammer, New York city.

This was the first opportunity afforded Snark Seidel to become a member of the cloister since he had held his present office.

THE ANNUAL CONCATENATION.

The annual concatenation, which was held in the banquet room of the Hotel Chisca Saturday evening, was attended by 154 members of the order, and was a most enjoyable gathering. Those who served in the various positions were as follows:

Snark, Julius Seidel, St. Louis.
Senior Hoo-Hoo, H. B. Weiss, Memphis.
Junior Hoo-Hoo, Max Sondheimer, Memphis.
Bojum, S. C. Bennett, Chicago.
Scrivenoter, P. A. Gates, Memphis.
Jabberwock, Charles J. Kammer, New York city.
Custocatian, L. D. May, Jacksonville.
Arcanoper, M. M. Elledge, Corinth, Miss.
Gurdon, J. F. Wilder, New Orleans.

The following candidates were intiated into the order:

Edward M. Wigard, Memphis, Tenn.; Earle Thomas Carothers, Memphis, Tenn.; John Joseph Niemann, Memphis, Tenn.; Gilman Stanley Lovell, Beloit, Wis.; James Ferguson McSweyn, Memphis, Tenn., and John Thomas Hellums, Belmont, Miss.

Following the concatenation the session on the roof was held and a splendid menu was served.

THE ENTERTAINMENT FEATURES.

The lumbermen and Hoo-Hoo of Memphis gave to both the visiting members and their ladies a much enjoyed program of entertainment. On Saturday afternoon the members and their ladies boarded special cars for a visit to Overton Park and the Memphis Zoological Gardens, which are said to be the second largest in the United States. On Saturday evening a theater party was given the ladies and this was followed by a luncheon. On Sunday afternoon the members and their ladies were the guests of the Memphis lumbermen on an automobile tour of the park system and the principal residence streets of the city. On Tuesday the ladies were taken to the Memphis Country Club where luncheon was served. They were accompanied by Harry J. Miller, who was delegated to escort them.

HOW TO FILE A HAND SAW.

Many readers of the LUMBER WORLD REVIEW are interested in manual training schools. To meet a demand for information on the care of the saws that are largely used in these schools the Simonds Manufacturing Co., of Fitchburg, Mass., has prepared a sixteen-page booklet on "How to File a Hand Saw." The subjects covered in the book are handled under five general subheads that are suitable for class room work. Copies of the book may be obtained by addressing the company at Fitchburg, Mass.

Meeting of Southern Pine Directors at Chicago

The following were present at a meeting of officers and directors of the Southern Pine Association, held at Chicago, Thursday, September 7, 1916, at the Congress hotel: Officers—P. S. Gardiner, vice-president, Laurel, Miss.; John H. Kirby, vice-president, Houston, Tex.; J. E. Rhodes, secretary-manager, New Orleans, La. Directors—W. T. Murray, Fordyce, Ark.; F. W. Stevens, Bagdad, Fla.; J. R. McLane, Noma, Fla.; G. A. Townsend, representing W. H. Sullivan, Bogalusa, La.; R. M. Hallowell, Elizabeth, La.; S. E. Moreton, Bude, Miss.; John H. Lucas, Kansas City, Mo.; E. A. Frost, Shreveport, La.; J. E. Crawford, Lake Charles, La.; D. V. Dierks, Kansas City, Mo.; L. D. Gilbert, representing T. L. L. Temple, Texarkana, Ark.

The following were also present: F. G. Wisner, Eastman, Gardiner & Co., Laurel, Miss.; A. G. T. Moore, assistant secretary, New Orleans, La.; W. J. Drewry, European representative, New Orleans, La.; W. J. Ferry, advertising manager, Kansas City, Mo.

Matters of importance to the industry were considered, among which were the following:

Income tax legislation—Vice-President Gardiner explained the work done by R. H. Downman, president of the National Lumber Manufacturers' Association, and F. G. Wisner, of Laurel, Miss., representing the Southern Pine Association, in presenting the interests of the timber owners of the United States to the members of congress in connection with proposed amendments to the federal income tax law. They showed the committees of congress that injustices might have been done to the owners of timber because of their ignorance of conditions in the lumber industry.

Thanks and appreciation of the Southern Pine Association were extended to Messrs. Downman and Wisner for their efforts.

Report of the Reclassification Committee—Chairman H. H. Snell made a report of the work of his committee in connection with the reclassification case, in which he said that careful attention had been given to the matter by the committee, its attorney, as well as by Assistant Secretary Moore. The evidence which was given at the Auditorium hotel at the hearing presided over by Chairman Meyer of the Interstate Commerce Commission, was perhaps the most harmonious hearing ever conducted by lumbermen before the commission. The contention of the Southern Pine Association was upheld by all parties to the hearing, including the traffic associations. Members of the association outside of the committee lent valuable assistance, particularly Charles S. Keith, Kansas City; R. M. Hallowell, Elizabeth, La.; John H. Kirby and C. B. Meyer, Houston, Tex., and M. B. Nelson, Kansas City. Special mention is made of the statistical information compiled and furnished by Assistant Secretary Moore.

The committee states that only through the effective organization of the Southern Pine Association could the interests of yellow pine manufacturers have been so well protected. The opinion of all parties connected with the hearing was that the decision of the commission would not be adverse to the interests of southern pine. A complete copy of the evidence and cross-examinations is on file at the office of the secretary. The committee felt that with the conclusion of the hearing its duties were completed and asked to be discharged. The Southern Pine Association extended its thanks to the reclassification committee and granted its request for discharge from further duty.

The School of Salesmanship—A report on the "School of Salesmanship" held at St. Louis, was presented by Harry T. Kendall, chairman of the committee on sales and distribution. He stated that the appropriation of $3,000 made by the board of directors had not all been expended, the total net expenses having been $1,953.10.

The committee believes that valuable results were arrived at through the School of Salesmanship, among them being a large amount of publicity throughout the lumber trade and the business world; the laying before the salesmen of the work of the Southern Pine Association and showing the value of all association work; the impressing upon salesmen the necessity of co-operating with the association so as to fully capitalize the investment made by their employers; the creating of a place for the salesmen in association work and the impressing upon the subscribers the necessity of securing the assistance of the salesmen in further association plans.

The committee recommended that a similar meeting be held next spring, to continue the work already started; that the committee proceed with the territorial work among salesmen in accordance with the general plan outlined, involving closer co-operation of the salesmen with the work of the association; the discussion of local conditions in each territory; the promotion of the use of southern pine and lumber generally; the employment of a field secretary, if necessary, to take charge of the detail work.

The committee also recommended that a meeting be called at an early date of the chairmen of the various salesmen's committees and the committee on sales and distribution, and outline the work so that it may be uniform in all its branches.

This report of the committee on sales and distribution was accepted and its recommendations were approved.

Sub-committee on Branding—The report of the special committee on branding was presented by the vice-president, P. S. Gardiner, on behalf of Chairman Charles W. Green. The committee asked further time in which to prepare its recommendations, which was granted.

European Representative—W. J. Drewry, European representative of the association, made a report on his work, in which he stated that he arrived at Liverpool March 27, and called upon a number of firms and secured their co-operation. Mr. Drewry went to Paris April 27 and found that the opening of the "Exposition of a Reconstructed City" had been postponed from May 25 to June 1, and it was later postponed to June 15.

Mr. Drewry said that he found that wood paving in Paris was not properly done, as the wood used, called "pin des landes," is very open grain, and splits almost as soon as laid; that the treatment given is not uniform; that the cement base is not thick enough and of poor quality, and that the filler used is far too thin. He found that owing to the disgraceful condition of the streets there was a popular demand that wood paving be done away with altogether; however, the council of Paris, after investigation, concluded that the fault was not in the wood paving, but in the character of the material used and the way it was laid.

Mr. Drewry stated that he ascertained that after the war the laborers used on reconstruction work would be housed in wooden barracks, which would call for a large amount of wood material. He interviewed engineers of different railways, and learned that if the yellow pine sleepers lately sent over there stand the official test they will be specified in the future for all the railways in France, as well as Belgium.

On his visit to Italy, Mr. Drewry ascertained that the Italian government had taken over all of the timber in the country, and after the war the demand for wood for all purposes would be enormous. He stated that the Southern Pine Association would be able to arrange for creosoted wood blocks to be laid immediately in front of the Royal Palace at Madrid, Spain. This, if satisfactory, will mean the use of yellow pine paving blocks wherever wood paving can be used in Spain.

He stated that it is the intention of the French government after the war to build a railway across Morocco, linking the Mediterranean with the Atlantic, which will call for millions of ties and a large quantity of lumber for laborers' dwellings.

As for competition, in Mr. Drewry's opinion, during the next three or five years all the competition to be found will be from Norway and Sweden. Swedish timber is already largely cut out, and the Norwegians have not the facilities for getting out more than a small percentage of the wood required.

As for Russia, there are immense timber resources in that country, but it will be from three to five years after the war before Russia will be in any position to compete. In Mr. Drewry's opinion, the question of freight will be the greatest problem. The different governments will supply their own bottoms, but there will be a vast amount of lumber required by men having contracts with the several governments. Shipbuilding is going on at an unprecedented rate, and the foreign governments are daily releasing more ships taken over for war purposes. However, in his opinion, this matter should be given immediate consideration.

On Transit Cars—The position of the Southern Pine Association regarding transit cars, as ascertained by Secretary-Manager Rhodes and Assistant Secretary Moore, was that the members of the association almost unanimously recorded themselves against the privilege of diverting unsold cars in transit.

Mr. Kirby moved, and the motion prevailed, that the Southern Pine Association go on record as approving a charge of not less than $5 for each reconsignment of cars in transit.

Increase in Subscription Fees—Secretary-Manager Rhodes reported that nearly 92 percent of the subscribers to the Southern Pine Association had signed the supplement subscription contract, providing for an increase in subscription fees. This meant 154 subscribers having a production of 433,273,600 feet. Eleven subscribers were either opposed to the increase or did not advise.

Mr. Frost moved that in view of the fact that subscribers representing more than 90 percent of the total production of the association had assented to the increased assessment, the same be declared effective from August 1, 1916. The motion was carried.

The next meeting of the board of directors will be held in New Orleans, Tuesday, October 10.

UNIFORM SPECIFICATIONS DISCUSSED.

New York, Sept. 20.—An important conference was held in Brooklyn last week of committees representing the American Society of Testing Materials, the American Society of Civil Engineers, the American Society of Municipal Improvements, the American Railway Engineering Association, the American Wood Preservers' Association and the Southern Pine Association, for the purpose of discussing uniform specifications for timber, preservatives and treatment of wood block pavement.

It is understood that the whole question was gone over thoroughly, and that the results of the deliberations of the conference will be presented by the committees at the annual meetings of their respective organizations, and, that, therefore, nothing pertaining to the conference can be published until the reports are acted upon by the bodies above referred to.

SHIPMENTS OF WESTERN PINE FOR JULY.

Spokane, Wash., Sept. 19.—A. W. Cooper, of Spokane, secretary of the Western Pine Manufacturers' Association, this week mailed the report of lumber shipments and cut for July, as compared with July, 1915, as follows:

Shipments.	Cars	Feet
1916	3,977	97,086,208
1915	3,854	94,204,517
Total increase	123	2,881,791

	Feet
Cut, 38 mills, 1916	128,556,857
Cut, 36 mills, 1915	114,950,161
Increased cut	13,615,696

During the month there were shipped 31,479.649 feet more than were cut.

OPERATION OF KENTUCKY'S NEW WORKMEN'S COMPENSATION LAW.

Louisville, Ky., Sept. 23.—It is interesting to note that the new workmen's compensation law is operating smoothly in Kentucky, and while 1,656 industrial injuries have been reported since the law went into effect on August 1, only one claim for adjudication has been filed, all of the others being settled "out of court." Some 2,500 employers, including all of the large ones, are operating under the law. Several of the lumber concerns are carrying their own risks, including the Morehead Spoke Co., Morehead, Ky.; Bond Brothers, railroad tie dealers, at Elizabethtown, Ky., and the Rush Cooperage Co., of Harriman, Tenn., operators of several plants in Kentucky.

ENGLAND IMPORTING CANADIAN LUMBERJACKS.

St. Paul, Minn., Sept. 21.—The labor question continues to vex the lumbermen of this district. As the logging season approaches millmen are advertising and endeavoring in every way to obtain lumberjacks, but the outlook is poor.

It is reported that labor stringency is also affecting the Canadian mills, not only on account of the enlistment for the army, but, it is understood that England has imported some twenty-five hundred Canadian lumberjacks to do logging this winter in some of the private forests of Great Britain, the timber to be used for trench material.

RETAILERS' DECLARATION OF PURPOSE

New National Organization Proclaims Its Objects—Articles of Association and Resolutions Adopted at Chicago Meeting September 8—Plans are Approved by Manufacturers

The articles of association of the recently formed National Retail Lumber Dealers' Association at the meeting held in Chicago September 7 and 8 have been completed and are presented herewith, together with the preamble and resolutions adopted at the same meeting.

The declaration of purpose and articles of association were prepared by a committee composed of Julius Seidel, St. Louis, Mo., chairman; Fred J. Schroeder, Milwaukee, Wis.; A. M. Melone, Minneapolis, Minn.; Edwin M. Hill, Pittsburgh, Pa.; R. B. Burns, St. Paul, Minn.; Fred Wuichet, Dayton, Ohio; W. M. Delaplante, Buffalo, N. Y.; J. H. Doppes, Cincinnati, O.; Guy Gray, Cleveland, O.; C. D. Huyette, Detroit, Mich.; L. L. Seibel, Kansas City, Mo.; Henry Koehler, Louisville, Ky.; E. L. Thornton, Chicago, Ill.; O. L. Huey, Indianapolis, Ind.; Edward Hines, Chicago, Ill.

The declaration of purposes, as adopted at the meeting, follows:

We, the undersigned, retail lumber dealers of the United States, recognizing the advantages of co-operation in securing and distributing valuable information for our mutual benefit and protection, hereby form an association and adopt the following articles for the government of same:

ARTICLES OF ASSOCIATION.

The full text of the constitution and by-laws is as given herewith, save the routine paragraphs devoted to the duties of officers:

ARTICLE 1—Name. The name of this association shall be the National Retail Lumber Dealers' Association.

ARTICLE II—Objects. Sec. 1. The objects of this association shall be to promote the general welfare of the retail lumber dealers of the United States; to co-operate with associations of lumber manufacturers and others in collecting and distributing information concerning the proper uses of wood and the general state of the lumber industry; to prevent, so far as possible, the sale of lumber of inferior grade, kind or manufacture; to correct business abuses in the lumber industry; and to promote uniformity in the customs and usages of the lumber trade in the United States.

ARTICLE III—Headquarters. Sec. 1. The headquarters of this association shall be located at the city of Chicago, in the state of Illinois.

ARTICLE IV—Membership. Sec. 1. Any individual, firm or corporation regularly engaged in the retail lumber business, carrying an assorted stock of lumber and other building material reasonably commensurate with the demands of the community in which the business is carried on, and having proper equipment to handle and deliver same, may become a member of this association. Each member shall be entitled to only one vote. All applications for membership shall be made in writing to the board of directors, addressed to the secretary. New members may be elected at any regular or special meeting of the board of directors, by a majority vote of the members of the board present at such meeting; but before being admitted to actual membership, the applicant must sign these articles of association.

ARTICLE V—Officers. Sec. 1. The officers of this association shall be a president, a first vice-president, a second vice-president, a secretary, a treasurer and a board of directors of fifteen members.

Election of Officers—Sec. 2. The president, first vice-president, second vice-president, treasurer and secretary shall be elected annually by the board of directors, either from their own number or from the members of the association, or from both, as the board may deem best, and shall hold their respective offices for the term of one year, and until their successors are elected and have qualified, unless removed by the board of directors. The first election of officers shall take place at the first meeting of the board of directors, and each subsequent election of officers shall take place at the first meeting of the board of directors, held after the close of each annual meeting of the association.

(The duties and po[illegible] of officers are such as are usually prescrib[illegible] lar organizations.—Editor.)

ARTICLE V[illegible]rs. Sec. 1. The members of [illegible] elect a board of directors, [illegible] directors, from among the members of the association residing in the following cities, viz.: Pittsburgh, Pa.; Milwaukee, Wis.; St. Louis, Mo.; Chicago, Ill.; Buffalo, N. Y.; Dayton, Ohio; Duluth, Minn.; St. Paul, Minn.; Detroit, Mich.; Louisville, Ky.; Kansas City, Mo.; Indianapolis, Ind.; Cleveland, Ohio; Cincinnati, Ohio, and Minneapolis, Minn.

Sec. 2. At the first meeting of the association, five directors shall be elected for the term of one year, and five directors for the term of two years, and five directors for the term of three years. All directors shall be elected by ballot. As and when the terms of the directors so elected expire, their successors shall be elected at the annual meetings of the association for the term of three years, so that three directors shall retire each year.

Sec. 3. Any director failing to attend three consecutive meetings of the board of directors may be dropped from the board by a vote of the majority of the directors present at any meeting, and thereupon such director shall cease to be a member of the board of directors. The traveling expenses of the directors and of the officers of the association shall be paid out of its funds at the rate of three cents per mile.

Sec. 4. The board of directors shall have the power to hold meetings at such times and places as it may deem proper; to appoint special or standing committees from the members of the board of directors, or from the members of the association, or from both; to print and circulate information concerning the lumber industry, and especially the retail lumber business; to raise funds and pay out the same to promote the welfare of the association; and to employ all such means not in conflict with these articles, or the law of the land, as it may deem proper and expedient to secure the objects and promote the welfare of the association. The board of directors may remove any officer whenever, in its judgment, the welfare of the association requires such removal; and may make rules and regulations for the conduct of its own business and meetings, and for the conduct of the business and meetings of the association.

ARTICLE VII—Vacancies. Sec. 1. In case a vacancy shall occur in the board of directors or in any other office, the same shall be filled by the board of directors for the unexpired term of such vacancy.

ARTICLE VIII—Annual Meetings of Association. Sec. 1. There shall be an annual meeting of the association for the election of directors and transaction of other business on the ——— day of ———, in each year, and notice of such meeting shall be mailed by the secretary to each member of the association at least ten days prior to the holding of such annual meeting.

Special Meetings of Association. Sec. 2. Special meetings of the association may be called whenever, in the opinion of the chairman of the board of directors or of a majority of its members, such special meeting may be deemed necessary or advisable. The secretary shall mail to each member of the association a notice of such special meeting at least ten days prior to the holding of the same.

Meeting of Board of Directors. Sec. 3. The board of directors shall meet as often and at such time and place as the board may deem advisable, but the board must meet not less than four times in each year.

ARTICLE IX—Voting by Mail. Sec. 1. When the president of the association shall deem it inexpedient to call a special meeting of the association, or when the chairman of the board of directors shall deem it inexpedient to call a special meeting of the board of directors, the president or chairman, as the case may be, may request a vote by mail on any question upon which a vote is deemed necessary, and the vote of each member of the association, or of the board of directors, as the case may be, so given by mail, shall have the same force as if given at a regularly convened and held meeting.

ARTICLE X—Salaries and Expenses. Sec. 1. All officers and directors of the association shall serve without compensation, except the secretary, whose compensation shall be fixed by the board of directors.

ARTICLE XI—Quorum and Proxies. Sec. 1. Seven directors shall constitute a quorum at all meetings of the board of directors for the transaction of any and all business. A majority of the members of the association shall constitute a quorum for the transaction of business at any and all meetings of the association.

Sec. 2. The members of the association not present at any meeting may be represented and vote by proxy, given in writing, to any other member of the association; provided, however, that no member of the association shall vote more than one proxy at any meeting.

ARTICLE XII—Membership Dues. Sec. 1. Each member of the association shall pay dues annually based upon the volume of his sales for each year, beginning with the year 1916, as follows: On annual sales or $100,000 or less he shall pay for that year $10; $100,000 to $200,000, $20; $200,000 to $300,000, $30; $300,000 to $400,000, $40; $400,000 to $500,000, $50; $500,000 to $600,000, $60; $600,000 to $700,000, $70; over $700,000, $75.

DECLARATION OF PURPOSES.

ARTICLE XIII—Declaration of Business Ethics and Business Methods. Sec. 1. The retail yard lumber dealers having made investments in necessary equipment and stock for the purpose of engaging in the business of supplying the needs of a particular community with lumber, the association believes they should be protected in their legitimate business of assembling lumber of various kinds and retailing the same to the public, and that the manufacturer should recognize retail lumber dealers as the proper agents for the distribution of his manufactured product.

This association, therefore, earnestly protests against the retail yard lumber dealers being compelled to compete with those manufacturers and wholesalers whose lumber they purchase, and declares that it is the duty of retail yard lumber dealers to take all lawful measures to ascertain the names of the manufacturers and wholesalers of lumber who solicit or accept orders which legitimately belong to the retail lumber dealers, and who injure the retail lumber business by selling, directly or indirectly, to the contracting and consuming trade.

Dishonest Practices. Sec. 2. Evils now exist in the lumber industry arising from the dishonest practice of mixing grades, giving short measure or misrepresenting the character and quality of lumber, which is chiefly done by wholesalers, and in a lesser degree by manufacturers. The association urges all retail yard lumber dealers to condemn such practices, and to take all lawful steps to ascertain the names of those manufacturers and wholesalers who make it a practice to mix grades, give short measure or misrepresent the character and quality of the lumber they offer for sale, in order that the retail lumber yard dealers may protect themselves and protect the public, whom they serve, against such dishonest practices.

The membership of the associations of lumber manufacturers affiliated with the National Lumber Manufacturers' Association is made up of manufacturers of various kinds of woods, who stand for uniform grades, for full and honest count, for fair and equitable adjustment of disputes, and the highest business ethics, and who guarantee, so far as possible, the character of the lumber they sell; and the members of this association declare it to be their experience that more satisfactory relations will be brought about by confining purchases to such manufacturers, rather than dealing with manufacturers and wholesalers who are guilty of the foregoing dishonest practices.

Branding Lumber. Sec. 3. This association heartily endorses and will support the efforts of all associations of lumber manufacturers which are devising ways and means for the branding of the product of their members, and thereby assuring, with a reasonable variation, the integrity of the grade, as well as making possible the identification of the stock, with consequent protection to the retail dealers and the consuming public.

Trade-Mark. Sec. 4. This association recommends that a national trade-mark be adopted for the use of the members of the association.

Advertising Lumber. Sec. 5. The retail lumber dealers recognize that their interest lies in the sale of lumber, and they are directly benefited by the advertising campaigns which are being conducted by the National Lumber Manufacturers' Associa-

Digitized by Google

tion and by the several associations of lumber manufacturers affiliated with the National Lumber Manufacturers' Association for the promotion of the use of lumber. This association, therefore, most heartily endorses all efforts directed to the promotion of the use of lumber, and commends those manufacturers who are aiding such promotion by the financial support which they are giving to the National Lumber Manufacturers' Association.

This association approves the efforts of the National Lumber Manufacturers' Association in advertising the good qualities of lumber and believes that such work should be supplemented by aggressive local campaigns in the various cities where the sale of lumber may be promoted and its good and useful qualities fully expounded to the public, and its use increased.

This association recommends to the manufacturers of lumber that they place upon their office stationery and advertising matter the information that they are members of or affiliated with the National Lumber Manufacturers' Association; and recommends that the members of the National Retail Lumber Dealers' Association place upon their office stationery and advertising matter the information that they are members of the National Retail Lumber Dealers' Association.

Restrictions in the Use of Lumber. Sec. 6. This association pledges its support to the members of the association of lumber manufacturers to do what it consistently and legally can to aid them in combatting all unjust and illegal efforts which may be made to unreasonably restrict the use of lumber in any district or community.

Shipments from Retail Yards. Sec. 7. Believing strongly in ethical business methods, and in fair and legitimate competition, this association declares it to be its judgment that yard lumber dealers who ship materials to contractors or consumers located outside of their own territory, are not pursuing ethical business methods, and are not engaged in fair and legitimate competition.

RESOLUTIONS ARE ADOPTED.

Whereas, Great damage to the lumber industry has resulted by reason of the shipment from manufacturing points of material, either poorly manufactured or of inferior wood, or not up to specification or grade; and

Wheras, Such business methods have greatly injured the reputation of lumber as a building material, and have caused much loss of business by the consequent use of substitutes; and

Whereas, The members of this body, standing close to the consumer in the lumber trade, are determined upon giving to the consumer at all times material fully up to specifications; be it, therefore,

Resolved, That we heartily approve the efforts now being made by the various associations of lumber manufacturers to improve and elevate the lumber business by more careful manufacture and grading, and that we in particular commend the movement to hereafter brand all stock showing its kind and grade; and, be it, further

Resolved, That we condemn as subversive of the best interests of the public and the trade, the practice which has grown up of the shipment of unsold cars in transit, resulting, as it does, in the tying up at all times of a large amount of rotting stock, and the continual forcing upon the market and the consumer of great quantities of material of inferior quality and manufacture, and in the shipping of cars in transit, the original shipper and point of shipment being generally concealed, thus making it impossible for the buyer to know what class of stock he is getting or by whom manufactured; and, be it, further

Resolved, That the true interest of the public and the consumer will be best subserved by refusal hereafter to purchase any material so offered upon cars in transit.

ENDORSED BY MANUFACTURERS.

The new movement has been endorsed by the executive committee of the National Lumber Manufacturers' Association, which held a meeting at its headquarters in Chicago Tuesday, September 19. An extract from the minutes of the meeting is appended and doubtless the movement will be endorsed by the subsidiary organizations:

"Mr. Hines presented the declaration of purposes and plan of organization of the National Retail Lumber Dealers' Association, formed in Chicago September 7-8, and explained in detail the membership of the organization, and the expected formation of strong local organizations of retail lumber yard dealers in nineteen of the most important lumber consuming cities, for the purpose of improving trade practices, and co-operating with the National Lumber Manufacturers' Association in promoting the best and more extended use of lumber. The executive committee recommends the work proposed by the National Association of Retail Lumber Dealers and will co-operate with the new organization in every way mutually advantageous to the manufacturers and retailers. It was felt that only through national organization can the greatest benefit of co-operation be secured to the general lumber trade, and the public at large served in the most efficient manner.

"The secretary was directed to transmit copies of the declaration of purposes of the National Association of Retail Lumber Dealers to the secretaries of the affiliated associations, and request that they, in turn, fully inform their members of the plans of the new organization and urge their co-operation therewith."

INCREASE IN RECONSIGNMENT AND DEMURRAGE CHARGES OPPOSED BY CINCINNATI LUMBERMEN.

Cincinnati, O., Sept. 21.—The proposed increase of reconsignment and demurrage charges on lumber was discussed at a recent meeting of the Cincinnati Lumber Exchange, a subsidiary of the Chamber of Commerce. President Walter J. Eckman presided over the meeting. Among those taking an active part in the discussion were Dwight Hinckley, J. Watt Graham, S. Earle Giffen, C. C. Hagemeyer, Emil J. Thoman and F. R. Renshaw, of the traffic department of the Chamber of Commerce.

The sentiment of the club is considered very strong against any increase in the charges. A committee consisting of C. C. Hagemeyer, chairman; S. Earle Giffen and Samuel W. Richie, was appointed to work in conjunction with Mr. Renshaw in the preparation of a brief and other necessary papers to be filed with the Interstate Commerce Commission in connection with the investigation of freight rates and the reclassification of forest products. Mr. Renshaw was directed to inform all the lumber dealers' associations in the United States of this decision of the Cincinnati Lumber Exchange.

J. Watt Graham and Fred W. Mowbray were appointed a committee to attend the installation of a blackboard for "wants" and "for sale" in the new room assigned to the exchange.

This was the first meeting since the summer vacation, and from now on weekly gatherings will be held every Tuesday afternoon.

The Cincinnati Lumbermen's Club, at a meeting held recently at the Metropole hotel, discussed at length the subject of reconsignment and demurrage. No official action was taken at this meeting, but a committee was appointed by President Christie to make a recommendation to the club at an early date. Sentiment of the various speakers was that the interests of lumber wholesalers would be jeopardized by prohibitive charges or restrictions on reconsignment.

EXHIBIT OF FOREIGN AND DOMESTIC WOODS.

The New York State College of Forestry at Syracuse, N. Y., has lately installed what is probably the best collection of foreign and domestic woods in panel form in this country. The collection is placed in the rotunda of the new $250,000 forestry building, and is the result of two years of work by the college authorities.

Among the rare foreign woods displayed are panels of African gaboon, East India koa, marblewood, East India rosewood, satinwood, camphor wood, teak, Circassian walnut and mahogany, the latter in eight different varities.

Among the native woods displayed in panel form are Douglas fir, California redwood, California sugar pine, western yellow pine, Sitka spruce, Port Orford cedar, incense cedar and eucalyptus, the latter in several varieties.

Southern woods are represented in panels of cypress, southern pine, North Carolina pine, red gum, black gum, cucumber and persimmon. There is also a large variety of hardwoods and softwoods indigenous to the state of New York.

Among those who donated material for the exhibit were the following well known lumber concerns:

Ichabod T. Williams Co., New York; G. Elias & Bro., Buffalo, N. Y.; Mann & Hunter Lumber Co., Syracuse, N. Y.; T. Sullivan Lumber Co., Buffalo, N. Y.; A. C. Dutton Lumber Corporation, Poughkeepsie, N. Y.; North Carolina Pine Association, Norfolk, Va.; Wilson & Greene Lumber Co., Syracuse, N. Y.; Hugh McLean Lumber Co., Buffalo, N. Y.; Transfer Lumber & Shingle Co., North Tonawanda, N. Y.; Buffalo Hardwood Lumber Co., Buffalo, N. Y.; Kenyon Lumber Co., Syracuse, N. Y.; Mulheran Lumber Co., Syracuse, N. Y.; F. M. Klock Lumber Co., Syracuse, N. Y.; Bannon Lumber Co., Syracuse, N. Y.; Hayden Lumber Co., Rochester, N. Y.; California Sugar & White Pine Co., San Francisco, Cal.; Bridal Veil Lumbering Co., Portland, Ore., and the West Coast Lumber Manufacturers' Association, Seattle, Wash.

NATIONAL HARDWOOD ASSOCIATION AFFAIRS.

The monthly bulletin of the National Hardwood Lumber Association for September announces that its inspection of lumber during August, 1916, was the heaviest of any month since August, 1913. The total of inspection during last month was 17,015,862 feet, of which 10,341,919 feet was made by salaried inspectors, the balance being by fee inspectors. The volume of inspection shows a gain of approximately 50 percent over the corresponding month of the last two years, which indicates activity in the hardwood lumber business and presages much future activity.

The association has received applications for membership from the following during the month:

Santee River Cypress Lumber Co., Ferguson, S. C.; Marion Lumber Co., St. Louis, Mo.; Mansfield Hardwood Lumber Co., Winnfield, La.; Hemphill Lumber Co., Kennett, Mo.; Plunkett-Webster Lumber Co., Inc.. New York City, N. Y.; Commercial Hardwood Co., Shortleaf, Ala.; Dunnington Lumber Co., Inc., Lynchburg, Va., and Edward Partington Pulp & Paper Co., Ltd., St. John, N. B.

SERIOUS FIRE LOSS AT LITTLE ROCK.

Little Rock, Ark., Sept. 20.—The E. L. Bruce Co., of this city, successor to the Kansas City Hardwood Flooring Co., and manufacturer of oak flooring, suffered a loss estimated at $60,000 about midnight last night, when about one-half of its plant was destroyed by fire.

The principal damage was to the main mill plant and to the lumber in the nearby sheds, though many laths were destroyed, and one section of the company's dry kilns was burned. The loss was covered by insurance. Nearly one hundred men employed on the night shift were at work in the mill when the fire started near the center of the main plant, but the exact cause of the fire has not been learned. It is thought that it was caused, either from friction of belt or from sparks from one of the machines in the plant.

Failure of the sprinkling system to work properly is blamed for the big headway the fire made before the Little Rock fire department arrived at the scene.

HOUSE CONSTRUCTION.

Farm Bulletin No. 5, on "Poultry House Construction," has just been issued by the Trade Extension Department of the National Lumber Manufacturers' Association. The cover page, which is in green and orange, illustrates a practical type of poultry house, which is described in more detail in the text.

The author is K. J. T. Ekblaw, University of Illinois, and the drawings are by Walter Buehler, consulting engineer, who also assisted in revising the text, and contributed the chapter on equipment. An unusual feature of Mr. Buehler's drawings is that the different types of poultry house are shown in perspective, as well as in the plan and elevation drawings. These perspective drawings enable the farmer or small builder to more readily visualize the type of house which is described.

The text covers the importance and tendencies of poultry raising, the general requirements, type and construction of buildings, and the essential points, such as drainage and ventilation, and sunlight and sanitation.

It is surprising to read in this bulletin that the "poultry products of America are equal in value to one-half the entire corn crop of the nation," and that "the poultry and eggs from Ohio last year are worth more than the combined output of gold and silver from Colorado."

PARTNERSHIP ANNOUNCEMENT.

C. A. Sanborn and Paul H. Gearhart announce their partnership as timber factors and estimators with offices at Asheville, N. C. They will specialize in timber land investigations in the United States, Mexico, Central America and South America.

The Latest News of the Lumber World

DR. COMPTON CONFERS WITH CALIFORNIA REDWOOD AND PINE MEN.

Early in September, Dr. Wilson Compton, of the Federal Trade Commission, met the redwood and California and Oregon pine lumber manufacturers at a luncheon in the Commercial Club of San Francisco. The purpose of the meeting was to secure a complete informal understanding with the lumbermen concerning the conditions prevailing in the lumber industry, the causes and possible ways in which relief may be secured.

With E. A. Selfridge, jr., of the Northwestern Redwood Co., Dr. Compton will visit a number of redwood mills and later will inspect the pine mills of the McCloud River Lumber Co.

Those present at the luncheon, besides Dr. Compton, were: E. A. Selfridge, jr., president of the Northwestern Redwood Co.; C. W. Pennoyer, president of the Pacific Lumber Co.; J. H. Browne, sales manager of the Pacific Lumber Co.; A. B. Hammond, president of the Hammond Lumber Co.; W. S. Burnett, of the Hammond Lumber Co.; J. H. Holmes, president of the Holmes Eureka Lumber Co.; C. R. Johnson, of the Union Lumber Co.; C. S. Smith, assistant district forester, and Edwin E. Myers, secretary-manager of the California Redwood Association, all interested in the redwood lumber industry. The pine and fir manufacturers were: C. R. McCormick, president, and S. M. Hauptman, secretary-treasurer, of the Charles R. McCormick Co.; E. K. Wood, president of the E. K. Wood Lumber Co.; C. E. Huddart, of the E. K. Wood Lumber Co.; A. B. Johnson, Wilson Bros.; F. C. Talbot, president Pope & Talbot Lumber Co.; W. D. Brookings, Brookings Timber & Lumber Co.; O. C. Haslett, California Pine Box Co.; F. S. Sayre, California Sugar & White Pine Co.; W. R. Wilson, California Door Co.; F. B. Hutchins, vice-president and general manager McCloud River Lumber Co., and E. A. Blocklinger, secretary of the California Sugar & White Pine Lumber Manufacturers' Association.

During his stay in San Francisco, Dr. Compton met a committee of ship owners, and heard a discussion relative to the shipping industry and its relation to conditions in the lumber industry.

A NEW FIRE PREVENTIVE.

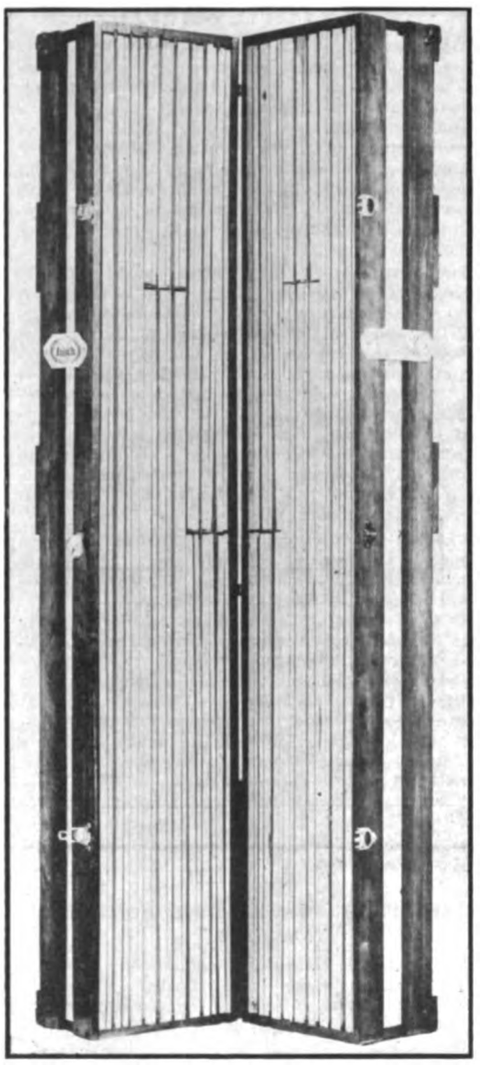
Seattle, Wash., Sept. 17.—The West Coast Lummermen's Association reports that a pharmacist of Badger, Iowa, has found a chemical which makes wooden shingles absolutely fireproof. The new compound is said to be sufficiently low in cost to make it practical in connection with shingle manufacture. Tests which were made at the University of Iowa, where the inventor was formerly a student, comprised the saturation with the liquid of a block of wood a half inch thick, after which it was placed in running water for twenty-four hours, then thoroughly dried again and held for one hour over a Bunsen burner with a temperature of between 700 and 1,000 degrees Fahrenheit, a greater heat than is usually developed in a conflagration. The wood was not burned, and only charred slightly at the point of the flame. The fireproofing liquid leaves insoluble fireproofing substance in the fiber cells of the wood which cannot be washed out with water. A sheet of paper which was dipped in the preparation burned freely until it reached the treated half, and the fire then died out. A rag was saturated with the new solution, and was kept under running water for eight days, dried and then could not be made to burn. Patent rights of this invention are still pending at Washington, but as soon as the manufacturing rights are available the shingle manufacturers of western Washington intend to give it a thorough test, and expect to adopt it for their purposes.

ARKANSAS LUMBERMAN WOUNDED.

Little Rock, Ark., Sept. 20.—Lucien Farrell, superintendent of the sawmill owned and operated by the Farrell Lumber Co., at Farrell, Ark., was shot and slightly wounded last week by Will M. Jones, a former employe of the company.

A NEW CABINET FOR LUMBER SELLING.

While in Oshkosh recently, the writer visited the rooms of the Northern Hemlock & Hardwood Manufacturers' Association and was shown by Secretary Swan and the publicity manager, Roger E. Simmons, a new contrivance in the shape of a cabinet for selling boards and to be installed in department stores, hardware stores, or other places where favorable, and especially among the small towns throughout the country. The cabinet is 8 feet 6



THE BIRCH-HEMLOCK CABINET.

inches high and when opened on the perpendicular hinges is about 5 feet wide. The lumber comprises birch and hemlock, and is so arranged that there is no waste space in the cabinet, although the lumber is of different lengths. The standard cabinet contains eighty-two pieces of lumber. One half of the cabinet is devoted to birch and the other to hemlock. The lengths of both woods are 2, 4, 6 and 8 feet and the widths are 2, 4, 6, 8 and 10 inches. The thicknesses of the various boards are a half inch and 1 inch and all of the lumber is dressed and edged.

Mr. Simmons got his idea of these cabinets while making his recent tour through South America. The lumbermen there conduct a regular department store of building material. Mr. Simmons designed the cabinet and has had it patented on behalf of the association, which controls the patent. The cabinet has casters and is easily moved from one place to another about a store room.

It is the intention of the Northern Hemlock & Hardwood Manufacturers' Association to have the retailer distribute these cabinets to merchants he might designate in his own town. He would see to it that the cabinet is kept constantly filled, going around once a week or as much more often as may be necessary to see what is lacking.

The advisory committee of the Wisconsin Retail Lumber Dealers' Association, comprising President Charles F. Kellogg, of Grand Rapids, Secretary Adolph Pfund, of Milwaukee, and Frank Bodden, of Horicon, visited the offices of the association Friday, Sept 1, where they conferred with the promotion committee of the hemlock and hardwood association, comprising Chairman R. B. Goodman, Secretary O. T. Swan and Roger E. Simmons. The committee was invited to inspect the cabinet and also to criticise the various activities of the association in several respects and did so. A few changes were suggested in the manner of distributing the lumber by means of these cabinets, but the project as a whole was heartily approved. The enterprising committee of the retailers saw the possibilities of the plan and feel confident that it will be a great success. The various other enterprises on the part of Secretary Swan's association were also given the stamp of the retailers' approval.

THE CAR SUPPLY.

The monthly report of car surpluses and shortages, as compiled by the committee on the relations between railroads of the American Railway Association, was sent out to the public September 15. The report was, as expected, a decided discouragement to those lumbermen who have not already ordered their winter coal or their winter and spring stock of lumber. The figures follow:

	Surpluses.	Shortages.
September 1, 1916	43,541 cars	57,822 cars
August 1, 1916	49,753 cars	39,991 cars
September 1, 1915	191,309 cars	6,300 cars

This shows that while on August 1 there was a total net surplus of approximately 10,000 cars, there was on September 1 a positive net shortage of 14,281 cars.

The surpluses and shortages of the various kinds of cars on September 1 are shown in the following table:

	Surpluses.	Shortages.
Box	19,907	34,529
Flat	2,609	2,441
Coal and gondola	7,079	17,900
Miscellaneous	13,946	2,912
Total	43,541	57,822

COLONEL HARTLEY CANDIDATE FOR GOVERNOR OF WASHINGTON.

Seattle, Wash., Sept. 12.—Roland H. Hartley, of the shingle firm of Clough-Hartley Co., Everett, Wash., is a candidate for governor of the state of Washington on the republican ticket. Col. Hartley is making an out-and-out fight against the "closed shop" principle, and is receiving the hearty support of the strongest business interests in the state.

Col. Hartley declares he is fighting no union, church, lodge or other organization, but he believes every man should have the right to work or not work when and where he chooses, free from the dictation of any labor agitators. In fact, the candidate's arguments are directed largely against the professional labor agitator, who makes his living by causing trouble among workmen.

LIGHTNING RODS ON FARM BUILDINGS.

Secretary R. S. Kellogg announces that the next campaign of the National Lumber Manufacturers Association for the improvement of the condition of the life of the farmer, the installation of lightning rods on farm buildings of all types, has been anticipated by the national underwriters' laboratories, working in the interest of the fire insurance companies and fire prevention, by the publication of a standard reference book for the proper construction and installation of such equipment. Pictures and diagrams are included in the book of standards.

RECENT DEVELOPMENTS IN OAK DEMAND

Darker Woods Given Preference for Some Purposes—Opinions of Many Leading Hardwood Manufacturers—Belief Expressed that any Change Can be but Temporary

A prominent hardwood lumber manufacturer in the south made the statement to the LUMBER WORLD REVIEW recently that "Oak is going out of style." He argued that there were changes in styles in the lumber trade the same as in the fashions for men's and women's wear. He said that just now the taste of users of lumber, including furniture and interior trim manufacturers, was for dark woods; that oak was already considerably lower in price in consequence of this change and that it was now hard to sell and would very probably go still lower in price; that red gum, mahogany and birch were replacing oak steadily and were coming into consumption in constantly increasing volume.

Such a startling statement as the above could not well be ignored by anybody interested in the hardwood lumber trade, and least of all by a lumber newspaper. Accordingly, an investigation was made. A number of prominent lumber manufacturers were communicated with and the question was asked whether in their opinion any of these things were substantiated in their own experience. Nearly every lumberman written to responded, although one or two preferred not to be quoted by name. The subject evidently created a great deal more interest in the trade than had been anticipated by the lumberman who dropped this bombshell into a peaceful, yet watchful, industry.

From a perusal of the letters below, it is inferred that there is a constant change going on in all woods, and that it is no new thing for users of wood to shift from one kind to another, and especially when the price of a certain variety of lumber gets above what the consumer thinks he ought to pay. At the same time most of the leading manufacturers do not seem to think that oak is going out of style in the strict sense of the term, but that this is one of the periodical changes, and that, as one of our correspondents puts it, "oak is the old, original come-back wood."

Readers of the LUMBER WORLD REVIEW, however, will be interested in reading the replies received from a large number of prominent lumbermen, which are found below without any special arrangement as to precedence:

LOWER PRICES WOULD INCREASE DEMAND.

A manufacturer of oak in Arkansas, who prefers not to be quoted, has this to say: "We have also heard from some sources that oak is going out of style. The demand for oak in interior trim is about 10 percent of the total. In furniture, especially high grade, very little oak is used. This condition, however, has prevailed for about two years, so it is nothing new. For the cheaper grades of furniture, however, oak is still used very extensively, and we do not anticipate any change of sentiment on this class of goods. The oak market is indeed weaker than it has peen for some time. If it weakens any more, however, we are of the opinion that the demand for it will increase, inasmuch as it will eliminate the demand for substitutes for oak, such as elm and ash, which have been holding quite firm."

OAK WILL COME BACK.

"In regard to oak lumber, we do not think it has gone out of fashion. It is not being used in furniture as much as formerly, but it will come back all right. We are not worrying about it going out of style. The demand has not been as active this year as for other woods, but this is probably due to the war and the decrease in the export business.

"VANSANT, KITCHEN & CO.,
"R. H. Vansant, president."

CONSIDER LACK OF FOREIGN TRADE.

"We are in receipt of your letter of September 14 advising that some manufacturer has stated that 'oak is going out of style.' We are not of the same opinion.

"Just at the present time, possibly, the grade of No. 1 common is moving very slowly, but we are able to get more orders for firsts and seconds plain white oak and firsts and seconds and No. 1 common quartered white oak than we have ever had before.

"We will average possibly 66⅔ percent of oak in our annual cut and we are able to dispose of it as fast as it becomes dry.

"There is another point that must be reckoned with before it can be said that oak is not in as large a demand as formerly, and this is on account of there being no foreign market. This, of course, has cut out a large amount of this stock for shipment across the water to the nations at war, and in trying to find a market for this additional stock for our home consumption naturally would make the manufacturers accumulate more stock.

"With the proper advertising oak will never go out of style. In fact, in a few years it will be so much in style that the manufacturers will more than break even with this operation.

"MISSISSIPPI LUMBER CO.,
"F. R. Crandall, sales manager."

THINKS POSSIBLY SOMETHING IN IT.

"We are hardly in position to answer your inquiry intelligently. We think possibly there is something in the claim that 'Oak is going out of style,' but only to a very limited extent and more particularly in certain grades of furniture stock; but, on the other hand, there seems to be an almost unlimited demand for quartered oak veneers.

"As far as our own particular experience goes, we have not been handling any southern oak for some time for several reasons, and as the supply of Indiana timber is growing beautifully less all the time, what little we get of this wood is rapidly taken up and our supply is always limited.

"LONG-KNIGHT LUMBER CO.,
"W. W. Knight, president and treasurer."

GOOD OAK WILL NOT GO OUT OF STYLE.

"We have your letter advising that you have been informed by a large southern manufacturer of oak that that commodity is going out of style, and asking us to say something on this subject for publication.

"There is much that could be said on the subject, but we hardly feel that we are the best qualified people to discuss the matter. Fortunately for us, our mills are located in West Virginia and Tennessee, where we produce high grade soft textured oak, and in our judgment there never will be a time when this will not be one of the most popular woods known to the lumber industry.

"The southern hard, brash oak is not as desirable for finish, or, for that matter, for any purpose, as our northern soft-textured oak; hence, we feel that anything we might say for publication might be construed by some as knocking the southern oak and it is furthest from our intention to do anything of that kind. Therefore, we really feel it would be best if we did not attempt to discuss this matter.

"BABCOCK LUMBER CO.,
"By F. R. Babcock."

NO FEARS WHATEVER.

"I note your inquiry 'Is oak going out of style?' No; but it is a recognized fact that oak is diminishing in quantity rapidly and you recognize that in nature sometimes when one organ is temporarily restricted in its duties, another attempts to discharge the extra duty, and it is the same in regard to the matter of the use of oak as a wood for finishing and furniture.

"There has come about a considerable demand for dark finish, and the demand for dark stuff is increasing, perhaps not more rapidly than it is justified. This demand for dark finish, while it has not depreciated the price of oak, has appreciated the price of gum greatly, and the loss of the supply of the Circassian walnut has increased the demand for American black walnut to a considerable extent, but there need not be any fear whatever for any extraordinary demand for black walnut, because it doesn't exist. There was a large drain made on American black walnut the last fifteen months; such a one as it will not be possible to make again in the near future. More American black walnut was moved in the last year and a half in this country than will be moved in the next five years from the tree to the mill.

"Oak has not fallen off in price, but it has not advanced in the last year as has gum, but there has been a general improvement in the prices of oak, especially in all the common grades. Southern oak has made a fair advance all along the line, but has not advanced proportionatey to gum and where the American manufacturer is handicapped, if at all, on account of demand for high class oak, the value of certain other American woods will be enhanced more than proportionate. While quartersawed oak has not been as active this present year as ordinarily in firsts and seconds, quartersawed veneer has been higher and more in demand than I ever knew it. This only indicated a passage from solid finish to veneer finish in a considerable measure, but might cause the superficial observer to think that oak was going out of style.

"There has been an extraordinary demand for quartersawed oak veneer this year. This has, to a great measure, taken the place of firsts and seconds. The demand has been active all the year, and continually for a period of years, for the lower grades of quartered oak, which go into a cheaper class of furniture where they use the solid wood. You understand that you cannot get the figure effect from No. 1 common that you can from firsts and seconds. Neither can you get the figure effect from firsts and seconds in a regular way as you can from veneer, for when it comes to a high class stock, if the man buys veneer he can match an entire top from the same flitch and get the same effect covering the entire surface. This cannot be done in any such perfect manner when using lumber.

"I have been an oak man all my life and have dealt largely in quartersawed oak, and I have no fears whatever concerning the future for all oak lumber of high grade that the United States will be able to produce, and without any depreciation, but in fact an appreciation consistent with the times.

"J. V. STIMSON."

THE OLD ORIGINAL "COME-BACK" WOOD.

"The writer has noticed the tendency on the part of furniture manufacturers who cater to the trade in this country to manufacture less oak and more of the Circassian, mahogany, American walnut and gum finishes, but we do not think this extends to the manufacturer whose product is largely exported.

"There is no doubt but that the present demand for oak is noticeably off and it is probably due in a large measure to the change in specifications on furniture and interior trim, which, of course, was caused by the popular demand for darker woods. We have gone through these periods of changing styles in woods before this, and I consider them a good thing for the hardwood business in general, for I do not think they hurt any wood in particular, but tend to advertise the different woods that are available for the purposes mentioned. Above all, I do not think that this changing of styles is in any way detrimental to oak in the long run, for the merits of oak as a finishing, flooring, furniture, cabinet and construction material are so absolutely above question and so firmly established in the minds of the public, as well as the manufacturers of the different lines mentioned, that oak will never 'go out of style.'

"Oak is the old reliable and original 'come back' in the hardwood trade; and even if there is a less demand for it at present than is usual, there are still enormous quantities of it used in flooring, furniture, trim and for other purposes; and if the manufacturer of oak would stop trying to push it in markets where it is not as popular now as formerly, and hunt the markets where it is still considered almost a necessity and where a substitute has a poor show, I think he will have no trouble in getting a fair price for his oak lumber.

"WISCONSIN LUMBER COMPANY,
"P. E. Gilbert, sales manager."

FEELS OPTIMISTIC ON OAK DEMAND.

"Relative to the supply and demand of oak lumber, we think there has been rather a tendency for furniture manufacturers to run more to mahogany, walnut, birch and gum for furniture, owing to the prevailing tendency to finish it dark, than there has been for oak; but if you will go to a furniture store and look over their furniture, we think you will still find that a very considerable amount of oak is being used for furniture purposes, and there has been so much larger demand for oak lumber in other lines that it has offset any falling off in demand by the furniture manufacturers. The Latest News of the Lumber World

DR. COMPTON CONFERS WITH CALIFORNIA REDWOOD AND PINE MEN.

Early in September, Dr. Wilson Compton, of the Federal Trade Commission, met the redwood and California and Oregon pine lumber manufacturers at a luncheon in the Commercial Club of San Francisco. The purpose of the meeting was to secure a complete informal understanding with the lumbermen concerning the conditions prevailing in the lumber industry, the causes and possible ways in which relief may be secured.

With E. A. Selfridge, jr., of the Northwestern Redwood Co., Dr. Compton will visit a number of redwood mills and later will inspect the pine mills of the McCloud River Lumber Co.

Those present at the luncheon, besides Dr. Compton, were: E. A. Selfridge, jr., president of the Northwestern Redwood Co.; C. W. Pennoyer, president of the Pacific Lumber Co.; J. H. Browne, sales manager of the Pacific Lumber Co.; A. B. Hammond, president of the Hammond Lumber Co.; W. S. Burnett, of the Hammond Lumber Co.; J. H. Holmes, president of the Holmes Eureka Lumber Co.; C. R. Johnson, of the Union Lumber Co.; C. S. Smith, assistant district forester, and Edwin E. Myers, secretary-manager of the California Redwood Association, all interested in the redwood lumber industry. The pine and fir manufacturers were: C. R. McCormick, president, and S. M. Hauptman, secretary-treasurer, of the Charles R. McCormick Co.; E. K. Wood, president of the E. K. Wood Lumber Co.; C. E. Huddart, of the E. K. Wood Lumber Co.; A. B. Johnson, Wilson Bros.; F. C. Talbot, president Pope & Talbot Lumber Co.; W. D. Brookings, Brookings Timber & Lumber Co.; O. C. Hazlett, California Pine Box Co.; F. S. Sayre, California Sugar & White Pine Co.; W. R. Wilson, California Door Co.; F. B. Hutchins, vice-president and general manager McCloud River Lumber Co., and E. A. Blocklinger, secretary of the California Sugar & White Pine Lumber Manufacturers' Association.

During his stay in San Francisco, Dr. Compton met a committee of ship owners, and heard a discussion relative to the shipping industry and its relation to conditions in the lumber industry.

A NEW FIRE PREVENTIVE.

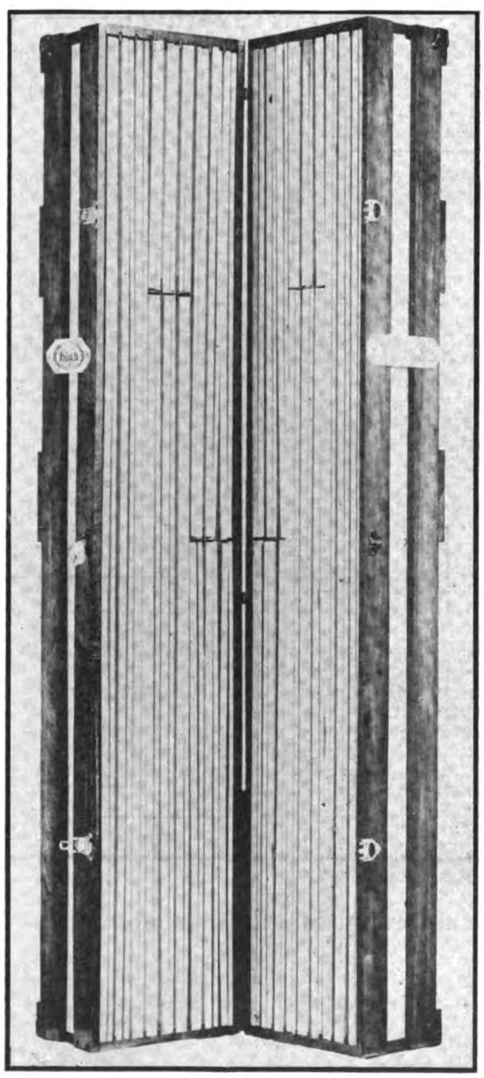
Seattle, Wash., Sept. 17.—The West Coast Lummermen's Association reports that a pharmacist of Badger, Iowa, has found a chemical which makes wooden shingles absolutely fireproof. The new compound is said to be sufficiently low in cost to make it practical in connection with shingle manufacture. Tests which were made at the University of Iowa, where the inventor was formerly a student, comprised the saturation with the liquid of a block of wood a half inch thick, after which it was placed in running water for twenty-four hours, then thoroughly dried again and held for one hour over a Bunsen burner with a temperature of between 700 and 1,000 degrees Fahrenheit, a greater heat than is usually developed in a conflagration. The wood was not burned, and only charred slightly at the point of the flame. The fireproofing liquid leaves insoluble fireproofing substance in the fiber cells of the wood which cannot be washed out with water. A sheet of paper which was dipped in the preparation burned freely until it reached the treated half, and the fire then died out. A rag was saturated with the new solution, and was kept under running water for eight days, dried and then could not be made to burn. Patent rights of this invention are still pending at Washington, but as soon as the manufacturing rights are available the shingle manufacturers of western Washington intend to give it a thorough test, and expect to adopt it for their purposes.

ARKANSAS LUMBERMAN WOUNDED.

Little Rock, Ark., Sept. 20.—Lucien Farrell, superintendent of the sawmill owned and operated by the Farrell Lumber Co., at Farrell, Ark., was shot and slightly w[illegible]ded last week by Will M. Jones, a for[illegible] of the company.

A NEW CABINET FOR LUMBER SELLING.

While in Oshkosh recently, the writer visited the rooms of the Northern Hemlock & Hardwood Manufacturers' Association and was shown by Secretary Swan and the publicity manager, Roger E. Simmons, a new contrivance in the shape of a cabinet for selling boards and to be installed in department stores, hardware stores, or other places where favorable, and especially among the small towns throughout the country. The cabinet is 8 feet 6



THE BIRCH-HEMLOCK CABINET.

inches high and when opened on the perpendicular hinges is about 5 feet wide. The lumber comprises birch and hemlock, and is so arranged that there is no waste space in the cabinet, although the lumber is of different lengths. The standard cabinet contains eighty-two pieces of lumber. One half of the cabinet is devoted to birch and the other to hemlock. The lengths of both woods are 2, 4, 6 and 8 feet and the widths are 2, 4, 6, 8 and 10 inches. The thicknesses of the various boards are a half inch and 1 inch and all of the lumber is dressed and edged.

Mr. Simmons got his idea of these cabinets while making his recent tour through South America. The lumbermen there conduct a regular department store of building material. Mr. Simmons designed the cabinet and has had it patented on behalf of the association, which controls the patent. The cabinet has casters and is easily moved from one place to another about a store room.

It is the intention of the Northern Hemlock & Hardwood Manufacturers' Association to have the retailer distribute these cabinets to merchants he might designate in his own town. He would see to it that the cabinet is kept constantly filled, going around once a week or as much more often as may be necessary to see what is lacking.

The advisory committee of the Wisconsin Retail Lumber Dealers' Association, comprising President Charles F. Kellogg, of Grand Rapids, Secretary Adolph Pfund, of Milwaukee, and Frank Bodden, of Horicon, visited the offices of the association Friday, Sept 1, where they conferred with the promotion committee of the hemlock and hardwood association, comprising Chairman R. B. Goodman, Secretary O. T. Swan and Roger E. Simmons. The committee was invited to inspect the cabinet and also to criticise the various activities of the association in several respects and did so. A few changes were suggested in the manner of distributing the lumber by means of these cabinets, but the project as a whole was heartily approved. The enterprising committee of the retailers saw the possibilities of the plan and feel confident that it will be a great success. The various other enterprises on the part of Secretary Swan's association were also given the stamp of the retailers' approval.

THE CAR SUPPLY.

The monthly report of car surpluses and shortages, as compiled by the committee on the relations between railroads of the American Railway Association, was sent out to the public September 15. The report was, as expected, a decided discouragement to those lumbermen who have not already ordered their winter coal or their winter and spring stock of lumber. The figures follow:

	Surpluses.	Shortages.
September 1, 1916	43,541 cars	57,822 cars
August 1, 1916	49,753 cars	39,991 cars
September 1, 1915	191,309 cars	6,300 cars

This shows that while on August 1 there was a total net surplus of approximately 10,000 cars, there was on September 1 a positive net shortage of 14,281 cars.

The surpluses and shortages of the various kinds of cars on September 1 are shown in the following table:

	Surpluses.	Shortages.
Box	19,907	34,529
Flat	2,609	2,481
Coal and gondola	7,079	17,900
Miscellaneous	13,946	2,912
Total	43,541	57,822

COLONEL HARTLEY CANDIDATE FOR GOVERNOR OF WASHINGTON.

Seattle, Wash., Sept. 12.—Roland H. Hartley, of the shingle firm of Clough-Hartley Co., Everett, Wash., is a candidate for governor of the state of Washington on the republican ticket. Col. Hartley is making an out-and-out fight against the "closed shop" principle, and is receiving the hearty support of the strongest business interests in the state.

Col. Hartley declares he is fighting no union, church, lodge or other organization, but he believes every man should have the right to work or not work when and where he chooses, free from the dictation of any labor agitators. In fact, the candidate's arguments are directed largely against the professional labor agitator, who makes his living by causing trouble among workmen.

LIGHTNING RODS ON FARM BUILDINGS.

Secretary R. S. Kellogg announces that the next campaign of the National Lumber Manufacturers' Association for the improvement of the condition of the life of the farmer, the installation of lightning rods on farm buildings of all types, has been anticipated by the national underwriters' laboratories, working in the interest of the fire insurance companies and fire prevention, by the publication of a standard reference book for the proper construction and installation of such equipment. Pictures and diagrams are included in the book of standards.

RECENT DEVELOPMENTS IN OAK DEMAND

Darker Woods Given Preference for Some Purposes—Opinions of Many Leading Hardwood Manufacturers—Belief Expressed that any Change Can be but Temporary

A prominent hardwood lumber manufacturer in the south made the statement to the LUMBER WORLD REVIEW recently that "Oak is going out of style." He argued that there were changes in styles in the lumber trade the same as in the fashions for men's and women's wear. He said that just now the taste of users of lumber, including furniture and interior trim manufacturers, was for dark woods; that oak was already considerably lower in price in consequence of this change and that it was now hard to sell and would very probably go still lower in price; that red gum, mahogany and birch were replacing oak steadily and were coming into consumption in constantly increasing volume.

Such a startling statement as the above could not well be ignored by anybody interested in the hardwood lumber trade, and least of all by a lumber newspaper. Accordingly, an investigation was made. A number of prominent lumber manufacturers were communicated with and the question was asked whether in their opinion any of these things were substantiated in their own experience. Nearly every lumberman written to responded, although one or two preferred not to be quoted by name. The subject evidently created a great deal more interest in the trade than had been anticipated by the lumberman who dropped this bombshell into a peaceful, yet watchful, industry.

From a perusal of the letters below, it is inferred that there is a constant change going on in all woods, and that it is no new thing for users of wood to shift from one kind to another, and especially when the price of a certain variety of lumber gets above what the consumer thinks he ought to pay. At the same time most of the leading manufacturers do not seem to think that oak is going out of style in the strict sense of the term, but that this is one of the periodical changes, and that, as one of our correspondents puts it, "oak is the old, original come-back wood."

Readers of the LUMBER WORLD REVIEW, however, will be interested in reading the replies received from a large number of prominent lumbermen, which are found below without any special arrangement as to precedence:

LOWER PRICES WOULD INCREASE DEMAND.

A manufacturer of oak in Arkansas, who prefers not to be quoted, has this to say: "We have also heard from some sources that oak is going out of style. The demand for oak in interior trim is about 10 percent of the total. In furniture, especially high grade, very little oak is used. This condition, however, has prevailed for about two years, so it is nothing new. For the cheaper grades of furniture, however, oak is still used very extensively, and we do not anticipate any change of sentiment on this class of goods. The oak market is indeed weaker than it has peen for some time. If it weakens any more, however, we are of the opinion that the demand for it will increase, inasmuch as it will eliminate the demand for substitutes for oak, such as elm and ash, which have been holding quite firm."

OAK WILL COME BACK.

"In regard to oak lumber, we do not think it has gone out of fashion. It is not being used in furniture as much as formerly, but it will come back all right. We are not worrying about it going out of style. The demand has not been as active this year as for other woods, but this is probably due to the war and the decrease in the export business.

"VANSANT, KITCHEN & CO.,
"R. H. Vansant, president."

CONSIDER LACK OF FOREIGN TRADE.

"We are in receipt of your letter of September 14 advising that some manufacturer has stated that 'oak is going out of style.' We are not of the same opinion.

"Just at the present time, possibly, the grade of No. 1 common is moving very slowly, but we are able to get more orders for firsts and seconds plain white oak and firsts and seconds and No. 1 common quartered white oak than we have ever had before.

"We will average possibly 66⅔ percent of oak in our annual cut and we are able to dispose of it as fast as it becomes dry.

"There is another point that must be reckoned with before it can be said that oak is not in as large a demand as formerly, and this is on account of there being no foreign market. This, of course, has cut out a large amount of this stock for shipment across the water to the nations at war, and in trying to find a market for this additional stock for our home consumption naturally would make the manufacturers accumulate more stock.

"With the proper advertising oak will never go out of style. In fact, in a few years it will be so much in style that the manufacturers will more than break even with this operation.

"MISSISSIPPI LUMBER CO.,
"F. R. Crandall, sales manager."

THINKS POSSIBLY SOMETHING IN IT.

"We are hardly in position to answer your inquiry intelligently. We think possibly there is something in the claim that 'Oak is going out of style,' but only to a very limited extent and more particularly in certain grades of furniture stock; but, on the other hand, there seems to be an almost unlimited demand for quartered oak veneers.

"As far as our own particular experience goes, we have not been handling any southern oak for some time for several reasons, and as the supply of Indiana timber is growing beautifully less all the time, what little we get of this wood is rapidly taken up and our supply is always limited.

"LONG-KNIGHT LUMBER CO.,
"W. W. Knight, president and treasurer."

GOOD OAK WILL NOT GO OUT OF STYLE.

"We have your letter advising that you have been informed by a large southern manufacturer of oak that that commodity is going out of style, and asking us to say something on this subject for publication.

"There is much that could be said on the subject, but we hardly feel that we are the best qualified people to discuss the matter. Fortunately for us, our mills are located in West Virginia and Tennessee, where we produce high grade soft textured oak, and in our judgment there never will be a time when this will not be one of the most popular woods known to the lumber industry.

"The southern hard, brash oak is not as desirable for finish, or, for that matter, for any purpose, as our northern soft-textured oak; hence, we feel that anything we might say for publication might be construed by some as knocking the southern oak and it is furthest from our intention to do anything of that kind. Therefore, we really feel it would be best if we did not attempt to discuss this matter.

"BABCOCK LUMBER CO.,
"By F. R. Babcock."

NO FEARS WHATEVER.

"I note your inquiry 'Is oak going out of style?' No; but it is a recognized fact that oak is diminishing in quantity rapidly and you recognize that in nature sometimes when one organ is temporarily restricted in its duties, another attempts to discharge the extra duty, and it is the same in regard to the matter of the use of oak as a wood for finishing and furniture.

"There has come about a considerable demand for dark finish, and the demand for dark stuff is increasing, perhaps not more rapidly than it is justified. This demand for dark finish, while it has not depreciated the price of oak, has appreciated the price of gum greatly, and the loss of the supply of the Circassian walnut has increased the demand for American black walnut to a considerable extent, but there need not be any fear whatever for any extraordinary demand for black walnut, because it doesn't exist. There was a large drain made on American black walnut the last fifteen months; such a one as it will not be possible to make again in the near future. More American black walnut was moved in the last year and a half in this country than will be moved in the next five years from the tree to the mill.

"Oak has not fallen off in price, but it has not advanced in the last year as has gum, but there has been a general improvement in the prices of oak, especially in all the common grades. Southern oak has made a fair advance all along the line, but has not advanced proportionatey to gum and where the American manufacturer is handicapped, if at all, on account of demand for high class oak, the value of certain other American woods will be enhanced more than proportionate. While quartersawed oak has not been as active this present year as ordinarily in firsts and seconds, quartersawed veneer has been higher and more in demand than I ever knew it. This only indicated a passage from solid finish to veneer finish in a considerable measure, but might cause the superficial observer to think that oak was going out of style.

"There has been an extraordinary demand for quartersawed oak veneer this year. This has, to a great measure, taken the place of firsts and seconds. The demand has been active all the year, and continually for a period of years, for the lower grades of quartered oak, which go into a cheaper class of furniture where they use the solid wood. You understand that you cannot get the figure effect from No. 1 common that you can from firsts and seconds. Neither can you get the figure effect from firsts and seconds in a regular way as you can from veneer, for when it comes to a high class stock, if the man buys veneer he can match an entire top from the same flitch and get the same effect covering the entire surface. This cannot be done in any such perfect manner when using lumber.

"I have been an oak man all my life and have dealt largely in quartersawed oak, and I have no fears whatever concerning the future for all oak lumber of high grade that the United States will be able to produce, and without any depreciation, but in fact an appreciation consistent with the times.

"J. V. STIMSON."

THE OLD ORIGINAL "COME-BACK" WOOD.

"The writer has noticed the tendency on the part of furniture manufacturers who cater to the trade in this country to manufacture less oak and more of the Circassian, mahogany, American walnut and gum finishes, but we do not think this extends to the manufacturer whose product is largely exported.

"There is no doubt but that the present demand for oak is noticeably off and it is probably due in a large measure to the change in specifications on furniture and interior trim, which, of course, was caused by the popular demand for darker woods. We have gone through these periods of changing styles in woods before this, and I consider them a good thing for the hardwood business in general, for I do not think they hurt any wood in particular, but tend to advertise the different woods that are available for the purposes mentioned. Above all, I do not think that this changing of styles is in any way detrimental to oak in the long run, for the merits of oak as a finishing, flooring, furniture, cabinet and construction material are so absolutely above question and so firmly established in the minds of the public, as well as the manufacturers of the different lines mentioned, that oak will never 'go out of style.'

"Oak is the old reliable and original 'come back' in the hardwood trade; and even if there is a less demand for it at present than is usual, there are still enormous quantities of it used in flooring, furniture, trim and for other purposes; and if the manufacturer of oak would stop trying to push it in markets where it is not as popular now as formerly, and hunt the markets where it is still considered almost a necessity and where a substitute has a poor show, I think he will have no trouble in getting a fair price for his oak lumber.

"WISCONSIN LUMBER COMPANY,
"P. E. Gilbert, sales manager."

FEELS OPTIMISTIC ON OAK DEMAND.

"Relative to the supply and demand of oak lumber, we think there has been rather a tendency for furniture manufacturers to run more to mahogany, walnut, birch and gum for furniture, owing to the prevailing tendency to finish it dark, than there has been for oak; but if you will go to a furniture store and look over their furniture, we think you will still find that a very considerable amount of oak is being used for furniture purposes, and there has been so much larger demand for oak lumber in other lines that it has offset any falling off in demand by the furniture manufacturers. For illus-

Digitized by Google

tration, the consumption of oak for flooring purposes increased from 1911 to 1915 165 percent, while it has increased thus far during 1916, 31 percent more, and you can readily see that this, in itself, will take care of a very large amount of decrease in the supply for furniture purposes.

"We are manufacturers of veneers, and we have never seen a larger demand for oak veneer of all kinds than there is at the present time; and in addition to this, while we run two sawmills exclusively on oak, we are right up to green stock on our supply of quartersawed white oak. We have just this morning booked an order for over a million feet of common oak for a purpose that is entirely foreign to furniture manufacturing or interior finish, and it is comparatively a new field for the use of oak.

"JAMES E STARK & CO., Inc.,
"James E. Stark, president."

BIRCH AND ELM USED.

A large manufacturer of oak who does not wish to be quoted says: "We understand that oak is not being used very extensively, either in furniture or interior trim at the present time and that there is quite a demand for dark woods. We find a very heavy demand for red gum in quartersawn and mottled, for both furniture and interior trim.

"We are also advised that a great deal of sap gum is being used, stained to imitate mahogany, and in conversation with a large interior trim manufacturer in Chicago, a few days ago, he advised me that a large percentage of his work was either in birch or gum."

OAK NEEDS ADVERTISING.

"During a recent visit with the furniture manufacturers we learned from good authority that demand for oak furniture has fallen off considerably and that brown woods are very much more popular. The oak market is anything but satisfactory now, as the prices at which stock is being sold are very low indeed, and when a sale is made it is practically a matter of swapping dollars.

"We believe the trouble with oak is that other hardwoods are being extensively advertised and exploited, while the opinion seems to prevail that oak is staple enough to maintain its prestige. However, the ones who have been so optimistic on this point should begin to realize that this wood must be kept before the public in the way of elaborate advertising if we expect it to keep pace with other cabinet and interior trim woods.

"LAMB-FISH LUMBER CO.,
"L. P. DuBose, sales manager."

OAK NEVER IN BETTER DEMAND.

"Yours of September 14 is a surprise to me. I have never known oak to be in better demand than it is right now, all kinds and grades, and your letter is the first intimation we have had that dark woods are having the preference. There have always been and always will be light, medium and dark finishes used. A great many people take chestnut and dress it because it has a flaky grain and then paint it black or a blue black or a darker brown.

"We are lower on oak today than we have been for the last ten years. Our stock is lighter. While we have a reasonable stock on hand, our dry stock is pretty well taken up; in fact, we always hold 300,000 or 400,000 feet for a half dozen big factories who have bought of us for years and want bone dry lumber, or we would not have that. We could not supply them if we had not driven people away from it.

"The lumber trade is good; low grade hardwood culls are bringing $15 to $18 for the roughest kind, what we used to call mill culls and, in fact, we have not got any, as we are sold up to the limit. Hardwood culls that used to bring $10 we have no trouble getting $15 and $18 for now. Of course, we may be a few dollars above country prices, on account of freight and the demand here, although we aim to sell our lumber here at railroad prices; and, in fact, we understand from everybody around the country that they have not got the stock.

"C. CRANE & CO."

OAK IS STILL FASHIONABLE.

"We note your remarks in regard to oak lumber going out of style, and that the preference of makers of furniture, interior trim, etc., seems to be more for dark woods, and that in consequence the demand for oak is getting very slow and that the price is very likely to be cheaper.

"We can only judge the market by our own experience. Up to the first of September of this year, we sold more oak lumber by at least 10 per cent did all of last year, and last year a great deal more than we did the year before last year that we have been in business we have been able to sell more oak lumber than we did the preceding year. Of course, we cannot help but feel that oak is still very fashionable. We do not think that there has been a time in the past ten years when the cheaper grades of oak were in better demand; we mean special size timbers, switch ties, crossing plank and things of that kind. You understand that this takes up quite a percentage of the oak logs, and we do not believe that the demand was ever better, or the price better, than it is right now.

"As regards the other grades of oak lumber, we do not think they are in quite as good demand as they have been at other times, but we have still been able to sell the oak lumber at a good price, and are getting more money now for it than we did last year, so we certainly have no occasion to feel discouraged about it at all. We believe that in the medium price furniture and the real cheap furniture they are not using quite as much oak as they used to, but we think that this has been more than offset by the demand for oak for other purposes. There is an immense amount of oak used by the automobile manufacturers. That is a new field entirely to the oak business, and, in addition to this, there has been an enormous increase in the use of oak flooring. We believe that these two things have offset the falling off in the use by the medium-priced and cheap furniture manufacturers.

"It must also be taken into consideration that, during the past year, the shipment of oak to foreign countries has been practically discontinued. The only lumber you can ship to the foreign countries is something that they must have, and as you have to get a permit to do it, there has not been any chance to ship any oak at all.

"We do not believe that oak lumber will get very much cheaper. If it does, it will have to get right back to its present price or better. The cost of getting out logs and manufacturing oak lumber is such that we do not believe that any manufacturer today could stand for very much of a cut in price without losing money, and we do not think that any of them would continue to do that for any length of time. There is quite a lot of walnut furniture being put on the market at present, but we do not think that anyone familiar with the lumber situation would believe that walnut could ever take the place of oak. The matter of supply will soon take care of the demand for walnut furniture.

"There is also quite a lot of gum being used where they used to use oak in the manufacture of furniture. However, as stated in the fore part of this letter, we believe that these items have been offset by the increased consumption in railroad material, in the manufacture of automobiles and such. However, we do not believe that the substitution of gum for oak will last very long. We really believe that business is going to be so good that there will be plenty of demand for all the gum and oak that is produced.

"The only real dull thing that we know of in oak is firsts and seconds quarter-sawed, and the percent that you get of this grade is so small that it would not hurt much if we did have to cut the price a little bit on it. We feel sure that our log run values of oak lumber will show at least a dollar increase over last year.

"THE MOWBRAY & ROBINSON CO.,
"By F. W. Mowbray."

NORTHERN HEMLOCK AND HARDWOOD EXHIBIT.

The Northern Hemlock & Hardwood Manufacturers' Association had most interesting exhibits at the Minnesota State Fair held during the first week of September and at the Wisconsin State Fair at Milwaukee during the second week of this month. The exhibit was especially arranged with a view of showing the practical uses of the various kinds of lumber manufactured by the members of this aggressive association and as such it created great interest among the thousands of visitors at the two expositions. The display was in charge of W. H. McDonald, the chief inspector of the association, whose knowledge of the various woods displayed is complete. The two official designs of the association, "Old Faithful Hemlock" and "Beautiful Birch," met the eye at several points with pleasing effect. Carefully arranged around the booth were various products of hemlock and hardwoods and placed on easels were samples of roofing made with the three grades of white cedar shingles, extras, standards and sound butts. In the hemlock part of the exhibit were specimens of hemlock lumber prepared for shipment to the retail trade, which included clear hemlock ceiling, No. 1 dimensions, flooring, shiplap, drop siding, moulding, casing and base. At one side of the exhibit was placed a silo, the inner and outer surfaces of which were made of inch matched stock and both the interior and exterior were creosoted.

In the hardwood portion of the exhibit there were a number of wide boards made of birch and finished in natural color. There were samples of brown ash and a collection of panels showing the finished stage in both natural and stained, of pine, brown ash, butternut, bird's-eye maple, curly birch, plain red birch, soft elm, northern hemlock, basswood, curly soft maple and curly red oak. There were also a number of doors in model size made of various hardwoods and finished in a variety of ways. There was a rack containing samples of twenty-three Wisconsin woods, ordinarily manufactured into lumber. These samples were numbered and a prize of $10 in gold was offered to any who guessed the most nearly correct the various woods.

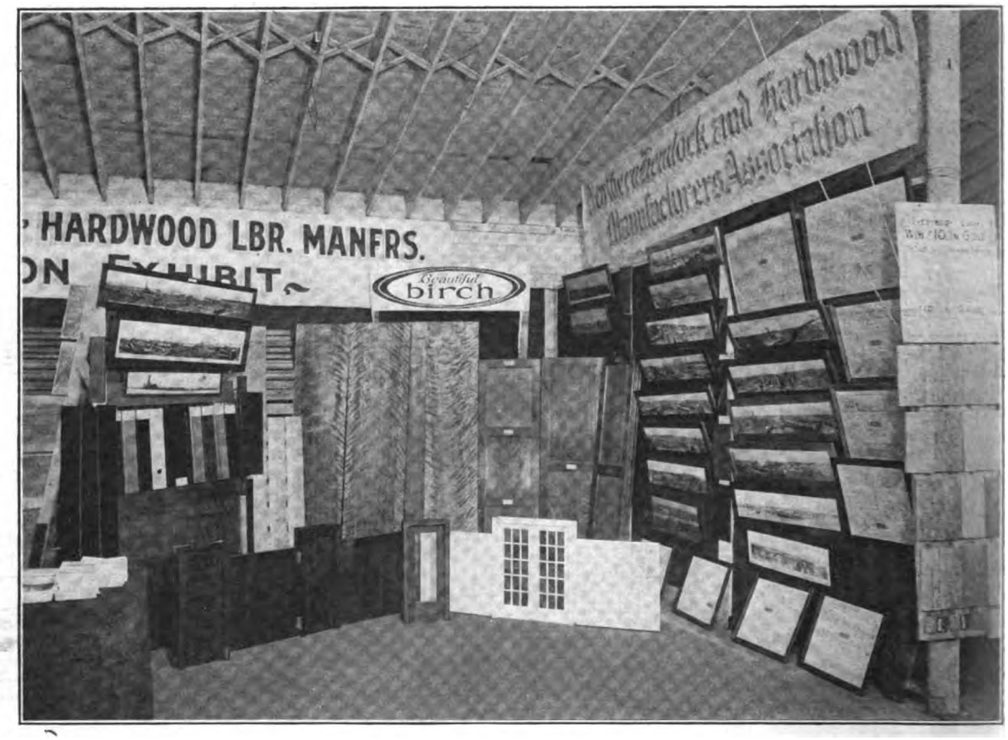

EXHIBIT OF NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS AT MINNESOTA STATE FAIR.

Exhibits of Lumber at Northern State Fairs

At the recent Minnesota state fair held at St. Paul, Minn., the White Pine Bureau had some of the most attractive exhibits ever shown at any gathering of the kind. It comprised a group of suburban homes all built of white pine and comprising nine miniature houses designed on the scale of 1-inch to the foot. The houses were originally exhibited at the Building Material Exposition at Cleveland, Ohio, and were designed by Howe & Thomas, architects of Columbus, Ohio, specializing in suburban homes. There were landscapes surrounding these houses which were designed by one of the noted landscape architects of the country. There were trees and flowers and all the accompaniments of the modern country home, including grass, shubbery, walks, drives, pavements (wood block, of course), lights, statuary and inhabitants—necessarily of diminutive size.

The four buildings here presented represent respectively a residence of English architectural style, a typical American design, a Colonial residence and a reproduction of Mt. Vernon, with modern additions. The trees used in the exhibit were mostly real trees, which embraced 150 cedar trees, fifty Irish junipers, a number of Japanese cypresses and a number of box woods, elms, oaks, fruit trees, Lombardy poplars, many of these being also real trees. The entire exhibit represented a prosperous suburb of a large city and attracted a great deal of attention.

The exhibits as shown at the Minnesota fair occupied a large booth 56x64 feet in size and the nine buildings were illustrative of various styles of architecture, as follows:

Thatched Shingle Roof—English type.
Characteristic Modern American Type.
New England Colonial influence.
Dutch influence.
Adaptation from Washington's home at Mount Vernon—Southern Colonial.
An English Adaptation.
Victorian Country House.
Modified Colonial.

Additional exhibits were made by the Northern Pine Manufacturers' Association and by the Northland Pine Co. That of the former association displayed various grades of white and Norway pine, including samples of white pine in B and better, C select, D select, Nos. 1, 2 and 3 common, both rough and surfaced, C and D lap siding, 8 and 10-inch No. 2 shiplap and 8 and 10-inch No 3 shiplap. In Norway there were displayed Nos. 1, 2 and 3 common, both rough and surfaced and C and better. A number of cards were stationed around the booths bearing these legends:

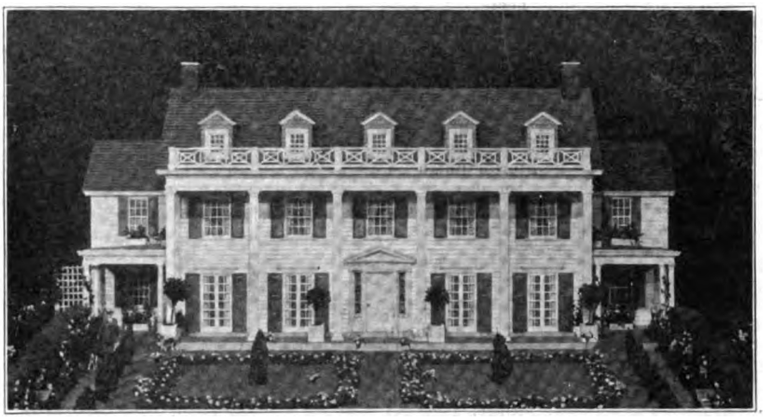
"White Pine—Plenty of It."
"The Pioneer's Choice."
"A Minnesota Wood."
"Holds Plant Perfectly——Stays Put."
"It Lasts Forever."
"The Daddy of 'Em All."
"The Wood That America Is Mostly Built Of."
"The King of Woods"
"Our Forefathers Choice."
"Norway for Dimension."
"Norway for Strength."

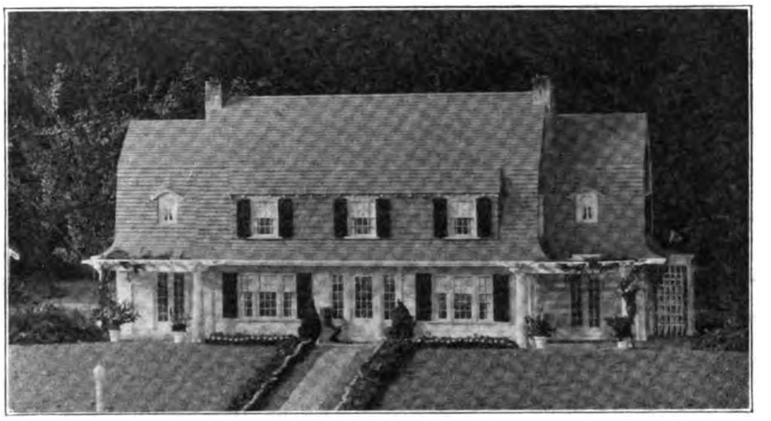
The exhibit of the Northland Pine Co. comprised a pergola effect at the entrance and a model house with natural surroundings in the center, besides panels on the side walls representing the various grades of lumber with varied finishes. This was such an interesting display that the company received a number of requests from officials of county fairs to install it on the grounds for exhibition.

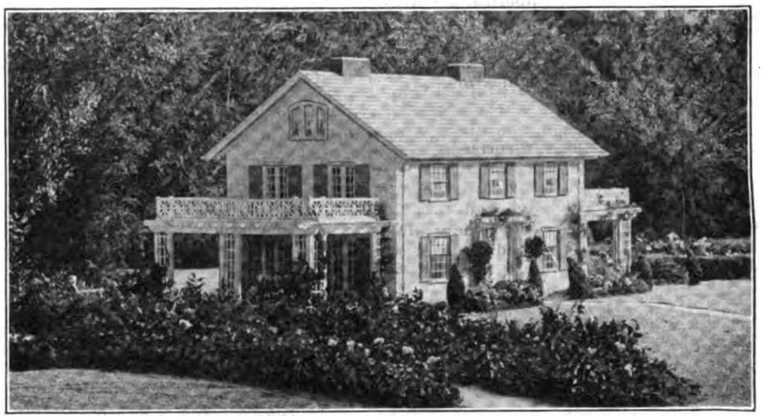
NEW STEAMER SERVICE TO CENTRAL AMERICA.

The New York & Cuba Mail Steamship Co., of which M. L. Schultz, 533 Marquette building, this city, is the western traffic agent, announces that on September 30 it will inaugurate a direct freight and passenger service from New York to the west coast ports of Central America and to Salina Cruz, Mexico, by way of the Panama Canal and will call at the following ports: Punta Arenas, Costa Rica; San Juan del Sur, Nicaragua; Corinto, Nicaragua; Amapala, Honduras; La Union, Salvador; Salina Cruz, Mexico; La Libertad, Salvador; Acajutla, Salvador; San Jose, Guatemala; Champerico, Guatemala; Coos, Guatemala.

Beginning September 30 there will be sailings every twenty-one days and every article of freight shipped will be carried through to destination without transshipment. This service will no doubt be of interest to many lumbermen who have Central American agents or who may contemplate entering that trade.







FOUR OF THE NINE MODEL HOUSES EXHIBITED BY THE WHITE PINE BUREAU AT THE MINNESOTA STATE FAIR HELD AT ST. PAUL, MINN., DURING THE FIRST WEEK IN SEPTEMBER.—NOTE THE MOUNT VERNON MODEL AT THE TOP.

Personal News Notes

George D. Burgess, of Russe & Burgess, Inc., Memphis, Tenn., has been spending several weeks in Chicago and vicinity as a sort of vacation, although intermingled occasionally with a little business. He was accompanied by Mrs. Burgess and they were guests at a prominent south side hotel.

Dr. Hermann von Schrenk, the forestry expert, of St. Louis, Mo., was in Chicago September 15 and was accompanied by Mrs. von Schrenk. They were on their way home from an extended visit to various eastern cities and stopped over a day or so to visit with Chicago friends.

R. H. Downman, of New Orleans, La., president of the National Lumber Manufacturers' Association, was in Chicago on a brief business visit last Tuesday and Wednesday, devoting his time mostly to a meeting of the directors of the association, at which were discussed many important trade subjects.

Jesse W. Thompson, associated with P. F. Stone, wholesale hardwoods, Rockford, Ill., was in Chicago going and coming when on a trip to northern Michigan a few days ago, where he went in the interest of the business. Mr. Thompson reports very fair trade in the hardwood line.

E. G. Swartz, general manager of the Burton-Swartz Cypress Co., of Burton, La., and Perry, Fla., who has been stopping at the Moraine Hotel in Highland Park, Chicago's beautiful northern suburb, for several weeks and was accompanied by Mrs. Swartz, left for the south September 15. He expressed himself as being very much pleased with his summer sojourn on Lake Michigan's shores.

J. C. Remick, vice-president and general manager of the Cummings-Moberly Cypress Co., of Moberly, La., has been in Chicago recently, having been called north by a serious turn for the worse in the illness of his uncle, J. N. Cummings, president of the company, who has been in a sanitarium at Flint, Mich., for nearly two years. Mr. Remick reported the cypress business as being in fair shape, and said that both price and movement were satisfactory.

Frank N. Snell, general manager of the Louisiana Red Cypress Co., New Orleans, was in Chicago around the middle of the month on his return from a northern business trip, which he combined with a vacation visit to his old home in central Wisconsin. He was accompanied by Mrs. Snell and they spent some little time with their old friends, Charles and Will Kellogg, of the Kellogg Bros. Lumber Co., at Grand Rapids, Wis. Mr. Snell said that he had had some good fishing and tried to forget business, and consequently had not been in close touch with matters in the New Orleans office for a week or so.

The venerable D. R. Edwards, forty years known to the sawmill trade of Michigan and the south, called at the office of the LUMBER WORLD REVIEW one day last week to pay his respects. Mr. Edwards was well known in the machinery trade of the country for many years as a successful sawmill operator. He has now retired and is making a playtime of his ripening years. His chief invention in saw and wood working machinery lines was a ball-bearing cut-off saw for the special manufacture of wood blocks in sulphite fibre mills. One of his sons, D. W. Edwards has been superintendent of the Greenlee Bros. Co. at Rockford, Ill., for some time.

James L. Fraser, an old Chicago lumberman, for many years lately located in Milwaukee and prior to that with the Hines interests in northern Wisconsin, has recently returned to Chicago and is in charge of the sales department of the E. A. Engler Lumber Co., 1450 McCormick building, this city, to which location the company moved from the Lumber Exchange a few weeks ago. Mr. Engler is for the present looking after affairs at the mill at Beaudette, Minn., which is being operated actively. Mr. Fraser says that the business of the company is excellent and that orders for white pine are almost in excess of the ability to supply them. The company's new telephone number is Harrison 118.

Geor[illegible]rnsworth, president of the Oconto Co., [illegible]Exchange building, this city, has j[illegible] trip to the company's mills, [illegible]Mich., and Oconto, Wis. He [illegible]pply of woodsmen and mill [illegible]ooler weather approaches and says that the prospects for a good trade are promising.

R. B. Goodman, of the Goodman Lumber Co., Goodman, Wis., was in Chicago last week in attendance upon a meeting of the directors of the National Lumber Manufacturers' Association.

John W. Blodgett, of Grand Rapids, Mich., treasurer of the National Lumber Manufacturers' Association, was in town last week, Tuesday and Wednesday, attending a meeting of the directors of the association.

R. M. Tidball, for many years one of the leading lumber dealers at Lincoln, Neb., and well known throughout that state, visited relatives in Chicago a few days around September 15. Mr. Tidball sold out his business at Lincoln a year or more ago and since that time has been taking life easy. He had just returned from a several weeks' eastern trip.

STATUS OF HOUSTON BROS'. AFFAIRS.

The business of George T. Houston & Co., of Chicago, and Houston Bros., of Vicksburg, Miss., is temporarily conducted by a creditors' committee, consisting of the following personnel: Ralph Van Vechten, chairman; vice president Continental & Commercial National Bank; John P. Oleson, vice president First National Bank of Chicago; C. H. Harbert, W. T. Rickards Co., Chicago; Henry R. Platt, counsel, Mayer, Meyer, Austrian & Platt, Chicago; Arthur P. Kemp, secretary of committee, assistant cashier First National Bank of Chicago.

Frederick H. Wickett, senior member of the firm of Wickett, Walker & Wegg, in the Corn Exchange National Bank building, and William Wilms, who until recently has been connected in an executive capacity with the Paepcke-Leicht Lumber Co. and Chicago Mill & Lumber Co., are in charge of the business.

A recent investigation of the affairs by William Wilms has disclosed that the assets of the firm and its subsidiaries in the aggregate, on a very conservative basis, are equal to more than three times the entire indebtedness, and the creditors' committee feels confident that all debts will be discharged in the near future.

All current obligations will be met promptly and plans for reorganization of the business are at present under consideration.

A CONFERENCE OF GRADING COMMITTEES.

The grading committees of the Northern Hemlock & Hardwood Manufacturers' Association and of the Michigan Hardwood Manufacturers' Association held a joint conference at the Hotel Sherman, Chicago, on Friday, September 15, with about a dozen members of the boards of directors and official representatives of the two associations present.

The session lasted practically all day. The primary question discussed was the probable action of the two groups of northern manufacturers regarding the proposed changes in the grading of hardwood lumber. Each of the two grading committees presented comprehensive reports of their investigations, and these reports were analyzed and amended in accordance with the ideas and suggestions of the various manufacturers present. Of course northern woods only were discussed, and the work of the two committees was with the object in view of just what grading rules would be best adapted to the marketing of the hardwood lumber produced in Wisconsin and Michigan, and also the best method under which they could be put into commercial practice were the changes to be determined upon.

The rough draft of the proposed rules agreed upon will not be published at present, it being the opinion of the committees that they will first submit these rules to a joint meeting of the Michigan and Wisconsin associations, which will be held probably during the latter part of October, and at which time the matter will be thoroughly worked out.

OBITUARY

W. H. MYLREA.

William H. Mylrea, for some years past identified with various phases of the lumber business in the Wisconsin valley, with headquarters at Wausau, Wis., died at his home in that city last week at the age of sixty-four years. Mr. Mylrea had been in declining health for the last two years and recently had been confined to his residence. In the late 90's he served a term as attorney-general of Wisconsin and was rated high as a lawyer. After the conclusion of his term of office he resided in Chicago for a year or more, but later returned to Wausau. He then became interested in the Wausau Box & Lumber Co. and other timber and lumber enterprises. He was also secretary of the Wisconsin Valley Advancement Association. The deceased is survived by his wife, who was a Miss Ostrander, of Milwaukee, and one son, John D. Mylrea, general manager of the Langlade Lumber Co., at Antigo, Wis. The funeral services were held at Wausau under Masonic auspices.

J. W. DEMPSEY.

Tacoma, Wash., Sept. 18.—After an illness of several months, J. W. Dempsey, treasurer of the Dempsey Lumber Co., of this city, and an officer in several other corporations, died at his home in Tacoma on September 15.

Mr. Dempsey is survived by his widow, Mrs. Helen Elizabeth Dempsey, two daughters, Miss Dorothy and Miss Dickie Dempsey, his father, James Dempsey, of Manistee, Mich., five brothers, Lewis, of Chicago, Frank, of Detroit, Mich., Neal, J. J., and L. T. Dempsey, of Tacoma, and five married sisters.

Mr. Dempsey was born at Manistee, Mich., in 1867, and at an early age entered the lumber business with his father, a prominent and successful manufacturer. In 1896 he married Helen Elizabeth Ramsdell, of Manistee.

Besides being treasurer of the Dempsey Lumber Co., one of Tacoma's largest mills, Mr. Dempsey was president of the Saginaw & Manistee Lumber Co., of Williams, Ariz.; president of the Lebanon Traction Co., of Indiana, and vice-president of the Wabash Screen Door Co.

Mr. Dempsey's funeral was held in Tacoma, September 17, and was attended by lumbermen from all parts of the Pacific northwest.

ROBERT RUTHERFORD SHOT AND KILLED.

Little Rock, Ark., Sept. 20.—Robert L. Rutherford, 48 years old, and a well known lumberman, planter and oil and gas prospector, was shot and instantly killed on his plantation, near Pine Bluff, about 11 o'clock yesterday morning, by a negro tenant, who is said to have become enraged because Mr. Rutherford scolded him for spending his money for whiskey instead of paying his debts. The negro used a double-barreled shotgun, and Mr. Rutherford's face and head were riddled with buckshot.

As soon as the report of the killing reached Pine Bluff a posse of officers and many friends of Mr. Rutherford started in immediate pursuit of the slayer, but so far his capture has not been reported. Officers over the state have been notified and are on the lookout.

Mr. Rutherford was a brother of the late John E. Rutherford, the capitalist and lumberman of wide acquaintance, who died a few years ago. Robert Rutherford was engaged in the lumber business with his brother before his death, but since the old Bluff City Lumber Co. went out of business Robert had been engaged in farming. He owned a large farm southeast of Pine Bluff, and had recently become convinced that oil and gas might be found there. He had organized the Jefferson Oil Co., which has recently started a well on the Rutherford plantation. Mr. Rutherford is survived by his wife and four children.

JOHN V. BEEKMAN.

New York, Sept. 15.—John V. Beekman, for many years connected with the Lidgerwood Manufacturing Co., passed away at his home in Plainfield, N. J., September 11.

Mr. Beekman was born in 1842 at Somerville, N. J. About 1870 he engaged in the manufacture of rotary engines, pumps, etc., being a member of the firm of John A. Lighthall, Beekman & Co., with works at Inlay street, Brooklyn, N. Y. This company was absorbed by the Lidgerwood Manufacturing Co. in 1873, Mr. Beekman assuming charge of the works of that company, and was the inventor of many improvements in hoisting engine design.

Mr. Beekman gradually withdrew from active participation in business about ten years ago, devoting his later years to outdoor pleasures, becoming an enthusiastic motorist and golfer, being a member of several golf clubs, and a familiar figure on the golf course at Pinehurst, N. C., where he spent his winters.

For many years Mr. Beekman had been a member of the American Society of Mechanical Engineers.

Mr. Beekman's death is keenly felt by his surviving family, and by many of the men with whom he was formerly associated.

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

DUTIES OF THE NEW TARIFF COMMISSION.

Washington, Sept. 18.—After years of fighting for and against a tariff commission, congress has enacted into law a measure which provides for the establishment of the United States Tariff Commission. This commission, if it follows the precedent laid down by the foreign tariff commissions, especially that of France will act in an advisory capacity to congress which will still have the deciding voice in the matter. It will, however, provide a capable body with abundant time to scrutinize objections to or petitions for increases or decreases in duties to be levied upon goods coming into the United States.

As the measure has passed congress it provides for six members, not more than three of whom shall be of one political party, and the terms of office running from two to twelve years from the date of the passage of the act, all subsequent appointments to be for terms of twelve years of service. Unlike the Interstate Commerce Commission the chairmanship of this commission and the vice chairmanship are to be designated annually by the president.

The salary of the membership is one of the unsatisfactory features of the bill for the reason that it will be exceedingly difficult to get competent, broad minded, internationally informed men who will be willing to devote their services exclusively to the work of this commission for $7,500 a year. The principal office of the commission is to be in Washington, but meetings may be held in other places as occasion arises. Agents may be designated to carry on investigations not only in the United States but in foreign countries.

The duties of the commission will be to investigate the administration and the fiscal and industrial effects of our own law. Then they will be expected to investigate the relations which may exist between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties and of compound specific and ad valorem duties; they will undertake to consider questions bearing on the arrangement of schedules, the classification of articles in the several schedules and, in fact, a general investigation of customs laws, their relation to the federal revenues and their effect upon the industries and labor throughout the United States.

It is expected to transfer to this commission the present cost and production division of the Bureau of Foreign and Domestic Commerce. It will also have power to investigate all tariff relations between the United States and foreign countries, including alliances and preferential provisions.

The commission is given extensive power to investigate the records of any firm or business corporation which may be under investigation, but the penalty for disclosing such information is a fine of $1,000 or imprisonment for one year or both. It may thus be considered that one's private interests, while they may become government property, are not in danger of being made known to trade opponents.

THE PASSAGE OF THE SHIPPING BILL.

Washington, D. C., Sept. 20.—The president's approval here a few days ago of the shipping bill marks a definite step forward toward the restoration of the American flag to the high seas. No longer can a combination of foreign and domestic shipowners destroy independent competition under the American flag on the high seas through the practice of "fighting ships," because it is outlawed by the present act.

The bill gives the shipping board $50,000,000 for the purpose of constructing and purchasing merchant ships suitable for naval auxiliaries and for the commerce of the United States. It is not expected that $50,000,000 will create a sufficient American merchant marine, but this money can be expended by the shipping board so as to greatly stimulate ship building in this country.

The bill also gives the board power to lease or sell to American citizens the ships built with the $50,000,000 appropriation, retaining in the government the right to re-possess itself of these ships under fair conditions whenever they are needed for naval or military purposes.

The bill further gives the board power to establish lines of steamships to South America and other places under conditions that do not interfere with private enterprise in the shipping field.

LUMBER REPORT ALMOST READY FOR THE PRESS.

Washington, D. C., Sept. 20.—It is understood that the general summary of the lumber report, which has been under way for months by the Forest Service, has just within the past few days been sent to the Secretary of Agriculture for his official signature. It is thought that it will receive his signature in a short time. Many parts of the report have not been completed, but the part of the report now in the hands of the Secretary contains the "meat" of the investigation.

According to officials at the Service, the report, when it is finally completed, will probably be published in ten volumes.

FORESTRY APPROPRIATIONS MADE BY CONGRESS.

Washington, D. C., Sept. 21.—There were comparatively few changes in the appropriations for the Forest Service during the session of congress just ended. The amounts of previous years have been, generally speaking, re-appropriated, making provision for continued administration, protection and development of the national forests and for varied investigations relating to the practice of forestry and the utilization of forest products.

Provision was made for the continuation of the appropriated by the Weeks law for similar purposes, through an appropriation of $3,000,000; $1,000,000 for the fiscal year 1917, and $2,000,000 for the fiscal year 1918. Of the original $11,000,000, appropriated by the Weeks Law for similar purposes, only $8,000,000 could be spent, owing to the limitations of time on the use of the first installment of the sum.

In addition to the sums appropriated in the agricultural act for the support, maintenance, and development of the national forests, the federal aid road act provides the sum of $10,000,000, or $1,000,000 annually for 10 years, for the construction and maintenance of roads and trails within or partly within the national forests. One of the objects in constructing these roads is to bring the resources of the regions into productive use and to assist the communities in improving means of communication to markets at a time when they themselves are unable to construct proper roads.

ANNOUNCEMENT OF FALL MEETING OF THE APPALACHIAN LOGGING CONGRESS.

The fall meeting of the Appalachian Logging Congress is announced for October 18 and 19, 1916, at the Atkin Hotel, Knoxville, Tenn. Officers are to be elected, and other business transacted; subjects of general interest and subjects of special interest to the members will be discussed.

October 20 will be spent by the members and their guests in a trip to the logging operation of the Little River Lumber Co., at Townsend, Tenn.

INTERSTATE COMMERCE COMMISSION HEARINGS

The following lumber hearings are now on the docket of the commission for hearing between now and our next issue:

On September 26, at Chicago, Ill., before Examiner Spethman, in I. & S. Docket No. 863, concerning lumber rates from Indiana stations.

On September 27, at Spokane, Wash., before Examiner Disque, in case No. 8648 of the Sand Point Lumber & Pole Co. against the Northern Pacific, et al.

On September 28, at Spokane, Wash., before Examiner Disque, in case No. 8858 of the Potlatch Lumber Co. vs. the W. I. & M., et al.

On September 30, at Houston, Texas, before Examiner McCawley, in case No. 8925 of the Houston Tie & Lumber Co. vs. Morgans Louisiana R. R. & S. S. Co., et al.

On October 2, at Seattle, Wash., before Examiner Disque, in case No. 8853 of the Canyon Lumber Co. vs. the Great Northern, et al.

On October 2, at Chicago, Ill., before Examiner Spethman, in case No. 8965 of the Hilgrad Lumber Co. vs. the C. & E. I., et al.

On October 5, at Portland, Ore., before Examiner Disque, in case No. 8793 of the West Coast Lumbermen's Association, et al. vs. the A. & Wn., et al. Also in case No. 8819 of the same association against the B. & A., et al.

INTERSTATE COMMERCE COMMISSION MISCELLANEOUS

The commissioners have granted application No. 10784 of E. B. Boyd, Agent on behalf of carriers parties to his I. C. C. tariff No. A-668, authorizing them to establish rates on mahogany and cedar lumber and logs, when from Havana, Cuba, from shipside Keywest, Fla., to points in Indiana, Ohio, Illinois, Kentucky Michigan Iowa, Missouri, and Wisconsin, which will equalize the rates available on the same traffic via the port of Mobile, Ala.

The Shreveport Chamber of Commerce has been permitted to intervene, by the commission, in case No. 8711 of the Crossett Lumber Co. vs. the Arkansas & Louisiana Midland Railway Co., et al., on behalf of the Western Silo Co.

CONFERENCE OF SAWMILL MANAGERS AT DE RIDDER, LA.

New Orleans, La., Sept. 19.—The conference of saw mill managers, headgraders, superintendents and other employees of subscribers to the Southern Pine Association, held at De Ridder La., Sept. 15 and 16, was unprecedented in attendance, it having reached the mark of 70 individuals, representing 18 mills.

The purpose of these meetings is to bring about closer relations between the individuals on whom the responsibility for grades rests, to the end that there be greater uniformity and efficiency in the grading of southern yellow pine. These meetings have always proven a source of considerable interest and benefit to those present, this fact being clearly demonstrated by the continually increased attendance.

There will be another meeting of a similar character in Laurel, Miss., on Friday and Saturday, Sept. 29 and 30. A special feature of this gathering will be an opportunity accorded all present to see a lumber branding machine in actual operation. One of these machines has been installed at the Eastman-Gardiner plant. The branding of timber is another step of the Southern Pine Association to guarantee the stock of its subscribers.

NEW SHIPBUILDING COMPANY IN TACOMA.

Tacoma, Wash., Sept. 20.—Announcement of plans for the immediate construction of a new shipyard in Tacoma was made September 18 by John Martinolich of Dockton, who has been building ships at that port for a number of years. The new company, which will be known as the Northern Shipbuilding Co., has leased a site on the tidelands of Commencement bay and will begin operations at once. Wooden ships will be constructed at first and later steel vessels will be built at the company's yards.

Mr. Martinolich states that the new company has orders for a number of vessels. He has built several of the passenger boats now in use on Puget Sound and expects to construct several lumber schooners at the new yards. The coming of the Northern company gives Tacoma three shipbuilding concerns.

Business Changes, Incorporations and Fires

New Concerns

Jersey City, N. J.—Kieswetter Brothers Co., to deal in lumber; $100,000 capital. Norman R. Wynne, Otto Kieswetter, Louis F. Kieswetter.

Huntington, W. Va.—The Ackerman Lumber & Manufacturing Co.; $25,000 capital. S. D. Smith, W. C. Wilson, Williams Isaacs, W. T. Ackerman, F. E. Ackerman and A. W. Ackerman, all of Huntington.

Johnson City, Tenn.—Southern Lumber Co.; $10,000 capital. E. C. Wallin, E. F. Steel, Will L. Lewis, J. Stanley Brown and S. E. Miller.

Cleveland, O.—The Great Lakes Timber & Logging Co.; $50,000 capital. J. E. Morriss.

Victoria, B. C.—The Northern Pacific Logging Co., Ltd.; $25,000 capital.

New Westminster, B. C.—The Dominion Shingle & Cedar Co., Ltd.; $45,000 capital.

Stanwood, Wash.—The Hayland Mill Co.; $9,000 capital. A. W. Hayland, H and A. Lovgren.

Seattle, Wash.—The Hylebus Logging Co.; $2,500 capital. G. L. Sibert and A. E. Campbell.

Seattle, Wash.—The Three Ply Veneer & Box Co.; $500,000 capital. J. H. Moore, W. T. Coleman and N. M. Veder.

Savannah, Ga.—The Georgia Shipbuilding Co.; $50,000 capital.

Ashley, Okla.—The Farmers' Grain, Lumber & Coal Co.; $5,000 capital. I. T. Strickland and others.

Paris, Tex.—The Boland Lumber Co.; $10,000 capital. J. M. Braswell and others.

Tacoma, Wash.—The Marine Lumber Co.; $100,000 capital. M. P. Leach, F. A. Leach and F. G. Skewis, of Tacoma.

St. Louis, Mo.—The Luxora Cooperage Co.; $40,000 capital. Charles Wunderlich, George W. McBride, Paul T. Bolz and George E. Carter, of Luxora.

Jersey City, N. J.—The Pacific Lumber & Navigaton Co.; $100,000 capital. R. A. Ban Voorhis, Jersey City; A. R. Oakley and Paul Brilsch, of Brooklyn, N. Y., and others.

La Porte, Ind.—The Broadway Lumber & Supply Co.; $60,000 capital. Harry W. Richter, John C. Richter and Max L. Kline.

Alexandria, La.—The Alexandria Lumber & Supply Co.; $20,000 capital. Robert Stack, president; E. W. Brown, vice-president; J. C. Fingerle, secretary-treasurer.

Duluth, Minn.—The Northern Lumber & Coal Co.; $500,000 capital. Walter T. Wright, of Duluth; Charles W. Radford, of Oshkosh; James A. Robb, of Eveleth, and Frank S. Colvin, of Biwabik.

Seattle, Wash.—Tilton River Lumber Co.; $500,000 capital. E. E. Jones and J. K. McDowell.

Tampa, Fla.—Hillsborough Lumber Co.; $100,000 capital. J. L. Greer, president; A. H. McFarlan, vice-president; N. Powers, secretary-treasurer.

Raymond, Wash.—The Guaranty Shingle Co.; $20,000 capital. W. S. Tucker and E. M. Withrow, of Tenino.

Paducah, Ky.—Ferguson Hardwood Co.; $250,000 capital. John K. Ferguson, S. Mall and J. D. Mocquot.

Wakefield, Mich.—Sunday Lake Lumber Co.; $5,000 capital.

Hattiesburg, Miss.—The Silver Lumber Co.; $20,000 capital. C. O. Eure, A. E. Harbison and R. W. Dunn.

New Orleans, La.—The A. J. Higgins Lumber & Export Co., incorporated out of the business heretofore conducted under the management of A. J. Higgins. The company will move to the fifth floor of the Hibernia building. W. M. Cady, president; J. G. McNary, vice-president; A. J. Higgins, secretary, and S. L. Belknap, assistant secretary and manager.

Chicago, Ill.—Treece Lumber Co.; $25,000 capital.

Seattle, Wash.—The A. W. Miller Lumber Co.; $50,000 capital. A. W. Miller, O. S. Larson and R. A. Ballinger.

Aberdeen, Wash.—North River Shingle Co.; $5,000 capital.

Boston, Mass.—Whittle Manufacturing Co., to conduct a general woodworking business; $10,000 capital. Thomas J. Hannon, president; William G. Mason, treasurer; E. Najarian.

New Albany, Ind.—Floyd County Veneer Mills; $10,000 capital. George B. Lapping, Guy W. Theis and Robert A. Lapping.

Gary, Ind.—Lake County Lumber & Supply Co.; $60,000 capital.

Newdale, Ida.—Fleischmann Lumber Co.; $25,000 capital.

New Mills

McNary, La.—Announcement is made that the new Cady mill at McNary will be completed about October 15.

Newberry, Mich.—A. M. Chesbrough, of Toledo, O., and others will build sawmill here.

Augusta, Ga.—The J. M. Card Lumber Co., of Chattanooga, Tenn., contemplates building sawmill here.

Elmina, Tex.—The Walker County Lumber Co. will build mill; has let contract for circular and gang equipment for daily capacity of 100,000 feet.

New Westminster, B. C.—The Marsh-Hutton-Powers Co. is building a shingle mill here.

New Westminster, B. C.—The Acorn Lumber & Shingle Co. is building shingle mill.

Hamlet, N. C.—The Clark-Rhodes Lumber Co., of Richmond, Va., will establish a sawmill.

Baker, Ore.—The Oregon Lumber Co. will rebuild mill recently burned.

Manistee, Mich.—The Michigan Lumber Co. has begun the erection of a sawmill.

Superior, Wis.—The Superior Box Co. has begun work on a new bolt sawmill, which, when complete, will cost in the neighborhood of $15,000 and will have a capacity of about 50,000 feet per day.

Willard, N. C.—The Williams-McKeithan Lumber Co. has started the construction of a modern planing mill.

Elcho, Wis.—The Chas. W. Fish Lumber Co. has begun the erection of a new sawmill. It will be single band mill with capacity of at least 25,000 feet daily.

Pyatt, Ark.—The Redus Lumber Co. will rebuild its planing mill recently burned.

Goldsboro, N. C.—The Virginia Box & Lumber Co. will build box factory. W. T. Hunter, manager.

Business Changes

Batesville, Ark.—A. M. Pease has moved from Mills, N. M., to Batesville, and purchased the Wasson Lumber Co.

Chicago, Ill.—The Lincoln Sash & Door Co. has increased its capital from $30,000 to $40,000.

Mena, Ark.—A. H. Scoggin, of the Scoggin Lumber Co., has sold his interest to W. J. Lauck.

West Palm Beach, Fla.—The Dade Lumber Co. has been succeeded by the Home Lumber & Supply Co.

Moran, Mich.—Emil Albrecht has purchased a one-third interest in the business of the Standard Post & Tie Co.

Jackson, Miss.—The Yellow Pine Lumber Co. has removed its offices to Brandon, so as to be near its sawmilling interests.

Poplarville, Miss.—J. E. Williams has sold his sawmilling business to M. M. Hull and W. W. Wells, who will rebuild the mill and add a dry kiln.

Turton, S. C.—The Atlas Lumber Co. has been succeeded by C. D. Derr.

Seattle, Wash.—The O. Wollenweber Co. has removed to Portland, Ore.

Denver, Colo.—J. F. Gresly & Co. have sold out to J. E. Hanson & Co.

Cairo, Ill.—The Illinois Lumber Warehouse Co. has increased its capital to $20,000.

Blairstown, Ia.—Charles E. Grunewald has sold out to Dennison & Partridge.

New Duluth, Minn.—The Northern Lumber & Coal Co., recently organized at Duluth, has purchased the business of the Colvin-Robb Lumber Co.

Watertown, Minn.—The Midland Lumber & Coal Co. has sold out to H. C. Wolfarth.

Greensboro, N. C.—The Newport Lumber Co. is now known as the Newport Manufacturing Co.

Waxahachie, Tex.—The H. D. Timmons Lumber Co. changed name to D. H. Thompson Lumber Co.

Columbus Junction, Ia.—Reaney & Eliason have sold out to the Eclipse Lumber Co., of Clinton.

Ocheyedan, Ia.—Glade & Shuttleworth have changed name to Glade Lumber Co.

Nenzel, Neb.—McKenna Bros. have sold out to the Nenzel Lumber Co.

Omaha, Neb.—Ellingwood & Wilkes are succeeded by D. E. Ellingwood.

Hamlet, N. C.—J. A. Williams has sold out to Adams & Graham.

Minneapolis, Minn.—Olsen & Serley have changed name to the Olsen & Serley Sash & Door Co.

Chicago, Ill.—The Grand Avenue Lumber Co. has increased its capital from $2,500 to $12,000.

Kennedy, Ala.—Bell & Holloman have changed style of their firm name to Mud Creek Lumber Co. J. E. Bell, proprietor.

Jerseyville, Ill.—Alexander C. Robb has sold out to the F. R. Miller Lumber & Coal Co.

Ollie, Ia.—Stahl & Bottgar have sold out to the W. H. France Lumber Co.

Hutchinson, Kan.—C. A. Sanders has changed style of firm name to C. A. Sanders Lumber Co.

Niles, Ohio—The National Supply & Construction Co. has sold out its planing mill and lumber yard to the Western Reserve Lumber Co., of Warren.

Nashville, Tenn.—The Morford Lumber Co. has sold out to the J. M. Whitson Lumber Co.

New York—Wistar, Underhill & Nixon, of Philadelphia, have opened a branch sales office at 280 Madison Avenue.

Hot Well, La.—The Boyce Lumber & Realty Co. has removed its saw mill from Boyce to this place.

Cairo, Ill.—The C. M. Kellogg Lumber Co., of Chicago, has moved its yard from Memphis, Tenn., to this city.

Demopolis, Ala.—The Chickasaw Lumber Co. has increased its capital stock to $28,500 and reorganized with the following officers: H. L. Wood, president; E. D. Ward and D. H. Stubbs, vice-presidents; L. L. Schertzer, secretary, treasurer and general manager.

Fires

Baker, Ore.—Fire destroyed the sawmill of the Oregon Lumber Co., causing loss of $40,000.

Nadeau, Mich.—Fire destroyed the sawmill of the Nadeau Bros., entailing loss from $12,000 to $15,000. Will not rebuild.

Van Hook, N. D.—Property of the Bovey-Shute Lumber Co. damaged by fire to the extent of $30,000.

Seattle, Wash.—The Lake Union Shingle Co. visited by fire which caused a loss of $1,500; insurance fully covers loss.

Dendron, Va.—A fire at plant B of the Surry Lumber Co. caused damage of many thousands of dollars.

Robinson Point, Fla.—The sawmill, planing mill, lumber sheds, dry kilns, boiler house and 200,000 feet of lumber of the Robinson Point Lumber Co. burned; total amount of loss not given but exceeds the insurance of $12,000.

Nadeau, Mich.—Saw mill of Nadeau Bros. burned. Will not rebuild.

News Miscellany of the Lumber World

South Atlantic News

JACKSONVILLE, FLA.

Jacksonville, Fla., Sept. 20.—An important company and enterprise, to be known as the Zellwood Produce Co., has been organized in Orlando, and will supply articles of incorporation at a later date. The capital stock is named at $500,000, and the place of business will be Zellwood, Orange county, and New York city.

The incorporators named are Charles Libarle, Locust, N. J.; Albert E. Hartcorn, New York city, and Charles H. Jones, Zellwood. The business to be carried on includes the purchasing of timber lands, manufacturing barrels, boxes, etc.

According to members of the Adams Lumber Co., of Hallandale, lumber is on a boom. They are preparing for heavy business this winter. Thousands of feet of lumber is being shipped from this mill every week to different towns on the east coast. E. P. Maule & Co. are also shipping many carloads of lumber each week.

* * *

PENSACOLA, FLA.

Pensacola, Fla., Sept. 20.—The largest cargo of mahogany logs ever consigned to an American port will be unloaded in Pensacola, Fla., within the next few weeks by the schooner Omnion, of the C. C. Mengel fleet. Six ships of the line are now in operation, and one is being built in Bath, Me.

A cargo of mahogany logs is due on the E. O. Saltmarsh early in November, and with the launching of the four-mast schooner in the same month, the business at Pensacola will be greatly increased. The schooner Hornet is now unloading a big cargo of mahogany logs.

S. L. Frazier, general manager of the company, says that Pensacola will be used exclusively for unloading the logs.

The American schooner Hornet has arrived in this port from Frontera, Mexico, where she will discharge a cargo of 575 mahogany logs. The logs are being unloaded direct from the schooner to flat cars for interior shipment. The Hornet is a large boat and consigned to take mahogany logs from Mexico to Pensacola.

* * *

ASHEVILLE, N. C.

Asheville, N. C., Sept. 16.—The Williams-Brownell Planing Mill Co. is increasing its capacity, and is now building a large dry kiln of the Moore moist air type. The new kiln will be completed about the middle of September.

Williams-McKeithan Lumber Co. is starting the construction of a modern planing mill at Willard. The company is also building a large dry kiln of the Moore moist air type. W. B. Harris, vice-president of the company, recently closed a contract for a large body of fine timber in Duplin county, this state, and has recently built several small mills. General Superintendent S. E. Lindsay, East Durham, N. C., is in active charge of the company's interest in the Carolinas.

The Champion Lumber Co., one of the largest corporations in the south, has been declared bankrupt by Federal Judge Boyd at Greensboro. Liabilities are estimated at from $4,000,000 to $6,000,000 and assets are not listed. The court ordered the operation of the company continued.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., Sept. 19.—Heavy shipments of lumber, sheep, cattle, wheat and fruit are being made from Spokane east over all railroads. Spokane building operations have been increasing steadily since the first of the year, the permits the first eight months being $280,649 in excess of those for the corresponding period of 1915. "There have been some important developments in the lumber situation during the last month," states the monthly trade report, issued for Spokane and tributary territory by the local office of R. G. Dun & Co. "While of late the price has been somewhat disappointing, ascribed in part to the short crops in the prairie states, shipments of Inland Empire mills for the first half of 1916 show a material increase over those of last year, and business has been done at much better prices."

* * *

KALISPELL, MONT.

Kalispell, Mont., Sept. 20.—C. B. March, general manager of the State Lumber Co., returned this week from a business trip to Spokane, and other points of the Inland Empire. Mr. March states that their mill is running on a day shift only, and that they have several million feet of logs in storage to keep their plant in operation as late as weather conditions will permit. They expect to manufacture approximately 12,000,000 feet this season, and their shipping department is being worked to full capacity, and the outlook is encouraging for a good fall trade.

A. E. Boorman, chief fire warden for the Northern Montana Forestry Association, returned this week from an inspection trip, covering the territory within the boundaries of the co-operative fire districts. Mr. Boorman reports that the forests are in good condition, and is of the opinion that very little difficulty will be experienced this year in handling the fire situation.

C. B. Roberts, of the Lincoln Logging & Lumber Co., Fortine, Mont., returned this week from a business trip to Seattle and other points on the coast. Mr. Roberts states that the output of their plant is being handled by the Boorman Lumber Co., which operates a string of retail yards in eastern Montana, and owing to the strong demand for lumber in that district, he expects that their usual output will be greatly increased this year, and that they will operate their mill as soon as weather conditions will permit.

George Pilling, auditor for the Rogers-Templeton Co., with headquarters at Great Falls, visited the mills of this district this week on matters of business pertaining to his company.

Central Southern News

BIRMINGHAM ALA.

Birmingham, Ala., Sept. 15.—Everything indicates that lumber has assumed a firm and permanent basis with prices very satisfactory. Sales are good, and movements are hampered very little by the car shortage in this district. There is considerable activity in lumber circles. From all parts of the state reports are encouraging. Optimistic news comes from Perry county. All of the smaller mills there are reported operating on full time. The Moundville Lumber Co. is taking the product of all of the smaller mills in that section.

The Marion Cooperage Co. at Marion, in that county, is running full time, with a fine pay roll. Several stave mills will be added to the ones now in operation, within 90 days. A great many cross ties are being cut in Walker county.

John Price, a Louisiana farmer, is in Birmingham seeking a location for a wagon factory which will employ several hundred men.

The Pine Belt Lumber Co., located at Pine Belt, near Selma, has placed a contract with the L. Moore Dry Kiln Co., of Jacksonville, Fla., to increase its dry kiln capacity and put in the Moore moist air system of drying.

Seattle (White Bl[illegible]

tion has purchased the grounds and buildings of the Moss Point Fertilizer Co., which are located on the Alabama and Mississippi Railroad and Escatawpa river, a mile east of the business district of Moss Point. Primarily, it is the purpose of the company to build on this location a modern plant for the manufacture of box shooks, made of rotary cut veneer, from Pascagoula river hardwoods.

Mr. White has been for several months in casting about for a suitable location, and one as near as possible to the timber supply, and has selected the present site as possessing as nearly as possible all of the necessary attributes.

The company is composed of William M. White, Mrs. J. H. White, his wife; H. L. White and Edwin B. Lang.

H. L. White is president of the J. J. White Lumber Co., which has extensive interests at Columbia, Miss.

Northern States News

MANISTEE, MICH.

Manistee, Mich., Sept. 19.—Operations of the Hoffman & Peters sawmill at Highbridge will be resumed again soon, it has been announced by Richard Peters, who has charge of the work at the mill. It is planned to begin work soon after October 1.

The resumption of activities at the mill will mark the third year of its existence. According to the announcement of Mr. Peters, over 1,000,000 feet of timber will be cut during the approaching two months of operations.

On account of the decline of the logging industry, cut lumber and timber from the Hoffman & Peters mill is in much demand. Their holdings comprise timber of all kinds, ranging from the soft pines to the hardwoods.

* * *

SAGINAW, MICH.

Saginaw, Mich., Sept. 16.—The largest raft of logs in years has been towed up the Saginaw river. If stretched in a circle the logs would measure more than 4,000 feet in circumference. It required 160 boom logs, each averaging 25 feet in length to hold the shipment together, which contained 3,500,000 feet of hemlock and pine.

The logs were gathered from different parts of the northern shores of the Great Lakes, some coming from Marquette county, others from the Soo, and still others from different harbors on Lake Superior.

The logs were all assembled at Detour, Mich., from which point under the tow of the tugs Ames, of Green Bay, Wis., and the Dimmick, of Cheboygan, they arrived at the Bay of Saginaw. The final destination of the logs was at the Ross & Wentworth lumber yards.

Southwestern News

KANSAS CITY, MO.

Kansas City, Mo., Sept. 21.—The settlement of the coal mine strike trouble in Oklahoma, Kansas and Missouri was one of the most important pieces of news in lumber circles here. Retail lumbermen in many instances are also coal dealers and there was added interest in the outcome of the negotiations because the Central Coal & Coke Co. was one of the largely interested concerns. There may be a few remaining points of difference but it now seems probable that the mines will be operating as usual soon.

Weather and crop conditions in this territory are favorable to a good fall business. From practically all of this immediate territory the reports received lately have been entirely optimistic. The late corn is unhurt by the frost so far and most of it is now past the stage where it is in danger.

Among the activities of lumbermen recently here, the winnings of Frank J. Bannister and R. A. Long in the Dairy Show here are prominent. Both Mr. Bannister and Mr. Long demonstrated to the judges here that their dairy herds are among the best in the United States.

Fall building is on the increase here. Both residences and commercial structures are going up rapidly. Among the residences is one going up for C. W. Thornton, city sales manager of the Long-Bell Lumber Co.

LITTLE ROCK, ARK.

Little Rock, Ark., Sept. 19.—The representatives of the thirteen big yellow pine lumber manufacturers of this state, which subscribe to and constitute the Arkansas Soft Pine Bureau of this city, held a meeting in Warren recently, and were the guests of the Arkansas Lumber Co. at a luncheon given at the Hotel Southerland of that city.

The Oklahoma Land & Timber Co., of Fayetteville, yesterday filed notice with the secretary of state that it had increased its capital stock from $10,000 to $25,000. This company also last week closed a deal whereby it secured a tract of 20,000 acres of timber lands in Sequoyah county, Oklahoma, at an average price of $1.25 per acre. The company also owns a 10,000 acre tract in Adair county, Oklahoma, which lies adjacent to the newly purchased tract. It is now operating a number of stave and heading mills on the tract in Adair county, and will extend its work to the other tract soon.

Two large deals are also reported from Searcy, Ark., during the past two weeks. One in which the Chess & Wymond Co., of Louisville, Ky., owners and operators of a number of stave and heading mills and finishing plants, as well as many acres of timber lands in Arkansas, secured a 2,600-acre tract of virgin timber near Georgetown, known as the Galloway tract, for the sum of $34,000. The other, in which the Henry Wrape Stave Co., which also owns considerable timber lands in this state and operates several mills, secured 10,000 acres of timber lands in Van Buren County, Arkansas. The consideration in this instance is given out as $25,000.

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., Sept. 23.—The lumbermen are much pleased here at the large total shown by building operations for August, which amounted to $1,756,000, and the outlook for large building work all through this fall. Plans for big work on September 1 amounted to $750,000 and a large amount of extension projects are being carried out by local concerns. It looks as though work would be active in the building line during the remainder of the year and that the total of last year's permits would be exceeded.

Dealers in British Columbia shingles report that these are being introduced more and more into this market, though the price is considerably higher and where strong competition prevails the business goes to the Washington shingles. It is expected that shingles will run short in this market during the winter, as the lake lines have not been giving the attention to the trade they usually do.

The Buffalo Lumber Exchange held a special meeting the other day, largely for the purpose of considering the date of the next outing, but as the attendance at the meeting was not large the date was left open for the present. It will be some time in October.

Shortage of labor is the bugbear of the Buffalo lumber yards, as of most other concerns in this section. Many lumbermen have signs posted conspicuously to the effect that men are wanted, and a good deal of advertising is being done in the newspapers. All this effort only produces limited results and to have half as many men as usual in a busy season is quite the common occurrence. Carpenters and mill workers generally are also hard to get and are demanding high wages.

Pacific Coast News

SEATTLE, WASH.

Seattle, Wash., Sept. 19.—The schooner Allie I. Alger is remaining in port because of a dispute between her owners and the underwriters regarding the amount of lumber she shall be allowed to carry to Honolulu. The underwriters declare 70,000 feet is all that she can carry, while Todd Brothers, owners, want her loaded with 120,000 feet. She is tied at the Schwager-Nettleton mill.

The British steamship Blackheath is due in Seattle soon and will take a cargo of lumber from the Schwager-Nettleton mill here and the Hastings mill in Vancouver, B. C. The cargo is to go

Digitized by Google

"somewhere in France" for the British admiralty.

There is a vast and fertile field for the lumbermen of the Pacific coast in China, according to G. B. Sayer, sub-editor of the North China Daily News, who is in Seattle. He declares the business of the China Import & Export Lumber Co. has been seriously affected by the lack of tonnage. The great railroad development of China, the editor declares, is furnishing a rich field for lumber, if the vessels could be obtained.

* * *

SAN FRANCISCO, CAL.

San Francisco, Cal., Sept. 18.—The Douglas Fir Club of San Francisco has elected officers for the ensuing year as follows: A. A. Baxter, of the Charles Nelson Co., president; C. R. McCormick, vice-president, and F. V. Paramino, secretary. In the future the board of directors will meet weekly.

The General Wood Preserving Co. has purchased a large tract of land at Bay Point, Cal., and will erect a creosoting plant at once, under the direction of Frank D. Beal, formerly with the Charles R. McCormick Co., the organizer of the new concern.

Work has commenced on the erection of a plant for the manufacture of a composition board from mill waste by the Northwestern Compo Board Co., at Ft. Bragg, Cal. Material will be secured from the plant of the Union Lumber Co.

The steamer Edgar H. Vance recently brought a raft into San Francisco bay containing 10,000 pieces of piling, consigned to the Hammond Lumber Co. This material is to be used in harbor construction work.

Ohio Valley News

EVANSVILLE, IND.

Evansville, Ind., Sept. 23.—Lumber prices in the southern Indiana market have gone up slightly in comparison with the advances in other lines of building materials and consumers instead of protesting at the rise are congratulating themselves over their good fortune in being able to get material in practically a normal market.

Building permits during the past three months have greatly exceeded the permits for the three corresponding months of last year. Contractors and architects say there is enough work in sight for them to keep busy until cold weather sets in. Planing mills continue to operate on full time, while sash and door men report a much better trade than they had this time last year.

The various wood consuming factories in Evansville and southern Indiana and western Kentucky towns are being operated at full force, and there is a scarcity of workmen, and labor was never in better demand than just now. The veneer and furniture manufacturers report trade especially good.

Charles Maley, of the Henry Maley Lumber Co., at Jackson, Miss., was here on business a few days ago, and reported his large mill at Jackson being operated on full time. Mr. Maley stated that the trade conditions of the south just now are booming, and he looks for good times during the balance of the present year.

William B. Carleton, local trade journalist, member of the Evansville Lumbermen's Club and prominent Hoo-Hoo, has returned after taking an active part in the Maine campaign, and contributed largely to the success of his party.

Claude Maley, of Maley & Wertz, hardwood lumber manufacturers, has returned from a business trip to Indianapolis and the central part of the state. He reports business conditions much better than they were a month or two ago.

* * *

LOUISVILLE, KY.

Louisville, Ky., Sept. 21.—Building operations continue good, with local concerns especially active, and permits well ahead of last year. The demand for interior trim from the builders has been good, and there is also a good demand for veneers, panels, dimension stock, short lengths, etc., in mahogany and other popular woods used in car building, fixtures, etc.

The Chess & Wymond Co., large cooperage manufacturers of Louisville are adding additional kilns of the Moore Moist Air Type at their plant, located at Holly Ridge, La. The kiln is being built by L. Moore Dry Kiln Co., Jacksonville, Fla.

The Yellow Poplar Lumber Co. has purchased additional timber lands on Gabriel's Fork, near Whitesburg, Ky., and has nearly completed fifteen miles of narrow-gauge road. Large crews of men are being employed by the company, which is rushing its developments.

CINCINNATI, OHIO.

Cincinnati, O., Sept. 22.—The local market was considerably stirred recently when it was announced that the Chicago, Milwaukee and St. Paul Railroad was inquiring for 10,000,000 feet of grain door lumber. This order, it is said, will represent the fall requirements of the railroad for equipping freight cars and considerable speculation has been indulged in by local lumbermen because of the unusual volume of the inquiry.

The freight car shortage is becoming more serious day by day and now there is hardly a road entering the city that is not more or less seriously affected by the scarcity of rolling stock. The Big Four, Queen & Crescent, Louisville & Nashville, Norfolk, Western & Cincinnati and the Cincinnati, Hamilton & Dayton all are warning shippers to use greatest care in ordering only as many cars as are actually necessary and to use all possible speed in loading and unloading.

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Sept. 22.—Prospects for a good fall and winter lumber trade are excellent, according to F. N. Snell, secretary of the Louisiana Red Cypress Company, who has just returned from one of his periodical "swings around the circle" which included parts of Texas, Oklahoma, Kansas, Nebraska and Iowa.

Mr. Snell reports that the corn crop of Kansas has been badly injured by unfavorable weather conditions, but that the crops of Nebraska, Iowa and Kansas are good. Iowa's crop, in fact, on a basis of prices prevailing three weeks ago, and indications of production at that time, will bring $52,000,000 more this year than last.

Mr. Snell found that business men through the west generally regard our present exceptional prosperity as artificial to a considerable degree, and the opinion was unanimous that radical changes in labor and wage conditions would follow the European war.

Louisiana and Mississippi turpentine operators met here at the St. Charles Hotel September 14, and took preliminary steps to organize an association representing the industry in both states. After two sessions it was decided to appoint a committee of five to canvass the firms not represented, and report back at another meeting to be called at some future date.

The object of the proposed organization is to better working conditions for production and marketing, and to enable producers to obtain information on the trade situation, sales, stocks on hand, etc.

James D. Lacey, the big timber operator, has been spending a few days in New Orleans en route to the Pacific coast.

The J. G. Rainwater Lumber Co. of this city has secured an additional contract from the Panama Canal Commission for 1,600,000 feet of boards and No. 2 dimension on order No. 69,224. The Rainwater Co. announces also that it chartered the steamship Santa Alicia from W. R. Grace and Company, and shipped 40,000 cypress crossties from New Orleans to Cuba last week. The charter was for this single shipment only.

* * *

BEAUMONT, TEX.

Beaumont, Tex., Sept. 17.—The prediction of a new shipping record for Beaumont this month has already been realized. With only half the month gone the shipments of crude and refined petroleum products, hardware, merchandise and lumber have exceeded that of any previous month.

Two mammoth steamers are in the harbor loading 6,400,000 feet of lumber and timber for export to England, and another lumber ship will arrive September 25 for 2,500,000 feet of lumber and timber, and the ships Keechi and Vaska will return from Mexico probably twice before October 1 for cargoes for Tampico.

Completing her immense cargo of 3,400,000 feet of lumber and timber, the British steamship Swan River, which has been in port about nine days, cleared Saturday for a British port. She will sail from Beaumont at 7:30 o'clock this morning.

The British steamer Coniston Water, which will have been in port two weeks Monday, will clear that day for an English port, and will sail Tuesday morning, carrying 3,000,000 feet of lumber and timber.

The Current Trend of the Lumber Market

General Market Review

Trade in lumber has not rallied from its summer depression as much as had been anticipated for this stage of the fall season. However, there is considerable confidence expressed in the volume of fall business and this is possibly indicated to some extent by the unusual activity prevailing in the sash and door industry, although it is urged that sash and doors usually follow the course of the lumber movement instead of being an indicator. Still, there is a good prospect for lumber movement throughout the country in spite of the sense of disappointment prevailing over the country districts because of a partial crop failure. Business men feel, however, that the higher prices obtained for all cereals will do much to recompense the farmers for their decreased volume.

Building operations are generally reported active, the August report showing a general increase throughout the country with the exception of a few large cities led by New York and Chicago; but in seventy-one of the 112 cities from which statistics were obtained by the American Contractor, a healthy increase in building circles was shown and in practically every large center outside of a half dozen the reports are unusually gratifying. This should be followed by a renewed demand for lumber and, barring untoward happenings, the outlook appears bright. Money is plentiful, rail and industrial stocks are decidedly firm, the volume of steel orders continues heavy, factories are generally doing a fair business and there seems to be little in sight that would conspire to restrict the building activity already noted.

The presidential campaign is only just beginning and for the next six weeks will undoubtedly grow in intensity. The result, however, seems to be already forecasted by intelligent observers and likely contributes to the complacency with which the business world is going about its ordinary affairs.

There is more or less uncertainty as to business conditions still prevailing among the manufacturers of the south and of the west coast, although their orders are again showing a substantial, if not heavy, gain. The element of car shortage is one that helps to foster a certain degree of uncertainty, while the absence of export business continues to be a discouraging factor in the south.

For some time the manufacturers of hardwoods have observed a growing disposition to unseat oak from its acknowledged place as the head of the hardwood column and there are many who believe that this staple product is at least temporarily on the wane. Whether the decreasing movement of oak consumption is to continue is a mooted question, but the opinion of most hardwood manufacturers is that the prospects for oak are not at all as threatening as some have contended. An increasing use of red gum, birch and mahogany is noted, however, in furniture and trim and these woods are likely to show the effects of the increased demand in the near future.

That there is a pronounced shortage in the car supply is evidenced by the last report of the railroads, which shows that from a surplus of 10,000 cars on Augut 1 there is a deficiency of 14,000 cars on September 1. As the crops in many parts of the country are just beginning to move, it is hardly reasonable to assume that the car supply will be any more plentiful during the coming two or three months, but, in fact, that a continued decrease may be looked for.

NORTHERN AND WESTERN HEMLOCK.

The production of northern pine has been much reduced owing to the scarcity of men, but late reports are to the effect that an increasing number of [illegible]men and mill employees are now avail[illegible] at the northern white pine mills ar[illegible]re is a continued demand for [illegible]k. Demand for western and California pines has shown no symptom of improvement this month, but continues on a reasonable basis of volume and prices are fairly attractive. It is felt that most northern and western pines will come in for a good business during the latter part of the year.

NORTHERN AND SOUTHERN HARDWOODS.

Chicago dealers are not particularly enthusiastic over the trade they are now getting for hardwoods. Many complain that their oak business has fallen off considerably and ascribe it to the substitution of other and, in most cases, cheaper hardwoods.

There is a considerable range shown in the prices for oak delivered in this territory, firsts and seconds being quoted all the way from $50 to $55, No. 1 common at from $31 to $35 and No. 2 common at from $22 to $24. Gum prices are holding rather steady around $38 for firsts and seconds red, $27 for firsts and seconds sap, $27 for No. 1 common red and $23 for No. 1 common sap. Poplar is selling well in the upper grades and there is noted an increased call for box lumber. Of the northern hardwoods birch is an unquestioned leader and is coming into constantly growing favor. Stocks are by no means large and the prospects for a restricted supply of logs the coming winter renders the present birch market rather attractive to buyers. No. 3 birch lately has been held firmly at $11 at the northern mills. Firsts and seconds maple in inch and thick stock and also thick good maple, as well as common, has been scarce in general supply and values firm. No. 3 maple has been too low in comparison with the list and northern manufacturers are now endeavoring to get $9.50 or better at the mills. Stocks of dry basswood are scarce and the supply moves readily.

SOUTHERN PINE.

A decided gain is shown in the orders for yellow pine, the figures for September 15 showing unfilled orders for 24,122 cars, as compared with 19,962 cars on September 1. This is the greatest number of unfilled orders reported since early spring. Considerable complaint is made of car shortage, which has had the effect of restricting deliveries at many points in the south where, usually owing to a nearby junction or terminal business, cars have been freely available. Many of the yellow pine manufacturers now complain that the grain movement lately has not been gulfward and that they are not able to get the cars which they have usually depended upon at this season.

Prices are holding well and in many respects the yellow pine market is in better position than it was thirty days ago, with an advance on some items of about 50 cents, which is regarded as showing the gradual strengthening character of the market. It is reported that some of the smaller mills have been compelled to close down for lack of shipping facilities and if the car shortage should show much of an increase many more undoubtedly would close, as the average small manufacturer is not able to carry a large stock owing either to lack of money or yard room or both.

CYPRESS.

Cypress production and consumption are about on an even keel. There is perhaps not so much inquiry as there was a few weeks ago, but shipments as well as manufacture continue steadily and the average shipper feels comfortable as to the disposition of his stock. At many of the cypress mills there is some unevenness shown because of car shortage, but there is piling space available, as stocks had deen pretty well pulled down during the spring and summer. Demand from factory sources has been uniformly good for several months and straight cars are not any too frequently figuring in the orders. A fair trade is reported from the middle western retail territory, where the mixed car business prevails. Prices are being firmly maintained.

HEMLOCK.

With firmer conditions obtaining in the yellow pine industry, the producers of hemlock in northern Wisconsin and Michigan are feeling somewhat encouraged. Besides there has been a revival of the hemlock advertising campaign, both on the part of associations and of individual manufacturers, so that the natural hemlock territory is again furnishing a comfortable supply of orders. This has helped the price and many manufacturers are asking $1.50 off the list, where thirty days, or less, ago they were willing to take $2 off the list and sometimes a half dollar more. Stocks of hemlock are concededly light and broken and the cut has been materially reduced during the summer by a shortage of men. There is some car shortage reported recently in the north and the average buyer of hemlock would do well to make note of that condition.

SHINGLES AND LATH.

Demand for shingles continues along the same lines as for the last month. There is a little better inquiry as colder weather approaches and the supplies have not been burdensome, so that the market as a whole is in a materially improved condition. Late quotations on red cedars are based on $1.90 for clears and $1.60 for stars at the mills, although some prices are being paid in Chicago 3 or 4 cents over these quotations, the Chicago basis being around $3.11 for clears and $2.67 for stars. White cedar shingles are moving about as usual at the former quotations of $2.80 for extras and $2.40 for standards delivered in the Chicago district. Lath are only fairly plentiful in supply and the prices heretofore quoted are easily obtained. Cypress lath are not available in carload lots, but there is an excellent demand for them along with mixed cars.

Southwestern Markets

ST. LOUIS, MO.

A lumberman of St. Louis writes us as follows: "The wheels are all turning at the big and little mills in this territory, and it looks as if there is going to be more stock put out than the market will absorb without softening.

"There has been some improvement in the local market during the week. The hardwood business has shown an increase in orders, both for building and from the furniture factories, and the railroads have been buying more heavily of hardwood timbers.

"Manufacturers and wholesalers report a fair trade in yellow pine, but the country yard trade has not yet assumed satisfactory proportions. The buying of consuming factory and local yards has been better.

"The yards that handle cypress report better demand and stiffening prices.

"The shortage of cars is seriously affecting shipments from the mills throughout the south."

* * *

KANSAS CITY, MO.

This good report of the Kansas City market comes to us from our correspondent: "The yellow pine business here is holding up fairly well, but it is admitted that there has been a slight lull. However, with cars hard to obtain the mills are still shipping about all the stock that they have ready to move. However, retailers who have been in this city recently, as well as country salesmen, agree that there is still a large amount of building planned and that retail stocks are not excessive.

"Cypress has been selling steadily and so far no decrease in business has occurred. While the cypress trade is more or less affected by the activity of yellow pine, the present time seems an exception to the rule. There is a constant demand for mixed cars of cypress. Mill stocks of cypress seem fairly well assorted, although some lengths of No. 1 boards are reported scarce. As usual, the quantity of red cypress lath that can be included in a mixed car is limited, owing to the scarcity of that item. Yellow cypress lath is plentiful.

"Hardwoods are still selling readily here and if

Digitized by Google

anything the trade is increasing. Flooring has been in good request recently and an unusual amount of oak flooring is going to country points. Maple flooring is also selling well in this city and in the larger towns. There is a fair request for walnut lumber and also veneer. Thick walnut suitable for gunstocks which has been quiet was again called for last week, according to some reports.

"White pine is moving steadily in limited quantities at steady to strong prices. There is also a good normal trade in fir. Western pine is being taken readily and all lower grade west coast woods are firm."

* * *

A correspondent writes us of the situation at Shreveport as follows: "Inability to secure sufficient cars in which to ship out orders is undoubtedly the most displeasing feature of the yellow pine lumber market in this section. It might be said to be the only unsatisfactory feature about the market, for prices have been steadily strengthening with improvement in demand, which has been under way for the past few weeks, and there is a world of encouraging inquiry, making prospects exceptionally bright for the fall season.

SHREVEPORT, LA.

"During the latter part of the past week there was a slight lull in the buying, due to the threatened railroad strike and the embargoes established by railways against all kinds of shipments, but now that the strike has been averted better conditions are prevailing and a splendid fall trade seems to be assured. Some new lists have gone out and others are expected to be issued. The demand is generally favorable, and on some items it is particularly strong, flooring being in this class, resulting in an advance of $1 lately, while stocks generally have advanced 50 cents. There is also brisk coastwise trading and much South American trading."

* * *

A well known Texas lumberman writes of the Houston market as follows: "The car shortage is delaying shipments from all mills. Some mills are not receiving more than 50 percent of the cars ordered. But notwithstanding this trouble there is a steady movement of lumber, with prices about as they have been for several weeks.

HOUSTON, TEX.

"The country yards served from this territory are buying fairly well, and good crops throughout the section make lumbermen optimistic."

Central Southern Markets

A prominent lumberman engaged in the manufacture of yellow pine, writes as follows: "We have been very much encouraged during the past few weeks over the increased volume of business, and the fact that our customers have proved very willing to pay the prices that we are now asking for our products, when only five or six weeks ago we found it almost impossible to get an order on the same figures. From all that we have observed and experienced, and judging from the reports made by our representatives in various sections of the eastern half of the country, the buying should be very active during the remainder of this month and a good part of next, sufficiently so, in fact, to give a very firm tone to the present market level, with numerous items probably advancing.

BIRMINGHAM, ALA.

"We, of course, still find some manufacturers making prices for which we cannot find any warrant whatever in the situation. These seem to be determined not to run any risk of failing to enter a full line of business for fall shipments, regardless of what price must be made to do this, or what effect the cutting of prices has upon the general market.

"The car situation is indeed very serious, and I cannot prophesy as to what will happen in that connection. It is altogether likely that the condition will grow worse before it begins to show an improvement, and this will mean the accumulation of stocks at the mill at a season when they should be diminishing, unless the manufacturers realize the danger and apply the obvious remedy, which is to reduce their output until conditions are normal again.

"We lost two weeks in July, due to the storm damage, and have been compelled to run full time for several weeks past in order to take care of time contracts that we had, but have gone again to five days, and, so far as we can determine now, will continue this policy until the situation shows an improvement.

"I sincerely hope that yellow pine manufacturers generally will so manage their affairs as to go into winter quarters with plenty of room to take care of the winter cut, and then that no effort will be made to sell anything until after the first of the year. During the past five or six years the buyers have been going into the market in December, when business was practically at a standstill, and making contracts on the basis of the lowest prices current during the whole year. Then they have used this low priced stock in their sheds and yards to keep prices below the level they would normally reach during the spring.

"As to these recurring car shortages, it does seem as if the Interstate Commerce Commission will eventually have to take cognizance of the situation and work out some plan which will insure better distribution of such equipment as is available. No one carrier can ever do anything with it, and we very much doubt whether any considerable number of them will ever get together on a solution."

* * *

A manufacturer of yellow pine in Alabama writes as follows: "The yellow pine market continues to improve. Inquiries and orders plentiful. We would not be surprised to see a repetition of last fall's advance in price.

VREDENBURGH, ALA.

"The car shortage with us is more severe than at any previous time. In addition to the car shortage, shipping is hampered by the fact that some of the southern roads have issued embargoes on their equipment moving beyond their own rails."

New England Markets

A lumberman of Boston has this to say of the New England lumber market: "Building continues with increased activity throughout New England, in towns and rural districts alike. Operations in Boston, Springfield and other cities have been handicapped by shortage of labor and the labor troubles at the finish mills. And the lack of shipping facilities is now causing delays.

BOSTON, MASS.

"The hardwoods are selling fairly well, with builders and factories busy; prices show little change from August. Cypress is selling well, in heavy stock especially.

"Yellow pine and North Carolina pine are in good demand, with prices somewhat advancing, the car shortage at the southern mills affecting the supply of these southern pines in the New England market."

* * *

A prominent lumber dealer of New England has this to say: "The general lumber trade throughout New England has been rather above the average this year, and in many sections the movement of lumber has been much above the average, even for good years.

HARTFORD, CONN.

"Here building has been active all season, and the retail yards have had a heavy trade; the same is true of New Haven, Bridgeport and other distributing centers. Bridgeport has for months been having an unprecedented building boom, and it is said there is now a demand in that district for several thousand houses."

Middle States Markets

A lumberman writes of conditions in the metropolis as follows: "There is undoubtedly a stronger tone to the general market than there has been for six months.

NEW YORK, N. Y.

"Transportation problems still vex the trade. No sooner had the railroads lifted the embargoes than the car shortage was upon us, which will probably continue for some weeks, to limit the receipt of southern pine and western woods, while the excessive tonnage rates by water make relief in that way impossible.

"Building continues active though affected adversely by the threatened railroad strike and the impending labor strikes in the city. Architects

American Forest Trees

By the late Henry H. Gibson
Edited by Hu Maxwell, Wood Utilization Expert

The book is beautifully printed, and is handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

The work is illustrated in sepia with more than 100 full-page halftones from photographs covering all the chief commercial varieties of virgin forest timber growing in the United States, and also with numerous engravings from drawings showing leaf and flower forms, etc.

The price of the work is $6.00, delivered by express or mail.

and builders report that the indications are for active building, which the severe weather holds off, unless the labor troubles and the high price of structural metals and hardware render building costs prohibitive."

* * *

PHILADELPHIA, PA.

The lumber market of Philadelphia is reported as follows: "Trade is active. Both manufacturers and dealers report demand increasing in all lines; building is going on actively, the railroads are buying well, road and bridge and pier improvements are going on everywhere in this section, while the wood consuming factories are busy and buying well. Lack of cars and lack of laborers are drawbacks to the general prosperity of the trade.

"Yellow pine shows increase in demand throughout this section, and is advancing in price. North Carolina pine is in active demand, both as to building timbers and box lumber, and prices are tightening. Hemlock, white pine and spruce are in good call.

"Hardwoods are all selling well; oak, ash, maple and basswood being the best sellers, and gum, birch and chestnut in good call."

* * *

BUFFALO, N. Y.

A correspondent reports the situation in the Buffalo district as follows: "The lumber business is on a fairly active scale, and business is generally stated to be as good as usual at this time. Everybody is beginning to predict a car shortage for this fall and winter, and this will cause a good deal of trouble, in all probability, in getting needed stocks from the south.

"In the hardwood trade the demand has been steady, though it is not heavy just now. A great drawback to better business is the scarcity of cars at the lumber yards, as well as at the consuming plants. Lumbermen say that the furniture factories are running at as full time as is possible, but that the labor situation is very discouraging. It seems to be impossible to get all the men needed, and nobody expects this condition to improve durthe remainder of the year. Maple, ash and oak are about the chief woods, with some report of increased demand for basswood and elm. Prices are not showing much change, and are firm in most woods.

"The building woods, including yellow pine, hemlock and white pine, show little change in price, being held steady at the figures recorded several weeks ago. The sales are said to be quite good in both yellow pine and hemlock, as retail business is improving and larger stocks are needed to round out the yard supplies. The approach of the close of the lake season causes an advance in lake lumber freights, so dealers are now finding additional stiffness at the mills in both hemlock and white pine.

"Demand for shingles has been showing some increase and retailers are getting somewhat anxious about their winter supplies. The next few weeks ought to see an increase in the quantity of lake shingles received, unless a shortage is to prevail in the retail yards during the coming winter. Prices in shingles are holding steady, but an advance is looked for soon, as the stocks in the east are not heavy."

Gulf Coast Markets

NEW ORLEANS, LA.

A correspondent writes of the situation in the New Orleans market as follows: "Yellow pine prices are about stationary, and are not expected to change materially during the next thirty days. There is no probability of prices decreasing as long as the present car situation continues, even if no other influences were brought to bear. At all points in Mississippi and Louisiana the shortage in rolling stock is reported very serious, and growing worse. Unless there is an improvement, several of the smaller mills will be forced to shut down within the next few days, while the larger plants will curtail extensively. The labor situation is fair.

"Continued improvement is reported in all classes of cypress, with prices slightly up, on some items, and a firm demand from all sections of the country. Anxiety over the car shortage, and its probable even more serious interference with business in the near future, is believed to have had something to do with the usually large number of inquiries and orders recently received, but the principal stimulus of the market is thought to be the general business prosperity throughout the country, and the active building operations in progress on all sides. Labor is scarce.

"Marked improvement in the demand for gum, at advancing prices, has featured the generally upward movement of the hardwood market here within the past week. A prominent local operator reports the sale of 750,000 feet of 1-inch firsts and seconds tupelo at the full market price. The lumber was bought by a concern which has used very little of it heretofore. After experiments the lumber was found satisfactory, and the big order followed. Inquiries for gum exports are also coming in.

"Hardwood trade in general is reported as showing a surprising turn for the better over the recent summer dullness. All dealers are anticipating a very substantial fall and winter business. Factory interests continue heavy purchasers. Woods conditions are excellent for logging operations."

* * *

ORANGE, TEX.

We have received this report of trade conditions from Orange: "The shortage of cars is the only thing that is holding back the lumber business at this time, according to Orange manufacturers. Railroad officials say they are doing everything within their power to relieve the shortage, but the great volume of freight moving in all directions has placed the situation beyond their control.

"With the exception of a few small railroad orders for ties, bridge timbers and car material, all of the orders received during the past week have been for yard stocks, indicating that the retailers are anticipating a big fall business. The demand has been especially good in north and central Texas and inquiries are also coming in from Oklahoma, Kansas, Missouri and other states of the middle west. The excellent crop conditions everywhere are beginning to show their effect upon the lumber market, as predicted several weeks ago."

* * *

BEAUMONT, TEX.

Trade conditions at Beaumont are reported as follows: "Demand is better than it has been for months, and prices are better than at any time in six months. Inquiries for lumber have been more numerous from the interior and from Mexico.

"The car shortage is enforcing curtailment at the mills, and there is no prospect of immediate relief.

"Increased activity at the mills and at the yards is looked for in the next two or three weeks, according to several manufacturers."

Northern States Markets

MINNEAPOLIS, MINN.

This report of the situation in Minneapolis is as follows: "A touch of frost on the corn has hastened the farmers to gather in their last remaining crop. Attention already is turning toward country building, with the result there is fair demand for northern pine and hemlock. Mills are noting a gradual increase in business and shipments are going forth to stock rural yards that were nearly cleared. Scarcity of laborers and high wages demanded have caused most mills to run on low schedule and stocks in hands of manufacturers are not large. However, they seem ample to care for demands.

"City building operations are going on apace. The requirements of this branch have made business good all season with local retailers. Sash and door factories find the city demand very satisfactory although they report that country orders are not large as yet. Flooring in oak, maple and birch continues firm in price. Interior finish holds firm and advances are expected as suitable dry stocks are not plentiful.

"Hardwoods are in good demand by furniture factories, especially heavy calls being made for birch. Low grade hardwoods of all kinds are being taken up freely for box trade.

"White cedar posts and poles are moving in better volume and at prices considered reasonable in view of the outlook for small production next winter. Telephone companies have made inquiries in the last few days that encourage jobbers to believe that big orders will follow."

Digitized by Google

Ohio Valley Markets

CINCINNATI, OHIO.

This report of the Cincinnati lumber market comes to us from a correspondent well informed on the situation: "The yellow pine demand seems to be of fair volume, the buying on the whole being of seasonable proportions, although the expected gain in the request during the early part of September has not been as heavy as was confidently expected. The car shortage is causing stocks to become pretty badly assorted and a pronounced scarcity in some items may be expected soon.

"The price lists undergo frequent changes and these usually are for the better, the quotations standing up remarkably well under what might be termed rather adverse circumstances. The market for car material has increased considerably within the last few weeks.

"A satisfactory movement in cypress is generally reported, the amount of straight car bookings at mills increasing, with the factory grades probably being in the heaviest demand. The country yard trade is beginning to pick up in a very gratifying manner. Tank stock and thick items are moving well. Prices are strong with a pereceptible upward tendency.

"The fall hardwood trade is developing quite nicely and if the present gain is maintained a few weeks longer, there will be little to complain about in this market. The upper grades of gum are finding a ready market, the demand in fact seeming to center on this lumber, the furniture factories appearing especially active after the better grades of gum. In the lower grades, the box factories are keeping up a lively demand. An improvement has been noted in oak within the last couple of weeks and is rapidly regaining its normal status and moving in large volume. Quartered red oak is in especially good request, while the demand for white oak shows considerable of a gain.

* * *

LOUISVILLE, KY.

The Louisville market is reported as follows: "According to the leading hardwood handlers and manufacturers of this district there are plenty of orders on the books at this time for fall delivery, but the demand is slowing up slightly. It is claimed that production of hardwoods this year has been light, compared with other seasons, and with a big demand facing the trade it looks as though higher prices will be realized all along the line, and it is claimed that there is no good reason why prices should not be higher.

"Retail lumber yards in Louisville have been handling a fairly good run of business during the past month, building at present showing a spurt, and August records showing an increase of over $100,000 over August of last year, and with a fewer number of permits. The jobbers report that the demand for lumber is spotted, and the retailers are not disposed to carry any large stocks or buy, except for immediate use, refusing some very good offers on choice stock.

"There is very little thick gum, quartered white oak or cottonwood on the market, and prices on these commodities are good. Gum is strong, in good demand and featuring the market. Furniture factories continue buying liberally, and the automobile people are in the market for thick elm, to be used in place of thick ash, which is high and scarce. Poplar is not as active as it was, nor are prices quite so good. With the exception of the decided shortage of cars the hardwood market conditions may be termed very satisfactory."

South Atlantic Markets

NORFOLK, VA.

A letter from an operator in Virginia reads as follows: "We are operating only five days a week and curtailment is general in this district.

"We shipped more lumber in August than in any previous month of the year. The prospects for the fall and winter trade look good to us, and other lumbermen in this district seem to hold a like opinion.

"The increased demand for North Carolina pine in the north for building and boxmaking has strengthened prices, and all indications point to an advance within the next few weeks."

JACKSONVILLE, FLA.

A lumberman writes us as follows: "Lumbermen in this section are looking forward to a good fall trade as soon as the car shortage trouble abates. Orders are more plentiful, both from the interior and from the railroads, and prices will undoubtedly advance.

"Conditions in the export trade are no better, and there are no indications at present of improvement."

Pacific Coast Markets

TACOMA, WASH.

We have received this report of the market situation in Tacoma: "Continued over-production, in spite of all efforts toward curtailment, is assigned by Tacoma lumbermen as the reason for the undoubted weakness that is prevailing in the lumber market. While orders and inquiries have been tremendous during the past 10 days, prices have not responded to any extent and in some cases are actually lower than before. There has been no recession in the regular price list, but it is believed that few of the mills are holding quotations at the list. Manufacturers say that the condition is serious and the market appears to be shot to pieces in spite of the enormous demand for lumber from the middle west.

"Most of the inquiries now being received are for yard material from middle western yards. These inquiries have run to many millions of feet since the first of the month, but without any corresponding uplift in prices.

"Shingles are holding firm and the demand is brisk. Prices are unchanged."

* * *

SEATTLE, WASH.

We have received this report of the Seattle lumber market from our correspondent: "There has been little development in the lumber market of the northwest in the last week to encourage the manufacturers of this section. There is no denying the fact that the market is weaker than it has been for several weeks.

"Price concessions have been made on fir dimension and No. 2 V. G. flooring, but the average prices on all items have not declined further than the levels of a few weeks ago. As a rule both wholesalers and manufacturers believe there will be a normal volume of fall buying and so are not anxious to take large orders at the prices offered. For a week the production at most of the mills in the northwest reached and passed normal cuts, but in the last week the cut has fallen off. The car shortage in some sections of Oregon is believed to be largely responsible for the smaller cut, as some mills were forced to close for three or four days.

"The transcontinental trade showed especial weakness. Orders were 558 carloads less than the previous week and shipments 242 carloads less. There was some encouragement seen in the reports of the cargo mills which showed an increase of 5,000,000 feet ordered for export shipment. In the coastwise trade, orders received totaled 3,682,567 feet, while export orders totaled 9,458,260 feet.

"Red cedar shingles show little change. There are many brokers who feel there will be fair fall trade but none are willing to say that a large volume of shingles will be shipped. Prices remain stationary.

* * *

SAN FRANCISCO, CAL.

The San Francisco market is reported as follows: "The labor troubles that have been interfering with building operations at San Francisco and the cities around San Francisco bay have subsided somewhat, and there is now a healthier tone to the lumber market than has been noted for several months. Building permits have been larger for several months than they were during a corresponding period a year ago, but much work planned for June and July is just being commenced, as it was impossible to secure full deliveries of lumber early in the summer. Construction work is now being rushed, so as to get jobs well advanced before the commencement of the rainy season, and retail yards are making heavier deliveries of material than usual.

"Prices for lumber of all kinds remain unchanged, and quotations are well maintained, the demand being considered quite satisfactory, with no surplus in local yards. Mountain pine mill men were disturbed for a time by a threatened shortage in cars, but this has been averted, and the season's cut will be moved as rapidly as they desire.

"S. O. S."

In this connection, the above does not mean trouble. On the contrary it means avoidance of trouble. It means: SEND ORDERS SOUTH, for Yellow Pine to

Positions

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care LUMBER WORLD REVIEW.

WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open in August, 1916. Correspondence invited. Address "T. M." care LUMBER WORLD REVIEW, 1740 Transportation Building, Chicago, Ill.

L. M. LAMM,

208 District National Bank Building, Washington, D. C. In charge of the Washington Bureau of the LUMBER WORLD REVIEW. In close touch with lumber matters at Interstate Commerce Commission. Able to watch for decisions, etc. Prices reasonable.

FIGHTING THE MILL FIRE HAZARD.

In Bulletin No. 90 the Lumberman's Underwriting Alliance keeps up its persistent fight for prevention of fires in the lumber plants. That its instructions are being heeded is shown by this bulletin in two ways, first, by the small fire loss for the period reported, and by letters from mill superintendents saying that the instructions and suggestions given in Bulletin No. 89 had been carried out.

IMPROVING THE PATROL SERVICE.

Bulletin No. 91 of the Lumbermen's Underwriting Alliance is devoted largely to the subject of intelligent watchmen and intelligently supervised patrol service.

The report of July Alliance fires shows that fifty percent of their fires were at dry kilns, which fact calls forth suggestions for extra precaution against the fire hazard at dry kilns, which are especially threatened in August, September and October. Commenting on the importance to be attached to the watchmen the bulletin says:

"Watchmen who take a keen personal interest in conditions which menace the safety of the plant, and who constitute themselves real guardians of the property, instead of merely clock-punchers, are by no means as common yet as we would like to see, but their numbers are increasing year by year. One of the most noticeable marks of progress in the care and custody of the plants during the eleven and a half years of our experience is in the fitter class of watchmen employed and their more intelligent comprehension of their duties.

"We know of no more effective way to lessen the shameful fire waste, which has made the heated fall season a period of dread to lumber property owners and insurance mediums alike than to add more capable and conscientious watchmen to the ranks, training them in the duties bearing most closely on fire prevention and fire control. There are still too many men holding these responsible jobs who seem to think they have but two duties, as far as fire is concerned—punching the clock stations to satisfy the insurance companies, and giving the alarm if they find a fire. They have not been made to feel that the safety of the plant lies in their hands for fully half of the entire time, and that upon their work for the first few minutes after finding a blaze may depend not only the loss or saving to their employers of immense property values, but the misfortune or well being for months to come of many fellow workmen."

AN ATTRACTIVE MAGAZINE FOR THE ASKING.

"Yates Quality," a magazine published in Beloit, Wis., by the publicity department of the P. B. Yates Machine Co.,—successors to the Berlin Machine Works—is one of the most attractive technical magazines that comes to the editorial desk of the LUMBER WORLD REVIEW.

This paper is now a bi-monthly and we believe that the company would be glad to put any high class lumber institution on the distributing list.

The front cover of "Yates Quality" for July-August, 1916, shows the improvements that are going on at the Beloit plant of the P. B. Yates Machine Co.

The paper contains a very interesting illustrated article on the Shevlin-Hixon and Brooks-Scanlon Lumber Co., two big mills at Bend, Ore., and many other articles of interest.

Y. M. C. A. BUILDING AT ROSE LAKE.

Rose Lake, Ida., Sept. 15.—What is said to be the best industrial Y. M. C. A. building in a sawmill town west of the Mississippi river, is being completed here. The building is being built with the personal funds of C. J. Winton and his brother, D. N. Winton, both of Minneapolis, the former being the president of the Rose Lake Lumber Co. Mr. Winton believes in helping men to help themselves and has attached the very wise condition to his gift that the men should provide the furnishings.

During the past week the enthusiasm with which the employes have raised among themselves the $700 required for equipment must be a source of satisfaction to the president of the company.

The basis of operation is interesting as it illustrates the industrial plan of the Y. M. C. A. Mutuality and co-operation are the keynotes all along the line; for instance, the employers provide the building and the employees the equipment and furnishings. In the maintenance, Manager Walter S. Rosenberry has promised that the Rose Lake Lumber Co. will furnish heat, light and water and a cash appropriation equal to about half the annual cost of operation. The employes provide the other half of the annual maintenance by their membership dues.

The activities will be in charge of O. C. Thompson, an experienced Y. M. C. A. secretary, who will have an advisory committee of five men, two selected by the company and three by the men.

The building is a model of its kind and is arranged to serve not only the men and boys, but the women and girls of the community. It is expected the building will be opened with a big celebration about

One of town Y. M. C. A.'s was organized in Cloquet in 1908. The first one in the Pacific northwest was organized in 1911 at Doty, Wash., by the Doty Lumber & Shingle Co. Other firms that have helped their employes establish branches are: The Potlatch Lumber Co., Potlatch, Ida.; Inman Poulsen Logging Co., Kelso, Wash.; the Sunset Timber Co., Raymond, Wash., and the Booth-Kelly Lumber Co., of Eugene, Ore.

D. K. JEFFRIS LUMBER CO. ASSEMBLING LUMBER FOR EXPORT TO EUROPE.

New Orleans, La., Sept. 15.—Extensive contracts recently entered into with the French and British governments, whereby southern yellow pine and oak will be shipped to Europe and India, are announced today by D. K. Jeffris, president of the D. K. Jeffris Lumber Co. of Chicago. While Mr. Jeffris declines to state the exact amount of lumber bought, materials are being assembled here and at Mobile for ten to a dozen shiploads, the first of which has gone forward and the remainder of which will be exported at irregular periods between now and the new year.

Delivery of southern lumber at Bombay, India, will also mark something of an event in the trade. Various classes of materials are included in the British specifications, though all are for oak and pine. The first ship for India will probably leave here in October, it is stated, and others at different times when vessels are available.

The steamer Hassell sailed three weeks ago from New Orleans with a cargo of 60,000 oak cross-ties, bound for "somewhere in France." These ties, which were the first oak ties ever sent out of here to Europe, were part of the gigantic order placed with the Jeffris company by the French government.

The next steamer out of here loaded with Jeffris lumber for France will be the Omnium, which will get away the latter part of September, it is expected. Like the Hassell, the Omnium is chartered by the French government.

Mr. Jeffris is arranging to forward these export materials as promptly as shipping facilities make possible, and cargoes will be loaded at Mobile, as well as at New Orleans.

WOODS AVAILABLE FOR AUTOMOBILE CONSTRUCTION.

Louisville, Ky., Sept. 21.—Hardwood manufacturers report that the automobile business is responsible for a considerable movement of stock at present, the motor car interests having been busier this summer than for a long time, as inquiries and orders have been much more numerous than ordinarily at this season of the year.

This is due partly to the war business which has been enjoyed by a good many concerns in this line, and also to the general condition of the trade, the public ability to absorb new cars apparently being out of proportion to the number of non-owners with sufficient buying capacity to be considered prospects. It seems to be evident that present owners of cars offer a never-satisfied market for new automobiles.

Lumbermen have been especially interested in noting the increased variety of woods available for automobile construction work, as indicated by inquiries emanating from automobile centers. Elm and maple have been added to the list, supplementing the use of ash, which has been the "one best bet" in frame construction, and gum is now being tried out for the same purpose. All of this business has stimulated the call for thick lumber.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

General Electric Company

General Offices: Schenectady, N. Y.

District Offices in:

Boston, Mass. — New York, N. Y.
Philadelphia, Pa. — Atlanta, Ga.
Cincinnati, Ohio — Chicago, Ill.
Denver, Colo. — San Francisco, Cal.
St. Louis, Mo.

Sales Offices in All Large Cities 6293

The great economies of G-E motor drive are not confined to logging operations, but are evident throughout the mill. The following list shows a few of the many lumber mills with G-E installations:

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

Lumber World Review
608 So. Dearborn St., Chicago

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

Running A Sawmill Right Is a Science

It requires the Best Equipment and Most Capable Workman—*We have both!*

50 H-P G.-E. Motor Driving Trimmer and Transmission Booth-Kelly Lumber Co., Springfield, Ore.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

LOOK INTO IT

Examine this saw question carefully. Study it from every angle. Are you getting the most out of your Saws? You may **think** so—but are you, for believe me there is a difference in Saws. And the better your Saws, the more money you are going to make. Are your Saws the best? Are they the cheapest in the long run?

There is a brand of Saws, made by the biggest exclusive Saw Factory in the World. The name that is on the blade of every Saw which they make, reads like this:

ATKINS

We have branch houses in all the large distributing centers and sales arrangements with most of the leading supply houses. So, we say, "LOOK INTO THIS SAW QUESTION." We have made it easy for you to do so. Simply specify ATKINS SILVER STEEL SAWS and you'll get "The Finest on Earth."

CO-OPERATION NOT COMPETITION IS THE LIFE OF TRADE

Lumber World Review

THE LUMBER REVIEW FOUNDED 1897

CONSOLIDATED JANUARY 1912

THE LUMBER WORLD FOUNDED 1905

Volume XXXI Number 7

CHICAGO, OCTOBER 10, 1916

Single Copies Fifteen Cents Two Dollars a Year

And now come a number of Cypress manufacturers, having the right kind of timber back of them, who have decided to make a commercial asset of their own conscientious scruples. They are careful manufacturers who take pride in their product and they want all retail lumbermen to feel an equal pride in handling it. They are willing to guarantee their goods—*and stand back of their guarantee.*

"THE WOOD ETERNAL"

CYPRESS

TRADE MARK REG. U.S. PAT. OFFICE

COPYRIGHT 1915 BY SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION.

As a hall-mark of Cypress quality, which is also a hall-mark of the determination of its more responsible manufacturers to see that the buyer gets the quality and dependableness he is entitled to, they have devised and will always hereafter place upon the Cypress shipped by them, the Registered Trade-Mark shown across this page. All who are permitted to apply this mark to their product are at once identified as among those who have the good of the Cypress industry most at heart and who are willing to help others (as well as themselves) by that course. Study it, for it will soon become an even more vital asset to you than to the manufacturer himself.

(Continued on Pages 8 and 9. Don't omit the rest of the story.)

THE men back of the Frost-Johnson Lumber Company are always keenly alive to every movement that works for better business for the retail lumber dealer. That is why scores of successful lumber dealers of the United States enthusiastically endorse this firm and its methods.

The fact that Frost-Johnson yellow pine lumber quality and service are so generally favored by shrewd, cautious lumber dealers who are likely to look not merely once but twice before placing their orders, is therefore highly significant.

It costs you no more in the beginning and it's cheaper in the end.

You owe it to yourself to test our methods and see that we really do eliminate shipping delays and off-grades, thus giving you an opportunity to please your customers by giving them real service and real quality.

We are prepared to load lumber promptly even in stormy weather, without damaging the lumber. Our mills have the best of shipping facilities and you'll not be disappointed in any way when you order yellow pine lumber from us.

Your copy of our price list is ready for mailing. Your request will bring it to you without delay. A postcard will do.

The Resaw Feed Works

The mill man who possesses a keen sense of the importance of a well designed Feed Works seldom goes wrong in his selection of a Sawmill Resaw.

He has a right to assume that its builders know, or should know, enough of the principles of band sawing to build a machine that will properly carry the blade and give it the necessary protection—yet even on that point there is plenty of chance to go wrong. But when it comes to the matter of properly getting material to the saw and keeping it everlastingly at it, he knows that depends entirely on the resaw feed works. Into

Yates formerly BERLIN **Heavy Duty Vertical Band Resaws**

is built every element of successful feed works construction—Speed, Power, Activity, Accuracy and Ease of Setting, and a carefully selected range of speeds with single hand wheel control.

Not content with this, we have recently added the new Yates Selective Yield Set Works enabling the operator to saw to gauge either side of blade. These are a few of the things that the buyer gets with his Yates Heavy Duty Resaws.

And these are the reasons why users say these machines meet every operating contingency.

Our new book, "Band Sawing Machinery," tells all about these capable machines. Write for a copy while you have it in mind.

Decayed Barn Sill. Note condition of siding at point of contact with sill. (Courtesy U. S. Forest Service.)

Another Lumber Customer Lost

Conditions, such as illustrated above, cause the consumer to resort to substitutes. Not only is the wooden sill destroyed by decay, representing a monetary loss in material and labor, but a germinating place for dangerous bacteria and insects is provided by the decayed wood.

Lumber cannot hold its ground against substitutes unless it is protected from such failure.

Coal-tar Creosote Oil is the *best* wood preservative. It is recommended by all authorities.

Barrett's Carbosota Grade-One Liquid Creosote Oil is a pure coal-tar creosote oil made especially for the Brush and Open Tank method of treatment. It can be conveniently used *anywhere* and at *any time.*

Barrett's Carbosota Grade-One Liquid Creosote Oil

Lumber dealers can greatly aid the *cause of wood* if they will induce their customers to treat with creosote oil all lumber used under conditions subjecting it to decay.

Barrett's Carbosota Grade-One Liquid Creosote Oil should be carried in stock by every lumber dealer. It is nationally advertised, easy to sell, convenient and profitable to handle.

Booklet and further details on request.

Special Notice Regarding Change in Name

Since we introduced Grade-One Liquid Creosote Oil, numerous imitations have appeared on the market. For ease of identification, therefore, we have decided to change the name of this product and hereafter it will be known as BARRETT'S CARBOSOTA—Grade-One Liquid Creosote Oil.

He Who Looks Before He Leaps

Almost entirely out of consideration for the retail lumber dealer, the CYPRESS manufacturers have proceeded slowly with the trade-mark propaganda. It is now more than a year since the first statement was made to the retail dealers that CYPRESS would be trade-marked by those having the quality of timber and the willingness of mind to furnish material which would honor the trade-mark. It has continuously been stated, since the first announcement, that this trade-mark would ultimately become familiar to all actual consumers of CYPRESS (your customers) and that the people would only be satisfied with the material carrying this trade-mark. We wished to give ample warning that this would be the situation and that it would be wise for you to gradually dispose of that CYPRESS which did not bear the trade-mark so as to be prepared with a stock of that which would be saleable.

We now feel that we have fully complied with our obligations to our friends, the retail dealers, and we also feel that they know from past experience that CYPRESS lives up to its promises. We have, therefore, put the machinery to work which will soon make our announcement to the public. We have realized that a few cars might get out from even the best of mills without the trade-mark and have, therefore, drawn a contract with a big machinery house for automatic machines which will end-brand every board produced by those mills having the good of CYPRESS at heart.

We know of orders being placed by retail dealers which state specifically "Do not ship this car unless every piece is branded with the official brand of The Southern CYPRESS Manufacturers' Association." It is our advice, knowing as we do the campaign which is ahead of us, that you word your orders in the same way.

All of those whose names are here given can ship trade-marked CYPRESS

30 Days' FREE TRIAL on your edger

COLEMAN FEED ROLLER (that never wears out)

Nothing since the shot-gun feed has meant so much to the modern sawmill. It is not only more efficient than the old style roller but can be *resharpened any day* AT NOON and is therefore always sharp, positive, accurate and speedy. You know and your mill boss knows that this means a saving of hundreds of dollars per edger per year in doing away with roller repairs, narrow ends, crooked lines and overplus of low grade lumber.

WOULD YOU SELL YOURS FOR TWICE WHAT YOU PAID?

We have asked this question of a number of sawmill men who are using Coleman Feed Rollers. With one great accord they have answered to this effect: "What! And go back to using the old style rollers? Not at any price!" We have published some of their letters in a sawmill man's booklet, together with the facts and figures about Coleman Feed Rollers. You will do yourself a favor if you

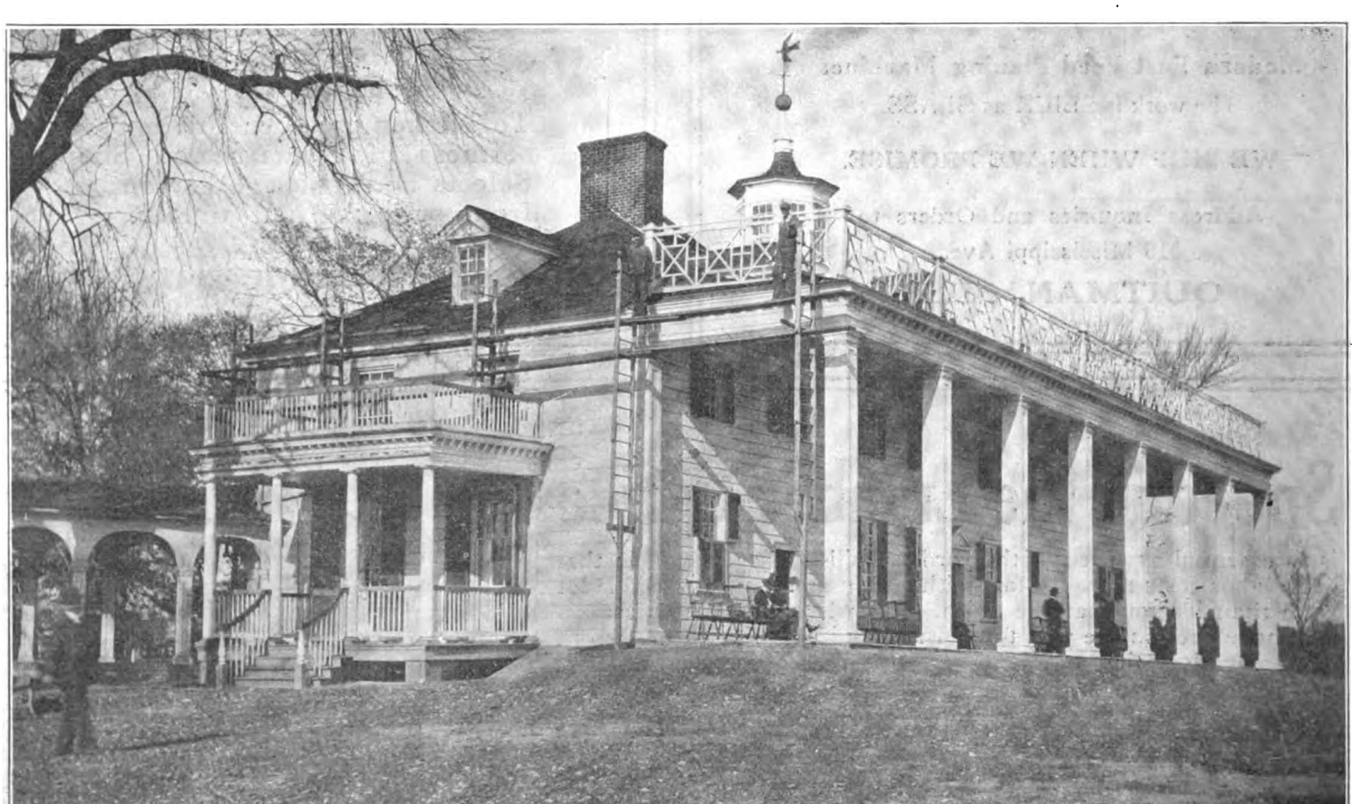
WE NEVER TIRE

of good examples of home building. If they are architecturally correct and artistically pleasing they are a constant source of delight.

The most prominent example of this sort of domestic architecture is the old home of George Washington—MOUNT VERNON, on the Potomac. This beautiful house—built in 1743—is shown below. At the time this photo was taken workmen were renewing the roof—hence the scaffolding. The weatherboarding is of NORTH CAROLINA PINE, and has not been renewed. Likewise the floors and interior trim are of

North Carolina Pine



Washington showed good judgment, not only in his selection of a design for his home, but in his choice of building material. He grew up amid the Pines of Virginia, knew their value, and himself absorbed their sturdy qualities.

Be wise, therefore, and follow his example. Use a proven wood yourself, and recommend it to your customers. It will be a constant source of profit and satisfaction. Write to us about it.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four **thousand, three** hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into **not** one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it **makes.**

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

Make Your Company Stores More Profitable

If you will read these questions and answers, we shall be glad to show you how a complete National Cash Register will solve these troubles.

Do you always know that your cash is right?

You cannot know unless you have an accurate check on every cent that comes over your counter in exchange for goods.

Do you give goods away?

You do when you or your clerks "forget to charge" customers who buy on credit. In such cases the customers get the goods and you get nothing.

Do you ever pay bills twice?

You surely do unless you keep a permanent record of every cent you pay out as a safeguard against mistakes.

Do you ever lose customers by billing them after they have already paid you?

You do if you depend on memory, or on an uncertain system, to see that customers get credit for the money they pay you.

"A Drawer for Every Clerk"

A complete National Cash Register will help you—if you want to make more money; if you want to make your clerks more efficient; if you want to save yourself from worry and work; if you want to get ahead.

More than 1,500,000 have been sold.
And they pay for themselves as they go.

Write us on your letterhead for the little book, "Troubles of a Storekeeper"

THE LAKE WAS NEVER MORE FASCINATING, rugged and helpful than it is this ninth day of October, 1916, as we look through the "Wide East Windows" to the steel blue horizon over the mercury-like cold and rippling water. The play of the sunshine through the openings of the clouds throwing light on the distant sea, the cold, black leaden sort of "rough washed" rock of the nearby waters, which the sunshine does not reach—ALL conspire to turn this department this autumn morning into an endeavor to be sentimental and sonnet-like. HOWEVER, a much more practical necessity intervenes and our "Wide East Windowites" are spared any so-called "bursts of song" or "barber shop melodies."

The thing which intervenes is not market conditions, or our dear old threadbare friend "supply and demand," or that evasive wight "curtailment," or the possible action of the Federal Trade Commission, or any other of the STOCK subjects which always are sitting about on the railing dangling their feet and begging to be written about!

No; the proverbial quarter of a dollar which we hold close up to our good right eye this morning which shuts out not only the shimmer of sea, but even the tang and perfume of the October atmosphere is the GREAT QUESTION of how ALL the lumber interests in the United States may get themselves together, in an association way, into one GREAT big FORTY-TWO CENTIMETER effort to do things NATIONALLY!

At the Forestry Industry Conference in San Francisco in the autumn of 1915, H. D. Langille sprang the sensation of the meeting and started a question rolling in the direction of the goal posts which has ever since been on its way, but which has never gotten far along in publicity; and as we believe in the proposition we are going to devote a lot of space to a discussion of all phases of it.

The sum and substance of Mr. Langille's idea was that some sort of co-operation or confederation of interests should be accomplished as between the various and sundry lumber associations west of the Rocky mountains, which would include all branches of the trade and which would not in any sense disturb the immediate working plans of the SEPARATE associations called upon to co-operate.

There was a lot more of it than that, but as we remember the occurrence without referring back to the voluminous paper which Mr. Langille read, the sentence above covers the subject.

During the progress of this same Forest Industry Conference, at a welfare dinner or something of the kind at Eureka, Cal., Mr. Langille made a very remarkable after-dinner speech on the same subject of co-opera-

tion among the various lumber interests, which he likened to the falling of the dew and the snow on the mountains, the gathering of the waters in the rivulets and mountain rills and the flowing of it down great rivers to the sea.

Inasmuch as there has been National co-operation among lumber associations simply in name and hardly enough of it at that for such co-operation to stand up and declare itself, we have carefully watched the result of the agitation at San Francisco and on the trip to Eureka and subsequent happenings in that connection, for RESULTS!

Before the Western Forestry and Conservation meeting adjourned at San Francisco, a National committee, consisting of E. G. Ames, T. J. Humbird, E. A. Selfridge, Jr., J. B. White, C. A. Weyerhauser and H. D. Langille, was named by that body to make and report on this subject. During the remainder of 1915 and the first four months of 1916, Mr. Langille and his committee worked on this question and produced a preliminary report which, had it arrived in Chicago in time, would have been made part and parcel of the very interesting program of the National Lumber Manufacturers' Association held in Chicago in May.

Judge A. L. Flewelling, president of the Western Forestry and Conservation Association, at that time entrusted the editor of the LUMBER WORLD REVIEW with the report which we handed to the National association, a full account of which episode may be found in another section of this publication at this time.

The idea THEN was to give the question a lot of publicity and try out the ideas on the lumber mind in order to see what could be done with the question at the next annual meeting of the Western Forestry and Conservation Association, which will occur at Portland, Ore., October 24 and 25. HOWEVER, as the program of the National Lumber Manufacturers' Association was full, all that could be done about the matter at that time was to print some resolutions on the subject (which were elaborate and to the point) and to print in its proceedings later the RESUME of the report which Judge Flewelling had submitted through the editor of the LUMBER WORLD REVIEW.

We are thus careful to state specifically all the conditions that surrounded the submission of this report, so that the lumber public will understand WHY we are printing it at this TIME.

The handing of the original report to the National Lumber Manufacturers' Association through the LUMBER WORLD REVIEW had no significance whatever. Judge Flewelling simply desired to use the editor of the LUMBER WORLD REVIEW as a convenient agent and all that we did was simply to turn the matter over to the National Lumber Manufacturers' Association and let it GO at THAT.

We had intended to print the matter that this issue of our paper contains on this subject as early as August 10, but were prevented from that on account of the interposition of conditions over which we had no control; but we NOW offer in THIS issue, the entire text of Mr. Langille's committee's remarkable PRELIMINARY REPORT, which was filed May 22, 1916, for what it contains and not as an official utterance, for in many ways it is not at all likely that the text of this report will coincide with the text of the report which Mr. Langille will make at the meeting in Portland at 11 o'clock on the morning of Wednesday, October 25.

The title of Mr. Langille's paper at that time will be "Reorganization of Forest Industrial Associations" and will be called according to Mr. Allen's program, "Report of the 'Nation-Wide Committee'."

At that time thirty minutes will be occupied in reading the report and sixty minutes in the discussion thereof.

It will be a great event.

Since this "Forest Products Federation" question is up, now is a splendid opportunity to print a lot of things on the subject for the information of our "Wide East Windowites" which have long been deferred and for which we have waited for just this chance.

"Reorganization" to be Discussed at Portland.

CONCERNING THE REPORT WHICH IS to be made by H. D. Langille, at the Forest Industry Conference at Portland on the "Reorganization of Forest Industrial Associations," in a letter dated October 5, Mr. Langille says: "When the report was prepared, it was contemplated that a series of meetings should be held at Chicago and elsewhere, at which those locally interested would build upon the fabric of the report according to local needs. This has not been done and for the purpose of the present meeting the report seems very incomplete. E. T. Allen and I are going to try to show the amount of money now spent by timber owners and manufacturers in the Douglas fir district, tell how it is spent and point a way to the economies which are emphasized in the report itself, and which were particularly alluded to in my address at San Francisco last year."

In his communication of October 5 Mr. Langille seems to sum up the whole question in this statement, viz.: "It seems to me that the point to be emphasized now is the need that timber owners join with the manufacturers in providing the funds sufficient to do the things which both the local and National associations are unable to do for want of money."

There, in the paragraph above, is the whole thing.

It is an endeavor to get every phase and character of lumber association in the United States to join in a movement which (until some one suggests a better) we shall continue to call a Forest Products Federation. To do just these NATIONAL things without interfering with the work of the local associations, just as the national government at Washington does NATIONAL things without interfering with the legislation of the states, is what we wish to see achieved.

This movement, which has had really two birthplaces, should now be given a place in history.

"Forest Products Federation" History.

WE MAY CALL THE GETTING TOGETHER of all lumber associations in this country under one flag any sort of name we like, but really nothing has ever been suggested that was BETTER than our original suggestion of "Forest Products Federation." That did not and never has meant another association, as some allege, "to complicate matters" but it would weld into one great big whole all NATIONAL LUMBER EFFORT.

The earnest organizers on the Pacific coast set out to accomplish only a getting together of Pacific coast interests.

What we wish to see accomplished is to have that movement broadened sufficiently to take in the entire lumber interests of the country, and this can be done, too, without any lumber trade association LOSING its INDIVIDUALITY or USEFULNESS in any PARTICULAR.

As E. T. Allen so vividly portrays in his allegorical picture, which he prints on the reverse side of the program for the Western Forestry & Conservation Association meeting—a reproduction of which suggestion we have caused to be made and printed in this issue of the LUMBER WORLD REVIEW—we need a "firm, national policy."

The title of Mr. Allen's picture story "Needed!—The Big Gun and Men Behind It," epitomizes what our necessities may be.

Let us get back to history.

The LUMBER WORLD REVIEW endeavored to get the leading lumbermen of the United States together in Chicago early in September, 1914, and was authorized by 95 percent of the men approached to call a mass meeting in Chicago at that time. As we recall (in our news introduction to Mr. Langille's committee report, printed elsewhere) this sentiment when crystallized was handed over to J. E. Rhodes, secretary of the National Lumber Manufacturers' Association at that time and the ultimate result was the call which Mr. Rhodes issued on November 16, 1914, for lumber officials to get together in Chicago at the Hotel La Salle on November 17, 1914, for a conference on the subject of a NATIONAL ORGANIZATION OF ASSOCIATIONS.

The result of that conference ultimately produced the Trade Extension Bureau of the National Lumber Manufacturers Association, and from that date until the Forest Industries Congress, in San Francisco last autumn, there was no endeavor made to nationalize lumber association effort which should incorporate in the movement more than just the manufacturers' associations.

On January 25, 1915, in this department of the LUMBER WORLD REVIEW on page 18, we said: "WE REALIZE JUST HOW READILY A LUMBER TRADE NEWSPAPER CAN GET ITSELF DISLIKED BY MAKING SUGGESTIONS WHICH LOOK LIKE AN ENDEAVOR TO DICTATE TO THE TRADE; BUT FORBEARANCE CONCERNING A PROPOSITION TO CREATE THE PROPOSED FOREST PRODUCTS FEDERATION WILL SPEEDILY CEASE TO BE A VIRTUE, FOR IF SOMEBODY DON'T VERY SOON PROPOSE A PLAN THE LUMBER WORLD REVIEW WILL BE UNDER THE PAINFUL NECESSITY OF MAKING A FEW DIAGRAMS OF A PLAN WHICH IT HAS BEEN INCUBATING FOR SEVERAL MONTHS."

On February 10, 1915, in this department, under the caption "What Will The Forest Products Federation Be?" we made this statement: "AND NOW, WHEN WE ARE ALL READY AND WAITING FOR A PLAN BY WHICH ALL ASSOCIATION EFFORT MAY BE WELDED INTO ONE ASSOCIATION BATTERING RAM, BY WHICH WE MAY HAMMER DOWN THE CITADEL OF OUR ENEMIES AND MAKE OUR WAY TO FREEDOM, IT DEVELOPS THAT THERE IS A GREAT HESITANCY OR RETICENCE IN OFFERING THE PLAN."

On December 10, 1915, in this department, upon page 18, we made the simple suggestion—all along looking for a chance to speak—that the only scheme worth consideration was the nationalizing of the plan of organization of the Lumbermen's Association of Chicago; and it is YET our deliberate opinion that after EVERYTHING else has been SUGGESTED and TRIED that the lumber interests of the United States will come back to exactly THAT POSITION.

Shingle Weavers will Probably Not "Trade-Mark"

Several Letters on the Subject of the Proposed Shingle Weavers' Union "Trade-marking" of Lumber with their Union Brand.

Concerning the matter of the endeavor of the shingle weavers of Washington to work in conjunction with the Lester W. David Co. to popularize the Shingle Weavers' Union label brand for the red cedar shingles of Washington, we recently sent a letter to all executive officials of lumber associations in the United States, which read as follows:

"I have been hoping to have some expression from you in regard to an article which was printed in a prominent department, in the August 25 issue of the LUMBER WORLD REVIEW, but as yet nothing has come to hand. I refer to the item on page 36, entitled 'International Shingle Weavers' Union Begin National Advertising Campaign,' in which is set forth an arrangement which Lester W. David has made with the International Shingle Weavers' Union.

"It would seem to the writer that in this direction lies a great danger which threatens the whole trade-marking proposition. It is a recognition of the unions which may have some very unfortunate possibilities. The first thing we know we are liable to have union carpenters and builders striking about using trade-marked shingles and lumber to retaliate for our 10 and 11-hour day.

"It hardly seems possible that the item which we printed so conspicuously could have failed to catch your attention, as we hoped it would. Are we wrong in believing that this is a matter which we should look carefully to? Next attached is copy of the item in question, in case you have not seen it. Please let me hear from you on the subject."

To this communication we have received a variety of answers but by no means have all of the various presidents and secretaries made reply to our query.

Some have written saying that they did not consider that this question should receive publicity, but this is a question that must be settled in the office of the LUMBER WORLD REVIEW and had already been settled by the printing of our news story on the subject in the issue of August 25.

The LUMBER WORLD REVIEW cannot help eradicate the evils of the trade outside of the arguments it may print between its column rules, and this is ONE lumber trade newspaper office that does not believe in "gum shoe" processes or that there is any question under discussion in the lumber field which may not be PROFITABLY discussed HERE.

The above is not an excuse for printing what follows, but a reason. We hope that our readers will take what we and the lumbermen who have helped in this contribution have to say upon the subject in a kindly spirit.

TWO DIVERGENT OPINIONS.

The president of a prominent manufacturers' association says: "I had not noticed your news item 'Union Branded Shingles,' and certainly do not approve of the 'entering wedge.' We may have serious trouble ahead for all of us."

The secretary of the same association says: "We anticipate no trouble from this source in the ———. There are very few mills making shingles exclusively. It is largely a by-product proposition."

So there you are.

One man sees that it interests the whole country, and another man sees that it does not interest his section, and therefore has no interest at all; and we keep wondering among us why it is that lumbermen cannot be depended upon to work together in national affairs!!

We do not believe that the shingle weavers of Washington or anywhere else are going to arrange to put over a trade-marking proposition in connection with the union label, but they certainly would do it if we who believe in the "open shop" did not make some endeavor to increase the solidarity of thought among lumbermen upon this subject.

A SOUTHEASTERN PRESIDENT SPEAKS UP.

A. R. Turnbull, of the Rowland Lumber Co. of Bowden, N. C., and Norfolk, Va., and president of the North Carolina Pine Association, speaks up and out loud. He says:

"We are in receipt of yours 19th, referring to item on page 36, entitled International Shingle Weavers' Union, and we agree with you that there is a very great danger in this matter. It has always been the writer's opinion, and was expressed to your Mr. Johnson, that trade-marking of lumber would be a very serious mistake, and would lead to the mechanic handling this material looking for the union label along with the trade-mark. We have appointed a committee to act on this matter, and shall be very glad to have any information that you receive as to the development of this movement."

"SEER OF THE FRENCH BROAD" SEES THE POINT.

George L. Forester, secretary-treasurer and traffic manager of the Western Carolina Lumber & Timber Association, comes back at us with a fine communication on the subject of the shingle weavers' trade-mark, which is characteristic of him, and of course is therefore worth reading. Mr. Forester traces "trades unionism" back a long ways. He says:

"Your favor of September 20th is acknowledged.

"In the rush of trying to salvage about three million feet of erstwhile real marketable hardwood lumber from the maws of the roaring French Broad river and its tributaries, and from the paws of certain gentlemen of the section, a small minority of whom have exhibited a desire to appropriate to their own use, without recompense of any nature, such lumber as was carried down stream by the heavy shower of July 16th last, I have not previously read the article to which my attention is called, anent 'International Shingle Weavers' Union' and their advertising campaign.

"Trade unions are here to stay, however much we may differ in our opinions as to the good or bad results we think they accomplish.

"It is acknowledged that it pays to advertise and the question in my mind is whether or not greater publicity will not aid rather than retard the work which is aimed at by the union and our friend David.

"Some time before last week, if my memory serves me rightly, a fat old duffer named Goliath came off second best in an argument with a nifty little cuss called David, and I have been laying off on the David stuff ever since, or at least since I first heard of David. That Boy certainly was some pitcher in his league. I am not acquainted with THIS David, but it looks to me like he is a 'south paw.' Still you never can tell.

"This is a matter which I believe deserves careful consideration and may bring unfortunate results, but it is one which I do not feel called upon to tackle individually. I simply 'pass the buck.'

"This letter is written only because you ask for and are entitled to a reply, and it is certainly legitimate matter for the consideration of this as well as other associations. If I can get our members to listen long enough, I will bring it up at our next meeting.

"If you feel like taking up the job, I can only say 'More power to you,' but is it not possible, if not probable, that the proposed action will be aided rather than harmed by publicity?

"Now I wish to say this much about union labor: I believe it to be beneficial in many ways, and to have accomplished much good for many men and trades, and properly handled should continue to be beneficial. The trouble as I see it with such labor is that when they become strong enough to be of still greater benefit to their members they usually become very human and by arbitrary methods defeat the very objects for which they sought and injure their own cause by demanding more than they can get.

"My recollection is that Noah had some sort of a fracas with the shipbuilders' union and I believe such trouble will continue long after the time when I shall have crossed the Great Divide. Therefore as to this particular David, I am willing that we have war, but want my wife's relatives all to enlist."

THREATENS "TRADE-MARKING" PROPOSITION.

B. B. Burns, secretary-treasurer of the C. L. Ritter Lumber Co. of Huntington, W. Va., and president of the Hardwood Manufacturers' Association of the United States, has some very positive opinions on this question which go to make good reading. Mr. Burns says:

"Yours of the 19th instant received. In my opinion this movement not only threatens the whole trade-marking proposition, as you state, but it is the entering wedge to burden the manufacturers of lumber with union labor and all the restrictions and handicaps that go with such a situation. I certainly hope that the lumber producers and organizations in the northwest, where this movement has originated, will take active steps to see that it makes no headway."

A RETAIL ASSOCIATION SECRETARY SPEAKS UP.

We are very sure that the gentleman we are going to quote has not the slightest objection to being quoted and to have us spell out his name in full, but we believe that just for the present we will withhold his name, if for no better reason than that it will puzzle the other fellow. Our correspondent in this case can always be depended upon for the facts in detail and what he has to say is very much worth while. He says:

"I have yours of the 20th. I note what you say about the article referring to national advertising campaign of shingles made by the shingle weavers' union people. I confess I had overlooked it.

"Now, I note you have used the name of J. G. Brown. Mr. Brown is the gentleman who stood up last year before the Federal Trade Commission in Tacoma and said that the trouble with the shingle business was that the retailers were robbing the public, and then he told of having seen a newspaper containing an advertisement of red cedar shingles at $5.25 per M and up, somewhere in Illinois.

"Of course he did not know that there was a little, ordinary retailer sitting around listening to what he had to say. He took it for granted that there was nobody there at the Trade Commission hearing but the manufacturers, and I do not mind saying to you that some of the manufacturers seemed to be very much tickled over what Mr. Brown had to say, inasmuch as it seemed to confirm what they had believed, and some pretended to know, as to what the retailers were doing.

"When the hearing was over, I went to Mr. Brown and handed him my card, and asked him to give me the name of the paper, the town, and the retailer that was getting such prices in Illinois (this town was in Illinois which he mentioned). He gave no name, location, etc. He promised to give it to me, but he never did. He finally wrote me and gave me the name of the town in Illinois, and that, of course, was all I wanted. I took it up with the dealers in that town, and instead of them getting '$5.25 and up' for shingles, they were actually getting $4 and down.

"I then asked the gentleman to explain why he had made such a statement. The best part of the whole thing was, however, that I filed the information with the Federal Trade Commission, and wrote them a pretty sharp letter about the kind of testimony they had been listening to, on the part of Mr. Brown. Therefore, I do not think there will ever very much come of this idea of union carpenters over the country demanding shingles shipped through this David company.

"The shingle weavers of that territory are already in a union, and they are getting better wages than most anybody that works. I do not object to that. I am glad they are getting it, but if the consuming public had to depend on its supply of shingles from sources indicated there would not be very many used, because they could not be made fast enough.

"However, this is worth watching, and I am glad you called my attention to it."

HERE IS PROBABLY THE "NUB" OF IT.

Here is probably the nub of the story as suggested in a few vigorous sentences taken from the letter of a lumber manufacturer who is also a prominent official of a lumber association. He says:

"Replying to your favor of the 19th instant, would state that I have no fear of this situation at all; the fact is, I think this originated in the fertile brain of someone connected with the Lester W. David Co. and I do not believe it will ever materialize to hurt us. This is the first union organization that I have ever heard of that advertised the product of an industry in which it was engaged.

"As suggested above, this is more an effort on the part of the Lester W. David Lumber Co. to sell their product through the use of the union label than it is an effort on the part of the organization; the lumber company is simply using the organization for the purpose of accomplishing results in that way. I think that this is very poor business ethics on the part of this lumber company."

WOULD INTERFERE WITH GENERAL "TRADE-MARKING."

O. T. Swan, secretary of the Northern Hemlock & Hardwood Manufacturers' Association, says:

"There is no question concerning the important bearing which the action of the shingle weavers' union may have in connection with the developments in the lumber industry. I have not been able to figure the matter out to my own satisfaction, as I am unable to judge just how much power is back of the movement. Granted that it becomes successful, it would doubtless have a marked tendency to stop activities looking toward the use of cheap trade-marking machinery through the fear of some mills that such equipment might be diverted to the placing of the union label in lieu of or in connection with the original branding proposition."

WEST COAST LUMBERMEN'S ASSOCIATION PROTESTS.

H. P. Wyckoff, secretary of the shingle branch of the West Coast Lumbermen's Association, enclosed to us a circular which he had recently sent out to the mills shortly after the shingle weavers' movement is supposed to have started. It is a very interesting document.

This document was entitled "Circular No. 163," and was issued from Seattle, September 14. In this document he called the attention of the shingle manufacturers to his circular of August 17 in connection with the "recent trade agreement entered into by the International Shingle Weavers' Union and the Lester W. David Lumber Co."

Mr. Wyckoff called particular attention in this circular to a letter from L. H. Irvine, manager of the Employers' Association, who had written as follows:

"Permit us to call your attention to the fact that several shingle manufacturers have registered a complaint to the effect that indifference among manufacturers may give the shingle weavers' union an opportunity to strengthen themselves in Washington.

"The International Shingle Weavers' Union is planning to create a special market throughout the United States for the red cedar shingles of the Pacific northwest through the use of its official label.

"It is the purpose to begin a campaign to advertise and sell Washington shingles manufactured under union conditions. Union men are boasting that this will unite the purchasing power of organized labor throughout the United States to do all in their power to force consumers to buy union-made shingles.

"We share in the belief of a number of manufacturers that this project is a wedge by which the shingle weavers' union hopes to force shingle manufacturers to unionize under closed shop regulations—in other words, to give the control of the plants to the walking delegate. It seems plain that if their plan succeeds it will result in the boycotting of all shingles made by other than union establishments in Washington, for no mill will be permitted to use the union label unless it hires union men only. Of course this would force independent workmen out of a job and destroy the business of independent mills.

"It seems that the Lester W. David Lumber Co. has agreed to become the selling agent for all mills that will agree to use the label of the shingle weavers' union on their product.

"This seems to be an alliance essentially un-American and unfair to an industry which under such open shop conditions as the country is now coming to understand, adopt, and even demand, might become far more powerful than it is to-day if independent conditions were encouraged.

"It seems manifest that the pernicious activities indicated by the shingle weavers' union should not be allowed to pass without protest and vigorous opposition."

After quoting the letter of Mr. Irvine, Mr. Wyckoff says that the West Coast Lumbermen's Association "hereby condemns this proposition as being unfair and in direct discrimination against the independent non-union employer and employe." Mr. Wyckoff says further that it is simply an endeavor by J. G. Brown, president of the International Shingle Weavers' Union, through the Lester W. David Lumber Co., to gain control of the shingle industry.

Mr. Wyckoff asks the members especially to re-read that portion of his Circular No. 155 which appertained specifically to the agreement that had been made by Mr. David with the shingle weavers' union, two paragraphs of the text of which are as follows:

"It is further understood and agreed by the party of the second part (International Shingle Weavers' Union) that the use of the union label shall be given only to mills having full union crews so far as the skilled mill employees are concerned, and who shall first agree that all shingles upon which the union label is used shall be sold or marketed by the party of the first part providing said party of the first part is able to procure a market in accordance with the terms set forth in section 2 of this agreement.

"The party of the first part (Lester W. David Lumber Co.) further agrees to use its best endeavors to obtain the signing of agreements between shingle manufacturers and the party of the second part in accordance with the provisions hereinbefore mentioned."

ARCHITECTS AND BUILDERS.

The architectural edition of Sweet's Catalogue Service, Inc., 115 West Fortieth St., New York, for 1916, is at hand and is an almost invaluable text book for dealers in building material, as well as architects. It is a mammoth compilation, comprising 1,802 pages and contains just such information as would be wanted by the building industries. It gives data and illustrations concerning the products of 800 manufacturers of building material and equipment in the United States and is indexed by firms represented by products and by location. This is the eleventh annual edition of this valuable work and it is without doubt one of the most to be desired catalogues of its kind in the world.

Plan a "Forest Products Federation"

Preliminary Report of the Committee Appointed at the San Francisco Meeting Last October to Develop a Real National Lumber Organization Effort

H. D. Langille, chairman of the committee whose preliminary report follows this introduction, fully explains the genesis of this report in his letter of submission to Judge A. L. Flewelling, president of the Western Forestry and Conservation Association, May 23, 1916, along with his suggestion that the report be used and given prominence by the National Lumber Manufacturers' Association annual meeting in Chicago, May 31, 1916,—the letter of submission we print elsewhere in this article.

Judge Flewelling was to have attended the national meeting in Chicago but was unable to be present and submitted the entire report and correspondence to the editor of the LUMBER WORLD REVIEW on May 25, saying: "I am enclosing you correspondence relating to the report of the Langille committee, appointed at our October meeting in San Francisco. You were present and know the full situation. Take this matter up with R. H. Downman, president of the National Lumber Manufacturers' Association as to whether or not this report should be presented. If Mr. Downman thinks this matter should come up for hearing you are hereby appointed to represent me or to appoint someone else to represent me on the floor of the meeting. **WOULD BE GLAD TO HAVE THE MATTER THOROUGHLY DISCUSSED THERE AND LEAVE IT TO THE JUDGMENT OF YOURSELF AND MR. DOWNMAN.**"

PRELIMINARY REPORT PRESENTED BUT NOT READ.

These documents arrived in Chicago after the program for the meeting had been determined upon, and were approved by Mr. Downman and turned over to E. A. Sterling for administration.

Ultimately a very extensive resolution was passed by the National Lumber Manufacturers' Association referring to the matter in a promising way.

The report was NOT made for submission to the National Lumber Manufacturers' Association, but rather for submission to the annual meeting of the Western Forestry and Conservation Association which convenes in Portland, Oregon, October 24 and 25, 1916, and it was a very broad thought of the committee which considered the idea of presenting the matter to be discussed at the National meeting.

Commenting upon the idea of giving the report publicity at the National gathering, E. T. Allen, secretary of the Western Conservation and Forestry Association, said to Judge Flewelling under date of May 24, 1916: "AS A MATTER OF TECHNICAL PROCEDURE I SUPPOSE THE REPORT WAS ORDERED BY OUR PEOPLE IN SAN FRANCISCO AND SHOULD FIRST BE SUBMITTED TO OUR ASSOCIATION FOR DISCUSSION AND ACTION, BUT THERE WILL BE NO OPPORTUNITY FOR THIS BEFORE OUR OWN MEETING IN SEPTEMBER OR OCTOBER. PRACTICALLY THE CHICAGO MEETING IS A BETTER PLACE TO PRESENT IT. THE SUBJECT CALLS FOR THE LEAST POSSIBLE DELAY IN PRESENTATION ONCE THE COMMITTEE HAS FINISHED ITS REPORT. THE DELAY HAS ALREADY BEEN LONG. BUT OF MORE PERTINENCE IS THE FACT THAT THE WHOLE SUBJECT JUMPED AWAY FROM OUR LOCAL JURISDICTION AT THE START AND INVOLVES ALL LUMBERING REGIONS. THE 'NATIONAL' BECAME A PROMINENT PART OF THE DESIGN. MOREOVER SUGGESTED IMPROVEMENT IN LOCAL ORGANIZATION WAS NOT CONFINED TO OUR TERRITORY. WE COULD HARDLY DISCUSS THE MEETING MORE FULLY THAN TO REACH OUR OWN DECISION, THEN PASS IT ON TO OTHER DISTRICTS AND TO THE 'NATIONAL.' IF IT GOES TO THE 'NATIONAL' AT THE COMING MEETING ITS BROADER ASPECTS WILL BE DEALT WITH IMMEDIATELY AND IT WILL BE PASSED ON TO LOCAL DISTRICTS OTHER THAN OURS. IT WILL OBVIOUSLY BE ONE OF THE MAIN FEATURES OF THE CHICAGO MEETING."

Mr. Allen also thought that there was "EVEN A DISTINCT ADVANTAGE AND PROPRIETY IN OUR PUTTING IT UP TO THE INDUSTRY AT LARGE FOR COMMENT BEFORE WE ACT."

MR. ALLEN'S HOPES WERE NOT REALIZED.

As we all know, who have this matter at heart and who have helped to make lumber history, a line of orators had already been provided for the "National" meeting and this PRACTICAL subject was not discussed except in the resolution mentioned.

ORIGIN OF THIS MOVEMENT FROM TWO QUARTERS.

It is not at all strange when the conditions of trade and national life DEMAND it that demonstrations and representations should be proposed for the solution of such problems SIMULTANEOUSLY and from SEVERAL parts of the country.

The movement for a greater solidarity of lumber association effort, an attempt to amalgamate the work of ALL lumber associations into ONE movement for national affairs in lumber originated in the office of the LUMBER WORLD REVIEW, when in September, 1914, it telegraphed to a score or more of prominent lumbermen in the United States asking for and receiving from them the privilege of calling a meeting in Chicago to discuss this matter.

The National Lumber Manufacturers' Association stepped into the affair—however,—claiming and demonstrating for the time that the sort of work proposed belonged STRICTLY to the "National" body; and on November 16, 1914, sent out a call for all secretaries of lumber associations in the country to meet in Chicago for consultation upon the subject. A Forest Products Federation was THEN proposed, but the National Association prevailed and added a Trade Extension Department as one of its bureaus and there the matter dropped.

MR. LANGILLE ENTERS THE FIELD.

Independent of this, H. D. Langille conceived and worked out in FINER DETAIL a proposition of SIMILAR character which he proposed at the Forest Industries Congress at the Panama Pacific International Exposition in San Francisco last October, and demonstrated at THAT time that the OTHER movement of a similar character originating in Chicago in September, 1914, had never been brought to his attention and was entirely UNKNOWN to HIM.

These facts should very materially interest our readers in pursuing this report of the committee that was appointed in San Francisco last October. We pay our further respects to the Forest Products Federation idea in an editorial way in this issue of our paper.

MR. LANGILLE'S CHARTS OF EXPLANATION.

In the report of this committee which follows there is mention made of two charts, one only of which we use in this article.

Chart No. 2 is a carrying out and minute explanation of the chart which we DO print, and in its shape and form is impossible of reproduction at this time in this publication, and as a matter of fact would probably best be left for later consideration and be not used at this time, because this is a vast subject and too much detail at first would undoubtedly confuse and bother the average reader even IF the "average reader" was actually seeking knowledge—for some DO—you know.

REPORT OF THE COMMITTEE APPOINTED BY THE WESTERN FORESTRY AND CONSERVATION ASSOCIATION TO PRESENT A PLAN BY WHICH TIMBER OWNERS, MANUFACTURERS AND PROTECTIVE AGENCIES MAY UNITE TO ADVANTAGE.

To the President of the Western Forestry and Conservation Association.

At the annual meeting of your association, held in San Francisco, October 19-20, 1915, a resolution was offered and approved which called for the appointment of a committee to formulate a plan of organization under which timber owners, manufacturers and protective agencies might unite in the several lumber districts to bring about co-operation, more economical protection, more efficient and profitable manufacturing and better merchandising of the products of wood.

You appointed as this committee, H. D. Langille of Portland, chairman, representing Oregon; E. G. Ames, Seattle, representing Washington; T. J. Humbird, Sandpoint, Idaho, representing the Inland Empire; E. A. Selfridge, jr., Willits, California, representing California; Captain J. B. White, Kansas City, representing the southern states and C. A. Weyerhaeuser, St. Paul, representing the northern states.

Your committee has met and now has the honor to submit its report as follows:

INTRODUCTION OF THE SUBJECT.

History is but a record of human achievements. It is recorded in epochs differentiated by changed relations between peoples or their affairs, due to social or economic evolu-

Digitized by Google

tion. Every period of progress develops unwholesome conditions requiring epochal readjustments but such adjustments elevate men to higher planes and standards of accomplishment; and every urgent need evolves thought that leads to betterment. Industrial emancipation is often slow but it is nevertheless inevitable, be it by or against the will of those concerned.

For years the ways of lumbermen have led through burning sands with only occasional cases of prosperous times to relieve hunger and thirst and need. Epochs have been recorded but mostly they have been marked by shifting scenes of greatest activity or by mechanical development. The industry is undeveloped. Always it is associated with pioneer endeavor advancing at the forefront of civilization and dealing with primitive conditions. Virile men, trained to the accomplishment of physical feats, matched mechanical skill against the bulk of forests, blazed the way into new places and spanned a continent. Succeeding generations developed a type of lumbermen—mechanics—specializing producers whose vision was narrowed by self-reliance, heredity and environment.

In the pursuit of any vocation men may become so absorbed, so intent upon following definite lines of development, as to fail to discover a widening breach between their own particular activities and new principles of relationship as between that vocation and the conduct of human affairs. This seems true of lumbermen and their industry. Lumbering attained its position among the great industries because it supplied an essential commodity that was required in one form or another by all the people of this and every other civilized country. It has followed more or less fixed channels out of which it has not flowed. These channels were only temporarily obstructed during many decades but latterly the current of business has received a check which threatens to be permanent; and the industry, instead of opening new channels or removing the obstruction, has impotently awaited a recurrence of a deluge that would clear the stream and relieve its stagnation.

LUMBER MAKING LONG UNPROFITABLE.

The business of making lumber has long been unprofitable, with only brief periods of prosperous times to dispel the gloom and foster hope that continuous better times would come. Looking back to the days of their forebears, clinging to a sound but misinterpreted theorem of early exhaustion of raw material, and constantly disclaiming personal responsibility, lumbermen and timber owners have steadily looked beyond the range of their own activities expectantly awaiting the coming of some new and undefined condition that would write profit and success upon the pages of their records. But latterly, despairing of the coming of relief out of the unknown, the industry has turned to look within itself. It has gone to confession before enquiring bodies and itself bared its secrets to the world and exposed its weakness. It has shown the dry-rot that has attacked its materiality. It has shown the answer to the question, "What is the matter with the lumber industry?" that has been asked by the industry itself and repeated with alarm by the country at large. It is now preparing itself to enter a new epoch of its history, an epoch that should lead to final relief from its inherent ills.

In the hearings before the Federal Trade Commission, in association meetings and in calm analysis of thoughtful minds the industry has been divested of its hereditary glamor; its physical, financial and commercial phases have been made naked and its incompetence has been revealed. The outstanding factors disclosed are as follows:

LUMBER INDUSTRY DIFFERS FROM ALL OTHERS.

(1) The lumber industry differs from every other industry in that its staple may be reproduced, yet centuries are required in its reproduction. This staple is all above the surface, visible, measurable, liable to injury and susceptible of exploitation and destruction by skilled or unskilled workers. There are no secret nor patent processes by which trees may be converted into their common products to the great advantage of the few or wise as against the many or the uninformed. Location, ingenuity, ability to manage and willingness to work are, then, the only prime advantages to be obtained as between one operator and another. And any one of these qualities, possessed in extraordinary measure, may offset the other three.

THE RAW MATERIAL IS ALL DISCOVERED.

(2) The raw material is all discovered, located, estimated and controlled by private or public ownership and all of it is under the axe. So diversified is its distribution and ownership that monopolistic control is impossible and the maximum price of its products is positively fixed by the price at which competitive materials may be sold. The "lumber trust" has been proved a myth.

An enormous capital investment is represented in trees upon which a fair return of interest must be paid or wasteful loss of a public resource will result. The industry is engaged in harvesting a commodity all of which will be needed by the people and in which the public is interested from the standpoint of an available commodity, employment and returns to the several states.

COMPLICATIONS BETWEEN GOVERNMENT AND CITIZENS.

(3) There is growing competition between government and citizen through the proffered sale of national forest timber, thus inviting further overproduction without compensating benefits to consumers and violating the principles of conservation for which the public has contended.

A WASTE OF THE STAPLE.

Because of the circumstances in which the industry is somnolently resting there is waste of the staple, unemployment of labor and consequent economic loss in all avenues of trade, besides capital loss which must lead to bankruptcy if not averted.

LACK OF ABILITY TO CREATE MARKETS.

The condition of which the industry complains is attributable to absence of foresight, enterprise and aggressiveness in seeking and creating new markets or holding established

Letter of Submission From H. D. Langille "Forest Products Federation" Report

"Portland, Ore., May 23, 1916.

"Mr. A. L. Flewelling, Pres.,
"Western Forestry & Conservation Assn.,
"Spokane, Wash.

"Dear Sir:

"At the annual meeting of the Western Forestry and Conservation Association held in San Francisco in October, 1915, you appointed a committee to report upon the feasibility of forming organizations in the several producing districts, for the betterment of the lumber industry. This committee was instructed to meet in Portland 'or some suitable place' on or before January, 1916, and formulate its report.

"Three members of your committee met at Portland on January 14, 1916, and as a result the enclosed report is submitted for your consideration. It is delivered after months of deliberation upon the part of the members and many prominent participants in forest work and lumbering. It has the approval of all members of the committee except one whose views have not been made known.

"Since your committee was appointed another of the recurring periods of prosperity, such as have come at long intervals in the past, has greatly stimulated the industry. As a consequence the message contained in this report may now reach less sympathetic and responsive hearers than did that which led to its conception but it seems to me that the experiences of the intervening months have added weight to every argument adduced and pointed more directly than before to the need for aggressive, vitalizing effort upon the part of both manufacturers and timber owners.

"The attitude of public and government has changed. Both have seen the errors of past judgment. The former has felt the penetrating sting of a great industry prostrated and the latter has made an earnest effort to determine the disease that has sapped the industry's vitality. Through the Forest Service and the Federal Trade Commission all of those things which government may properly do will be done. The way will be made clear for the industry itself to put its feet on solid ground and follow its rightful way in the light of understanding and without fear.

"Your committee earnestly hopes and urges that every zone of lumbering will respond to the need for associational activity, co-ordinate its forces and go forward under such policies as are defined in its report. Much has been done; much more is possible if every man whose interest attaches to trees will do his part.

"The National Lumber Manufacturers' Association will meet on May 31. In a recent talk with its secretary this report was discussed. It is his hope that you will accept a place upon the program and give out, in your own forceful way, the substance of our recommendations. No more opportune time or manner could be found in which to do good for the industry if you concur in our belief that our community house should be put in order.

"Respectfully yours,
"H. D. LANGILLE."

Digitized by Google

outlets; so-called over-production, which is but an unbalanced relation between producing and marketing, and, therefore, within the control of the industry; lack of co-operation and consequent adjustment to the needs of the times; subordination of marketing to manufacturing, adherence to old ways of selling through agencies that play one producer against another and whose only interest in lumber is to "bear" the price at the mill; which is to say that the producers have so far subordinated themselves that they have nothing whatever to say in determining the price at which their products are sold. There is failure to refine lumber into its most attractive, usable and adaptable forms. Production is sustained while futile and impoverishing efforts are made to increase sales through price cutting to levels below the cost of production. There is wide-spread indifference to the principles adopted by producers of other materials against which lumber must compete. Manufacturers and dealers alike lack knowledge of the qualities of wood and consumers have been left to determine those qualities for themselves in the face of impelling salesmanship in behalf of imitations and substitutes by men trained to a knowledge of the last detail of their wares.

Judge A. L. Flewelling's Resume of This Subject Which Would Have Been Presented to the National Lumber Manufacturers' Association Annual if the Subject Had Been Brought Up and Which Was Printed in the Annual Report of That Meeting

"Mr. Chairman and Gentlemen:

"In San Francisco last October was held the annual 'Forest Industry Conference' of the Western Forestry and Conservation Association, a league or alliance of the timber protective associations of the Pacific coast. These organizations exist primarily for patrol and fire-fighting, having a membership of over 13 million acres and patrolling over 20 million (containing a fifth of the nation's timber). But through constituting the only alliance of forest interests covering all five Pacific forest states, and through being the accepted medium of general co-operation with state and government throughout this important territory, we have come in our annual meetings to cover all subjects of broad interest to the industry as well as our fire work. Our San Francisco meeting, being an important part of 'Forest Week' at the Exposition, was further broadened to deal with matters of current interest to lumber and forest people throughout the United States and was attended by representatives of nearly all sections. It dealt particularly with the situation of the industry.

"One of the topics on the program was 'Can Manufacturers, Timber Owners and Protective Agencies Unite to Advantage?' The speaker, H. D. Langille, of the Jas. D. Lacey Co., was asked previously to discuss 'the growing interest in some plan for pooling strength, preventing duplication, and avoiding so many assessments for separate agencies.' In assigning him this topic, we did not have in mind to any great extent involving affairs outside our western jurisdiction. We were concerned chiefly with a situation more marked on the Pacific coast than elsewhere—the organization of timber owners as such, independently of manufacturers' associations, resulting in considerable duplication of effort. Such organization came about through our perfection of protective work and in this is highly successful. Nevertheless, in some districts particularly, there has seemed a need for closer co-operation and unity of purpose with other organized effort in the industry.

"Prior to the San Francisco meeting this need had suggested to few, if any, of us actual merger of the distinct organizations. We had in mind rather some system of alliance only in certain broad work in which all are interested and which can perhaps be supported jointly with more efficiency and economy than when prosecuted under several heads. This might include some legislative matters, matters of public sentiment toward the industry as a whole, and perhaps trade extension, in which timber owners and millmen are alike interested. It might leave distinct and separate such matters as purely forest legislation and protection on the one hand, and, on the other, many of the functions of manufacturers' associations. But it might suggest better organization within these separate fields for their own work, as well as their co-operation with each other in some joint matters. In short, we thought there might be a little realignment of our fire associations, and also of our manufacturers' associations, so as to do their respective work to best advantage at least cost, and then perhaps some more systematic contribution by both toward agencies serving both.

"Along these lines Mr. Langille presented a very eloquent and able report, in which he condemned us vigorously for our lack of organized effort in many directions essential to modern business. And he made some definite suggestions. It was so good a speech that it nearly broke up the meeting. After an hour of vigorous debate, over which I presided, it appeared that every sort of association in the United States agreed with him and was certain it could provide all the functions needed if the others would just join it. The proposition grew in that hour to involve all of you and, of course, the National Lumber Manufacturers' Association as the hub around which all revolve.

"The result was a motion calling for a nation-wide committee to go into the subject carefully and report to me, as president of the Western Forestry and Conservation Association where the project was born. It called for 'a plan for co-ordinating associate effort in connection with forest industry, using production districts as units but with the national co-operation of these units in mind.'

"It did not tell us what to do with the report when we got it. As a matter of technical procedure I suppose it should be presented at the next forest industry conference of the Western Forestry and Conservation Association, which is responsible for raising the subject for discussion, dressing it into concrete form, and getting it ready for national consideration. We could then act on it and pass it on to the rest of you. But as it involves all of you as much as it does us of the west, and as the committee which prepared it contained your representatives as well as ours, I felt it no more than proper to respond to the request of the National Lumber Manufacturers' Association and let it come before you at this meeting. It does so, therefore, without the action of the Western Forestry and Conservation Association. It is before you for discussion and action first of all; then, I presume, it will be considered by local associations everywhere just as it will be by us at our coming meeting.

"Under these circumstances I am hardly authorized to comment upon its recommendations favorably or unfavorably, for the Western Forestry and Conservation Association might not endorse what I would say in advance of its formal action. I can say, however, that it expresses what all of us, if we are honest, must admit is fundamentally needful if our industry is to hold its own. It represents the aim we must take. The measure in which we approach it is the measure of our success or failure. The questions are of time and method. We may not be broad enough and strong enough and cohesive enough to shoulder such a program in its entirety. It is ideal. Whether we can reach the ideal now, or must compromise, and the nature of compromise, if any, is not for me to say but for the industry as a whole to say. But I bespeak not only your earnest attention to a big idea, but also your appreciation of the earnest and generous work of Mr. Langille and his committee. This report represents no visionary reformer's dream, but thorough consideration by conservative men who realize all the difficulties yet believe our problems can be met in no other way. And I happen to know that they have consulted widely before presenting their conclusions."

NO EFFORT MADE TO STANDARDIZE LUMBERING.

Until recently no attempts have been made through co-operative effort to standardize lumbering, analyze its problems, protect it from organized attacks, tell the merits of wood, give knowledge of its uses and utility and extend its market. A beginning has been made but the creative forces have not been fully co-ordinated for the purposes of effectiveness and economy. Individualism and prejudice have prevailed in a business that is exceedingly complex in its amplitude and needful of the most earnest expression of mutuality. There has been too much militancy and destructive seeking to survive alone. Dollars are knocked off the price of lumber at the mills without self-reproach but cents are contributed reluctantly, if at all, toward the support of helpful organizations only through which such a far-spread and wide-

Digitized by Google

ly-owned resource can be profitably and intelligently exploited. While other industries are providing hundreds of thousands of dollars for advertising, research and market extension, the lumber industry follows its time-worn groove, lends no aid to the distributors of its product, ignores the laws of supply and demand and pursues policies under which no great industry has yielded fair returns.

In a broad way these statements set out "What is the matter with the lumber industry?" Basically they are the problems which have confronted every big industry. They have been solved in the meat, oil, steel, leather, aluminum and many other industries. Adherence to old customs, narrowness of vision, unawakened responsibility and selfish seeking after individual advantage alone stand in the way of effectually fortifying the industry against panic, sacrifice and decrement. Year after year there has been much talk but never until recently has real, energized, constructive effort resulted in any region; and enough has nowhere been done.

NEED FOR CO-ORDINATION OF LUMBER THOUGHT.

Lumbermen must come to see the great need for co-ordination of thought and purpose. They must recognize the complexities against which they can successfully contend only through voluntary mutual help. There is much of helpfulness that they can give and get in making over an industry that is mechanically complete but commercially unsound and sorely requiring adjustment to new but fixed conditions. No great industry can prosper or even survive upon the free-will offerings of public business unless the goods offered be monopoly goods, which lumber is not and cannot be.

LUMBER LACKS AGGRESSIVENESS.

Other than the lumber industry there is none of importance that never moves except to retreat; that yields its place without contest or fails to invade some new field when an outlet for its product is closed. Yet the lumber industry has steadily yielded its market, making no effort to gain new places or fill new wants in the wide range of human requirements. Apathy, indifference and fatuous neglect of opportunity should be written in the red-ink entries at the close of each succeeding year's record of insufficient return. No other industry knows so little of its actualities or its potentialities. In all of the broad scope of lumbering activities there is not a laboratory equipped for research work determining the possibilities of wood and pointing the way to the conversion of such by-product values as are now made to yield the greatest profits of other industries. Paucity of thought, inanity of action and looseness of purpose upon the part of those concerned in the ownership and harvest of trees has led the industry to its present unstable condition. Square it with the intensiveness of others at whose success and greatness the world marvels and the cause of its decadence is found. Plumb it with these industries which have been forced into large, effective units and great possibilities of permanence, stability and profit appear. Take, for example, the production of aluminum. In 1890 four hundred pounds were produced and its uses were not known. It is a "substitute" metal, the producers of which were required to force it into the market by finding new uses or displacing other materials. In 1915 production reached 3,600 tons per day; and THIRTY-FIVE HUNDRED RESEARCH EXPERTS WERE EMPLOYED TO DISCOVER FURTHER USES AND APPLICATIONS. Early in its development aluminum would have been "over-produced" had its producers left the research work to consumers as lumbermen have done. When steel cannot be sold as rails it is further refined and made into articles that the public can be induced to buy. Consider its campaigns of national advertising.

MUST BE ADJUSTMENTS, TO MEET REQUIREMENTS.

It is the way of successful, modern business; it must be the way of the lumber industry. In many uses which have heretofore contributed largely to the support of lumbering wood has been displaced. It will not resume its former place "when times are normal." Judged by the old standards of making and selling lumber, conditions will never again be normal in the lumber industry. There must be adjustments to meet the requirements of changed conditions; and unless present day operators shall re-adjust their positions, surrender the traditions of past generations and adopt modern ways they must yield to the inexorable law that eliminates the unfit.

BELOW IS TEXT OF THE RESOLUTIONS PASSED AT THE LAST ANNUAL MEETING OF THE NATIONAL LUMBER MANUFACTURERS' ASSOCIATION UPON THE REPORT WHICH WAS SUBMITTED BUT NOT READ—WHICH REPORT PROPOSED A REORGANIZATION OF PRACTICALLY ALL LUMBER ASSOCIATIONS AND AN AMALGAMATION OF THEM.

"Whereas, A committee was appoint by Judge A. L. Flewelling, president of the Western Foresty and Conservation Association, at a meeting held in San Francisco last October, to consider an improved and more effective organization of all lumber interests; and

"Whereas, Timberland owners, particularly on the Pacific coast, have evidenced a desire to co-operate more definitely in the activities of lumber manufacturers' associations; and,

"Whereas, The committee appointed to consider these matters has submitted a full and excellent report for presentation before the annual meeting of the National Lumber Manufacturers' Association; and

"Whereas, Such report strengthens the national organization and suggests ways and means for affiliating the timberland owning interests; Be it

"Resolved, That the National Lumber Manufacturers' Association in convention assembled tenders its thanks to the committee, its chairman, H. D. Langille, and to Judge Flewelling for the excellent plan presented, and that said plan be given full and careful consideration by proper officials and committees of the national organization."

Twentieth-century organization, the impelling force of energized business that goes out and creates a market for its goods will steal away the materials of the lumbermen's long-looked-for feast of plenty. For there is no use to which wood is applied to which some other material cannot be adapted, although it may be less suited; and while lumbermen apathetically await the return of old conditions, aggressive science works in its laboratories and pattern shops devising new materials and new applications of old materials to take the place of wood. Backed by co-operative production, advertising and skilled business-getting efforts, all of which are unknown or of doubtful value to the average lumberman-mechanic, trained to deal with the forces of production only, those modern captains of industry are at work creating new voids in the order books of the lumber makers.

PUBLIC THOUGHT MUST BE DIRECTED.

But it is not upon production and distribution alone that the blight of individualism has fallen. In the ownership of timber and the administration of forest lands there has been no concentration of effort in directing public thought toward a realization of its own deep interest; few forceful presentations of facts bearing upon the vital question of taxation and use of public funds; no helpful influence upon legislation; no elucidation of those phases of the industry which contribute to the public weal but of which the public cannot inform itself. The tree is the basis of the industry; its owner is the responsible steward to whom the public looks for preservation of its resources and its ultimate, timely conversion into wealth. Through organized expert intelligence the public has come to know its interest in the forest and by similar co-ordination of effort it can be taught its interest in the products of trees.

CO-OPERATION IS CO-ORDINATED SENSE.

The lumber business will continue to be productive through the medium of many operations; and this logically leads to the conclusion that only by organized co-operation that shall be morally and legally within the law can it be sustained, stabilized and made profitable.

Co-operation is but co-ordinated common sense. Its antithesis is uncontrolled, destructive competition, an evil thing that sacrifices the resources of a people, impoverishes labor, deprives capital of its just reward, destroys credit and paralyzes industry. It makes possible accomplishments necessary to all but beyond the reach of individual units. It brings men of common interests into mutual and harmonious relations. It concentrates thought and unifies purpose. It lends strength and cohesion to undertakings. It stands for economy and efficiency. It yields results where individual initiative fails. It offers first aid and a corrective for many of the ills of the timber industry. It is a thing to be gained, supported and made strong that it shall yield its fullest return.

Turning from wistful waiting to self-analysis the industry has determined the cause of its ills and answered the great question. Having answered it, there is need for applying remedial measures and bringing together in the bonds of unity and good understanding all whose interests are involved in the ownership of trees, conversion into their usable forms or delivery of the product to the consumer.

MUST BE UNITY IN NATIONAL ASSOCIATION.

The national scope of the industry, the common interests of those in any way concerned in it and the broad, basic principles which underlie its important parts demand co-operative unity centering in national association effort. There are many functions which, if performed effectively and economically, should be performed through a central body; else there must continue to be neglect of opportunity

Digitized by Google

and failure to accomplish the prime purpose in view, namely, the establishment of wood in its proper sphere of usefulness and appreciation of its worth.

LOCAL ASSOCIATIONS MUST SUPPORT THE NATIONAL.

Supporting the broad purposes of the national work there should be local associations built upon substantially the same form of organization but adapted to the peculiar needs of each district. There must be perception of common interests, definitely defined purposes, trained experts in charge of the different activities and liberal support of them, each participant bearing a share of the cost according to his place. Timber owners, loggers and manufacturers of all kinds must join, lending moral and financial support; for the time has come for action that will reinstate lumber as a commodity of recognized and accepted value and utility. If this be not done, if stability be not established and the complex problems of ownership of timber and its conversion be not made clear the inevitable effect upon present owners must be distress, bankruptcy and elimination. Not all of the problems of ownership and exploitation can be met and overcome through co-operation but the fundamental problems can be dealt with in such a manner as to create and sustain opportunity for those who have energy and determination to build upon a firm foundation and meet the conditions of modern times.

TIMBER OWNERS' INTEREST RUN TO THE CORE.

The interest of timber owners runs straight to the core of this issue. Under the changed economic conditions of today their former independence and complacent reliance upon diminution of supply must yield to recognition of absolute dependence upon the progress and achievements of those who harvest and sell. For a tree in its primal state is an inutile thing, dependent upon labor, refinement and the utility of its finished form for value. Hence it is only by amalgamation of interests, rehabilitation of the industry and assured permanence of utility of wood that the investments of timber owners and manufacturers can be made secure. An obligation to give permanence to the value of trees rests upon owners and manufacturers alike; yet the concern of owners should be deepest because manufacturers are often of today while non-operators will be required to carry to distant times the burden of the "heavy load." If they would give value to their trees and receive fair returns in the end they must give power to the vehicles of production upon which utility and demand shall ride into the future. In time to come the interest of the public may be acute but so long as its needs are supplied from any source it will be indifferent.

MANUFACTURERS MUST JOIN WITH ALL OTHERS.

Manufacturers, upon their part, should no longer hold aloof from others whose relations to the industry are legitimate. On the one hand are timber owners; on the other, dealers and distributors. Each occupies an important place but their forces are not directed to a common end. Each seeks an individual advantage rather than the advantages of common good. Even after the industry has become so stabilized that trees, mills and distributing facilities shall all be owned and conducted by large-scale producing units these several factors will have need to co-ordinate their functions.

NATIONAL CO-OPERATION THE ONLY WAY.

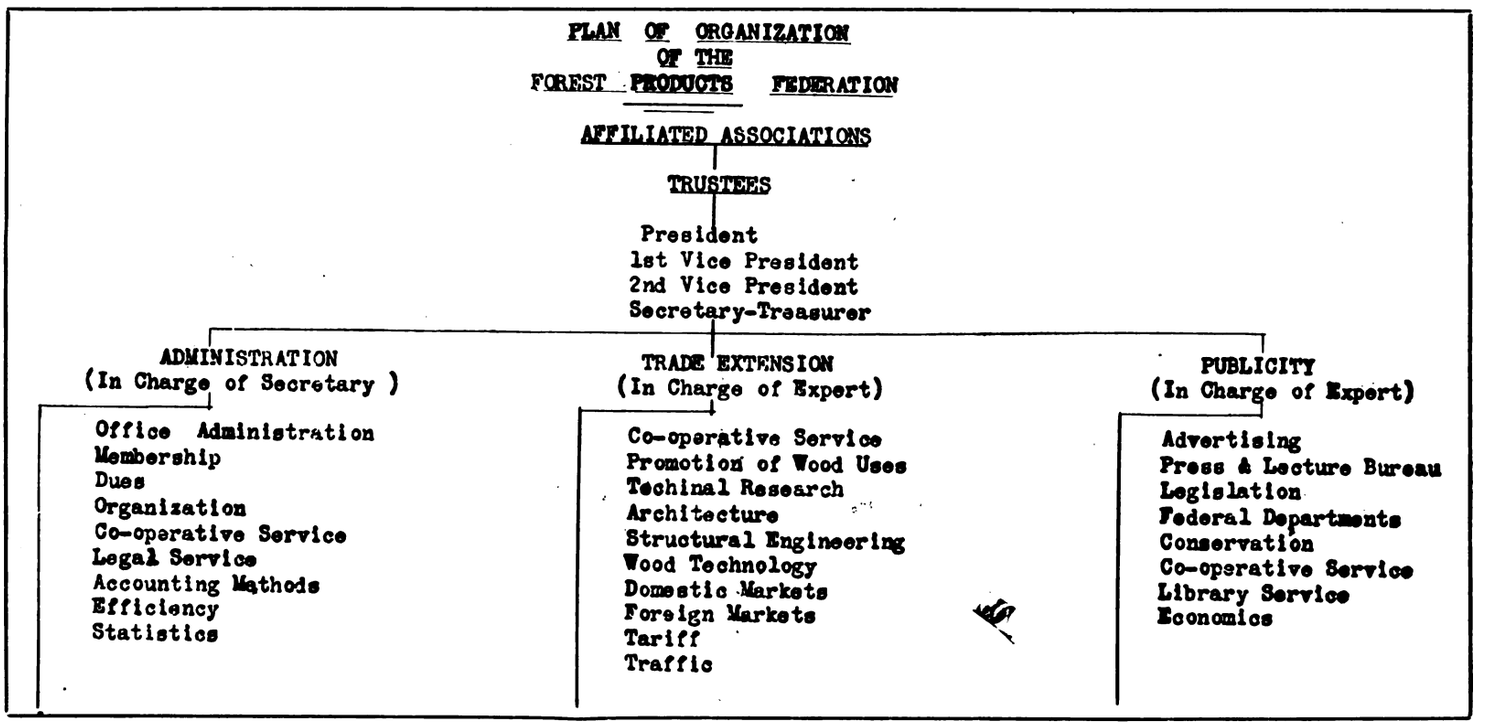
In the National Lumber Manufacturers' Association there has been created a service bureau through which much may be accomplished. It should be made helpful to the industry at large, Around it should be built supporting organizations that shall make it permanent, strong, aggressive and efficient.

As now established its duties are circumscribed. It does not serve in the wide field of its fullest possibilities. Primarily it is a manufacturers' association and as such it is attaining its end; but in the accomplishment of all the things the industry has need to accomplish its vision must be expanded and its urge made more potent. The exigencies of the times demand constant attention to matters comprehended only in the broader range of national economics.

The name of the association, as in the case of others, denotes circumscription and narrows its apparent purposes beyond the present scope of the things it should do. It has been suggested that it be enlarged to embrace the potentialities of a Forest Products Federation and your committee urges that this be done. Such a comprehensive title would invite support from all allied interests and give it power in national activities. It should bring public, government and industry into better understanding and more intimate relations.

Chart I is submitted to suggest some of the functions to be performed by such an organization. It presents only those phases of forest economics which are national in scope and fundamental in their relations to the industry and the public.

In addition to the statistical and trade extension work it would be well that capital, labor and the public should have in this service bureau a joint representative qualified to tell the facts about this great industry, aid in its development and maintenance and help to shape national policies in behalf of producer and consumer. He should be a policy-maker and sentiment-maker, a spokesman and an educator, whose utterances would truly define the position of the industry and carry its message to the public. His employment would broaden, deepen and make practical the business of forest conservation besides bringing about better understanding between those who harvest and those who buy. His duties are suggested in the chart. The possibilities of such an office are beyond calculation.



DISTRICT ORGANIZATION MUST BE PRESERVED.

It would be presumptuous upon the part of your committee to attempt to set down in detail the lines of endeavor to be followed in different districts under varying conditions by the several required organizations; hence Chart II prescribes only in general form the activities which might be undertaken in seeking to relieve the industry from the avoidable adversities of which it complains. The chart indicates the broad scope of practical endeavor and the possibilities of sustained, co-ordinated effort. Each function is susceptible of elaboration or elimination. An emotional mind is not required to discern the benefits to accrue from intelligent, forceful application of the plan. An association should be formed in each

Digitized by Google

district having peculiar conditions, as determined by species of timber, geographical location or mutual interests. Each should embrace all of the functions of ownership, protection, manufacturing and distribution.

Throughout the country there are innumerable associations of engineers, architects, builders and dealers; manufacturers of uncounted numbers of refined products, by-products, preservatives and accessories of wood; beside all those engaged in forest ownership or protection and the production of lumber, the prime article. All are directly or indirectly related to the lumber industry. Their activities extend over every phase of forest economics and so far as practicable they should become identified with local lumbermen's organizations and through them with the national service bureau; or, with the latter direct if the common purpose shall be best accomplished in that way, the prime object being to bring together every direct and allied interest into units of organization calculated to yield results, avoid duplication, save costs and develop every legitimate means by which forests may be owned, harvested and used through all time with fair profit to all concerned.

COMPETENT MEN NEEDED AS LEADERS.

Broad-gauged, com[illegible] t be employed and paid a[illegible]ility to get results in their respective lines of effort. There are many capable by reason of past experience to take up the work, expand it and grow with it to its ultimate dimensions. Initiative and capability grow with responsibility and opportunity.

Support of these organizations must be willing and adequate. Economy must be sought through singleness of purpose and it may be found. Experts studying the special problems of their assignments, codifying and making available the knowledge and experience of the industry will bring to members a fund of facts and deductions that will earn and save more than their respective contributions. In taxes, protection, administration and responses to calls for funds for special purposes fully organized timber departments should save much for each contributor from year to year. Haphazard, voluntary effort would be superseded by constant watchfulness and action. By reason of expert scrutiny of public affairs net results will accrue to every taxpayer and community confronted with the problems of forest taxation and rural development. One expert can do well that to which a dozen now give time and money with only indifferent results or none. Communities themselves will respond and give helpful aid. The effectiveness of organized effort upon the part of our embryonic organizations has been clearly and convincingly shown, in the past and present. The possibilities of co-ordinated effort are immensely greater.

THE FUTURE OF WOOD THE PROBLEM.

The expense should be borne by all whose interests are involved. Financial plans must be made to fit the peculiar conditions in each association district; but it seems cardinal that inasmuch as standing timber is the basis of the industry it should be the basis of assessments. For the problem "is the future of wood, not the lumber market of tomorrow;" and the recovery and preservation of markets must most helpfully benefit the withheld supply. It were manifestly unjust that the owner of a billion feet of stumpage operating only a small mill or camp should contribute on the basis of output alone. In addition to the contributions of the tree there should be further contributions based upon each process of refinement. Value will be given to timber by uplifting the industry and timber should bear its share, at least in the west where the reserve is enormously out of proportion to cut. Such contributions should not be regarded as gifts given in response to sentiment. They should be held to be needed and legitimate items in the costs of business which every successful enterprise of today must bear.

The beginnings of lumbermen's association

ILLUSTRATION USED FOR THE COVER OF THE PROGRAM OF THE ANNUAL "FOREST INDUSTRY CONFERENCE" OF THE FOREST PROTECTIVE ORGANIZATIONS COMPOSING THE "WESTERN FORESTRY AND CONSERVATION ASSOCIATION" WITH STATE, FEDERAL AND BRITISH COLUMBIA FOREST INTERESTS, TO BE HELD AT PORTLAND, ORE., OCT. 24-25, 1916.—THIS IS ANOTHER ONE OF THE PICTORIAL ALLEGORIES OF E. T. ALLEN, FORESTER OF THE WESTERN FORESTRY AND CONSERVATION ASSOCIATION, WHICH OUGHT TO CONSIDERABLY TERRIFY THE SQUEAMISH GENTLEMEN WHO THINK THAT THE "WAR OF THE SUBSTITUTES" IS OVER. IT HAS JUST BEGUN.

Digitized by Google

activities have evolved from manufacturers and membership has been exclusive. Community of interest is not admitted. But in this newer and more urgent need it may be clearly seen that all should draw together in the bonds of unity to gain power, efficiency and economy. Together all should reflect upon the past, analyze the present and consider the future.

THE QUESTION OF SUPPORT.

The national federation should be supported by the many district associations, each paying that percentage of its receipts necessary to provide the sum fixed by budget and approved by a board made up of trustees representing each affiliated association. Special membership should be provided for societies and associations whose co-operation the lumber industry needs more than they need the lumber industry.

The lumber industry has long talked and dreamed of the things that might and should be done; of its need for honest, sincere and effective co-operation. The thought has grown in the mind and heart of every progressive lumberman and owner of trees. Its development has been exceedingly rapid in these latter years and in some districts it has fructified. The fruits it is yielding sustain the contentions of this report and warrant each district in joining together its latent forces for the strengthening and upbuilding of a common cause.

The need is everywhere present; it has been brought home to every student of forest economics and every thinking timberman, lumberman, banker and citizen of forest regions that "something must be done." Co-operation is the only remedy within the reach of the industry as it is now controlled. Intelligently and lawfully applied it will fill the chasm that is opening ahead. If the consciousness awakened in recent months by laying bare the sores of incompetency shall not impel wholesome cleansing and energized rehabilitation the old law of the survival of the fittest will encompass the situation.

In trees there is value for which the public is willing to give fair exchange up to the maximum of its wants. The task of the owners of trees is to increase those wants and stabilize the business of supplying them. Only through co-operation can this be done. The time for action is now.

Plans for uniting timber owners, loggers, manufacturers and protective agencies are new in practice. The advantages are obvious.

DUPLICATION OF EFFORT MUST CEASE.

Organizations now performing the functions of association work should not be displaced but their activities should be expanded to embrace as many of the duties indicated by Chart II as local situations may require. Districts having no association should be organized. Where the common multiplicity of organization exists there should be amalgamation. Duplication of effort should come to a full stop. Capital, time and results are lost.

Subscriptions to this and that, dues to ineffective associations, expenses and loss of time are large items in the accounts of a few while others contribute unwillingly if at all. Many stand outside looking in, waiting for results; those inside often wait for others. To get results money, brains and energies should be united to support paid experts taking the place of volunteers.

Often there is multiplicity of organizations created for single purposes, working along parallel lines and over-lapping; or neglecting many matters. There should be amalgamation to secure efficiency and economy, consideration of all subjects and constant application. A few energetic men may make a beginning, get results and impel others to participate. The business of owning timber, manufacturing it and selling it should be integrated to the last degree. It is profitable to do so.

TAXATION AND FIRE PROTECTION.

Taxation upon non-productive property such as timber is onerous. Taxpayers complain of extravagance and waste upon the part of levying and disbursing bodies; yet they give but little heed to public affairs and exert but little, if any, influence to prevent wastefulness or wrong-doing. They are busy with other things; or, perhaps they are non-residents unfamiliar with conditions. They permit class prejudice to grow against them. Individually their interests may not justify investigation. Submission may be cheaper than opposition; yet a representative collectively-employed man familiar with laws and conversant with the facts may save to the industry each year many times the cost of his employment. There is much that may be done to help public, officials and owners alike.

Fire protection is another item of cost in western and northern states. In the beginning there was risk and loss that caused increased concern as values and investments accumulated. Out of the apparent need of the situation grew protection, co-operation and sentiment making that changed public opinion and gave forests recognition and importance. Associations were formed, experts were employed, individual patrols were practically discontinued and greater results were obtained at less cost. The time of many men was saved.

In Idaho and Oregon there are local associations and district or state organizations acting as directing bodies. The latter should be made parts of the proposed association that their activities may be broadened to include taxation, legislation and all-the-year service of importance to the district as a whole.

These services would embrace all of the purposes for which dues are paid and for numerous exigencies for which subscriptions are collected by men whose time is valuable but who are called by public or self-interest to leave their affairs to try to do helpful things. One qualified man could do well those things which many at heavy cost fail to accomplish. He would introduce new relief and save expense. Through his activities timber owners would gain immediate benefits besides cumulative rewards of the future.

Manufacturers too would gain. Joint contributions would accumulate a fund that would enable associations to do many more things and general support would make it possible to do them at low cost to each contributor. Yet cost must not be the governing consideration. Support must be liberal and freely given to secure increased earnings, stabilized values and permanent upbuilding. All are possible under the plan.

The tree should be the basis of assessments. Dues should be fixed in accord with the assessed value of the timber land. The same rule should be applied in the case of non-operative mills. Operating mills and logging camps should contribute dues according to output, a fixed amount per thousand feet. Each plant that further refines materials going into its product should pay its share. Each process of refinement should contribute because each would receive benefits.

ASSOCIATION EFFORT MUST BE BROADENED.

Western Forestry and Conservation Association, the five-state organization of the west, has been a most potent single factor in shaping public sentiment to the needs of practical conservation. It has done its work well and the country at large is indebted to the association's forester, E. T. Allen, for a large part of the sentiment that has made forests secure. It has been helpful in many ways.

To your committee it seems that local need for the restricted activities of this assocation is passing and that a broader field should be entered. The constructive work has been done; and it is fitting that there should be in the national organization proposed a man of Mr. Allen's talents who would give to the nation at large the helpfulness of his skill and training in such matters as are enumerated under "Publicity" in Chart I.

This department of the federation would be conducted with a purpose even more for the welfare of forest industry as a whole and permanently than for the current welfare of the existing manufacturing branches. It would constitute a channel through which the nation might have intercourse with the lumber industry and understanding of its economic problems.

Your committee has also given thought to methods by which its plan may be considered, amplified and perfected. It is recommended that there shall be called together at Chicago a meeting of principal officers of the various organizations and persons whose interests are embraced by the plan. Such a meeting would develop interest, bring about nation-wide understanding and establish intensive co-operation. It would give a national impetus to betterment and harmony.

To establish more intimate relations between the different producing districts and develop support for the plan a series of conferences should be held on the Pacific coast at which leaders in the industry in the south, where organization has been better accomplished, would set out the advantages of co-operation and weld diverse interests into harmony.

In conclusion your committee appeals to the industry to take leave of the strife and discord that has invited disrepute in the past; to reconstruct itself along lines of permanent advancement; to join together in unity that its own constituents shall no longer be its most disturbing and destructive element. Experience should now be augmented by logic and reason.

SOIL PRODUCTS EXPOSITION.

Washington, D. C., Oct. 6.—The Forest Service is to be represented at the International Soil Products Exposition to be held at El Paso, Texas, from October 14 to 24, by an exhibit showing the administration of the national forests in their relation to the farmers, the preservative treatment of farm timbers and similar matters.

HANDY VOLUME FOR HUNTERS.

Thomas B. Wyman, secretary-forester of the Northern Forest Protective Association, Munising, Mich., has published a synopsis of the game and fish laws of Michigan for 1915-16, which he is sending out to sportsmen on application. The pamphlet contains all the information relative to the Michigan laws for the protection of game and fish that would be needed by any person and lays special stress upon care in the prevention of forest fires, which, he says, kill more game annually than do the hunters.

Observations in the Realm of the Retailer

A Six Room House to Cost About $3,000

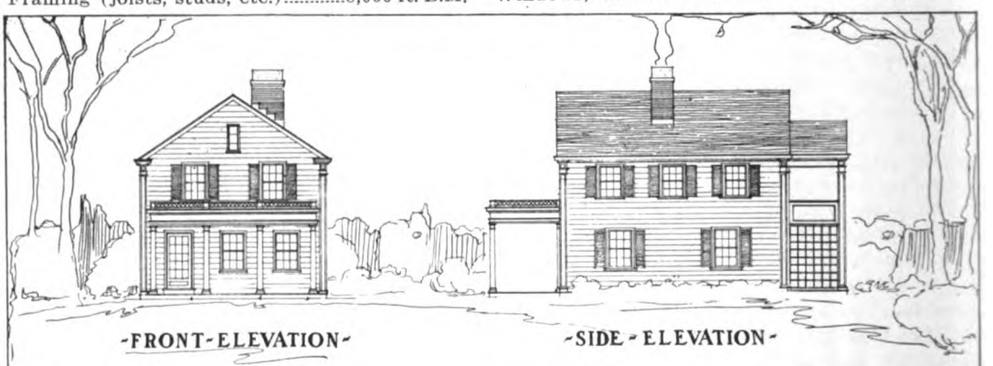
A SERIES OF ARCHITECTURAL DESIGNS OF HOUSES PLANNED TO BE BUILT OF ARKANSAS SOFT PINE.

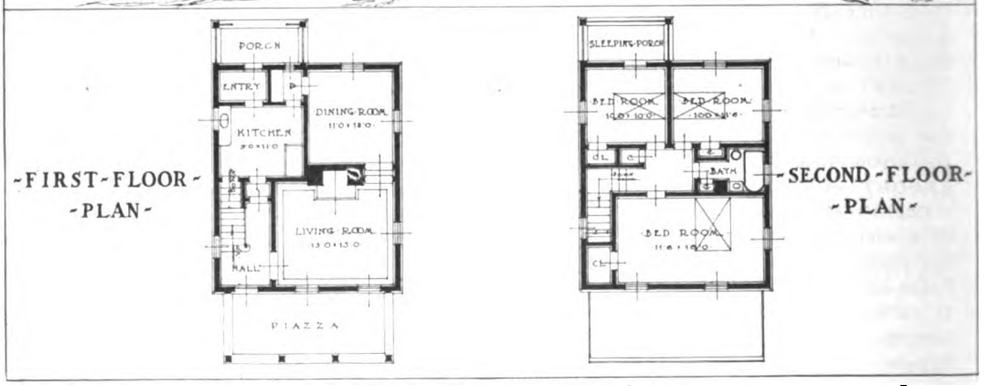
Recently the Arkansas Soft Pine Bureau issued through the medium of the press of the American Lithograph Co., one of the most beautiful architectural books which has ever been given out to the lumber trade of America, entitled "NOT A HOUSE BUT A HOME," and containing a number of house plans designed by the well-known architect, Aymar Embrey II, of New York.

Through the courtesy of R. H. Brooks, who has charge of the advertising of the Bureau, we have secured the privilege of republishing these designs in the LUMBER WORLD REVIEW, and we are running them in our general department, "Observations in the Realm of the Retailer," believing that if there is one thing in which all retail lumbermen MUST be interested it is in SUCH a series of PLANS, and we want to suggest that every retail lumberman who receives the LUMBER WORLD REVIEW file away the copies which contain these plans.

We do not know whether "Not a House But a Home" is out of print or not, but it probably is; and if that be true this may be the only opportunity there is to secure these etchings of the house plans.

EDITOR.





This house is especially designed for a narrow lot, with an entrance at one corner and a piazza across the front of the house, and as in all cases where the entrance is at the narrow side of the building, there is no more waste space than is proper in proportion to the bedrooms. This house is of the simple Colonial type, with round columns in the front porch, and two story columns in the back, making a kitchen porch and a sleeping porch above. The house should be painted white, with green blinds, and a dull green roof; the foundation would be of masonry, with a cellar under the entire house, and a single chimney. There is a fireplace in the living-room and a flue for the kitchen range. The first and second floors would be plastered throughout, and a certain amount of storage space would be available in the attic above the second floor, either by a ladder or by a folding stairway. The plan gives a rather small living-room which might be opened through to the hall if desired, a fair sized dining-room, a small kitchen with a pantry separating it from the dining-room. The entry gives room for an icebox and for provision storage.

On the second floor there are three bedrooms, one a large room, and the other two of medium size, but of comfortable shape. The bathroom is compact, and has in it a small towel closet, and there is a linen closet as well.

The material for the house might be either clapboards or shingles, and the roof shingled, the lower blinds should be solid, and the upper blinds slatted to permit circulation of air through the sleeping apartments.

TABLE OF CARPENTER MATERIAL.

NOTE—All amounts given do not allow for waste. Where there is doubt about widths of material the areas to be covered are given in square feet. Trim should be allowed for both sides of all openings.

Lumber.

*Framing (joists, studs, etc.)	8,000 ft. B.M.
*Sheathing, rough floors, etc	3,200 sq. ft.
*Clapboards	1,740 sq. ft.
*Shingle strips	2,200 lin. ft.
Shingles	6,000
*Ceiling for piazza and porches	320 sq. ft.
*Finish floors	1,200 sq. ft.
*Porch floors	330 sq. ft.

Millwork.

*Main cornice	98 lin. ft.
*Rake cornice	90 lin. ft.
*Panel square columns, two, 12 in. x 12 in. x 17 ft.	
*Panel square pilasters, four, 12 in. x 12 in. x 17 ft.	
*Sleeping porch rail and cornice	18 lin. ft.
*Trellis on rear porch	2
*Water table	100 lin ft.
*Facia piazza and porch	60 lin. ft.
*Piazza pilasters, two, 7 in. x 2 in. x 8 ft. 6 in. high.	
*Piazza columns, four, 8 in. fluted 8 ft. 6 in. high.	
*Piazza cornice and rail	39 lin. ft.
Windows cellar	6
Windows D. H.	15
Windows, casement	3
Doors, exterior	3
Doors, interior	17
*Trimmed openings	3
*Blinds (pairs)	12
*Base	390 lin. ft.
*Picture mold	300 lin. ft
*Stairs, cellar to second floor.	

Fitting Up.

Cellar partitions.	
Shelving (cellar and six closets).	
Mantel	1
Drainboard and dresser	1

**Materials noted with asterisk should be of Arkansas Soft Pine.*

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Trade has slackened to some extent in the last fortnight, but is still in good volume, possibly as good as could be expected at this stage of the building season. There has been more or less activity in the carload trade, as it seemed there is a considerable effort on the part of buyers of late to get some goods ahead of their immediate needs. For that reason, also, there has been a more active demand for small lots in stock sizes. The uncertainties of rail delivery are partly responsible for the better inquiry for carload quantities, as the scarcity of cars affects the sash and door industries as well as the lumbermen. Besides there is the incentive of still higher prices, which are in prospect owing to the strength shown in window glass and in lumber.

Building operations throughout the country up to October 1 were of extraordinary proportions, showing an increase over the corresponding period of last year of nearly 25 percent and indicating a total for the year in Chicago alone of upward of $100,000,000. A corresponding high figure is indicated by the building reports from other leading cities.

Good Demand for Factory Stock.

Manufacturers and distributers of white pine report generally a wide distribution, restricted only by the inability to secure cars. This is a considerable factor in the California and Inland Empire districts, where the car shortage is pronounced. Some inconvenience is felt by shippers in the upper Mississippi territory and even more trouble is likely to ensue in that section. Trade is kept up at a very fair volume, although there is considerable shortage in assortments, some items being difficult to secure, especially five-quarter No. 1 and 2 shop common. The demand for fir doors is exceedingly good and prices are being well maintained.

Glazed Sash Quoted Higher.

Owing to the higher prices for window glass and the prospect of a pronounced scarcity of many standard sizes before the factories start up this month, there is a heavy pressure on all stocks of glazed goods that are available and glazed sash has been quoted higher within the last week. The discounts on less than 100 openings for delivery in Chicago territory are firm at 69 percent for No. 1 and No. 2 doors, 64 percent for Nos. 3 and 4 and painted doors and 55 percent on white pine mouldings, whereas glazed sash have been advanced to 73 percent, the equivalent of about 5 percent over the September prices. It is reported that even with the factories in operation the shortage of glass is so great as to render likely another readjustment in the discount card on all glazed work.

Conditions in the Middle Northwest.

The sash and door manufacturers and distributers in Minneapolis and St. Paul, Minn., report a very modest demand from their country customers, due in large part, no doubt, to the reduced wheat crop this season. However, they are getting some business from the country and are adding to this an unusually active city demand, as building operations in both cities are heavy this fall. According to the reports, much of the increased building consists of small residences, which require a greater proportion of mill work than the larger structures. The quantity of this kind of business at hand henceforth depends entirely upon the weather, as the sudden advent of cold weather would practically shut out further outside requirements and restrict the local demand. However, if the weather continues open, inquiries now at hand would undoubtedly result in a considerable country movement in addition to what will naturally accrue from the active city trade. The manufacturers in the Twin Cities are well satisfied with the prices they are getting for their material, but say that the margin of profit is much less than is generally imagined, due to the greatly increased cost of raw material and labor. While there may not be any further advance this season it is believed that distributers will be compelled to advance their prices by the first of the year at latest. Many of the factories already have booked sufficient orders to keep them in active operation for the next sixty days.

Southwestern Trade Reports.

The distributers of doors and mill work at Kansas City, Oklahoma, Wichita and, in fact, all other southwestern distributing centers, have had one of the best business seasons in recent years. In fact their trade has lasted up to this time almost unimpaired in volume. There has been a great influx of inquiries throughout the summer and little abatement is seen in the fall season thus far. Although crops were not up to the average in that territory this year, higher prices are offsetting much of the loss in volume. It is readily seen that 30 bushels to the acre at $1 a bushel, as last year, does not bring in any more money to the farmer than 20 bushels at $1.50 a bushel, which he is now receiving; and 50 bushels of corn to the acre at 50 cents a bushel does not yield him as much money as 35 bushels to the acre at 75 cents a bushel.

Pacific Coast Trade Conditions.

There is considerable inquiry at the door factories at Tacoma and the opinion seems to prevail that there will be a fair trade well into the winter. The sentiment is evidently firmer and where quotations are asked on future deliveries there is a disposition to get better prices. All of the factories throughout the fir territory are running on good time and are finding a fair market in the eastern field. Prices are being held and it is considered likely that they will be advanced.

In the Ohio River Territory.

Recent news from the Ohio valley and especially in the territory surrounding Louisville, Cincinnati and Evansville, are to the effect that the fall trade has been a huge success in volume and a fairly profitable one in price. Neither manufacturers nor distributers, however, feel that they have gotten out of the business all that they should for the reason that they have been compelled to pay so many penalties in the way of increased cost of window glass and raw material, as well as higher wages for labor. The advances made in September were well held and it is likely that a further appreciation will occur before October has passed. The volume of business at Louisville is much larger than a year ago and inquiries at hand betoken a healthy trade up to the holidays. At Cincinnati the fall trade has been only moderately active. There is plenty of inquiry at Evansville, and this is likely to keep the factories and warehouses busily employed for the next two or three months.

The Window and Plate Glass Situation.

Stocks of both window and plate glass have been almost entirely closed out during the last two or three months and there have been some stiff advances in consequence. The American factories, it is reported, are sending out discounts applicable up to October 25 (when the factories will start up) a point higher than after that date. The first three brackets of A, single strength, are quoted at 87 off and after the date named will be one point lower. The first three brackets of B single are quoted at 89 and after October 25 will be 90 off. A double strength is quoted at 87 up to October 25 and after that date 88, while B double is now quoted at 89 off and will be quoted at the same price after October 25. As to plate glass, the price today is more than two and a half times the price ruling last January. The discount was then at 90, 50 and 2½ off and is now quoted around 87. This is figured as an advance of 160 percent.

The Car Shortage Causes Inconvenience.

Door distributers east of the Mississippi are making considerable complaint of the inability to secure needed stocks of such items as yellow pine mouldings from the south and white pine mouldings and fir doors from the west coast. Orders that have been placed a month or more ago on the Pacific coast are not yet shipped because of inability to secure cars.

Door Trade in South America.

The Bureau of Foreign and Domestic Commerce has had prepared blue prints showing designs of doors and windows common in South American countries. Some of these show designs of the massive ornamental front doors that are in high favor for city residences, others of the less expensive front and rear doors, as well as several windows and window doors, together with their dimensions. These were prepared from drawings furnished by Special Agent Roger E. Simmons in connection with his reports, "Lumber Markets of the East Coast of South America," special agents' series No. 112, and "Lumber Markets of the West and North Coasts of South America," special agents' series No. 117, in which publications is given an account of the sash and door market in each country. These prints will be loaned to firms interested. (Refer to files Nov. 714 and 772.)

General News of Associations and Clubs

WEST ALABAMA PINE MEN ORGANIZE.

Tuscaloosa, Ala., Sept. 25.—The lumbermen of this and several adjoining counties have perfected an organization here which will be known as the West Alabama Pine Manufacturers' Association. The shortage of cars caused the lumbermen to get together in an effort to alleviate the situation, and as a result an association was formed. At the meeting a report was heard from a special committee which had visited Vice-President Taylor, of the Mobile & Ohio railroad, in Mobile, and L. Sevier, of the Alabama Great Southern, in Birmingham.

The officers elected by the association were as follows: A. E. Bell, president; S. E. Deal, vice-president; R. L. Hughes, treasurer, and C. G. Harman, secretary. A committee on membership was appointed as follows: N. S. Curtis, George M. Collins and C. G. Harman. A committee on by-laws is composed of the following: W. W. Beasley, N. S. Curtis and C. G. Harman. Co-operation will be obtained from the railroads as a result of the visit of the committee, although there is a severe shortage over the whole of the two systems.

WEST COAST ORDER FILE.

The weekly report of order file and shipments of the West Coast Lumbermen's Association, issued September 26, gives a summary of the report from 116 mills for the week ended September 23. It shows for the rail trade the following figures:

	Cars.
Unfilled orders week ending Sept. 16th	6,425
Orders accepted week ending Sept. 23rd	1,769
Total	8,194
Orders shipped week ending Sept. 23rd	1,732
Balance of unshipped orders	6,462

Rail orders exceed rail shipments..... .....925,000 feet or 2.09 per cent.

For the cargo trade, both domestic and export, the figures are as follows:

	Domestic Feet	Export Feet
Unshipped orders wk. Sept. 16	45,308,822	53,503,537
Orders accepted wk. Sept. 23	8,501,226	5,750,000
Totals	53,810,048	59,253,537
Shipments wk. end. Sept. 23	7,468,828	4,888,000
Balance unshipped orders	46,341,220	54,365,537

The report shows a slight improvement over the previous week in both car and cargo trade, there being a balance of unshipped orders of 6,462 cars in the rail trade and over 100,000,000 feet in the vessel trade.

NORTH CAROLINA PINE ASSOCIATION.

The next meeting of the North Carolina Pine Association will be held at the Charleston Hotel, Charleston, S. C., Thursday, October 26. On the day before the general meeting there will be a meeting of inspectors, which will be held also at Charleston, and at which inspectors from every mill in the association are expected to be on hand.

CONVENTION DATES.

October 18-19—Appalachian Logging Congress, Atkin Hotel, Knoxville, Tenn. Fall meeting.
October 24-25—Western Forestry & Conservation Association, Portland, Ore. Annual forestry industrial conference.
October 25-26 27—Southern Logging Congress, New Orleans, La. Annual meeting.
October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.
October 26—North Carolina Pine Association, Charleston, S. C. Monthly meeting.
November 1—Southern Cypress Manufacturers Association, New Mason Hotel, Jacksonville, Fla. Semi-annual meeting.
November 7—Louisville Hardwood Club, Louisville, Ky. Annual meeting.
November 11 — Southern California Retail Lumber Dealers' Association, Los Angeles, Cal. Annual meeting.
February 11-12—National Builders' Supply Association, Hotel Sherman, Chicago. Annual meeting.
February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.
January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.
January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.
February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.

Among the important subjects to be discussed at the association meeting are advertising for 1917, odd lengths, outside inspections and the new sales report.

The monthly report of stocks and orders September 1, showed that rough lumber was oversold by ten members 8,763,000 feet and that there is a surplus on hand of dressed lumber over orders of 4,053,000 feet, making a net oversold of rough and dressed lumber of 4,710,000 feet.

AMERICAN FORESTRY ASSOCIATION.

Washington, D. C., Oct. 7.—What promises to be one of the largest annual meetings that has ever been held by the American Forestry Association will convene in this city the latter part of January, according to Percival S. Ridsdale, secretary of the association.

According to the present plan the meeting will last for three days, at which time, in addition to members of the society, a number of prominent lumbermen throughout the country will be here. It is now planned, if possible, that two or three of the committees of the National Lumber Manufacturers' Association will meet here at the same time as the association meeting.

While no definite program has been worked out it is understood that the matter of forest fires and their prevention as regards Canada and the United States will be taken up; the white pine blister rust and the matter of having congress appropriate $10,000,000 to carry out the Weeks law and other matters. The executive committee of the association is to hold a meeting in New York on October 10, when further details will be worked out.

ARKANSAS ASSOCIATION TO HOLD DISTRICT MEETINGS.

Little Rock, Ark., Oct. 5.—The Arkansas Association of Lumber Dealers will hold one of a series of district meetings in Forrest City on the 13th of this month, according to announcements which have been given out by E. D. Ferguson of Blytheville and J. B. Webster of Little Rock, president and secretary respectively of the organization.

It is planned for the dealers to get together for a one day's meeting and discuss in an informal way matters affecting their businesses as retail lumbermen. Several matters of particular importance to the trade are being slated for consideration, and doubtless many others of more or less importance will be called up for consideration by those present.

While the meeting is intended for the special benefits of those dealers located in eastern Arkansas, all dealers of the state, as well as manufacturers, salesmen and the general public are invited to attend. There will be no secrecy about the meeting or executive sessions, but open discussion and general consideration will be given to the problems confronting retailers of lumber. It is thought that these meetings will be of special advantage in getting full and frank expressions from dealers who are little inclined to take the floor at the annual meetings. And it is also expected that several dealers will attend who have never been in attendance at one of the association's annual meetings. Much interest in association work is being manifested among the Arkansas dealers now, who appear to be awakening to the fact that there are many ways in which they may benefit themselves by interchanging ideas and learning from one another new and better ways for conducting their businesses and meeting competition of an unfair nature.

WEEKLY YELLOW PINE BAROMETER

The trade barometer issued by the Southern Pine Association October 2, gives the figures for the week ended Friday, September 29, from 153 mills, follows:

	Cars	Feet
Orders on hand	23,341	472,025,043
Orders received during week	4,855	98,182,665
Total	28,196	570,207,708
Shipments during week	3,954	79,961,742
Balance orders on hand	24,242	490,245,966

The report reflects the conditions of car shortage now prevalent, especially in the volume of shipments, which were below the production during the week 9,568,138 feet, or 10.69 percent. Orders exceeded production 8,652,785 feet or 9.66 percent and exceeded shipments 18,220,923 or 22,79 percent. The orders, shipments and unfilled cars for each week from July 7 to and including September 29 were as follows:

Week Ended	Mills Reporting	Orders Feet	Average Shipm't Feet	Total Unfilled Cars
July 7	147	401,980	383,801	16,444
July 14	147	539,383	531,275	16,379
July 21	150	697,933	504,758	18,130
July 28	158	894,095	617,704	20,590
Aug. 4	154	687,671	638,443	30,552
Aug. 11	165	703,996	643,840	23,020
Aug. 18	162	704,955	641,079	22,674
Aug. 25	164	669,024	659,150	23,487
Sept. 1	152	625,570	610,499	19,962
Sept. 8	157	538,353	565,145	23,284
Sept. 15	164	669,579	606,197	24,122
Sept. 22	168	671,331	558,540	24,539
Sept. 29	153	641,717	522,626	24,242

West Coast Lumbermen Hold Meeting

The West Coast Lumbermen's Association held its monthly session in the Hotel Tacoma in Tacoma, Wash., Friday, September 29, with an unusually large attendance. J. H. Bloedel, president of the association, called the meeting to order at 2 o'clock in the afternoon. He referred to the car shortage, which he said was only in its early stages, and in his opinion lumbermen should endeavor to devise ways and means for overcoming, or at least lessening, the evils of the car shortage.

Major Everett G. Griggs asked leave to present resolutions on the death of the late James W. Dempsey, of Tacoma, and was granted the privilege. The following preamble and resolutions were thereupon unanimously adopted:

Whereas, James Ward Dempsey, of Tacoma, Wash., on September 15, 1916, was summoned by death in the prime of a life distinguished for its personal grace, usefulness, integrity and ability, Be it

Resolved, That the West Coast Lumbermen's Association, bowing in personal sorrow, makes the first action of this meeting a heartfelt tribute of affectionate remembrance to the life, character, works and worth of our departed comrade; and be it further

Resolved, That while we mourn the loss of his presence, his wholesome friendliness, his influence and his counsel, we take advantage of this opportunity, by rising vote, to express to his family our deep appreciation of his life, his manhood, his honor and his virtue; and to record our belief that of such are those whose souls shall live forever, even as the memory of James Ward Dempsey shall endure in the hearts of his fellow lumbermen.

REPORT ON STOCKS.

A report of the condition of stocks at the mills of members of the association was compiled by Secretary Thorpe Babcock. Although the figures were compiled exclusively for the benefit of the members of the association, it was stated that the stocks were considerably lower than had been generally believed.

Secretary Babcock made a report regarding yellow pine conditions, having received several telegrams from yellow pine markets, which indicated that there had been an advance of from $1 to $2 since the last meeting. It was also stated that the curtailment of production had been continued right along by the yellow pine manufacturers.

RESOLUTIONS ON CAR SHORTAGE.

Major E. G. Griggs offered the following resolutions regarding the car shortage, which were unanimously adopted, as follows:

Whereas, The car shortage now confronting the shippers of the country has already assumed serious proportions, necessitating closing of plants, throwing labor out of employment and rendering investment in industries absolutely unremunerative; and

Whereas, There is in the district represented in this association no other vocation or industry able to absorb the sawmill labor thus made idle; and

Whereas, From published reports the railroad dividends appear to-day to be sufficient to warrant expenditures for new equipment and the upkeep of old equipment; and

Whereas, It is assumed by congress that an already well paid class of labor, probably the highest paid class of labor in the United States, is entitled to a 20 percent advance entailed by a reduction in hours of labor; Therefore, be it

Resolved, That the lumber industry, as represented by this West Coast Lumbermen's Association, urgently requests the railroads to appropriate the necessary money properly to equip themselves with freight cars made of wood. The prosperity of industry determines the continued prosperity of the carrier and the placing of large purchases of lumber to-day for this needed equipment will greatly aid us to maintain living prices.

During a discussion of the subject a number of manufacturers expressed their opinion that there should not be any car shortage, because the railroads were in such condition that they ought to be able to furnish their shippers with a sufficient number of cars.

SOUTH AMERICAN OPPORTUNITIES.

Roger E. Simmons, of the Bureau of Foreign and Domestic Commerce, was present at the meeting and was called upon for remarks regarding his recent trip to the countries of South America in behalf of the lumber industry. Mr. Simmons' remarks have been pretty well covered in previous reports of his several addresses before lumber associations, and were along the same lines, with the exception that he devoted considerable attention to the possibilities of shipping Douglas fir to those countries. Mr. Simmons complimented the fir manufacturers by stating that their lumber was the only variety imported from the United States into the South American countries where the consignees had been given no grounds for complaint. He said they were perfectly satisfied with the character of Douglas fir, the way it was handled, the grading and the volume of the cargoes. In Chile, especially, he said that the wisdom of the west coast lumbermen in establishing an inspection bureau and arranging to transact their business on a standard basis is especially satisfactory, and in spite of competition on the part of native woods, the volume of Douglas fir is practically one-half of the entire requirement of that republic. He stated that the same systematized methods would place the west coast product in the River Plate market and other markets in South America.

Mr. Simmons recommended that the manufacturers arrange with one of the principal importers in the River Plate district for the placing of a cargo of Douglas fir on consignment and that a well posted salesmen be sent to direct its handling and disposition and instruct the consignee as to its qualities and uses. He would not recommend the establishment of a yard stocked with west coast woods in the River Plate territory, because it would be a very expensive way of introducing the wood, besides arousing some opposition on the part of the regular dealers. He recommended furthermore that an educational campaign on the qualities and uses of Douglas fir be inaugurated in Chile, Peru, Argentina, Uruguay and Brazil, so that people might be informed of the woods to use and how to use them; how to season them so as to prevent warping, shrinkage, or decay; how they could be treated to prevent rot when exposed to dampness and also to be made fire resistant. In his opinion there should be two organizations formed of fir manufacturers, one for operating on the east coast of South America and the other for operating on the west coast of South America. The steel and cement interests, he said, had been enabled to gain a strong foothold in South America by forming permanent organizations and keeping traveling men in all the principal countries of South America.

Mr. Simmons stated that in Brazil there was an immediate opportunity for substitution for Swedish pine in the form of deals, 3 x 9—14 to 18 feet, of which they used from 10,000,000 to 15,000,000 feet yearly. He also said that manufacturers of Douglas fir should look to the possibilities of trade with Venezuela, via the Panama canal, where lumber 12 x 12 or over and from 16 to 40 feet long is admitted free. He told of a vessel carrying Douglas fir which was wrecked near the island of Trinidad and the lumber was salvaged and taken to the island, where it made a favorable impression.

Mr. Simmons' ideas as to sending a specimen cargo to the River Plate were favorably received and the manufacturers, it is believed, will endeavor to secure the co-operation of the manufacturers of western pine and redwood in the matter.

George M. Cornwall, of the "Timberman," Portland, read a letter from New Zealand which set forth the great opportunity for west coast lumber in that country. He urged that samples of the different products be sent to the concern writing the letter.

FEDERAL TRADE COMMISSION REPRESENTATIVE.

The association was addressed by Dr. Wilson Compton, special examiner for the Federal Trade Commission. He assured the lumbermen that the Federal Trade Commission and all other branches of the government service were in sympathy with the lumbermen in endeavoring to solve their problems. Other industries throughout the country were much interested in the work undertaken by the Feeral Trade Commission relative to the lumber industry and are awaiting the results of the investigation with great anxiety. He referred to the Webb bill which was laid over by the last session of congress until the December session. He asked the co-operation of the lumbermen with the Federal Trade Commission.

President Bloedel thanked Dr. Compton for his welcome assurances and said that the lumbermen were very glad to have this kind of co-operation as compared with the rather hostile attitude of the government for some time previous. Adjourned.

"THERE IS A WOOD FOR EVERY NEED."

The National Lumber Manufacturers' Association has adopted the above as a slogan which was selected from among 76,291 slogans submitted to it by people all over the country, for which it offered a prize of $150. The winner who produced this slogan is Dr. Ben Webster, of Kingsbury, Ind. The second prize, $50, was awarded to Fred R. Grasser, of Belvidere, Ill., who submitted this: "Use wood where you should." There were also fifty prizes of $1 each awarded for slogans entitled to honorable mention and these went into twenty-seven states and one to Canada. A committee of judges, representing the lumber trade, arrived at the award of these prizes by elimination. There were three judges and they were assigned about 25,000 each, from which about 1,000 of the best were submitted to the entire committee. Each of the slogans submitted for the prize was numbered so that the judges did not know until the winning slogans were selected who the authors were.

GRANARIES AT SMALL COST.

The West Coast Lumbermen's Association has originated an idea which, if adopted, will bring to the farmers of eastern Washington and eastern Oregon, as well as all over the grain territory, a rich reward in being enabled to hold their grain for better prices. The association is now trying to interest retail lumber dealers in selling inexpensive grain storage buildings to farmers, which would enable them to put their crops into storage at small cost and hold them until prices are more profitable.

It is shown from government records that two-thirds of the wheat crop of the country is marketed during the months of July, August, September and October and that the price in those months is less than at other seasons of the year. It is estimated that in eastern Washington and eastern Oregon alone the farmers lose annually as much as $10,000,000 by being forced to sell their crops practically as soon as harvested.

The West Coast Lumbermen's Association has prepared complete plans, specifications and material bills for these low cost granaries and is prepared to furnish them to retail dealers in farming communities without cost. If the association idea is generally adopted it will also relieve much of the car shortage annually visible in the fall of the year.

SOUTHERN COMMERCIAL CONGRESS.

Washington, D. C., Oct. 5.—The question of adequate preparation for foreign trade at the conclusion of the European war, will be taken up at the eighth annual convention of the Southern Commercial Congress, to be held at Norfolk, Va., December 11-14, according to an announcement just made here.

"Preparation for Foreign Service" will be the title of the special session, over which Dr. Glen L. Swiggett, the assistant secretary general of the Second Pan American Scientific Congress, will preside.

ARCHITECTURE IN CONNECTICUT.

Another of the White Pine Series of Architectural Monographs has appeared. It describes Old Woodbury and adjacent domestic architecture of Connecticut. It is written by Wesley Bissell, the well known architect of New York City, and beautifully illustrated by photographs by the author and Julian Buckly of the old Woodbury houses, the Sanford house of Litchfield, the Lockwood house at Cromwell, and other examples of colonial and early national types.

The book contains also an interesting and enlightening article by Frederick E. Weyerhaeuser, than whom no man is better able to write it, on "The Available Supply of White Pine Timber."

McDONOUGH BRANDING MACHINE APPROVED.

Approval of the McDonough lumber branding machine and recommendation of its use among subscribers of the association, featured a meeting held September 19 of the sub-committee on branding of the grading committee of the Southern Pine Association at New Orleans.

A discussion of the experiments now being conducted with the McDonough machines, which have been installed at the plants of Eastman, Gardiner & Co., Laurel, Miss., and the Calcasieu Long Leaf Lumber Co., Lake Charles, La., was followed by a conference with Mr. McDonough, the inventor of these machines, regarding certain improvements made in them, and the invention of a machine for the automatic branding of timbers.

The committee believes that the experiments so far conducted have been sufficient to prove the practicability of the branding machine from a mechanical standpoint.

By virtue of the authority vested in it, the committee discussed with Mr. McDonough the installation of two machines for the branding of timbers, one to be located in the mill of a subscriber east of the Mississippi river and one in a mill of a subscriber west of the river, the cost of the machines to be borne by the association at an expense not exceeding $500, and the cost of installation to be borne by the subscribers in whose mills the machines are placed.

"The committee," the report continues, "is more than ever impressed with not only the necessity but the good business policy of the Southern Pine Association adopting the branding of the lumber produced by its subscribers as an association enterprise, and is confirmed in its opinion by the following resolution recently adopted by the National Association of Retail Lumber Dealers, representing the yard dealers of the cities of the United States:

" 'To the end that the public may be protected from the mixing of grades of lumber, we hereby heartily endorse the efforts now being made by certain of the associations of lumber manufacturers to devise ways and means by which the product of their members may be branded with trademarks representing their respective associations, with the number or name of the mill which manufactures the lumber, and if possible with the name of the grade of each piece, thereby absolutely assuring, within a reasonable variation, the integrity of the grade as well as making possible the identification of the lumber, with the consequent protection of the retail dealer and the ultimate consumer of the stock.' "

In the report, which it will eventually present to the grading committee and the board of directors, setting forth its final recommendations, the committee will suggest two or more tentative propositions for the consideration of the directors, suggesting the basis on which negotiations may be conducted with Mr. McDonough for the use of his machines.

Mr. Green reported that the trade-mark, consisting of the Southern Pine Association registration, which had been applied for in the name of Eastman, Gardiner & Co., had been authorized by the United States patent office, and the trade-mark duly recorded.

The committee desires it understood that because the Southern Pine Association, as a corporation, is not engaged in the production and sale of lumber it could not secure registration of the said trade-mark, and that Eastman, Gardiner & Co., will grant the privilege of using this trade-mark to other manufacturers of yellow pine who are subscribers of the Southern Pine Association.

The following were present at the meeting: Charles Green, chairman, Eastman, Gardiner & Co., Laurel, Miss.; B. H. Smith, Longville Lumber Co., Longville, La.; J. H. Eddy, Kaul Lumber Co., Birmingham, Ala. (by proxy); J. E. Jones, chief inspector, Southern Pine Association, New Orleans, La.; J. E. Rhodes, secretary-manager, New Orleans, La.; A. G. T. Moore, assistant secretary, New Orleans, La.

REPORT OF RAILWAY BUREAU.

Washington, D. C., Oct. 7.—The net operating income of railways of the United States for June, 1916, exceeded that for June, 1915, by $81 per mile, or 25.9 percent, according to an announcement which has just been made here by the Bureau of Railway Economics.

CALIFORNIA UNIVERSITY FORESTRY COURSE.

A catalogue describing the several courses in forestry of the College of Agriculture, University of California, Berkeley, has just been received, although the college year began August 22. The university has a number of courses in forestry, one of which, the general forestry course, is designed to train the students for practice of the profession of forestry in its broader phases. Students completing this course will be prepared to take positions with the federal and state forestry departments. Another course is that of forest utilization, which is a four-year course, intended to prepare men for work as forestry logging engineers in lumber companies and in the government service. There is a five-year combined course, which trains students in general forestry along the lines of the forest utilization course and provides for an additional year devoted to specialization. There is a short course which takes up the first twelve weeks of the spring session and is for men, employed as guards or rangers in the Forest Service or by lumber companies, who desire to obtain information that will help them in their work. There are two summer courses designed for students who do not intend to become professional foresters, but desire knowledge of the aims and methods of a forester. There is a correspondence course of ten lessons on lumber and its uses which may be had free of charge by anybody interested.

Students taking the general four-year course or any of the other regular courses are urged to spend a year of actual work in the woods, preferably before completing the final year of the course. Full information regarding these courses can be had by addressing the agricultural department of the University of California at Berkeley.

HUGE TOTAL OF UNITED STATES EXPORTS FOR AUGUST.

Washington, D. C., Oct. 7.—Exports for August amounted to $510,000,000, according to figures which have just been made public here by the Bureau of Foreign & Domestic Commerce. This is said not only to be a record for the United States, but for all countries. It is $35,000,000 higher than the previous high record, which was established in May, and $45,000,000 higher than the June total.

Imports, on the other hand, showed a decrease for August, the total being $199,247,391. This is a decline of $47,000,000 as compared with June, the record month. It is greater than the total for any previous August, however. The exports for the year ended with August totaled $4,750,000,000 and the imports $2,300,000,000, both totals being far in advance of those for a similar period in any previous year.

The favorable trade balance for August, according to the figures of the bureau, was $311,000,000, comparing with an export balance of $119,000,000 in August, 1915, and an import balance of $19,000,000 in August, 1914. For the twelve months to August 31, 1916, the export balance was $2,465,000,000, as against $1,363,000,000 in the preceding year and $374,000,000 two years ago.

Southern Logging Associafion

Secretary James Boyd announces the sixth annual meeting of the Southern Logging Association to be held at the Hotel Grunewald, New Orleans, La., October 25, 26 and 27. The preliminary program for the first day, October 25, comprises the annual address of President Oscar Marsan and the report of Secretary Boyd and an address on "Feeding Men in Logging Camps," by Dr. R. B. Austin, camp physician of the Fernwood Lumber Co., Knoxo, Miss.

At the afternoon session of that day C. P. Myer, assistant general manager of the Kirby Lumber Co., Houston, Tex., will deliver an address on "Main Line Construction."

A symposium will be held on "Handling the Steel Gang," which will cover the main points of track-laying on logging roads, together with costs.

October 26 is called "Progress of Invention Day" and at the morning session "Recent Improvements in Cross-cut Saws" will be the subject of addresses to be read by H. T. Benham, advertising manager of the E. C. Atkins & Co., Indianapolis; J. C. McCauslan, assistant sales manager Henry Disston & Sons, Philadelphia, and E. B. Saunders, efficiency director of the Simonds Manufacturing Co., Fitchburg, Mass.

"Recent Inventions and Improvements in Skidding and Loading Machinery" will comprise the subject for addresses by J. H. Dickinson, manager of the logging machinery department of the Lidgerwood Manufacturing Co., New York; J. R. McGiffert, secretary and treasurer of the Clyde Iron Works, Duluth, Minn., and C. O. Hinz, southern engineer of the Lambert Hoisting Engine Co., Newark, N. J.

At the afternoon session, October 26, addresses will be delivered on the subject "Recent Improvements in Wire Rope for Logging Purposes," by Dr. W. C. Kretz, of the engineering department of John A. Roebling's Sons Co., New York; John K. Broderick, sales manager of the Broderick & Bascom Rope Co., St. Louis, and C. R. Deam, sales manager of the A. Leschen & Sons Rope Co., St. Louis.

Other addresses on that day will be "Recent Improvements in Geared Locomotives for Logging," by G. L. Swabb, secretary of the Heisler Locomotive Works, Erie, Pa., and on "Recent Improvements in Rod Locomotives for Logging Purposes," by C. H. Peterson, southwestern representative of the Baldwin Locomotive Works, of Philadelphia.

Several of these addresses will be illustrated by lantern slides and moving pictures.

The annual banquet to members, guests and ladies will be held October 26 at 6:30 p. m.

The morning program on October 27 will comprise meetings for cypress operators and hardwood operators who will meet separately in different rooms to discuss subjects of special interest.

At the afternoon session the following program will rule:

Address—"Results of Two Years of First Aid and Sanitation in Logging Operations," Dr. C. L. Vines, physician of Crossett Lumber Co., Crossett, Ark.

Symposium—"Location of Camps," Advantages compared of housing men in mill towns or in the woods; policing of camps; sanitation.

Symposium—"Logging with Teams"—Cattle, horses, mules; feeding; contract teams vs. teams owned; types of wagons.

Address—"Employment of Men"—J. M. Campbell, Choctaw Lumber Co., Broken Bow, Okla., illustrated with forms. All who attend are requested to bring specimens of forms used by them.

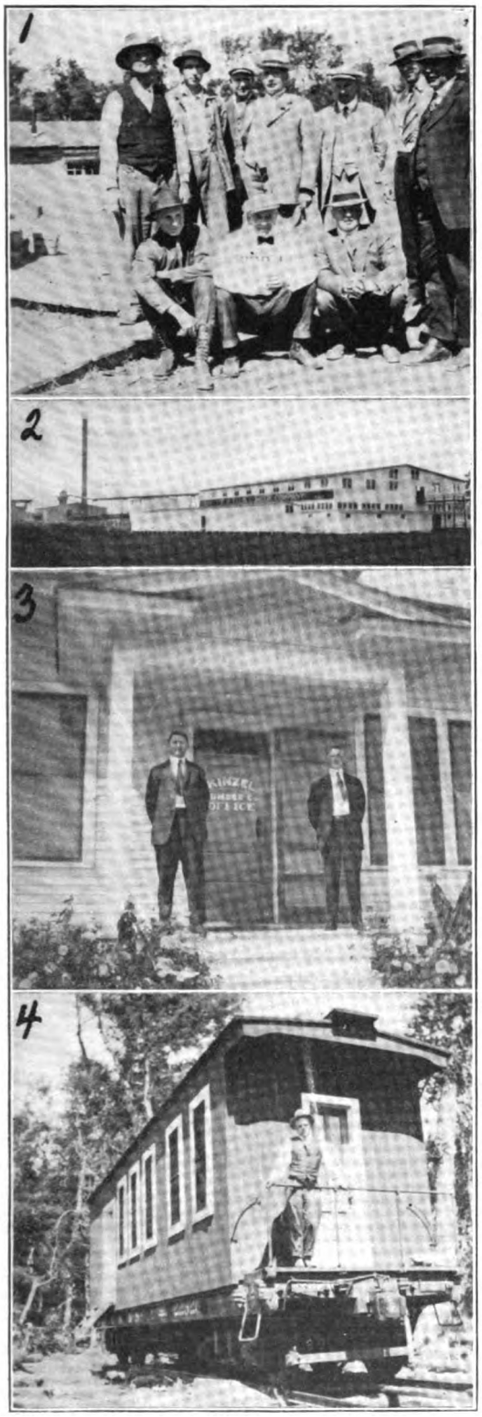
REMINISCENCES OF A NORTHERN TRIP

Views Taken and Incidents Noted During a Visit to Some of the Hemlock and Hardwood Mills of Wisconsin and Upper Michigan—Several New and Large Mills Under Way

As a necessary preliminary to a trip among the numerous mills of northern Wisconsin and the northern peninsula of Michigan, the intending traveler should provide himself with the latest maps of those states and all the time tables that he can assemble. Otherwise he must be prepared to put up with many vexatious delays, miss train connections, pass many weary hours at junction points or—a dread alternative—buy a "henry." A large number of the commercial salesmen who make the northern Wisconsin district find that the latter is about the only safe thing to do if they expect to make more than one town a day.

Wisconsin is supposed to be the best regulated railroad state on the footstool, but most assuredly it is not regulated to the advantage of the traveler who wishes to change from a north and south road to an east and west line on the same day. The Soo road, which is the great east and west artery in the northern territory, runs its trains for the benefit of the terminals and the principal express trains pass through that section in the small hours of the night with but little regard to the convenience of the local business. Hence there was much tribulation and loss of equipoise on the part of the writer in an endeavor to call upon some of the leading manufacturers of that territory during July, August and September of this year, and only a part of the visits contemplated could be made.



1—GROUP OF OFFICIALS AND EMPLOYEES OF THE A. H. STANGE CO., MERRILL, WIS. A. H. STANGE IN CENTER.

2—BOX FACTORY OF THE E. W. ELLIS LUMBER CO., GRAND RAPIDS, WIS.

3—OFFICE OF THE KINZEL LUMBER CO., MERRILL, WIS. C. J. KINZEL, PRESIDENT, AT RIGHT. GEORGE C. ROBSON, SALES MANAGER AT LEFT.

4—OFFICE CAR OF AUGUST J. STANGE AT LOGGING CAMP. MR. STANGE ON PLATFORM.

ALONG LITTLE BAY DE NOQUET.

The plant of the I. Stephenson Co. at Wells, one of the largest in the north, was found operating to the fullest extent permitted, but with a reduced force of employees. Manager R. E. McLean stated that in July he was forced to close down the mill several days owing to the inability to get enough men at the logging camps to furnish an adequate supply of logs. At that time he estimated the shortage of labor in his company's operations at something like 1,500 in a normal complement of 4,000. However, since July the labor situation has eased up wonderfully and the plant is now being operated on a practically normal basis, including the hemlock and pine mill, the hardwood mill and the hardwood flooring plant.

AT MASONVILLE, MICH.

The Stack Lumber Co. has been running about as usual with a nearly normal roster of employes. H. M. Stack, secretary and manager, stated that he had a supply of about 14,000,000 feet of lumber on hand, but was shipping in satisfactory volume by rail and water and expected to clean it up pretty thoroughly before the close of navigation.

AT GLADSTONE, MICH.

The Northwestern Cooperage & Lumber Co.'s plant suffered seriously through a lack of sufficient employes for logging and mill purposes, but is able to get out a fairly satisfactory volume of logs and to manufacture practically at capacity. Sales Manager J. D. Staple was on an extended vacation this summer and returned early in August, after having a good rest.

MENOMINEE-MARINETTE MILLS.

The various mills at Menominee and Marinette were operated the last two months at practically full capacity. The Sawyer-Goodman Co. of Marinette, as well as its fraternal operation, the mill of the Goodman Lumber Co. at Goodman, were being operated steadily. Manager C. A. Goodman, of Marinette, stated that the company was short of men and also carried less than its usual amount of lumber, the hardwood stock being particularly low.

The plant of the John W. Wells Lumber Co. at Menominee has also operated on full time. Manager A. C. Wells at the time of our visit was enjoying a vacation in the Muskoka lake country in Canada.

The plant of Walter C. Mansfield at Menominee was being run on full time with a full corps of men. Mr. Mansfield stated that in his specialties, which comprise basswood and its products, he was doing an excellent business with the prospect for a healthy fall trade.

Manager W. S. Patch, of the Crawford Cedar Co., reported excellent business in both posts and poles.

AT IRON MOUNTAIN, MICH.

Manager M. J. Fox, of the Von Platen Lumber Co., reports everything running smoothly at his plant. The company lately occupied a new and handsome office, which is complete in every detail. Pictures of the new office and of the mill are found accompanying this article.

AT PARK FALLS, WIS.

One of the largest and best mills in the northern country is that of the Park Falls Lumber Co. at Park Falls, Wis., which is presided over by W. B. Clubine, manager. The mill has been running steadily and with a fair complement of operatives. Manager Clubine is putting in a new yard, comprising about fifty acres, which is being filled up rapidly. The yard is traversed by an electric trolley system which removes the lumber from the yard to the mill in a most prompt and satisfactory way. Every facility and convenience for the operation and the inexpensive manufacture and handling of lumber is to be found at this plant.

3—WALTER C. MANSFIELD, BASSWOOD SPECIALIST, MENOMINEE, MICH.
4—THREE YEAR OLD WHITE PINE TREE PLANTED BY EUGENE SHEPARD, RHINELANDER, WIS.

AT PHILLIPS, WIS.

The mill of the Kneeland-McLurg Lumber Co., of which P. S. McLurg is president and general manager, is running the year round and is cutting 3,500,000 feet of lumber a month. The plant is equipped with twelve dry kilns and an up-to-date flooring factory and the company finishes all of its stock ready for the retail trade.

AT WESTBORO, WIS.

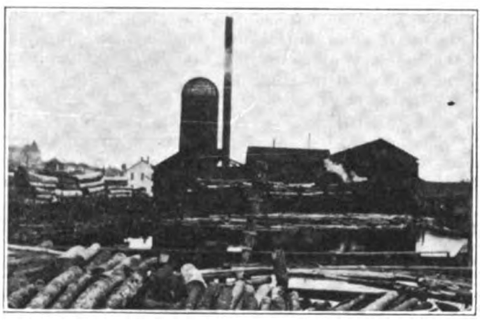
The Westboro Lumber Co.'s plant at Westboro, Wis., is one of the most capable plants in that country. This company is presided over by J. J. Lingle and J. W. Kaye, both of whom are known in the northern trade as being exceptionally qualified as practical lumbermen. They have been much hampered this season by the inability to secure woodsmen, but report that the situation lately has greatly improved. They are operating three camps and will have a full supply of logs with which to stock their mill the coming winter. One of the most attractive features of their camp is the splendid menu given to their men, and that is one of the reasons why they have little difficulty in securing and holding their woods force.

AT MEDFORD, WIS.

The plant of the Medford Lumber Co. at Medford, Wis., is operating on full time. This plant is owned principally by A. L. Osborn, of Oshkosh. E. L. French, who has been general manager, resigned August 15 to go into a new business at Cincinnati, Ohio. The sales department is in charge of J. J. Lutz, who is a well qualified and efficient salesman.

THE NEW RIB LAKE PLANT.

Manager George N. Harder, of the Rib Lake Lumber Co. at Rib Lake, Wis., states that the new mill now being completed will be ready for operations about November 1. This is one of the largest plants in the north. The main floor of the mill is 81 feet wide and the main building has a length of 240 feet. The lath mill occupies 21 feet of the width on one side of the building. When completed the mill will have two 8-foot bands, an 84-inch horizontal resaw, an 84-inch vertical resaw, two 63-inch double edgers, a 24-foot pneumatic overhead trimmer, and a 5-saw slab slasher and will have a capacity of 150,000 feet of lumber in ten hours. The picture of the mill which accompanies this article was taken just before it was enclosed. The company is now erecting its smoke stack, which is of brick construction, 165



SAWMILL PLANT OF THE MEDFORD LUMBER CO., MEDFORD, WIS.

feet high and with a diameter at the top of 6 feet 6 inches inside measurement. It has a concrete foundation 24x24 feet, 7 feet thick and will probably be the largest saw mill smoke stack in Wisconsin. The power plant will consist of four 78-inch x 20-foot horizontal tubular boilers of a total of 800-horse power. The engine is a 28 x 36 non-condensing Clark-Corliss type with a commercial rating of 1,000 horse power. The planing mill, machine shop and filing room will be driven by a 500-horse power generator, which will also furnish light for the entire plant. The planing mill will be equipped with the S. A. Woods machines of latest design. The company has timber holdings sufficient to keep it in operation at its present capacity for twenty-five years. H. P. Welch, of the Central Pennsylvania Lumber Co., Williamsport, Pa., has been the mechanical engineer in charge of construction.

AT BLACKWELL, WIS.

The plant of the Flanner-Steger Lumber Co. at Blackwell, in Forest county, Wis., has been running steadily, although like many others hampered by lack of men. The hardwood flooring plant was shut down for a week or two this fall owing to the blowing out of the cylinder head. The company has been running considerably behind its orders for maple flooring and the breakdown was untimely.

AT ELCHO, WIS.

The Chas. W. Fish Lumber Co., at Elcho, Wis., and also with a fine big mill at Birnamwood, has just completed tearing down its old mill at Elcho which has been operated for the past ten or twelve years. It was a rotary mill. The company has already begun the construction of a new saw mill

comprising a band and resaw on the site of the old plant. It will cut about 60,000 feet a day and will be ready for operation around December 1. The two mills produce about 50,000,000 feet a year. Frank Handryside, formerly of Rhinelander, is

1—"DEN." 2—BARN. 3—RESIDENCE.

sales manager and W. E. Latterman, formerly of Chicago, is office manager at Elcho.

NEW LIFE AT RHINELANDER.

The C. C. Collins Lumber Co., which purchased and started operating the F. S. Robbins mill at Rhinelander December 15, last year, ran the plant steadily until about July 15, when it shut down for repairs and alterations. These were to be completed along about October 1. The mill, which comprises a band and resaw, has a capacity of 70,000 feet of softwoods in ten hours, or 50,000 feet of hardwoods. New boilers are being installed and a new planing mill is being built. The planing mill contains a new No. A 91 Yates fast feed matcher and a new American No. 77 planer, together with a fine lay out of planing mill machinery to make it a complete modern mill. The yard, which is all situated in the city limits, comprises sixty-nine acres, of which fifty-five acres are used for piling, the remainder being given over to the buildings and to fire space. About 35,000,000 feet of lumber can be piled in the yard. When the mill shut down there were approximately 25,000,000 feet of lumber in pile.

The timber lands of the company are located in the vicinity of Pine Lake, Wis., which is sixteen miles south of Hurley, and the company has a twenty years' cut at the rate of about 25,000,000 feet a year. Of the total timber stand there are 20,000,000 feet of virgin cork white pine and of the balance about 60 percent is hemlock, 10 percent tamarack and the remainder hardwoods, mostly birch.

The officers of the company are Perley Lowe, Chicago, president; John D. Ross, Chicago, vice president; Jacob Mortenson, Oak Park, Ill., treasurer, and C. C. Collins, Rhinelander, secretary and manager. Charles A. Macdonald, formerly with the Westboro Lumber Co., is the sales manager of the new concern and Robert Caldwell, who was formerly connected with the Robbins Lumber Co., is superintendent of the operations and yard. In the office force also are Raymond Plunkett and Arthur Davidson, both experienced in their respective lines.

CHANGE IN THE BROWN INTERESTS.

The Brown Land & Lumber Co., which is composed of Luther E. Brown and his brother, Webster A. Brown, have recently purchased the saw mill of the Brown Bros. Lumber Co., which has been operated by the latter for the past thirty-four years. The Brown Bros. Lumber Co., as heretofore stated in these columns, will probably continue business along wholesale lines. The Brown Land & Lumber Co. will greatly enlarge its sphere of action in both manufacture and distribution within the next few months.

DEVELOPMENT OF LANGLADE COUNTY.

As stated in a recent issue of the LUMBER WORLD REVIEW, the timber resources of Langlade county, which have never been developed on any large scale, will be exploited the coming year to a greater extent than ever before. The new plant of the Langlade Lumber Co., at Antigo, will be one of the larger channels of manufacture, while another is to be installed at White Lake by the Yawkey-Bissell Lumber Co., of Wausau. This new mill, which has been heretofore described in these columns, will comprise a band and resaw with planing mill and other accessories and will cut something like 30,000,000 feet of lumber annually. It will be started in operation next winter.

THE NEW MILL AT ANTIGO.

The new mill of the Langlade Lumber Co., at Antigo, will be one of the largest and best mills in Wisconsin. The mill will have a capacity of about 100,000 feet a day and will consist of a band and rotary with probably a gang. George E. Foster, who is one of the leading stockholders of the new company, has been devoting considerable of his time lately to supervising the construction of the mill and hopes to have it ready for operation November 1. Mr. Foster says that the company will make logging its principal business and will sell logs to other manufacturers and to paper plants and will manufacture the rest at the new mill. John D. Mylrea, son of the late Hon. W. H. Mylrea, of Wausau, and who has been for some time operating the Hale & Mylrea Lumber Co., at Wausau, and Elcho, Wis., is the general manager of the new mill. He is an experienced lumberman and the new company is fortunate in securing his services.

OPERATIONS AT MERRILL, WIS.

The several large mills at Merrill are all now in operation, the A. H. Stange Co. having planned on starting up for its fall and winter run. The C. J. Kinzel Lumber Co.'s mill is again in operation after having given the plant a general overhauling and adding some new equipment.

The Heinemann Lumber Co. is going ahead on a normal basis of output.

The A. H. Stange Co. has recently put in some new camps sixteen miles northwest of Merrill and is getting out logs actively. The company has an abundance of timber to fall back on.

AT WAUSAU, WIS.

The B. Heinemann Lumber Co.'s extensive saw mill at Wausau is running full time and Manager W. B. Heinemann says that orders are coming in in good shape and that prices show a tendency toward improvement. Mr. Heinemann is doing some extensive advertising in the direction of retail trade and has some original and valuable ideas on the subject of retail advertising to which more extended reference will be made later.

The Jacob Mortenson Lumber Co.'s plant at Wausau is running steadily and is cutting some of the logs of the Mohr Lumber Co., whose saw mill plant was destroyed by fire a few weeks ago. The Mohr Lumber Co. is not sure whether it will rebuild at Wausau or at some other point, there having been a considerable desire upon the part of Tomahawk and other northern cities to induce the company to make a change in the location of its mill.

GRAND RAPIDS OPERATIONS.

At Grand Rapids, Wis., is located the saw mill and box factory of the E. W. Ellis Lumber Co., a concern related to the A. H. Stange interests at Merrill, Mr. Ellis being Mr. Stange's son-in-law. The company's saw mill is being operated on a normal output and its box factory is running full.

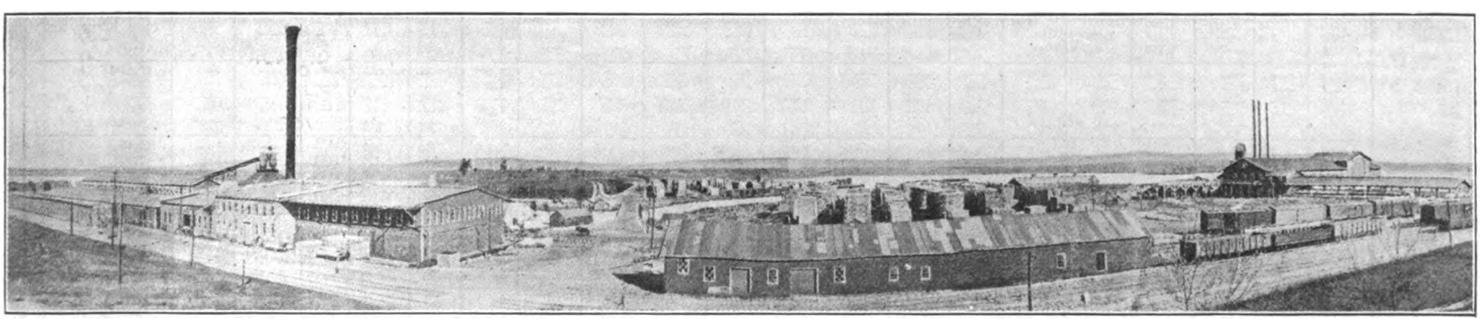
The Kellogg Bros. Lumber Co., one of the largest retail concerns in Wisconsin, has recently built a new lumber shed at its plant, a view of which is presented herewith. The company is also building a new office, all of which goes to indicate the deserved prosperity of Charles and Will Kellogg, the first named gentleman being the president of the Wisconsin Retail Lumber Dealers' Association.

A WONDERFUL SUMMER RESORT.

A glance at the accompanying map, distributed by C. P. Crosby, the well known wholesale lumberman of Rhinelander, and also engaged in the farm land business, gives a broad hint of the possibilities of Rhinelander as a summer resort. The city is traversed by the charming Wisconsin and Pelican rivers, which form a confluence within the city limits, just back of Eugene Shepard's fine residence and adjoining the city park. Within a radius of two or three miles of Rhinelander there are dozens of lakes, in all of which may be found gamey fish, while in the tributary streams there is an abundance of speckled trout.

Within a radius of twelve miles of Rhinelander there are 230 lakes of good size, and eleven trout streams.

For years Rhinelander has been without adequate hotel accommodations, but there is now in course of construction a handsome, modern brick hotel, with up-to-date equipment and containing sixty-six rooms, with about half of them provided with baths. The construction of this new hostelry marks a new era in Rhinelander's development, as the



GENERAL VIEW OF SAWMILL AND PLANING MILL PLANT OF THE KNEELAND-McLURG LUMBER CO., PHILLIPS, WIS.

Digitized by Google

money for it has been raised among Rhinelander's public spirited citizens, prominent among whom are the Brown brothers, Edward O., Webster E. and Anderson W. Brown, who took a large interest in the enterprise.

That the hotel will be a credit to its projectors and the citizens generally is emphasized by the fact that it will be conducted by the same people (the Wisconsin Hotel Co.) who operate those two popular hotels, the Palmer house at Fond du Lac and the Hotel Delta, at Escanaba, Mich. It is reported that E. W. Wilkowski, now manager at the Palmer house, will have charge of the Rhinelander hostelry. With the new hotel as an additional attraction, there is no doubt that Rhinelander will soon become one of the most popular places in the country for tourists, fishermen and summer resorters.

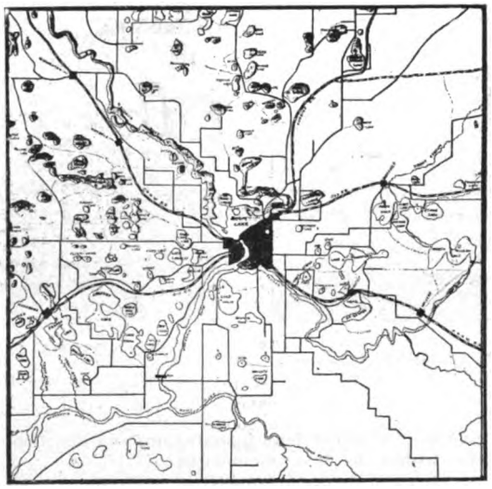
LUMBER MILL OPENED AT L'ANSE, MICH.

L'Anse, Mich., Oct. 1.—A city which has been burned to the ground once and which has had three booms only to fall back into decline later, but which is now enjoying its fourth and what is expected to be its perpetual period of prosperity is L'Anse, the county seat of Baraga county, in Clover-Land.

The lumbering industry has not only been the cause of the three booms as well as the great fire, but has also brought back prosperity to the community for the fourth time through the opening up of the L'Anse mill which is now turning out timber at a merry clip.

French Catholic priests were the first white persons to settle at L'Anse or "The Handle" as the word indicates. It is said that the Holy Fathers were on Lake Superior in a boat when a storm came up and drove them into Keweenaw bay for shelter. They went to the southern-most point before landing because of the immensity of the storm and thereby founded what is now the city of L'Anse.

These religious men found a band of Indians here and as a result worked among them. Thinking that this remarkable natural harbor would some day prove to be a great shipping point and that the Fall river would be harnessed for power by manufacturing plants a city was planned.



MAP OF RHINELANDER, WIS., AND ENVIRONS, SHOWING A FEW OF THE 230 LAKES IN A 12-MILE RADIUS.

A Catholic mission was first founded to be followed soon after by a Methodist mission. In view of the early completion of the Chicago, Milwaukee and St. Paul railroad several hundred settlers were living in L'Anse by 1872. Shortly after this time S. L. Smith, Charles H. Palmer and Captain James Bendry plotted the city and lots were sold as high as $1,000 each.

A huge ore dock was erected at a cost of $500,000 and other buildings followed. The first hotel was a frame structure which was moved from Houghton on a scow to L'Anse by Sam Lloyd. That was in 1871. Other improvements went forward to build up the city shortly.

The first real boom, however, came in 1838 when Charles Childs erected a sawmill. Millions of feet of first class timber on all sides of the city made the sawmill a prosperous venture from the very first. Prosperity smiled on the city until 1850 when the mill was destroyed by fire. Then the hamlet fell into decline.

In 1870 the lumbering industry, which has been the means of many fortunes in Clover-Land and which is still producing them, came to the front again. The Nester mill was erected and like its predecessor brought prosperity. The possibilities of L'Anse becoming an outlet for the great mineral wealth of Clover-Land as well as its timber brought great results. Capitalists bought great tracts of land and many settlers moved in.

But then came the crash in 1873. The mills closed down and hard times set in. The people moved away and buildings were vacated. For years the village went down hill and on May 10, 1896, fire, which originated in the mill yard of J. B. Smith, destroyed the entire location.

A few people rebuilt their homes but many more moved away. The period from then until 1913 was not prosperous although some new buildings were constructed. In that year a large mill was put up and it brought prosperity again. But in November of 1914 it closed down and L'Anse, then called the most unlucky city in America, again fell into an uncertain state.

W. T. Culver reorganized the company and with O. J. Smith as manager and E. Alter as bookkeeper, the new firm with its great financial backing is doing a large business. The mill is turning out 150,000 feet every twelve hours and the company owns 30,000 acres of fine timber land. The mill opened its doors this week and today L'Anse with its remarkable harbor and fine railroad facilities as well as its proximity to the raw product is booming more than ever before.

HACKLEY-PHELPS-BONNELL MILL BURNS.

The sawmill of the Hackley-Phelps-Bonnell Co., at Phelps, Wis., was totally destroyed by fire last week, Wednesday, and only by heroic effort on the part of the 200 employees of the plant was the fire prevented from spreading to other property. The chemical plant of the company, which is valued at $500,000, caught on fire several times, but was saved from destruction, the flames being confined to the mill, lumber yard and about 1,000 cords of wood in a yard adjoining. The loss is placed at $300,000 and this is fairly well covered by insurance.

Exports of Southern Yellow Pine

From Various Ports to All Destinations, for Fiscal Years Ending June 30, 1912-13-14-15-16—Compiled by the Southern Pine Association

The Latest News of the Lumber World

THE DOUGLAS FIR EXPLORTATION AND EXPORT COMPANY ORGANIZED.

Tacoma, Wash., Oct. 3.—The Douglas Fir Exploitation & Export Co., the organization of which has been hanging fire for the past four years, has been finally organized and will commence operations in the near future. At a meeting of the leading waterfront manufacturers, held in Tacoma, September 29, the organization of the company was completed, according to statements by some of those present. None of those taking part in the meeting would discuss the matter for publication at the present time.

The final arrangements for commencing business will be made in San Francisco this week, a delegation of lumbermen from the northwest leaving Tacoma on October 1 for California. The delegation included Major Everett G. Griggs, president of the St. Paul & Tacoma Lumber Co.; J. T. Gregory, of the Fir Tree Lumber Co.; J. H. Bloedel, president of the West Coast Lumbermen's Association and the Bloedel-Donovan Co., of Seattle; C. E. Hill, of Tacoma, chairman of the special committee in charge of the organization; R. H. Burnside, of Raymond, and A. L. Paine, of Hoquiam. It is expected that an official announcement of the company's plans will be made following the San Francisco conference.

It was reported that A. A. Baxter, of the Charles Nelson Co., San Francisco, has been appointed manager of the new company and will give up his present position to take charge of the Douglas Fir Exploitation & Export Co.

CAR SHORTAGE AND THE LUMBER MARKET.

Pittsburgh, Pa., Oct. 5.—Speaking today of the effect on the lumber trade of the severe car shortage, a leading lumberman of this city said: "To say that the lumber business is in rather a chaotic condition is a mild expression.

"It has been many years since the car shortage was as acute as it is at this time and for the last thirty days it seems to have been getting worse continually, and we see no hope of improvement during the next sixty days.

"The only chance for relief that we can see is the fact that all the trunk line railroads are thoroughly alive to the situation and have their traveling representatives out, urging immediate unloading, and quick handling of cars, which should go a long way towards keeping the situation from becoming any more serious. Although we have talked 'car shortage' constantly to our customers, few, if any, of them heeded our warnings, and it is only within the last few days that the trade in general seems to have become impressed with the seriousness of the conditions and are beginning to anticipate their wants and place their orders in advance.

"Experience has taught us that it makes little difference whether there is a shortage of lumber, or whether we are unable to get it for lack of equipment, it has the effect of stimulating business. This is true of both volume and price. Therefore, it looks to us as if we have reason to look for unusual activity during the next sixty days. Many people who are looking for quick deliveries are doomed to more or less disappointment. Some of the larger shippers have been forced to withdraw from the market because they cannot get equipment. Those who are more fortunately located will have to advance prices to some extent in order to protect themselves and not get loaded up with orders that they will be unable to ship at the present prices.

"The advances enjoyed in the lumber business are in no way commensurate with what most other commodities have enjoyed, and are more than consumed by the advances in labor, which have materially affected the cost of production. All these abnormal conditions have a tendency to increase the cost of doing business, which will necessarily have the effect of stiffening prices."

CAR SHORTAGE CAUSES MILLS IN THE NORTHWEST TO CLOSE.

Seattle, Wash., Oct. 3.—Lumber manufacturers of the Pacific northwest are facing one of the most serious car shortages in years and there is no hope in sight for relief, in fact some declare the shortage has just started. There are various opinions expressed by representative manufacturers as to the car situation.

W. H. Boner, manager of the Weyerhaeuser Lumber Co.'s plants at Everett declares he believes the car shortage is a blessing in disguise. He said: "If it were not for the car shortage the mills would be taking $7 off for dimension now. The Weyerhaeuser mills will not cut any more lumber than they can ship. I believe the car shortage will stiffen prices. We are not excited over the situation. I think the prices have stopped sliding and that we soon will have to advance prices."

Major Everett G. Griggs, of the St. Paul & Tacoma Lumber Co., of Tacoma, declares he is seriously considering calling in all the company's salesmen. He does not believe it is good business policy to continue to book orders ahead when there is no assurance that the material can be shipped.

J. H. Bloedel, of the Bloedel-Donovan Lumber Mills, in speaking of the situation, said: "The car shortage has just begun. There seems to be no relief in sight. It seems to me to be a crying shame that this great lumber industry should remain idle and let things drift. We are in a critical position, but the manufacturers can control the situation if they will. Washington and Oregon are the only sections of the country that are not prosperous. Most sections are not only prosperous but intensely prosperous."

The plant of the Grays Harbor Lumber Co. has been closed and N. J. Blagen, of that firm, has announced it will remain idle until the car shortage is relieved. No new business will be booked by this concern at present.

Several of the transcontinental lines have instructed their agents under no circumstances to allow cars to leave their own lines. There are fears that if the cars ever become lost in the congestion east of Chicago there will be little chance of getting them back. One line has booked 25,500 tons of from 900 to 1,000 carloads of freight to be shipped from Puget sound to the Orient. It is believed when this starts to move there will be a slight measure of relief in this vicinity.

The enormous demand for cars arises this year because of the scarcity of Pacific coast tonnage to take care of the foreign shipments of flour, wheat, salmon, fruit and other products which are being sent to the Atlantic coast by rail for shipment by water.

IMPROVING LUMBER SERVICE.

The Chicago & Eastern Illinois road is the pioneer in an endeavor on the part of the railroad

Western Forestry and Conservation Association Program

The annual Forest Industry Conference of the forest protective organizations composing the Western Forestry and Conservation Association, will be held at the Hotel Portland, Portland, Ore., Tuesday and Wednesday, October 24 and 25, 1916. Represented in this great gathering will be the state, federal and British Columbia forest interests. The Pacific Logging Congress will convene at the same hotel October 26 and 27.

TUESDAY MORNING'S SESSION.

The session will be called to order at 1d o'clock Tuesday morning, October 24, which is "forest protection day." After the address of President A. L. Flewelling and the report of Secretary-Treasurer George M. Cornwall, the following features are announced:

"The Year's Work and Its Lessons," by E. T. Allen, forester.

"Railroad Fires," a report by the committee on railroad hazard, followed by discussion.

"Fire Weather Forecast System," a report of progress and suggestions for the coming year, by E. A. Beals, of the United States Weather Bureau.

"Standardizing Association Business Systems," being a report by the committee on business system, followed by discussion.

TUESDAY AFTERNOON'S SESSION.

"Motor Vehicles in Fire Work," by George C. Joy, of the Washington Forest Fire Association.

"An Idaho Experiment in Perfecting Lookout Methods," by W. D. Humiston, of the Potlatch Timber Association.

"Aeroplane Patrol," by W. E. Boeing, president of the Northwest Aero Club.

"Wireless Telephony and Other New Wrinkles," by Coert DuBois, United States Forest Service.

WEDNESDAY MORNING'S SESSION.

This is "forest industry day" and the following program will be followed:

"The Government and the Lumber Industry," giving essential facts disclosed by the investigations conducted by the Forest Service and the Federal Trade Commission. The subject will be presented by W. B. Greeley, of the Forest Service and an hour will be given to discussion.

"Re-organization of Forest Industrial Associations," report of the nation-wide committee, of which H. G. Langille, of Portland, is chairman. An hour will be allowed for discussion of this subject.

WEDNESDAY AFTERNOON'S SESSION.

"What British Columbia Is Doing to Help Its Lumber Business," by M. A. Grainger, chief of the British Columbia Forest Service.

"After the War." The expected trade situation will be presented by Dr. E. E. Pratt, chief of the United States Bureau of Foreign and Domestic Commerce.

"Necessity of International Co-Operation," by H. R. McMillan, timber trade commissioner of the Canadian government.

The session will close Wednesday afternoon with reports of committees and election of officers. In the evening there will be a dinner given by the lumbermen of Oregon to the guests.

The cover of the program for the meeting is a beautiful and comprehensive design and was drawn by E. T. Allen, of Portland, forester of the association, whose skill, either in poetry or artistic work of any kind, to say nothing of his ability as a forester, is invariably of the highest order

Digitized by Google

people to improve the lumber service and its efforts are meeting with the hearty approval of the lumbermen. A. Fletcher Marsh, of Chicago, chairman of the tariff committee of the Lumbermen's Association, calls especial attention to a circular just issued by E. S. Stephens, general freight agent of the Chicago & Eastern Illinois, which is the fourth one he has sent out touching upon lumber. Mr. Stephens says that a railroad must have the good will of its patrons and the greater the good will the greater the railroad. He says that the Chicago & Eastern Illinois is specializing on lumber traffic, having a specific reason—that it may merit and justify an increase in patronage from those engaged in the timber trade.

W. J. Jackson, president and receiver of the road, in a recent address to its employes relative to claim prevention work, said: "More even than the saving of $150,000 wasted annually in damage to freight do I want to establish the Chicago & Eastern Illinois as the road of careful and 'coming' railroad men. I should take greater pride in feeling that, through his training and associates, every man on the Chicago & Eastern Illinois had an assured future, based on his character, than anything else I can think of.

"Our own men read these lumber specialization circulars with the same interest that lumbermen do.

"It is very simple to provide good transportation on lumber. All that is necessary is to get everyone interested.

"When the trainmen, yardmen, dispatchers, superintendents and agents are watching lumber shipments, it means that there are going to be few complaints on the service accorded lumber traffic.

"Our men realize that the fast handling of lumber increases car supply—that a car standing still is a car out of service.

"By service and all other means we are striving to increase the availability of equipment. We believe our connections in lumber producing territory are working with us to this end."

TRADE EXTENSION AND SALESMANSHIP.

The executive committee of the National Lumber Manufacturers' Association and the trade extension department of the association held meetings at Chicago on September 19. There were present R. H. Downman, president, New Orleans; R. B. Goodman, second vice president, Goodman, Wis.; John W. Blodgett, Grand Rapids, Mich., treasurer, and Edward Hines, C. H. Worcester, J. W. Embree and W. C. Hull, directors.

The work of the trade extension department was reported on by its manager, E. A. Sterling, and general approval was given to the projects under way.

The officers of the association were authorized to take out a membership in the World's Salesmanship Congress. They were also instructed to call a two days' meeting of traveling lumber salesmen in Chicago at the time of the semi-annual meeting of the board of directors in January, the object being to give salesmen information upon methods of selling lumber and meeting competition of other materials. It was also decided to invite manufacturers of other building materials interested in mill construction and buildings to hold a joint conference with the lumbermen at some convenient date to consider the best means of promoting mill construction and secure the adoption of uniform building regulations regarding mill construction. Authority was given the officers to employ a construction engineer to devote his entire time to building codes and especially with regard to changes proposed in various cities.

The officers were also authorized to employ a suitable man to work in co-operation with the Bridgeport Wood Finishing Co. and the Morgan Sash & Door Co. to take charge of the exhibits of the National Lumber Manufacturers' Association and the other concerns named at the Building Material Exhibit on the second floor of the Insurance Exchange, Chicago. The average monthly attendance at the Building Material Exhibit now exceeds 10,000. Samples of all the commercial woods are displayed and will be explained by the man in charge and literature published by the various lumber associations will be kept on hand for examination or distribution.

It was decided, after discussion, that inquiries for prices of structural and other timber received by the association should be referred to the retail yards in the localities where the inquiries originate.

It was decided that the president ask the affiliated associations to report the terms of sale in use in their membership and submit them to the National association so that they can be made more uniform. The work of the National Retail Lumber Dealers' Association, formed in Chicago, September 8, was endorsed. The affiliated associations were urged to co-operate with the new organization.

It was decided to appoint a finance committee for the purpose of securing more extended support for the association and also for helping the collection of back dues from the affiliated bodies. The committee is composed of the following: John W. Blodgett, chairman; F. E. Weyerhaeuser, F. G. Wisner, A. L. Flewelling, Arthur Cummer, R. M. Carrier and Edward Hines.

STATEMENT OF THE MANUFACTURE OF LUMBER PRODUCTS IN 1914.

A preliminary statement of the manufacture of lumber products in 1914 has just been issued by the Bureau of the Census of the Department of Commerce, Sam. L. Rogers, director. Compared with 1909, it shows an increase only in capital employed, wages paid and cost of material, every other item (probably including profits) showing a decrease. It would be interesting to make further comparison with 1916, were figures available.

	1914				
	Saw mills and logging camps	Independent planing mills	Total	1909	Percent of decrease* 1909-1914
Number of establishments†	27,229	5,841	33,060	39,492	16.2
Persons engaged in manufacture	535,616	115,969	651,585	746,112	12.7
Proprietors and firm members	32,340	5,131	37,471	47,736	21.5
Salaried employees	23,490	14,624	38,114	38,806	1.8
Wage earners (average number)	479,786	96,214	576,000	659,570	12.7
Primary horsepower	2,246,942	414,817	2,661,759	2,727,584	2.4
Capital	$916,574,000	$266,805,000	$1,183,379,000	$1,121,619,000	*5.5
Services	272,034,000	79,945,000	351,979,000	348,000,000	*1.1
Salaries	32,058,000	17,995,000	50,053,000	44,597,000	*12.2
Wages	239,976,000	61,950,000	301,926,000	303,403,000	0.5
Materials	281,952,000	184,227,000	466,179,000	461,639,000	*1.0
Value of products	715,310,000	307,672,000	1,022,982,000	1,080,786,000	5.3
Value added by manufacture (value of products less cost of materials)	433,358,000	123,445,000	556,803,000	619,147,000	10.1

*Increase.

†The decrease in the number of establishments is due primarily to the fact that at the census of 1909 a large number of reports were received from small lumber mills. Mills engaged exclusively in custom sawing for consumption in the immediate neighborhood should not be included in the census, but it is not always possible to conduct the enumeration in regard to these establishments on uniform lines at different censuses.

SAFETY FIRST TRUCK TYPE SWITCHBOARDS.

In every switchboard installation, protection against accidents should receive careful consideration. This applies particularly to the industrial plant, and doubly so if the panels are mounted in such location that access to them can be had by employes comparatively unfamiliar with electrical devices. In the latter case the safety first truck type switchboard units here shown are eminently fitted.

All live parts are enclosed, and danger of coming in contact with live circuits is practically eliminated. Oil switches, busses and other live parts are in compartments. This tends to reduce fire hazards and to limit disturbances to a single point. Extensions can be readily made or the units moved to other locations if desired.

Another marked advantage of this type of construction is the ease of inspection or replacement. The switchboard panel is mounted on a carriage which can be readily removed from and replaced in a stationary structure, but only when the oil switch is open. With the oil switch closed it is impossible to remove or insert the truck because of an interlock between the operating toggle of the oil switch and the stationary unit. In plants where feeders are standardized, spare panel trucks will permit systematic inspection of equipment with the least possible interruption of service.

The stationary member of the switchboard carries current and potential busses and disconnecting switch studs. Barriers between the current bus studs prevent accidental contact by any one who enters the compartment. The rear ends of the current disconnecting switch studs run to busses and incoming or outgoing leads; the potential bus wires to small contact studs near the top of the compartment. The side walls have hand holes, so that the bus bars and bus wires can be continued from unit to unit. These openings when not required can be closed by removable covers. Access to the rear of the compartment can be had by means of a two-section sheet steel door.

The removable truck is mounted on wheels, and when withdrawn, the equipment is dead and accessible from all sides. The fore part of the truck carries a sheet steel panel on which is mounted the instruments, meters, oil switches and other appliances as shown. The current transformers are mounted on steel brackets on the back of the instrument panel. The rear of the truck carries the movable parts of the disconnecting switches, the potential transformers and small wire accessories. To center the truck and to assist in placing it in or removing it from a compartment, rails are provided for the wheel to run on.

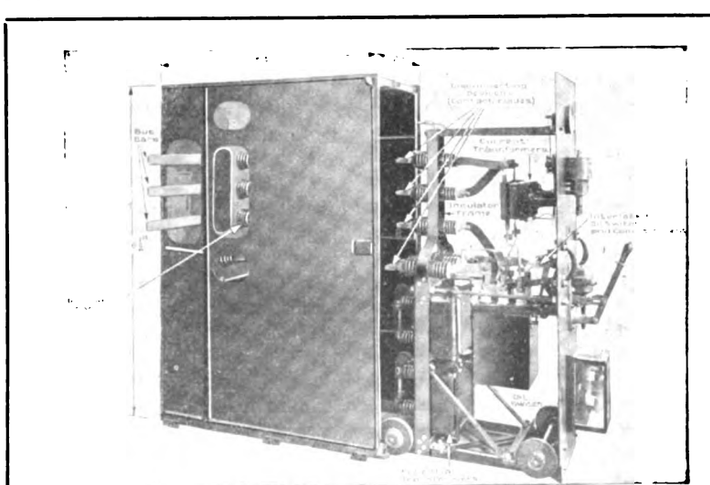
The field application of standard size units is limited to 75 volts and 2,000 amperes at 60 cycles, and 3,000 amperes at 25 cycles, on the main bus. Special units can be obtained for use up to 15,000 volts and 3,000 amperes. The current capacity of the removable element is limited to 500 amperes at 2,300 volts and above, and 800 amperes up to 600 volts. The units illustrated are 76 inches high, 24 inches wide and 52 inches deep.

TEXAS LUMBER PROBLEMS.

Houston, Tex., Oct. 7.—In an interview today a leading lumberman of Texas said: "The car shortage has so clouded the situation that it is impossible to make anything but a wild guess as to the future. As far as the car shortage is concerned, we anticipate that cars will be short until Jan. 1st.

"The labor problem is amost as serious as the car problem, but labor should be more plentiful by the middle of November.

"As far as the market is concerned, we are not getting enough equipment to warrant our testing it out to see how really active it is. Prices are getting better right along but ability to ship may be the deciding factor."



REMOVABLE TRUCK SAFETY FIRST SWITCHBOARD UNIT—TRUCK JUST ENTERING COMPARTMENT.

DEATH OF JESSE N. CUMMINGS.

The death is announced at Oak Grove sanitarium, Flint, Mich., on September 22, of Jesse N. Cummings, president of the Cummings-Moberly Cypress Co., Moberly, La. Mr. Cummings had been in ill health for several years and for two years past had been under treatment at the sanitarium without, however, showing any visible improvement. He was born at Port Huron, Mich., in 1856 and consequently was in his sixtieth year. He came to Chicago as a young man and became associated with the wholesale lumber firm of Street, Chatfield & Keep. In 1888 he went to Fort Smith, Ark., where, with a brother, he went into the hardwood manufacturing business. In 1893 Mr. Cummings went to Anahuac, Chambers county, Texas, where he operated a mill at the mouth of the Trinity river, manufacturing hardwoods. In 1901 he went with the Louisiana Cypress Lumber Co., at Harvey, La., of which he was in charge for several years. He organized the Cummings-Moberly Cypress Co., together with E. E. Moberly, formerly of Chicago, in 1905, and was president of the organization. Mr. Cummings was never married. His nephew, J. C. Remick, is vice-president and general manager of the Cummings-Moberly Cypress Co., and another nephew resides in Virginia. He is also survived by a niece, Mrs. Irwin McDowell, of Chicago, from whose residence, 6806 Constance avenue, the funeral was held, September 25. The interment was at Oakwoods.

FIRE LOSS OF ANDERSON-TULLY COMPANY.

Memphis, Tenn., Oct. 5.—It has been impossible for the Anderson-Tully Co. to check up its records covering the fire which destroyed between nine and ten million feet of lumber on its yards at Vicksburg, Miss., last week. It may be stated in a general way, however, that the loss was approximately as mentioned and that it involved property damage around $200,000, largely covered by insurance. The loss of this very large amount of lumber has very seriously handicapped the company in the operation of its box factory at Vicksburg and it is stated that, while preparations are being made to start this up again, it may require two or three months before this is possible. In the meantime, the company has its large box factories at Memphis and it has also that of the Morgan West Box Co. at Madison, Ark., and orders accepted for the Vicksburg plant will be taken care of at the two already mentioned. The company also operates a large band mill at Memphis and it takes the entire output of a band mill at Rayville, La. Both of these plants are being run on full time. The fire did not damage the circular mill of the company at Vicksburg nor did it interfere in any way with the building of the new band mill which is being constructed at that point and which will involve a total of approximately $75,000. Officials of the company are busy checking over the records with the insurance companies and they will be able within the next few days to make a full statement of the loss incurred. It is known that there will be some salvage from the Vicksburg yards, but nothing whatever has been given out indicating the extent of the lumber that will be available for use.

H. R. MAC MILLAN HAS RESIGNED.

Vancouver, B. C., Sept. 29.—H. R. MacMillan, provincial chief forester, has resigned and will take up immediately the duties of assistant manager of the Victoria Lumber & Manufacturing Co., at Chemainus, B. C. A month or two ago Mr. MacMillan returned from a sixteen months' trip around the world, made as special trade commissioner for the Federal Department of Trade and Commerce. During this trip he paid special attention to the possibilities of marketing lumber overseas. About a month ago it was announced that he had left on a four months' trip to the Orient and Russia, but at the very last moment this trip was postponed. Mr. MacMillan gained an invaluable personal acquaintance with conditions in all the lumber consuming countries of the world.

A MAMMOTH HARDWOOD LUMBER SHED.

W. O. King & Co. have lately occupied their new lumber shed at the Loomis street bridge, this city, and it is one of the handsomest and largest lumber sheds in Chicago, if not in the United States. It covers a ground area of 400 feet on Loomis street and is 208 feet wide, extending from Loomis street to the slip and is thirty feet high, which gives it over 80,000 square feet of floor space. Mr. King states that it will hold 10,000,000 feet of lumber and he is filling it up now as rapidly as possible.

W. O. King & Co. are known as one of the largest concerns in the Chicago hardwood trade and their responsibility is unquestioned. Mr. King has been in the lumber business in Chicago thirty-four years. He handles practically all the staple hardwoods of northern and southern origin and makes a considerable specialty of thick maple and, in fact, his concern is known as one of the largest distributers of this item in the country.

In the middle part of the new lumber shed are located the offices of the concern. On the first floor is the shipping department which is neatly finished in birch. On the second floor are the four rooms, the accounting and sales departments, which are handsomely finished in oak, natural finish. The doors are of oak, but are painted in white enamel which affords a pleasing combination. Mr. King's private office and that of his son, William, junior, who is now associated with him, are handsomely furnished throughout. The shed frame is made of yellow pine timbers and the siding is of cypress.

HYMENEAL

WILLIAMS—ARNOLD.

Seattle, Wash., Oct. 1.—John S. Williams, assistant secretary of the shingle branch of the West Coast Lumbermen's Association, was married Saturday, September 16, to Miss Rhea Gertrude Arnold, at Kenmore, N. Y., the home of the bride's parents, Mr. and Mrs. Clarence H. Arnold.

Mr. Williams is a graduate of the class of 1914, College of Forestry, University of Washington, Seattle, and for a time immediately following graduation was in the employ of the lumber department of the Panama Canal Commission at New Orleans, La., where he met Miss Arnold. Mr. and Mrs. Williams will make their home at 1726 Harvard avenue, Seattle.

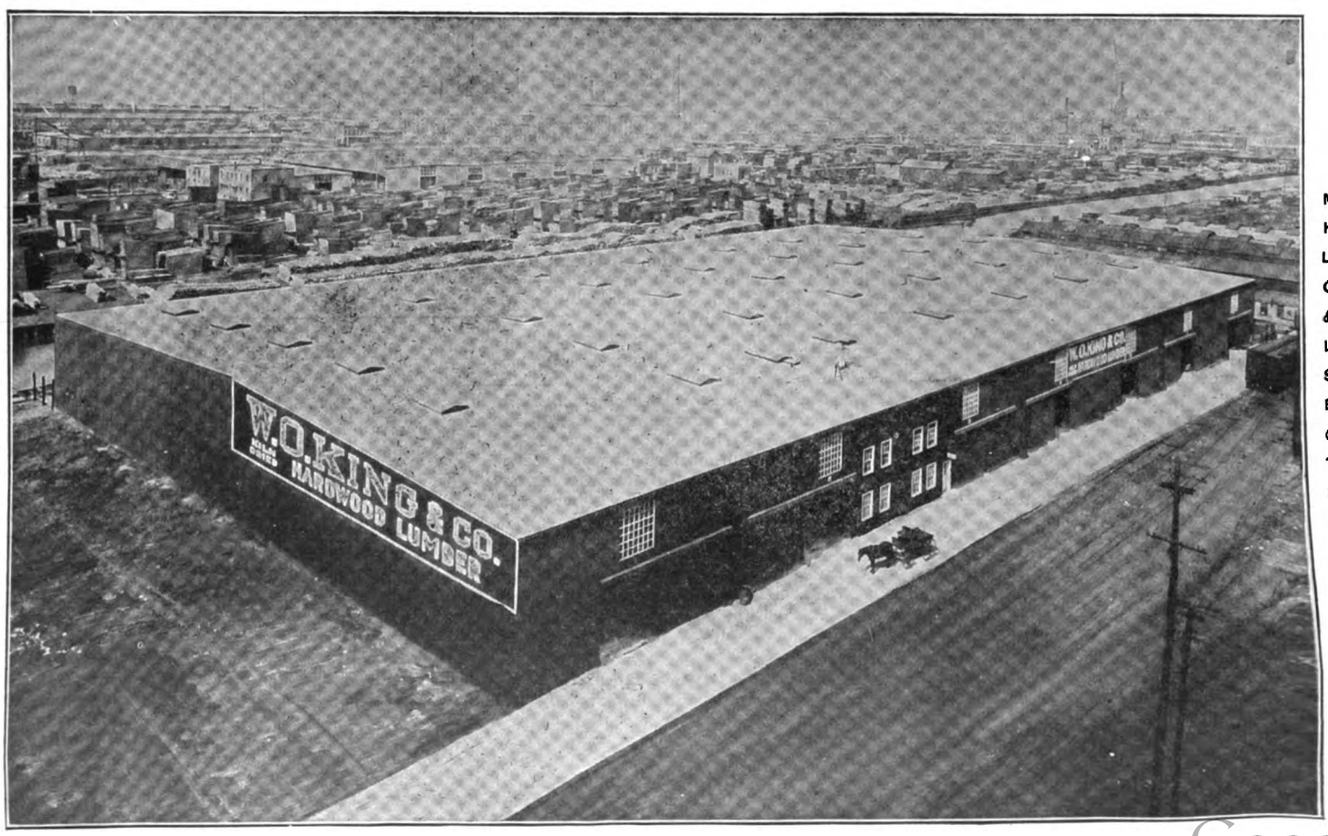
HADLEY—SCOTT.

Ottawa, Sept. 27.—The much-anticipated wedding of the season in military and social circles was solemnized this morning at 10:30 o'clock in St. James' Church, Hull, when Miss Lois Scott, daughter of the late Dr. Frank Scott and of Mrs. Scott, of Hull, was married to Captain W. Fraser Hadley, R. C. E., O. C., the Signal Depot at Rockliffe Camp, and son of Mr. and Mrs. William Arthur Hadley, of Chatham, Ont.

Impressively beautiful was the ceremony, conducted with full military honors and attended by several hundred guests, who formed a most brilliant assemblage.

As the bridal couple left the church they walked under an arch formed of the crossed swords of some twenty officers of the Signallers.

Captain and Mrs. Hadley will in a few weeks take up residence at 192 Cobourg street.



MAMMOTH HARDWOOD LUMBER SHED OF W. O. KING & CO. AT LOOMIS STREET BRIDGE, CHICAGO. THIS SHED HAS A CAPACITY OF TEN MILLION FEET OF LUMBER.

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

LUMBER INSPECTORS WANTED BY THE FEDERAL GOVERNMENT.

Washington, D. C., Oct. 6.—Lumber inspectors are wanted according to the United States Civil Service Commission, which has just announced that a competitive examination will be held on October 24. From the register of eligibles resulting from the examination certification will be made to fill two vacancies in this position in the Bureau of Forestry, Philippine Service. A salary of $2,500, a year is to be paid and the inspector is to be allowed traveling and subsistence expenses while he is away from his station.

The duties of these lumber inspectors will be to make such inspection of lumber exported from the Philippine Islands as will be necessary to prevent losses on the part of the exporters by reason of rejections at the point of destination, and to enable a lumber importer in the United States or foreign countries to be sure that an order placed by him in the islands will be filled satisfactorily.

Familiarity with Philippine woods is not essential, but the applicants must be thoroughly familiar with the hardwoods and the entire hardwood situation and market in the United States, with the peculiar requirements of the various hardwood markets, certainly of the United States and preferably with foreign countries, and in addition should have a thorough knowledge of the hardwood lumber industry, particularly so far as refers to the manufacture of the raw product.

Applicants must have had at least six years good general experience in the lumber industry, not less than two years of which must have been in actual inspection of lumber, preferably hardwood lumber.

FEDERAL RESERVE BULLETIN FOR OCTOBER.

Washington, D. C., Oct. 5.—Business conditions throughout the country are good, according to the Federal Reserve Bulletin for October, just out. The Bulletin is the official organ of the Federal Reserve Board. Relative to the lumber business in Cleveland the report says in part:

"The lumber business, which has been unsatisfactory during the summer, is better. Both hardwood and yellow pine dealers are reporting increased sales and better prices." The Chicago correspondent sends the following market report:

"Prices are firm, but sales decreased in some centers during August. Railroads and car manufacturers are taking only their immediate needs. The high cost of building construction is probably exercising a detrimental effect, but country sections which have held off are beginning to come into the market. Business has been below normal, but wholesalers report an indication of a stronger demand for the balance of the year. Mahogany is at a high price, due to the exorbitant ocean freight rates, and the quotations are a handicap to volume sales." The Kansas City district makes the following report about lumber and building conditions:

"In lumber, while some degree of quietness prevailed in July, August saw the placing of as many orders as wholesalers could readily handle and prices have stiffened. Reports indicate that business is holding up strong and collections are unusually good. Realty sales in all parts of the district indicate a substantial increase over a year ago. The building activities are strong, as indicated by permits issued. The increase of new buildings started in Kansas City in August over those started in August a year ago amounted to 67 percent gain, while Oklahoma City reports that the issuance for permits for August was greater than the same month during the past six years. Denver reports the total in building operations for the first eight months of 1916 as $2,765,350, as against $1,821,340 for the corresponding period of 1915."

From District 11, Dallas, Texas, headquarters comes the following word relative to the lumber situation:

"Manufacturers of lumber advise that normal demand and stable prices are not anticipated until European matters are adjusted and the work of reconstruction is commenced, when it is expected an unprecedented demand will be made for building material. Conditions prevailing in Mexico have also materially affected lumber shipments."

APPOINTMENTS TO BE MADE SOON.

Washington, D. C., Oct. 5.—Representatives from the Forest Service, the Federal Trade Commission, the Civil Service Commission, and the Bureau of Foreign & Domestic Commerce, are all working on the examinations which were held a short time ago, from which men will be chosen to look into the question of foreign markets for American lumber.

While the papers will probably not be entirely corrected until at least the middle of this month, it is understood that some excellent examinations have been turned in.

METHODS USED BY EXPORTERS.

Washington, D. C., Oct. 9.—[Special Telegram]—As a preliminary step to the European lumber investigation, the Bureau of Foreign and Domestic Commerce announces that it will send out to lumber exporters' and export associations a list of questions covering the methods employed by the different sections in their exportation of lumber and its manufactures. As the returns come in they will be compiled and a brief summary published.

RECOMMENDED TREATED WOOD FOR SILOS.

Washington, D. C., Oct. 6.—A statement rather interesting to our readers has just recently been sent out by the Department of Commerce in one of its weekly bulletins, which have a large circulation among the farmers of the country, relative to the preservation of wooden silos. The statement is as follows:

"Experience with silos built of untreated wood have shown that they are subject to more or less decay. Even such durable material as heart cypress or redwood is not immune. Deterioration generally appears near the foundation of the silos where certain conditions of moisture favorable to the development of the fungi of decay exists. Decay may also attack sappy wood in any portion of the structure.

"In 1913 about 100,000,000 board feet of high grade lumber were used in silo construction, and the consumption of lumber for this purpose is steadily increasing. The importance of some kind of preservative treatment to prevent decay in wooden silos therefore has become generally recognized. Several manufacturers of wood stave silos are now making use of preservatives, so that it is possible to purchase the silo material already treated.

"Of the various preservatives in general use, a good grade of coal tar creosote is very satisfactory for preserving timber. Almost any method of treatment with this preservative ought to add to the life of the silo. Superficial methods, however, such as applying with a brush, dipping in the preservative or spraying, are not sufficient. By far the best method is to have the staves treated with the preservative in a closed retort under pressure, and when so treated they should last indefinitely and should be more satisfactory to the purchaser.

"Those who are considering the purchase of treated silos should investigate carefully the methods used, and if greatest permanence is desired should choose only material that has received a thorough pressure treatment. Silos built of such material have the additional advantage of reduction in the swelling and shrinking of the staves and, hence, they can be kept tight more easily. Another advantage of silos built of well treated wood is that they need not be painted.

"To determine the effect of preservative treatment upon the durability of wood used in silos and to obtain information as to the effect of the treated wood upon the surrounding silage, the Federal Forest Products Laboratory began experiments in 1910 in co-operation with the University of Wisconsin. About five years after the experiments were begun the treated wood had not commenced to decay. Information in regard to the effect of treated wood upon its surrounding silage was obtained by an independent test after the first season, wood treated with creosote having been buried in the silage during the process of filling. This contaminated the silage sufficiently to give a strong odor, but the quantity of creosote in the feed could not be determined by analysis. This silage when fed to cows was not relished and two of the animals were affected slightly by it. This was a very severe test, however, for the wood was given a heavier treatment than is now considered necessary. Moreover, had the contaminated portion been thoroughly mixed with the rest of the silage it is considered doubtful whether the effect would have been noticeable.

INTERSTATE COMMERCE COMMISSION HEARINGS

December 15 has been set by the commission as the date for hearing the argument in case No. 8131 "in the matter of rates on and regulations of lumber and lumber products." The argument will be held in this city before the commission as a whole. Our readers will no doubt remember that extensive hearings were held in this case before Chairman Meyer, of the commission, in Chicago, during the past July.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until January 23 the operation of certain schedules contained in supplement No. 10 to R. H. Countiss, I. C. C. tariff No. 1017. The suspended schedules provide for increased rates on lumber and forest products originating in Pacific coast territory via the Northern Pacific and the Great Northern railways to stations in Michigan on the Copper Range railroad to a combination basis of rates.

The present rates are, from Pacific coast group 55 cents, and from intermediate groups, 52 cents per 100 pounds, to the destinations involved. The proposed combination basis will result in increases in the foregoing rates ranging from 2½ to 9 cents per 100 pounds.

The commissioners have suspended until January 29, the operation of certain schedules appearing in tariffs of Eugene Morris, C. E. Fulton, and E. B. Boyd, agents.

The suspended schedules provide for the withdrawal of proportional commodity rates on lumber, carloads, from Cairo, and Thebes, Ill., Evansville, Ind., St. Louis, Mo., and related points to Des Moines and other destinations in the state of Iowa.

The commissioners have suspended until February 2, 1917, the operation of a certain item appearing in F. W. Gomph, agents I. C. C. tariff No. 271.

The suspended item provides for the cancellation of a commodity rate of 50 cents per 100 pounds on box shooks, carloads, from Boise, and Nampa, Idaho, to San Francisco, Los Angeles and other destinations in California. The proposed class rate is $1.49 per 100 pounds.

Personal News Notes

Charles E. Gill, of the Gill-Andrews Lumber Co., Wausau, Wis., was in Chicago on a business trip week before last and made the LUMBER WORLD REVIEW a visit. Mr. Gill's company, which is a new one, is doing an excellent business.

Jos. M. Miles, of Columbus, Ohio, one of the best known traveling men in the central states territory, was in Chicago last week.

E. C. Dawley, of Wausau, Wis., a well-known hardwood lumber wholesaler, called on the LUMBER WORLD REVIEW while in Chicago late in September. He reported a fine demand for hardwoods in the northern trade.

George E. Foster, president of the Foster-Latimer Lumber Co., at Mellen, Wis., and managing director of the Langlade Lumber Co., Antigo, Wis., has removed to Chicago with his family and will be at the Moraine hotel, Highland Park, during the winter.

Charles F. Latimer, the well-known banker-lumberman, of Ashland, Wis., was in Chicago recently while on an eastern automobile trip, going as far east at New York and Philadelphia. Upon his return Mr. Latimer intends to go to Pasadena, Cal., for the winter.

Robert C. Clifford, who for the past four years has been district sales manager for the United States Cast Iron Pipe and Foundry Co., in charge of their St. Louis and Kansas City offices, is now associated with the Walter A. Zelnicker Supply Co. of St. Louis, in charge of its rail department.

Harry G. Wilber, of Milwaukee, Wis., general representative of the Brooks & Ross Lumber Co., Scofield, Wis., was in Chicago last week on a business visit. Mr. Wilber called on members of the yard trade and spent several days in the city. He is the president of the Northwestern Traveling Lumber and Sash and Door Salesmen's Association and stands high in the trade.

R. J. Lockwood, manager of the Memphis Hardwood Flooring Co., Memphis, Tenn., was in Chicago in late September visiting the company's Chicago representative, N. J. Clears, of 812 Monadnock building. Mr. Lockwood went from here to Detroit, where he also has a branch sales office. He reported an excellent business in hardwood flooring.

O. O. Byron, a well-known sash and door man, of Louisville, Ky., was in Chicago last week calling upon John A. Gauger & Co., extensive sash and door manufacturers and distributers of Twenty-second and Laflin streets, this city. Mr. Byron is now representing the big Chicago house in the Ohio river territory and has met with excellent success on behalf of this well-known concern.

Will E. Barwick, who during the past year has been assisting his father, S. E. Barwick, sales agent of the Long-Bell Lumber Co., 1201 Lumber Exchange, this city, sas gone to Longville, La., where the Long-Bell Lumber Co. operates one of its largest mills. Mr. Barwick has had an excellent office experience and is now intending to get a general experience in manufacturing operations at the Longville plant, which is operated as the Longville Lumber Co.

Louis A. Smith, a well known hardwood lumberman of this city and for some time associated with the Dermott Land & Lumber Co., at Dermott, Ark., has been operating his farm up in Michigan for the last two years, but returned to Chicago in September and has taken a position with Maisey & Dion, Inc. Mr. Smith's health was threatened for a time, but he is now feeling in the best of condition, thanks to his active outdoor employment.

Paul J. Sterne, for several years in charge of the accounting department of the Mississippi Lumber Co., at Quitman, Miss., has accepted a position with the Krauss Bros. Lumber Co., at New Orleans, La., and assumed his new duties last week. In his new location Mr. Sterne will have charge of the auditing and credit department, for which he is thoroughly well qualified. He formerly was connected with the Chicago lumber trade, but went south several years ago.

The Turtle Lake Lumber Co., of Grand Rapids, Mich., with sawmills at Winchester, Wis., has established a Chicago office with John F. Fountain, for some time past connected with the Strable Lumber & Salt Co., of Saginaw, Mich., as sales representative, looking after the Turtle Lake Lumber Co.'s business in this territory. Mr. Fountain for the present will make his headquarters at his home in Wheaton, Ill., but will probably establish an office down town later. He is a thoroughly well qualified lumberman, having been with the Hardwood Manufacturers' Association as inspector for five years.

Jacob Mortenson, of Oak Park, Ill., and Charles F. Latimer, of Antigo, Wis., have jointly constructed a large and attractive bungalow on the lawn of the Hotel Maryland, at Pasadena, Cal., where they have been accustomed to spend their winters. The two gentlemen furnished the material and erected the building, having the permission of the hotel authorities to locate in their yard. They are expecting to leave for Pasadena shortly and with their families will occupy the bungalow this winter and as long as they choose. It is a rather novel idea and doubtless will be adopted by others of the lumber colony on the west coast.

BUSINESS NOT INTERRUPTED.

Memphis, Tenn., Oct. 5.—Editor, LUMBER WORLD REVIEW—We wish to thank our many friends through your columns for their expressions of sympathy on account of the fire loss we suffered at our Vicksburg, Miss., yard. We wish to inform our friends and patrons, however, that we have a large supply of hardwood lumber at our mills at the following points: Memphis, Tenn., Madison, Ark., and Rayville, La.; and with the exceptions of a few items, we will be in position to furnish any stock inquired for.

ANDERSON-TULLY COMPANY,
Sam A. Thompson, Manager.

AN EAST INDIAN LUMBERMAN HERE.

J. P. Pfeiffer, for the last several years in charge of the plant of the Holland-India Lumber Co., at Samarang, Java, and with headquarters at The Hague, Holland, was in Chicago during the last week of September and made the LUMBER WORLD REVIEW a pleasant call, in company with his friend, W. G. Wilmot, of the Lidgerwood Manufacturing Co.'s Chicago office. Mr. Pfeiffer left Java in April and visited his company's home office at The Hague, after which he came to this country for the purpose of buying machinery for a new sawmill to be erected at Palembang, Sumatra, which will manufacture soft and hard woods. He bought the machinery from the Clark Bros. Co., of Olean, N. Y., and it will be shipped to Sumatra in January. Mr. Pfeiffer will take charge of the installation and operation of the new plant. The plant at Samarang has been devoted to the manufacture of teakwood and cuts about 20,000 feet a day. While in this country Mr. Pfeiffer has also been investigating lumber conditions. He visited the Forest Products Laboratory at Madison, Wis., where he spent several days. He will remain a few weeks on the Pacific coast and may visit the south before returning to the Dutch East Indies, where he expects to arrive about the time the machinery for the new mill is delivered.

LUMBER AND OTHER EXHIBITS AT THE LA SALLE.

An interesting association meeting, that of the Vegetable Growers' Association of America, was held at the Hotel La Salle September 26 to 29 inclusive and there were 700 members in attendance, besides the ladies. One of the features of the meeting was the exhibit of the Southern Cypress Manufacturers' Association, at which the diverse uses of cypress lumber for the construction of greenhouses and other structures were practically illustrated. The vegetable growers are large users of cypress and the growth of that class of food by greenhouses made expressly for vegetables is a growing industry and likely to become as large as the floral greenhouse business.

There were a number of exhibits made by the greenhouse manufacturers of Chicago and elsewhere and the interest in all the exhibits was very great. Included among them were those of the experimental stations conducted by Cornell University, Ithaca, N. Y.; Purdue University, Lafayette, Ind., and the University of Illinois at Champaign.

The cypress manufacturers' exhibit was in charge of W. F. Robitaille.

Business Changes, Incorporations and Fires

New Concerns

Wilmington, Del.—The DeLuca & Holton Logging Co.; $100,000 capital. L. DeLuca, F. DeLuca and J. F. Holton.

Chelsea, Mass.—The J. C. Prenny Co., to manufacture all kinds of building material, etc.; $50,000 capital. Joseph C. Prenny, president and treasurer; E. M. Archibald and W. J. Prenny.

New York, N. Y.—The Inter-City Lumber Co.; $2,000 capital. Bessie Gottlieb, Benjamin Gottlieb and Nathan Strumpf.

Mansfield, O.—The Ohio Lumbermen's Fire Insurance Agency Co.; $25,000 capital. E. S. Nail, W. H. G. Kegg, John W. Fighter, A. C. Bensen and Harry Wolf.

Mannington, W. Va.—The Beaty Development Co., to deal in lumber, building materials, etc.; $42,000 capital. M. A. Beaty, Harry B. Beaty and others.

Killam, Alta.—The Eagle Lumber Co.; $20,000 capital.

Fort Erie, Ont.—Hanna Bros. Planing Mills, Ltd.; $75,000 capital. To manufacture sash and doors, etc.

Dover, Del.—The United Dye Wood Corporation; $20,000,000 capital. Harrison Tweed, Welton C. Percy and W. F. Cahill, all of New York.

Washington, D. C.—The Thomas W. Smith Lumber Co. to succeed Thomas W. Smith; $200,000 capital. Thomas W. Smith, president; G. Linville Smith, first vice-president; Clifford U. Smith, second vice-president; Harry W. Smith, third vice-president; John B. Harvey, secretary.

Pittsburgh, Pa.—The Tionesta Lumber Co.; $25,000 capital. N. P. Wheeler, jr., Endeavor, Pa., treasurer.

New York, N. Y.—The Standard Hardwood Co.; $100,000 capital.

Montgomery, Ala.—The Pine Plume Lumber Co.; $50,000 capital.

Waco, Tex.—The South Side Lumber Co.; $10,000 capital. W. I. McReynolds, A. I. McCormick and Ralph Blair.

North Portland, Ore.—The North Portland Lumber Co.; $25,000 capital. R. J. Hubbard, C. A. Sheppard and Carlton E. Spencer.

Grundy, Va.—The Mitchell Lumber Co.; $25,000 capital. J. F. Mitchell, president, Galherpass, O.; A. A. Mitchell, vice-president, Blackey, Va.; V. M. Mitchell, secretary and treasurer, of Hardy, Ky.

New York, N. Y.—Charles F. Fischer & Co., Inc., lumber, timber, crossties, poles, planing mill products; $35,000 capital. W. J. Cox, A. V. Chartrand and C. H. Fischer.

Massena, N. Y.—The Evans Lumber Co.; $10,000 capital. J. L. Dyshaw, A. M. Nutt, H. M. Hall.

Uniontown, Pa.—The Cheat River Lumber Co.; $250,000 capital.

Deer Park, Wash.—The Fan Lake Lumber Co.; $10,000 capital. F. A. Reed, E. A. Reed and O. G. Follevaag.

Buffalo, N. Y.—The Miller Co.; $10,000 capital. Eugene A. Nostrand, Oscar L. Miller and Elmer C. Miller.

New York, N. Y.—The Schitter-Green Lumber Co.; $8,000 capital. Jacob Sanacory, Beatrice Grossfield and Moritz Grossfield.

Queens, N. Y.—The Weymar Lumber Co.; $1,000 capital. Albert Swensen, Geo. C. De Merritt and Adolph Weymar.

New Mills

West Norfolk, Va.—The Planters Manufacturing Co. will rebuild plant destroyed by fire.

Little Rock, Ark.—The E. L. Bruce Co. will rebuild its hardwood flooring plant recently burned. The new plant will have double the capacity of the old one and will cost $100,000.

Norfolk, Va.—The J. E. Etheridge Lumber Co. will rebuild planing mill recently destroyed by fire.

Banks, Ky.—H. L. McGuire, of Morehead, Ky., has purchased timber lands on Line Fork; will install stave mill.

Atkins, Ark.—W. J. Taylor has purchased saw and grist mill; will add shingle mill.

Riderwood, Ala.—The Jackson Lumber Co. is building a large sawmill.

Gaylord, Mich.—The Saginaw Wood Products Co. will erect a new sawmill. A complete band mill equipment is to be installed.

Newberry, Mich.—A. M. Chesbrough, of Toledo, O., is planning the erection of a hardwood and hemlock manufacturing plant here.

Business Changes

Kewanee, Ill.—George A. Wyatt has sold out to the Kewanee Lumber & Supply Co. Officers: M. H. Saunders, president; M. A. Saunders, vice-president and treasurer, and J. R. Saunders, secretary.

Saybrook, Ill.—L. J. Easterbrook & Co. have sold out to the Krum & Krum Lumber Co., of Elliott, Ill.

Wood River, Ill.—Charles H. Reith has been succeeded by the Wood River Lumber & Supply Co.

Grand Junction, Ia.—J. C. Haun has been succeeded by the Dalbey Lumber Co.

Union, Ia.—The Union Lumber Co. has been succeeded by the Lovell-Schofield Lumber Co., of Eldora.

Detroit, Mich.—The J. A. Boyd Lumber Co. has been succeeded by the Central Mill & Lumber Co.

St. Cloud, Minn.—The Midland Lumber & Coal Co. has sold its yard to the Thompson Yards, Inc. The Thompson Yards, Inc., has sold its yards at Hawick and Montrose to the Midland Lumber & Coal Co.

Carroll, Ia.—The Fullerton Lumber Co., with headquarters at Minneapolis, Minn., has recently started in business.

Garnett, Kan.—The Harrison Lumber Co. has sold out to D. T. Gabriel & Son, of Topeka.

Parker, S. D.—W. R. Wood has sold out to the Sioux Lumber Co.

Hurtsboro, Ala.—The Delta Lumber Co. has leased its plant to the Hurtsboro Lumber Co.

Orland, Cal.—The Brown & Doane Lumber Co. has sold out to the Hazelton Lumber Co.

Tacoma, Wash.—The Wheeler-Osgood Co. has opened an office at 807 Lumber Exchange building, Chicago, Ill.

Crawfordsville, Ind.—The Mercer-Winchel Lumber Co. has changed its name to the Montgomery County Lumber Co.

Lucas, Kan.—The Richolson Lumber Co. has changed its name to the Richolson-Scott Lumber Co.

Winchester, Ky.—The B. F. McCormick Lumber Co. has increased its capital to $35,000.

Bernie, Mo.—The Bunker Hill Lumber Co. is closing out.

Spearfish, S. D.—The E. A. Ritter Lumber Co. has sold out to the Renschell Lumber Co.

Jonesboro, Ark.—F. W. Wegman is now known as the Wegman-Mason Lumber Co.

Greensburg, Ind.—The Jones Lumber Co. has sold out to the Grouleff Bros. Lumber Co.

Guin, Ala.—The Guin Cooperage Co.; $12,000 capital. Miley Baskett, of Fayette, president; J. J. Pope, vice-president; R. R. Wright, secretary-treasurer.

Waterbury, Conn.—The Great Northern Tidewater Co.; $150,000 capital. To engage in operating timber lands in Virginia and North Carolina.

San Marcos, Tex.—The J. W. Webb Lumber Co.; $10,000 capital. J. W. Webb, C. W. Webb and James R. de Lay.

New York, N. Y.—The Central Timber Export Co.; $20,000 capital. L. Karasik, E. S. Anderson, C. J. Hoffmann.

Portland, Ore.—The Bramhall Timber Co.; $15,000 capital. R. B. Montague, G. C. Frisbie and Omar C. Spencer.

Dover, Del.—The Ensign Yellow Pine Co.; $750,000 capital. J. Clyde Parsons, William Stewart, both of Binghamton, N. Y., and Clarence Chamberlain, of Port Dickerson, N. Y.

Quicksand, Ky.—The Federal Parquetry Manufacturing Co.; $100,000 capital.

Kanapolis, N. C.—The Kanapolis Lumber Co.; $30,000 capital. E. L. Lowery, H. L. Leazer and V. C. Lowery.

Copas, Minn.—The Copas Lumber Co. has sold out to the Anderson Retail Lumber Co., of South Stillwater.

Bisbee, Ariz.—Geo. C. Wildman has sold out to the Worthington Lumber Co.

Magnolia, N. C.—The Magnolia Crate Factory has sold out to the Carolina Manufacturing Co.

Davidson, Okla.—The C. T. Herring Lumber Co. has sold out to the Dascomb-Daniels Lumber Co., of Kansas City, Mo.

Beaumont, Tex.—The W. T. Carter Lumber & Building Co. will open a yard here.

Duffield, Va.—The R. C. Duff Lumber Co. has moved to Kingsport, Tenn.

Wilmington, Del.—The Atlantic Coast Veneer Co. has increased its capital to $100,000.

Louisville, Ky.—The name of the J. George Steinacker Lumber Co. is changed to the Henry H. Brenckmann Lumber Co.

Saginaw, Mich.—The capital of the Germain & Boyd Lumber Co. has been decreased from $600,000 to $500,000.

Battle Creek, Mich.—The Rathbun & Kraft Lumber & Coal Co. is planning to close its business before the end of the year, either by liquidation or re-organization.

New York, N. Y.—The South Atlantic Lumber Co., of Greensboro, N. C., has opened an office in the Longacre building, this city, in charge of Earl A. Harrington and George F. Harvey.

Omaha, Neb.—The Mountain Timber Co. has increased its capital to $1,500,000.

Allentown, Pa.—Ritter & Smith, firm name changed to Elmer E. Smith.

Philadelphia, Pa.—J. F. Holloway, now J. F. Holloway & Co.

Omaha, Neb.—The Mountain Timber Co. has increased its capital to $2,500,000.

Fires

Markham, Wash.—Fire destroyed the Markham Shingle Co.'s mill; loss estimated at $25,000 with $14,000 insurance.

Altavista, Va.—The Standard Red Cedar Chest Co.'s plant burned; loss, $3,000.

Cleveland, O.—The woodworking plant of Marcus A. Monaghan was burned; loss, $60,000.

Casey, Ill.—The planing mill plant of the Central Lumber Co. burned; loss, $30,000, with insurance of $15,000.

Vicksburg, Miss.—Fire in the Anderson-Tully Co.'s yards destroyed about $250,000 worth of lumber.

Norfolk, Va.—The planing mill of the J. E. Etheridge Lumber Co. burned; loss estimated at $25,000; partly insured.

Victoria, Ont.—Fire destroyed the planing mills of E. Butler & Son; loss, $3,000; no insurance.

Ennis, Tex.—J. D. Burr Lumber Co.'s plant burned; loss, $30,000.

Call, Tex.—The Kirby Lumber Co.'s No. 2 yard and dressed lumber sheds burned; loss, about $50,000.

Stillwater, Me.—The sawmill and planing mill of the Stillwater Manufacturing Co. burned; estimated loss, $60,000; covered by insurance.

Napavine, Wash.—Planing mill of the Napavine Lumber Co., together with 200,000 feet of lumber, burned.

Lowell, Wash.—The box factory owned by the Everett Box & Lumber Manufacturing Co. burned; loss, $25,000.

News Miscellany of the Lumber World

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Oct. 7.—Exhibits of the Southern Cypress Manufacturers' Association will be seen at many fairs and expositions throughout the country during the present fall. An elaborate itinerary has been arranged by the association, which already has a number of interesting displays on the road.

To enable work to proceed on the New Orleans cotton warehouse here, Messrs. Jacob A. Zimmerman & Son, Inc., of New York, have just completed a cofferdam in the Mississippi river, which is the longest ever constructed by 250 feet. One of the wings to meet the main stretch of the cofferdam extended out from the bank into the river for over 200 feet. This sheet piling was manufactured of long leaf yellow pine by the J. J. Newman Lumber Co., Hattiesburg, Miss., and the Martinez interlock wood sheet piling was used for a backbone.

K. J. Williams, manager of the Rosa Lumber Co., of Picayune, Miss., who was here this week to complete details for the shipment of 500,000 feet of dimension and small timbers to the Panama Canal Zone, declares lumber market conditions in his section would be excellent were it not for the acute car shortage. Good weather, which has prevailed recently, has been a favorable factor, he says, though some mills are cutting more lumber than they are getting rid of. Prices are good and demand strong, but inability to guarantee deliveries is holding back trade.

Shippers and consignees were urged to speed the loading and unloading of cars, to relieve the acute car shortage, by President C. H. Markham, of the Illinois Central, who was here last Saturday making arrangements for $125,000 improvements at Harahan, just north of this city.

Mr. Markham's visit to New Orleans was primarily to look into the car situation. "The answer to the question," he said, "is simply that the shippers and consignees should expedite the work of loading and unloading as much as possible. You know, the railroads allow shippers and consignees 48 hours' time before a dollar is charged. It should not take more than two hours to load or unload a car, and with every one co-operating it would be but a very short time before the situation would be cleared."

* * *

GULFPORT, MISS.

Gulfport, Miss., Oct. 5.—J. F. Stuard, of Gulfport, a prominent coast lumberman, and associates are constructing a mammoth four-masted schooner at Martinolich shipyards at Handsboro, to be used in the lumber trade on its completion some time in January. The schooner, which is probably the largest vessel of its kinds ever built on the gulf coast, will, it is stated, cost about $60,000. The schooner is being built entirely of Mississippi lumber, with the exception of its keel, the wood for which came from Alabama. The boat will be 217 feet long over all, and will have a 38-foot beam. It will have a capacity for carrying 80,000 feet of lumber.

One of the largest cargoes ever sent through a Louisiana canal left Lake Charles last week for Tampico, Mexico, by way of the Calcasieu-Sabine section of the Intercoastal and the Sabine river to Port Arthur. It consisted of creosoted lumber and pilings, pumps and machinery, on two barges, the whole weighing 1,300 tons.

* * *

HATTIESBURG, MISS.

Hattiesburg, Miss., Oct. 7.—Charter of incorporation of the new town of Stephenson, near Gloster, Miss., was filed with the secretary of state of Mississippi at Jackson last Saturday. The town is being built by the Foster Creek Lumber Co., the stock of which is owned by the Stephenson family, of Michigan. With 50,000 acres of timber lands the mill will have an abundance of material to work on for a number of years to come. The machinery is on the ground, and it is expected that actual operations will begin by the first of the new year. It is predicted that a town of importance will soon develop at Stephenson.

C. C. Arnett, for several years manager of the Hattiesburg office of the Herman H. Hettler Lumber Co., but for the past year connected with J. H. Burton & Co., in New Orleans, has returned to Hattiesburg and opened offices in the Ross building. He will do a commission business for the present.

All records for loading logs with a single loader were broken at the camps of the Wausau Southern Lumber Co., near Laurel. In nine hours Foreman George Parker announces that he loaded fifty-two cars, using end tongs and a stiff boom loader.

Northern States News

MINNEAPOLIS, MINN.

Minneapolis, Minn., Oct. 6.—A gain of 100 percent in Minneapolis building operations for the month of September over the corresponding month of last year has been made. That the year's total will set a new high record seems assured.

Building contractors are urging those who intend to do any considerable building to place orders early, and it is predicted that there will be a rush on building permits before the close of the calendar year, because on and after January 1, 1917, a fee, based on the cost of construction will be exacted by the city building inspector. Such a fee system has been in vogue for years in New York, but that is said to be the only city in this country placing a tax of this character on progressive improvements.

The Northwestern Hardwood Lumbermen's Association will have its annual convention in Minneapolis, December 5. The place of meeting and a suitable program for the occasion are questions left to a committee.

Loggers who are planning to make a big cut in Minnesota pine and hemlock this winter are establishing camps in the north woods.

* * *

MANISTEE, MICH.

Manistee, Mich., Oct. 5.—Not in many seasons has a busier period been enjoyed by local sawmills than just at present. Mills are running to capacity, and the Buckley & Douglas lower mill, one of the largest, began a night shift last week. Ability to secure labor in the woods makes the increased output possible. Good wages are being paid, and less difficulty is being experienced in securing men who will start the logs down stream.

The Filer Fibre Co., a $300,000 concern to manufacture wood pulp, has just been organized in Manistee. Announcement of the new company was made this morning, E. G. Filer, millionaire manufacturer of salt and lumber, being the principal stockholder. The new plant will be marked out Thursday, and work will begin immediately. It is expected that the plant will be in operation within six or eight months.

Max Oberdoffer, of Muskegon, will be chemical engineer.

South Atlantic News

JACKSONVILLE, FLA.

Jacksonville, Fla., Oct. 5.—The establishment of offices in the Heard National Bank building by the Jose Taya's Sons' Co., of Barcelona, Spain, for the purpose of exporting hard woods and pine lumber to European countries, will mean the monthly calling to this port four additional schooners, and will greatly

Seattle (White Bldg.) Wash.

stimulate the local lumber situation, according to the statement of E. Carles, who is in charge of the company's office. Mr. Carles has called upon the secretary of the Chamber of Commerce and asked his co-operation in inducing the lumbermen of Florida and Georgia to get in touch with him at once, and in view of this fact he called upon the Merrill-Stevens Co. to ascertain the length of time required to build and launch a vessel being planned.

Mr. Carles stated that four large schooners would begin immediately calling at this port for cargoes of lumber, and that his company was considering securing a line of five steamers from another Spanish firm, which, if done, will be placed in the Barcelona-Jacksonville trade.

The Jose Taya's company has an office in New Orleans, but Mr. Carles declares by the establishment of an office here several hundred miles will be saved by the vessels calling at this port.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., Oct. 5.—The Panhandle Lumber Co. is making preparations to operate its logging camps at the head of Spirit Lake, Idaho, all winter. Heretofore they have always closed in the fall, but owing to the shortage of logs to operate the mill, the company plans to have a supply on hand next spring that will enable it to run a double shift throughout the summer.

At a cost of between $100,000 and $110,000 the Spokane Sash & Door Co.'s plant will be doubled in size within a short time. Plans already have been made.

"I have asked the Great Northern railway to extend the spur south along the side of our plant, with an idea of doubling the size of the mill," states Enoch Engdahl, president of the company. "Our plant at its present size represents an investment of $106,000. Our business is the best in its history."

Mr. Engdahl says that the construction of additions, costing at least $50,000, will begin within a few days.

A parcel post shipment of 49 bundles, containing 12,250 shingles, was received at the Spokane postoffice this week from the Manning Shingle Co. The shingles were shipped to Spring Camp, Idaho, forty miles from Grangeville.

E. H. Van Ostrand, president of the Craig Mountain Lumber Co., states that the logging camps near Winchester, Idaho, have recently been reopened for the winter, and the mills will be started about the first of next month. The mills have a capacity of about 3,000,000 feet a month, and the plans now provide for continuous operation, with the exception of a week's shutdown during the holidays.

* * *

KALISPELL, MONT.

Kalispell, Mont., Oct. 3.—That the introduction of manufacturing into the Flathead valley, particularly of pulp and finished paper, will be the greatest asset of, and, in fact, salvation of this section of Montana, is the opinion of many local forestry men, business men and boosters who are co-operating in an effort to interest capital in locating in this valley.

A prospectus, which it is said, will cover in every detail the opportunities which the valley affords for pulp and paper manufacture, is being compiled by local men, and when all data is gathered will be printed and sent to manufacturers and independent capitalists throughout the United States.

"This is not merely a proposition for the people of the Flathead to be interested in, but is something in which we must get help from every section of the state," said R. R. McLaughlin, supervisor of the Blackfeet forest. Mr. McLaughlin is enthusiastic over the idea, and believes that this valley is "the most practical and feasible place for a site for pulp and paper manufacture in all Montana."

C. B. March, manager of the State Lumber Co., Columbia Falls, Mont., left this week for Helena and Great Falls, Mon., on matters of business. He reports that their shipping department is busy, and that they have enough orders on hand to keep them busy for several weeks to come. The stock on hand at their plant at Kila, Mont., which discontinued operations at the close of the 1914 season, consisting of practically 7,000,000 feet, has been mostly shipped out this season.

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., Oct. 7.—The retail lumber interests of this city have been getting closer together during the past few weeks, during which time a number of meetings have been held for the purpose of forming an association. It is the experience of the retailers that a great amount of benefit can be secured by getting together and talking over lumber conditions, and the response to the invitation to get together has been quite satisfactory. In fact, practically every lumberman who has been spoken to has become a member. The organization is to be known as the Buffalo Lumber Dealers' Association, and Clark W. Hurd, of the firm of Hurd Bros., has been chosen president. Plans have not been entirely formulated as yet.

A good many local lumbermen were guests on September 20 at the farm of William A. and Charles N. Perrin, of Blakeslee, Perrin & Darling, of this city, taking an automobile trip to Conesus, N. Y., where the week end was spent very pleasantly.

Local building operations are on a satisfactory scale, and run ahead of last year. Construction work has been carried on here on a large scale so far this year, and much factory building has been done. The number of dwellings going up has also been up to the average.

Lake receipts of lumber were small last month, owing to the scarcity of tonnage. The season, as a whole, has been less active than usual, and much lumber has been brought in by rail.

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., Oct. 7.—There is perhaps some improvement in the situation, so far as flat cars for handling logs are concerned. The Valley Log Loading Co. reports that it is operating at about 75 percent capacity, which would suggest a shortage of only about 25 percent in cars. This company has several thousand cars of logs to load, and it is anxious to load every one it can get.

It was feared some days ago that the shortage of flat cars would result in decided curtailment of production at Memphis, but so far there has been comparatively little interruption to the manufacture of hardwood lumber. However, it is regarded as quite certain that the worst has not yet been reached, and that there may be an enforced slowing down of the mills, on account of inability to secure all the logs needed for work at full capacity. At outside mills the situation is much worse than at Memphis.

The Churchill-Milton Lumber Co., of Louisville, is reported to be seeking a location in Mississippi, and it appears at present that Greenwood has an excellent chance of capturing this new enterprise. Officials of the company have spent some time at Greenwood recently looking over sites at that point, as well as looking into the supply of timber available in that territory.

The Woods Lumber Co. has begun operation of its hardwood mill on the belt line in East Memphis. Eugene Woods is head of this company, and the opening of the mill in Memphis has followed close upon the sale of the plant of the Woods Lumber Co. at Millington, Tenn., to the Dickson & Shannon Lumber Co., Inc.

Pacific Coast News

TACOMA, WASH.

Tacoma, Wash., Oct. 5.—Building permits in Tacoma during September showed a gain of 350 percent over the figures for September, 1915. During the month just passed the permits totaled $142,692, as compared with $40,613 last year. The permits for the first nine months of 1916 are more than 100 percent greater than for the same period last year.

The longshoremen's strike, which has continued since early in June, may be settled this week. The men are now voting on a proposition to go back to work under the present scale of wages, and to submit the overtime dispute to arbitration after 30

Digitized by Google

days. It is thought that a majority of the union members will favor this plan.

W. C. Wheeler, president of the Wheeler-Osgood Co., of Tacoma, had a narrow escape from death September 29, when his automobile was struck by a street car. Mr. Wheeler was hurled from the car, and was unconscious when picked up. It was first thought that he was seriously injured, but a later examination showed that no bones were broken. Mr. Wheeler is now at his home, suffering from shock and minor injuries.

The entire plant of the Hague Box & Lumber Co., one of Tacoma's large mills, was sold late last month to J. W. Brokaw, president of the Northwestern Woodenware Co.

* * *

PORTLAND, ORE.

Portland, Ore., Oct. 5.—Plans for a very large sawmill, double the size of any now located there are under way at Klamath Falls. The new mill is to be located at Shippington, a suburb of that city, on Upper Klamath lake, and a petition is now being circulated by the Klamath Development Co. to eliminate several acres from the city limits, presumably for this purpose. Definite statements regarding the matter have not been made by those behind the proposition, but preparations have been under way for some time, and a deal is now pending for the purchase of two billion feet of timber on the Klamath Indian reservation.

* * *

SEATTLE, WASH.

Seattle, Wash., Oct. 5.—Owing to the scarcity of vessels the Puget Sound Mills & Timber Co. has ceased night operations. The A. W. Miller Sawmill Co. was awarded the contract of furnishing the United States government with 170,081 feet of west coast lumber, to be used in West Virginia. There was a wide range in the bidding. The low bid of the Miller concern was $1,602.39, while the highest was $2,745.10, made by the Lindstrom-Handforth Lumber Co. Twenty-six bids were submitted.

The mill of the West Waterway Lumber Co., at Seattle, has been completed, and a little lumber cut to test the machinery. The plant will have a daily capacity of from 60,000 to 80,000 feet. A big Sampson crane has been installed, and will handle lumber from the mill to cars and yards or from the yards to vessels. W. A. Whitman, formerly sales manager for the Tacoma Mill Co., is president of the new concern.

The Grays Harbor Lumber Co., at Aberdeen, is paving a part of its docks with creosoted wood blocks.

The Tulalip camp of the Everett Timber Co. reports an output for August of 4,600,000 feet, and the Ebey Logging Co. an output of 4,500,000 feet for the same month.

* * *

SAN FRANCISCO, CAL.

San Francisco, Cal., Oct. 5.—E. S. Downing, formerly with the C. A. Smith Lumber Co., and Mercantile Box Co., of San Francisco, has organized the E. S. Downing Co., handling lumber, box shook and cooperage stocks.

The C. T. Smith Lumber Co., which recently disposed of its steamer, the Nann Smith, is having a vessel of similar design built to carry lumber from Coos Bay to San Francisco.

Roger E. Simmons, special agent of the Bureau of Foreign and Domestic Commerce, was in San Francisco early in October conferring with local lumbermen. Mr. Simmons is a lumber expert who has recently completed an investigation of lumber markets in South America.

E. H. Cox, of San Francisco, president of the Weed Lumber Co., is in Washington, D. C., arranging for the purchase of timber on the Klamath Indian reservation and as soon as negotiations are successfully concluded a large mill will be erected at Shippington, Ore.

Ohio Valley News

CINCINNATI, OHIO.

Cincinnati, O., Oct. 7.—Cincinnati lumbermen whose stocks are beginning to run low are considerably alarmed over reports from the south to the effect that sawmills in southern Alabama and Tennessee will have to suspend operation unless speedy relief from the car shortage is afforded by the road in that section, appeals having been made principally to the Mobile & Ohio and the Alabama, Tennessee & Northern roads for more cars.

The 1916 convention of the Tri State Vehicle and Implement Dealers' Association (Ohio, Kentucky and Indiana) to have been held in Louisville for five days during November was cancelled last week at a meeting of the directors of the organization.

* * *

EVANSVILLE, IND.

Evansville, Ind., Oct. 7.—The building trade in Evansville enjoyed the prosperity that prevailed in other lines in this city and throughout the country in September, according to the report that has just been compiled by Edward Kerth, city building inspector.

The showing exceeded all the other summer months of this year and for previous months of September and was a record breaker. Building Inspector Kerth is optimistic over the outlook for October and believes it will prove a better month for building than did October of last year.

Daniel A. Wertz, president of the Evansville Lumbermen's Club, looks for a big revival in the lumber trade at the close of the European war. He thinks that Evansville being in the center of the great lumber district, will get her share of this trade.

* * *

LOUISVILLE, KY.

Louisville, Ky., Oct. 6.—The chief topic of discussion in Louisville lumber circles at this time is the car shortage and its effect on the market. Leading operators are unable to obtain more than 30 to 35 percent of the cars they need even by accepting flats and gondolas. Several of the mills are having trouble in getting enough logs to keep going, while others are so tied up with stock that they are unable to get it off the mill premises. It is said the business during the next few weeks will be controlled almost entirely by the car supply, being excellent if stock can be moved.

The demand for yard stock has picked up considerably, according to some of the leading manufacturers and mill sales agents. Last month the demand was spotted, and yardmen refused to consider items which they did not need for immediate use.

The annual meeting of the Louisville Hardwood Club will be held on Tuesday evening, November 7, and it is probable that arrangements will be made for special speakers to be present, and for a special menu.

Southwestern News

LITTLE ROCK, ARK.

Little Rock, Ark., Oct. 5.—According to an announcement which has been made by officers of the company, the E. L. Bruce Co., of Little Rock, will replace its main building, which was destroyed by fire on the night of September 19, with a larger plant. Construction work will be begun on the new building as soon as the insurance has been adjusted, according to a statement given out recently by Robert Bruce, an officer of the company.

He says that the company had been thinking for some time of enlarging its main plant to about double the old capacity, but that it had been decided to wait until after the first of next year. However, the fire, he says, has caused the officials of the company to change their plans, and they will now proceed to rebuild and enlarge the plant at the same time. The cost of the new structure will approximate $100,000.

* * *

MALVERN, ARK.

Malvern, Ark., Oct. 7.—The yellow pine mills are enjoying a volume of business much in excess of their fondest hopes of delivery, considering the car situation, hence the tendency is to accept only such orders as are most favorable, while the concessions show a gradual downward movement, reminding the sales managers of the pleasant days of last autumn. More than half of present shipments are going out on flat cars, although the Iron Mountain has prohibited their use for lumber, which will cut this ratio down and damage shipping volume to a considerable extent during the coming month.

A miniature tornado visited the mills in this region last Wednesday night, blowing down sections of blow pipe for the Wisconsin & Arkansas Lumber Co. and the Arkansas Land & Lumber Co., and putting the planing mills of both concerns out of business for three days.

The Current Trend of the Lumber Market

General Market Review

Prosperity in several industries directly affected by the war has not extended to the lumber business. This is shown, not only by a glance at current conditions, which even the most superficial inspection may reveal, but by government figures on prices. According to a compilation recently made, it is shown that in nearly every variety of lumber, excepting basswood, cottonwood and western pine, the values at the mill in 1915 were from 30 cents to $3 less a thousand feet than in 1906, and values now are not appreciably above the quotations established in 1915. Not only that, but according to the best statistics available the production of lumber in 1915 was something like 8,000,000,000 feet less than in 1906.

The popular idea that lumber has advanced to such a high price as to be no longer available to ordinary building purposes is highly erroneous. Yellow pine, the leading lumber product, had an average value at the mill last year of $12.50 a thousand, as compared with $15.02 a thousand feet ten years ago. Hemlock fell off to $13 a thousand thousand, as compared with $15.02 a thousand $14.20. The average price of oak f. o. b. mill in 1906 was $21.76, while last year its value was $19; and so on through the list.

A concrete report as to current conditions is not easily to be framed, for the reason that there are so many conflicting elements, and, furthermore, that the report from one section is not necessarily applicable to another. However, it can be stated as a general rule that there is no strong activity in any quarter. The yellow pine mills, in spite of curtailment and car shortage, are having a fair business, and could ship a good deal more lumber were cars available. The Pacific coast fir and pine people are experiencing a slight recovery. Hardwood operators in the middle south say that they are having a less demand for oak than for several years, especially in furniture and trim lines, due to the fact that there is much substitution of gum and birch. The cypress manufacturers are shipping in fair volume, and are making no particular complaint, although they are finding some competion from Pacific coast redwood in certain channels, notably in greenhouse construction. Northern hemlock manufacturers are feeling encouraged by the recent advance in yellow pine, and are distributing their rather limited stocks throughout the natural hemlock territory at slightly better prices. In the shingle industry there is also some recovery, there being fewer transit cars available, and a tendency noted to secure a more remunerative delivered price for the coast product.

Building operations have kept up to a satisfactory volume, but are not quite as heavy as were shown in August, as might be naturally expected at this time of the year. However, the summary of operations for September compare favorably with that of September in the previous year.

The scarcity of cars is just beginning to cause trouble in several quarters. Some of the northern shippers say that they are getting only part of their requirements, and the big mills who are favorably situated in the south say that they are getting about 50 to 60 percent of their needed car supply, while the small mills away from junction points are not getting any cars whatever.

NORTHERN AND WESTERN PINE.

Two principal factors have contributed to more activity in soft pine lately, one being the increased demand for box purposes, which has absorbed considerable of the low grade, and the other being a large demand for shop lumber from the sash and door factories, which have been running unusually full of orders in the last month or two. Stocks are only fairly well assorted, there being no surplus of 5-4 and 6-4 No. 2 shop and better in the hands of either dealers or manufacturers. The western pine manufacturers just now are laboring under a handicap of car scarcity, and this is affecting, in fact, the northern white pine manufacturers in corresponding degree. Prices are holding at fairly satisfactory figures, and it is not believed will show much if any weakness in the next month or so.

SOUTHERN PINE.

There is a fair volume of movement in southern yellow pine, and prices are being held something like 50 cents to $1.50 better than in August. Some of the big companies are asking better prices in Chicago territory than they are able to get right off the bat, but they are expecting that buyers will come to their quotations before long. There is a pronounced scarcity of cars, and it is not likely to grow any better for a while, and dealers and factory people are, therefore, urged to get their orders in considerably ahead of their needs, as the deliveries are likely to be greatly delayed. Production is going forward on the reduced scale about as heretofore recorded. There is no special call for export, as few vessels are yet available. A considerably better demand is coming from the car builders, there being a number of new orders for cars lately disclosed.

One of the leading yellow pine manufacturing concerns submits discounts from the list for items in mixed cars, as follows: B and better flat flooring, $10.25 off; edge grain flooring, the strongest item on the list, $9.75 off; 6-inch No. 2 center-matched, $10 off; 8 and 10 inch No. 2 shiplap, $9.50 off; 8 and 10 inch No. 1 boards, $7.50 off; 12-inch No. 2 boards, $7.75 off; dimension, $7.50 off.

NORTHERN AND SOUTHERN HARDWOODS.

There is a decided increase in the demand for red gum in the south and red birch in the north, but outside of these two items the list is not particularly active. Some of the leading hardwood men are of the opinion that the market will show a better movement and a considerable gain in price after the election is over, basing their ideas on the fact that the attention of many people will be more or less diverted during the next thirty days, and that there will be very little stocking up for reserve supply.

Shippers of oak into northern territory say that their demand has been more or less indifferent for some time, especially for interior trim and furniture stock, and that prices are correspondingly depressed. However, there are some manufacturers who say they are able to ship their entire product as fast as it can be made ready for shipment, and at as good prices as they have obtained this season. This does not appear to be the rule, however, as quartered oak is offered in Chicago around $80 for inch firsts and seconds, as compared with $82 to $84 earlier in the season, while plain sawed inch firsts and seconds bring from $48 to $54, red or white, as compared with a range of from $53 to $57 in the early summer. No. 1 common inch oak can be bought at $32 delivered in Chicago. This same stock was selling at from $38 to $40 only a few months ago. The demand for red birch is a feature of the northern movement, and stocks are low, while prices are regarded as quite satisfactory, being around $40 to $42 for inch firsts and seconds. Inch red gum in firsts and seconds is selling at $35 to $37 Chicago delivery, while No. 1 common is $27. Sap gum is off, sales of firsts and seconds inch being made around $26, whereas about $30 to $31 was the going price a few weeks ago. Lately there has been more attention paid to ash, especially firsts and seconds inch and thicker, with a particularly satisfactory demand for 3 and 4 inch thicknesses, prices for which range up to $65 and $70.

There is still considerable depression in low grade hardwoods, both north and south, notwithstanding the somewhat improved demand recently noted in box circles. Sales of northern No. 3 are made around $10 to $10.50, and while an effort is being made to get $11 for No. 3 birch, it does not appear to have resulted in that much of a strengthening in price.

HEMLOCK.

The scarcity of cars is retarding the delivery of hemlock from the northern mills, but stocks are not heavy, and, as a rule, the manufacturers are making no complaint as to the price, which is now from $1.50 to $2 off the list, as compared with $3 to $4 last spring. The manufacturers have had an additional handicap in a scarcity of men, in both the woods and at mill plants, but since the harvest season has passed more men have been available. A great many men who went from the northern mills to the iron and copper mines, being attracted by the higher wages, are coming back for the winter to the lumber camps, where they can get good board and comfortable quarters, together with the highest prices ever paid for woodsmen. Hemlock producers are looking forward to a satisfactory market during the winter, as there is no prospect of a large output, and demand bids fair to keep up well throughout the dairy section of the middle north.

CYPRESS.

An advance of from 50 cents to $1.50 a thousand has been made in the cypress industry in the last month, and while it has checked sales in some quarters, there has been enough new business developed to keep the shipments up to a fair volume. A good demand is shown for mixed cars for the retail yard trade, and were cars more plentiful this branch of the cypress business would be lively. It is even reported that some of the mills have been compelled to close down because of lack of cars and yard space in which to pile their product. There is some competition noted in one or two quarters with California redwood, which is coming forward as a claimant for favor, particularly in the line of greenhouse construction, but the cypress people feel secure in their position, believing that there is room enough for all, and that they will get their share of the trade through their wonderful advertising campaign. Thick cypress is especially in demand, and stocks of this item are not large.

RED AND WHITE CEDAR SHINGLES.

The higher prices for logs in the Pacific northwest has imparted considerable strength to the market for red cedars, an advance being scored within the last week of from 5 to 10 cents in several territories. The freight car situation is likely to prove more of a factor in the shingle trade as winter approaches. Within the last few weeks the number of cars placed in transit has been getting gradually less. Late quotations on red cedars are $2.05 for clears and $1.65 for stars, making the prices in Chicago territory $3.26 and $2.72, respectively. There is a growing demand for white cedars at northern points, sales being based on previous quotations, being around $2.80 for extras and $2.40 for standards. The demand for lath is excellent, and prices are unchanged.

Inland Empire Markets

KALISPELL, MONT.

A correspondent well posted on conditions in the Inland Empire writes us as follows: "There has been no material change in market conditions during the past thirty days. The demand continues strong, and prices are firm on practically all items. The mills throughout the district are well supplied with orders, and are operating their shipping department to full capacity. During the past three weeks shipments have been affected to some extent on account of car shortage, extending over the entire western Montana. Crop conditions throughout the territory supplied from this district are good. This makes the outlook most favorable for a good fall trade. Stocks on hand are about normal, and, on the whole, are well balanced and in good condition. Preparations are being made for extensive logging operations this winter, and it is believed that more than the usual amount of logs will be banked for next season's operations.

"Since harvest began there has been a scarcity

Digitized by Google

of labor throughout the entire district that has seriously affected mill operations."

* * *

SPOKANE, WASH.

The Spokane market is reported as follows: "A heavy volume of inquiries from eastern lumber dealers last week served to tighten up the market for mills in western Oregon and western Washington, and to improve the prospects for continued operation through the fall and winter.

"Much of the prospective new business is inspired by the apprehension of eastern buyers over the car shortage on the west coast. Some dealers, caught with short stocks in distributing yards, last week placed a considerable volume of retail yard orders, and some special cutting business, urging early delivery.

"As a result of this activity the markets are reported steady."

Gulf Coast Markets

NEW ORLEANS, LA.

We have received this report of the New Orleans lumber market: "Yellow pine prices are up a bit, though market conditions are very unsatisfactory, owing to inability of manufacturers to ship lumber because of the acute car shortage. Many mills are curtailing on an extensive scale, and several have withdrawn entirely from the market. There have so far been no entire shut-downs of plants, though a number of mills are understood to be considering such a course, unless there is an improvement in the car situation. The weather is reported excellent throughout the yellow pine belt, which has proved a stimulus to logging operations.

"Very little change over last week is noticeable in the hardwood market. A good volume of inquiries is pouring in, and there is still a tendency to boost prices a little. Manufacturers of the north and east are making a strong call for materials. As in other lines of lumbering, hardwood men are finding the car shortage a most serious problem, and all orders are taken subject to delay. Unlike yellow pine plants, hardwood mills are not curtailing because of inability to get rolling stock. The labor situation is fair.

"Cypress is reported slightly stiffer, and some items are at better prices, but not much. There is a good deal, in fact, an abnormal demand, on account of the car situation, many buyers who have ignored warnings of the approach of the present situation are now clamoring for material for immediate delivery. Tupelo gum is stronger, some having sold at $1 over the price offered a week ago. The labor shortage continues, many mills finding difficulty in finding a sufficiency of hands to properly take care of operations."

* * *

HATTIESBURG, MISS.

Conditions in the Hattiesburg district are reported as follows: "The lumber manufacturers in this section are up against the worst car shortage they have experienced for years. There has been but little curtailment, on account of cars, but this condition cannot last very long before a heavy curtailment will have to be made. The curtailment movement that was put in effect at several plants a few months ago is still in force, due entirely to the car situation, as market conditions have improved a great deal during the last sixty days, and the mills expect their average sale price for the present month to go at least a dollar higher.

"Dimension and shed stock has shown more improvement than any other items, though small sills are bringing a better price. Small timbers, both in long and short leaf schedules, are in better demand than they were sixty days ago. Lath and shingles find ready sale, with the local demand for shingles better than it has been in several years."

Central Southern Market

MEMPHIS, TENN.

Conditions in ths Memphis market are thus described: "The shortage of cars is still proving quite a serious handicap to shippers of lumber at Memphis proper, and it is even more serious, so far as interests at outside points are concerned. Because of this condition lumber is not being shipped promptly, or if it is shipped it is going forward largely on flat or open cars. A prominent firm here said today that it made requisition during the past week for about 12 box cars, and that it was furnished with only two. Others say that they are getting from 20 to 30 percent of their requirements, while some place their percentage as high as 50. Still others report an even higher percentage, where they are making use of open cars. The maximum crop moving period has not yet arrived, and there is no indication of any decided change for the better in car conditions. Building operations in Memphis during September involved a total of $239,685, an increase of about 12 percent, compared with the same month a year ago. The inspector of building is authority for the statement that October, November and December, 1916, will show marked activity, and that the excess for the entire year will be very much larger than for the first nine months. Handlers of building material of all kinds are finding a good demand, and the situation is regarded as entirely wholesome from their standpoint, as well as from the standpoint of architects, contractors and other building interests."

Pacific Coast Markets

TACOMA, WASH.

This report of improvement in the lumber situation comes to us from Tacoma: "A marked improvement in the Tacoma lumber market has taken place during the last two weeks, and a general advance in prices was made September 30. Discount sheet No. 12, issued by the members of the West Coast Lumber Association, shows an advance of 50 cents on common and of from 50 cents to $1.50 on uppers. While this is the amount of the advance over Discount Sheet No. 11, most of the local mills had issued discount sheets at still greater concessions. These mills are now selling at the list price, so that the advance is more important than is indicated by the sheet.

"Demand from both middle western and offshore markets is good, but is not general. Some of the larger mills have more business than they can handle at the present time, while others are not selling their entire output. The situation as a whole, however, is much better, and local manufacturers are hopeful of still further improvement.

"There is still some effort made at curtailment, but the movement is not as strong as it was, and the manufacturers are not holding firmly together on the proposition.

"Shingles are very strong, and an advance of about 5 cents was made the first of the month. Stars are now quoted at $1.65 and clears at from $1.90 to $2."

* * *

SEATTLE, WASH.

A correspondent writes us from Seattle as follows: "The outstanding feature of the lumber situation in the Pacific northwest is the lack of shipping facilities, both by land and water. The car shortage has become serious. This, of course, has a bad effect on the market. There is a fair volume of new business coming into the northwest, and considerable more could be booked.

"Fir prices are soft, and, cedar, although still rather firm, is not as firm as it has been so far this year. There is a scarcity of cedar stocks, but fir is comparatively plentiful. It is generally predicted among wholesalers and millmen that with better shipping facilities there would be a good volume of business. As it is there is a good local demand for lumber, and there is some railroad buying.

"Red cedar shingles are showing some strength. They have advanced on an average of 5 cents in the last week, and are now quoted at $1.55 to $1.60 for stars, and $1.90 to $1.95 for clears.

"There is no improvement in the offshore business, as vessels continue to be scarce, and rates higher than the business will warrant."

* * *

SAN FRANCISCO, CAL.

A correspondent sends this report of the lumber situation on the Pacific coast: "Unusually early rains have been experienced in California this season, and fall building operations are being cut short as a result. Some damage has been done to crops, but this is more than offset by the advantages to be gained through being enabled to start fall farming operations early.

"A splendid demand is being experienced for lumber for foreign shipment, but it is still very difficult to secure vessels, even at high charter rates. Word has come from Australia that very heavy rains have fallen there, insuring large

IF YOU ARE

An executive, an editor, or connected with a Business Paper in any capacity;
an advertiser in a Business Paper;
an advertising agency or service man;
a teacher of advertising,
or an "advertising man"—

YOU ARE INVITED

—to attend the annual convention of the ASSOCIATED BUSINESS PAPERS which will be held at—

The Hotel Astor, New York

October 26, 27 and 28

(Better mark these dates on your calendar now)

We use the word "convention" because we must, but in this instance, it is far from having the conventional meaning. This gathering of the men who control and use the great highways of business news and thought will mark the opening of a new epoch, not alone in the progress of business journalism, but in advertising itself. (And this is not a mere figure of speech.)

For publishers, there will be open forum sessions for the free discussion of problems relating to every phase of the making of good business newspapers.

For advertisers, there will be an exhibit of successful advertising campaigns, including the plan, the copy, the supplementary work, the results. Ideas that have produced thousands of dollars, that have cut the cost of selling, will be shown in complete detail.

Advertising agents and service men, will hear real experts tell how to produce resultful business paper copy, and will get many valuable ideas on the practical use of the trade and technical press.

The far-seeing, progressive agency man will also be not a little interested in the helpful spirit of co-operation that is being developed between his type of agency and the business press. To such, this will be an unusual opportunity.

For all, there will be an upward urge, new inspirations, a freshened enthusiasm, and three days in the world's metropolis at the most delightful season of all the year.

Better make up your mind to come

The Lumbermen's Headquarters

crops, and an immediate increase in the demand for lumber has been noted. The demand for lumber in the Hawaiian Islands has never been as great as at the present time, each of the three yards at Honolulu alone handling a million feet a month, with stocks entirely inadequate to satisfy the demand. The close of the Alaskan fishing season will release many vessels for lumber service.

"A feature of the lumber receipts at San Francisco of late has been the great increase in the quantities of redwood brought down from Mendocino county, as compared with receipts from Humboldt county, formerly regarded as the chief producer of this wood.

"Concerns operating redwood mills in the Sierra Nevadas are enjoying the best demand for their products that they have noted in several years. The eastern demand is especially active and record shipments of wide lumber are being made, quite a quantity of clears up to five feet in width being wanted.

"California laurel is again being offered in quantities in the local markets, the recent completion of a railroad into Eureka having tapped a large supply. This hardwood is being offered at $60 a thousand at retail and is in demand for finish work."

Southwestern Markets

A manufacturer of yellow pine writes from St. Louis as follows: "Relative to market conditions, car shortage, etc., we beg to advise that we are averaging about 50 percent of the number of empty cars that we require. At some mills we are receiving more than this percentage, but at other mills we are receiving considerably less—some of them as few as 30 percent.

ST. LOUIS, MO.

"As regards market conditions for the next six weeks or two months, will state that we look for very good demand. In fact, the demand at the present time is very heavy. Prices are somewhat higher than they were and believe that they will advance still more within this period.

"We cannot see any relief from the car situation until some time after the first of the year."

And another prominent mill owner of St. Louis writes: "Will advise that the car situation at present is more serious with our mills than we have ever experienced in their history. In September some of the mills only shipped about 33⅓ percent of their normal shipments, while others shipped from 50 to 75 percent. As a whole our total shipments were cut down to about 66⅔ percent, of normal. The last ten days has brought a further handicap, and we doubt if we will ship this proportion in October.

"The situation now is such that we have found it necessary to entirely withdraw from the market for all mills but one, and will probably be out of the market for that mill also within the next two or three days. At the present rate of shipments the order file which we now have should run us for 45 days. Unless the situation improves, which is doubtful, we will book very little if any more business during October.

"Prices are steadily advancing, and we find dealers eager to place orders at our own prices, if we can only give them some assurance of reasonably prompt shipment."

* * *

These comments on the general lumber situation are from a letter we received from a manufacturer of yellow pine: "I think, from the standpoint of price, that conditions are going to be entirely satisfactory to the southern lumberman during the next few months, and if he could ship the stock he piled up earlier in the year at the prices that are going to be abnormally produced by car shortage, he would forget his past troubles in the very joy of living in prosperous times.

KANSAS CITY, MO.

"Unfortunately, the poor yellow pine manufacturer never seems to be favored with pure, unadulterated good fortune. We are going to have a quick, almost uncontrollable advance in prices for lumber that we cannot ship. The latter part of last week marked the real beginning of the usual wild scramble to boost the prices, and now instead of trying to be low enough to get more than one's share of the business, we are trying to get high enough to prevent the same condition. Fortunately, most of the manufacturers have anticipated the situation, and their order files are comparatively small.

"The shortage of cars so far overshadows any other condition in the lumber business that no one seems to have any thought of what the market would do if there was not a serious car shortage. I believe the worst trouble in getting cars is just beginning to make its appearance. Many prophecies are that the shortage will be more severe and last longer than any time since 1907, or, indeed, at any time.

"As I said before, we have not had much chance to think of anything but car shortage; so the labor problem has not entered into our discussions here. I have not heard a word of trouble from the mill people."

Northern States Markets

We are in receipt of this expression concerning the lumber market from a well known lumberman of Minneapolis: "Considering the serious car shortage now existing, the lumber market should remain exceptionally firm for the next sixty days, and in fact, this condition of itself should warrant an advance in market values.

MINNEAPOLIS, MINN.

"We do not anticipate there will be any relief from the present existing car shortage for fully sixty days, and at the same time look forward to a considerable movement of lumber throughout the agricultural districts."

* * *

A lumberman prominent as a manufacturer and wholesaler of hardwoods writes from Indianapolis as follows: "Regarding conditions, and prospects for the next month or two, the outlook seems to us to be fairly good. Stocks do not seem to be very plentiful, and prices are held strong as far as we are advised. There is very considerable difficulty in getting cars at some points, particularly in the south, and shipments are being seriously delayed on this account. Labor is scarce, and about as highly inefficient as it is possible for it to be."

INDIANAPOLIS, IND.

* * *

A prominent manufacturer of hardwoods writes us as follows: "I am rather reluctant to even make a guess as to how the lumber business will be in four to six months from now. At the present time, and for the past year, I am glad to say business is good, in fact, exceedingly good. It is my belief that business will remain good for the balance of this year. We do not have trouble in getting cars, nor do we have any labor trouble. However, my brothers in the south, as near as I can learn, are having considerable trouble in car shortage, as well as serious difficulties from a labor standpoint.

GREENCASTLE, IND.

"To forecast labor conditions in the future would be to bring in politics. While I have no desire, in fact, prefer not to rush into print, my candid belief is that if Mr. Wilson is re-elected on November 7, this country will experience considerable labor trouble, to say nothing of probable business depression. I may take the next few years a little too seriously, but I believe this country needs wise leadership during the next few years, and while I am not a strong partisan, I am of the opinion that the Republican party is more able to give us wise leadership than the Democratic party. However, I am not attempting to deliver a political address, but I do think the lumber business, as well as the entire business of the country, depends upon who is elected on November 7."

New England Markets

A lumberman of Boston writes us as follows: "With reference to business conditions and prospects in our vicinity, would state, at the present time, the volume of our business is considerably in excess of last year, and we believe this would apply to general conditions in this territory.

BOSTON, MASS.

"Our collection are good, and the volume of new business is very satisfactory. General conditions, we believe, are somewhat above normal.

"The scarcity of cars at the south and in the west is affecting deliveries of lumber in this market to some extent, and reports are received from

Digitized by Google

these sections that it is quite a difficult matter to get cars.

"The local wholesalers are not buying very largely just now, having replenished their stocks earlier, but a fair amount of lumber is now arriving, and more is due to arrive."

Ohio Valley Markets

COAL GROVE, OHIO.

A manufacturer of southern hardwoods writes us as follows: "So far we have had no serious car shortage. Railroad embargoes on eastern shipments have caused us some temporary delay. Orders for the better grades in hardwood are being received about as fast as they can be filled with dry stock. Demand for the lower grades in oak is not so snappy as we could wish, but we think fall trade will absorb the dry stock in manufacturers' hands.

"We look for higher prices next spring than at present, especially for the lower grades.

"Should the European war cease shortly, and, consequently, export shipments resume, we believe dry stock for prompt shipment will be at a premium."

* * *

CINCINNATI, OHIO

A prominent lumberman of Cincinnati writes of the lumber situation as follows: "Labor seems to be plentiful now, both in our lumber yards and coal fields. The coal fields are well supplied with men at present but the railroads are a little short on cars, but we are having no trouble in this respect in Cincinnati.

"Trade is good, we are having a normal trade on everything and it comes without solicitation; we are not drumming any or holding anybody up to buy anything because we think lumber is going to be worth considerable more money. We are satisfied Wilson will be re-elected, and if he is we will have a whooping good business for the next four or five years as there will be nothing to interfere with prosperity."

* * *

LOUISVILLE, KY.

We have received the following good report of the Louisville market: "It is generally thought in Louisville lumber circles that prices are due for a general advance all along the line. It is claimed that production of hardwoods this summer was very light, while the demand has been heavy, and that the market is getting short on material.

"The demand for thick stocks of almost every kind, with the exception of quartered oak, has been strong. Red gum, in all grades and thicknesses, has been hard to supply, there being a very heavy demand for thick stock. Cottonwood is also a good seller, as is also elm, cypress, ash and hickory. Cottonwood stocks are very low, and elm and ash stock is selling almost green cut. Plain oak has shown a decided improvement during the month, some nice orders being booked for thick stock in No. 2 common and better. Poplar has been selling fairly well in boxboards and thick stock, but siding is a drag on the market, and prices are out of line. Mahogany lumber and veneers have been moving fairly well, there being some demand for four, five and six-quarter stock in lumber. Inquiries have been received for firsts and seconds, walnut in 4/4 stock, but very little is on hand and it is being conserved for export."

* * *

EVANSVILLE, IND.

A man well informed on the hardwood lumber situation in Evansville and southwestern Indiana writes as follows: "Trade has not materially changed here during the past two weeks and manufacturers say it has been fairly active and that both orders and inquiries are coming in most satisfactorily. Most of the large hardwood mills are being operated on full time. The river mills here are not, however, running steadily, but later on it is expected they will start up. The general tone of the trade is good and manufacturers say they are of the opinion that this year will show a large increase in business over 1915.

"Prices are holding up very well and manufacturers have not shown any disposition to cut prices at any time during the present year. Collections are good. Banks have plenty of money and this may be had at a reasonable rate of interest.

"There is a good demand for quartered white oak in this market and in fact has been for several weeks past, while the demand for plain oak is not so good. Ash and hickory are moving along very briskly and gum is also in good demand, this being due to the activity of the local furniture factories. Quartered sycamore is rather slow and elm is in fair demand.

Middle States Markets

NORTH TONAWANDA, N. Y.

A well known lumberman sends these expressions on general market conditions: "I have just returned from the Pacific coast, and while trade has not picked up to any great extent, so far as eastern orders are concerned, the present car shortage has caused quite an advance in the prices of shingles, and that car shortage is getting more severe every day.

"It looks very much as though we would have a repetition of what we experienced in 1906 and 1907, and if that is the case, no doubt it will drive the price of shingles beyond reason, as it is a most difficult problem to try and hold the price of a commodity down when the demand is greater than the supply.

"Business throughout the east seems to be about the same as it has been all summer. In some sections it is unusually good, but generally only about normal.

* * *

BUFFALO, N. Y.

Conditions in the Buffalo district are thus reported: "The lumber trade is showing some hesitation, according to a number of large dealers, who believe that conditions will not show much change until after election. It is about up to normal, with most of the yards, and the tone of the market is strong. Building lumber of almost every kind has shown an advance in price over a month or six weeks ago, and some wholesale concerns report having taken a large number of orders, based upon the prices ruling before the last advance occurred.

"The hardwood trade is keeping up well at most yards, though some dealers say a good deal more stock is coming in than is going out. Yet no great complaint is made anywhere as to the volume of business, which is fully up to last year at this time. Every hardwood yard has its troubles in getting men enough to handle the business. The chief woods in demand are maple, ash and oak, and a fairly general demand is reported at most yards. Prices have shown a stiffening tendency. Assortments are quite good here, and cars are fairly plentiful.

* * *

PITTSBURGH, PA.

A prominent lumberman writes to us from Pittsburgh as follows: "With regard to what the lumber market and the prospects for the next six weeks or two months are, this seems to me more or less of a guess, as there is no telling just what will occur after election. We, however, feel satisfied that as soon as the election is over we are going to see an increase in the volume of business. In fact, it should loosen up considerable business which must naturally come to the lumber manufacturers, as lumber is about the only commodity used for construction work that can be supplied with any degree of promptness.

"The car situation, of course, is going to be a serious difficulty to overcome, but, during the next ninety days most of the crops should have been harvested and delivered, and after the crop moving season a fair supply of cars should be available, and while we all will be pinched for the next sixty days, on account of the acute car shortage, this condition should right itself by the first of the year, and by the time good business can be anticipated by the lumber manufacturers.

"With the poor lumber manufacturer it is always either one thing or the other that prevents him getting a part of the unusual profit which every other commodity especially is enjoying just now, but from our point of view, inasmuch as more lumber must necessarily be forced into use, on account of the scarcity, as well as the high price and the oversold conditions of almost every other commodity that goes into building construction, we believe that the lumberman is about now ready to see better prices and a good firm market throughout the entire year of 1917."

FOR SALE.
MODERN SASH AND DOOR FACTORY.

This is an exceptionally well located, well arranged and well built plant, located at North Bend (Coos Bay), Oregon, having the Southern Pacific Railroad on one side and deep water on the other, and covers a ground area of about 4½ acres.

The plant has a capacity of about 500 doors and 800 sash per day, and an additional capacity for other mill work.

Coos Bay is the home of Port Orford cedar, generally known as white cedar, which is the best known wood for doors, sash, and inside finish. Tributary to this location is also a large quantity of fine old growth fir, spruce, and red cedar.

The Southern Pacific Railway has just completed its line into Coos Bay and has granted us a Pacific Coast Terminal rate. This will enable the manufacturers to ship to all Eastern points at as low a rate as any factory situated on the Pacific Coast.

This plant is not a run down proposition, having lately been thoroughly rebuilt, and with our terminal rate, deep water shipment, and low cost of raw material, we know of no better location on the Pacific Coast for a sash and door factory.

We want to sell and will make the right price.

BUEHNER LUMBER COMPANY,
North Bend, Oregon.

FOR SALE—MODERN SAWMILL.

And 300 million feet of standing timber in British Columbia most advantageously located on beautiful lake and main line of Transcontinental Railroad, having advantage of $3 per thousand feet in freight rates to best markets on the continent. Logging and manufacturing conditions ideal and very economical. A fortune for the right parties. Will sell on easy terms, and may accept other desirable property in part payment. Principals only. A. C. FROST CO., Corn Exchange Building, Chicago, Ill.

208 District National Bank Building, Washington, D. C. In charge of the Washington Bureau of the LUMBER WORLD REVIEW. In close touch with lumber matters at Interstate Commerce Commission. Able to watch for decisions, etc. Prices reasonable.

WOOD BLOCK PAVING PROSPECTS.

According to the National Lumber Manufacturers' Association, there is a growing call for creosoted wood blocks, not only for street paving, but for floors in factories, barns, bridges and other construction where there is heavy traffic. The authorities of East St. Louis, Ill., will spend $430,000 next year in wood block paving. St. Paul, Minn., will spend $124,830 for that type of pavement. Paducah, Ky., has let a contract for 5,500 square yards of wood block pavement. At Richland Park, Mich., a boulevard in [illegible] of the city will be paved with creosoted wood blocks, the entire contract amounting to 55,000 square yards. The municipal free bridge of St. Louis, Mo., will use 28,400 square yards of creosoted wood blocks.

CREOSOTED TIMBERS FOR DOCKS.

The trade extension department of the National Lumber Manufacturers' Association has recently issued "Technical Letter No. 7," in which it gives descriptions of two docks recently built in Chicago, one of concrete and the other of creosoted timbers. The concrete dock was built at the municipal plant at Marshall boulevard by the sanitary district of Chicago. The creosoted timber dock was erected at the pumping station on Twenty-second street at Slip "A." The cost of the two docks was as follows: Concrete, $56.10 a lineal foot; creosoted timbers, $28.72 a lineal foot. Assuming a conservative life of thirty years for the creosoted timber dock, a half century of service could be reasonably expected from the concrete dock; therefore, from a purely economic viewpoint, the association says, the concrete dock must be classed as a luxury when compared with the creosoted timber dock.

WOOD PRESERVATIVE MADE FROM PINE STUMPS.

Beaumont, Tex., Oct. 4.—The Schauman Chemical Co. is the name of a new concern which has already begun operations in Beaumont to manufacture a wood preservative from pine roots and knots. The discovery was made by F. A. Schauman, a Danish chemist who has been working out the formula in this section for the past twenty years. Twenty years ago the schooner "Martha," built and owned by the Lutcher & Moore Lumber Co., and running in the Mexican lumber trade, was launched and every timber entering into her construction was treated with this preservative. This vessel recently underwent a severe inspection and not a decayed spot was found in her timbers. Other lumber and timbers have been treated in the intervening time, the most recent being the material going into the new mill of the Lutcher & Moore mill at Orange. The bridge timbers and ties of the new Lutcher & Moore railroad are also being treated, and the new four-masted schooner now being built in Beaumont for the Orange Maritime Co. will also receive this treatment.

In extracting the oil of which this new preservative is composed there will be by-products of turpentine and rosin. One still has already been erected in the factory here and others will be built immediately. Backing the new company are F. H. Farwell, of the Lutcher & Moore Co.; H. D. Fletcher of Beaumont, an old-time lumberman; Fred Plummer, ship pilot; J. W. Ames, of Beaumont, and Dan W. Ryan, manager and president of the Ryan Towing Co., of Port Arthur. One of the exhibits of the new company is a section of a gum stump, already rotting, which was treated twenty years ago and buried in a marsh. This was recently dug up and it was found that decay had been stayed and that the wood had held in perfect condition.

It is claimed that the new process will supercede others now in use because of the fact that it is unnecessary to apply heat and compression in its use. There are thousands of acres of yellow pine stumps within 100 miles of Beaumont, and this new industry will, it is expected, solve the problem of clearing the land and making it available for agriculture.

"KORRUGO," THE NEW PAVING BLOCK.

Seattle, Wash., September 12.—An improved creosoted wood block for street paving has just been invented and patent applied for by E. J. Bartells, engineer for the Pacific Creosoting Co., and this company now is making the product.

The new block is corrugated on one side and one end with the grooves running parallel to the grain of the wood. Engineers who have examined the block declare it will overcome some of the objections now made to creosoted wood block, that is, the tendency to bulge under changes of temperature or moisture.

With the corrugated block there is room between the corrugations into which the "filler" can be poured, thus making each block have its own expansion joint. Then when the block expands the sharp edges of the corrugations are mashed into the next blocks and flatten out. This prevents buckling under changes of temperature or moisture. The blocks squeeze against each other and lie in perfectly flat, snug rows.

Another advantage claimed for this product is that the spaces between the blocks provide better traction for traffic.

The new block has been named "Korrugo" and will be marketed by the Pacific Creosoting Co. of Seattle.

BY-PRODUCTS OF THE AMERICAN LUMBER INDUSTRY.

Prof. H. K. Benson has completed a careful study of the progress being made in this country in utilizing the billions of feet of wood that have domestic commerce has published the results of this investigation in the form of a bulletin which it desires to place in the hands of every person and concern directly connected or indirectly interested in this subject.

The report includes chapters on wood distillation, the manufacture of tannin extract, the production of wood pulp, the manufacture of ethyl alcohol from sawdust, the manufacture of producer gas, and the progress that has been made in manufacturing a number of minor wood products. Prof. Benson has described the processes in use, but he has also paid particular attention to the commercial obstacles that have stood in the way of a more rapid development of some lines.

When the war is over a study will be made of these industries in the European countries where they have been highly developed.

A HANDY GUIDE TO BUYING.

Zelnicker's Bulletin is a handbook of about forty pages gotten out by the Walter A. Zelnicker Supply Co. of St. Louis, and is a valuable aid in buying or selling rails, locomotives, cars, machinery, steel piling, tanks and the other specialties handled by that well known firm, whose 30 years of experience has thoroughly familiarized them with the need and resources of their trade.

The September edition of the Bulletin, No. 207, which goes to 25,000 readers, lists an exceptionally fine list of bargains.

National Efficiency

Efficiency is a word often loosely employed, so we qualify it thus: "National Efficiency." Now, it stands for real merit. National kilns are the most efficient kilns made. They will dry more lumber—do it better and with less steam than any other kilns.

Three Great Time Savers

You can use electric power to increase factory efficiency as profitably as you use the telephone and telegraph to increase personal efficiency.

The perfect reliability of electric power from G-E motors and controllers keeps the wheels turning twenty-four hours a day, year in and year out, if necessary—production is greatly increased.

This power from G-E motors and controllers meets every requirement of your machines—whether you wish quick or slow starting and braking, constant, variable or varying speed—which means more and better product.

Our engineers have applied electricity to many industrial power problems. You are invited to avail yourself of their suggestions when considering means for increasing production.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

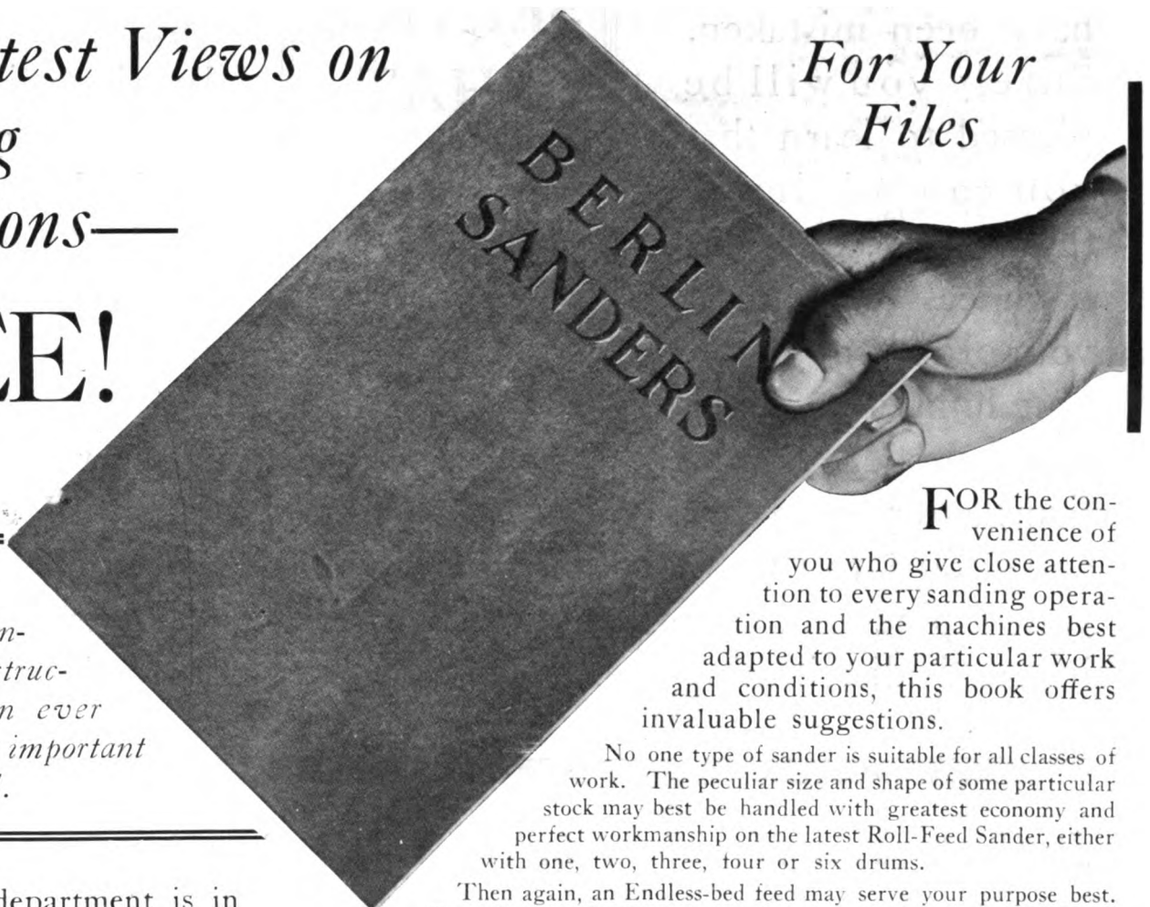
The Latest Views on Sanding Operations—

FREE!

For Your Files



48 pages of the most interesting and instructive information ever compiled on this important finishing method.

FOR the convenience of you who give close attention to every sanding operation and the machines best adapted to your particular work and conditions, this book offers invaluable suggestions.

No one type of sander is suitable for all classes of work. The peculiar size and shape of some particular stock may best be handled with greatest economy and perfect workmanship on the latest Roll-Feed Sander, either with one, two, three, four or six drums.

Then again, an Endless-bed feed may serve your purpose best. Or perhaps a Flexible-belt Sander may save considerable by finishing such work as you can now do only by hand.

Each type of Yates Sander is adapted to a definite purpose, yet all "overlap" one another in usefulness to insure highest efficiency of operation on the specific work in hand.

To judge such usefulness requires first-hand information. The book above supplies this definite knowledge.

Our Service department is in position to supply you, without expense or obligation, data on the latest sanding methods used in every kind of factory where sanders are used. Why not avail yourself of such help?

Just say, "Send us your Sander Book"

Transfer to economy and safety this season. If you have gone along accepting poor delivery service and off-grades of yellow pine lumber, imagining that these things are the necessary evils of the lumber industry, you have been mistaken. Surely you will be pleased to learn that you can minimize these provoking annoyances by sending your orders for yellow pine lumber to the Frost-Johnson Lumber Company. This firm has devoted years of thought and energy to the perfection of yellow pine lumber manufacturing and distributing facilities.

SERVICE THAT *IS* SERVICE

No expense or trouble has been spared in our efforts to equip and maintain our many large mills and offices so that we could be of the most possible help to our customers.

By our co-operative methods we have speeded up retail lumber firms which had become dissatisfied with the methods employed by other lumber manufacturers. We can be of great service to *you* if you will but give us the opportunity. We have on hand at all times millions of feet of yellow pine lumber of every description.

It Costs You No More In the Beginning
And It's Cheaper In the End

Send now for our price list which tells the cost of Yellow Pine Lumber *delivered* to any point on any railroad in America

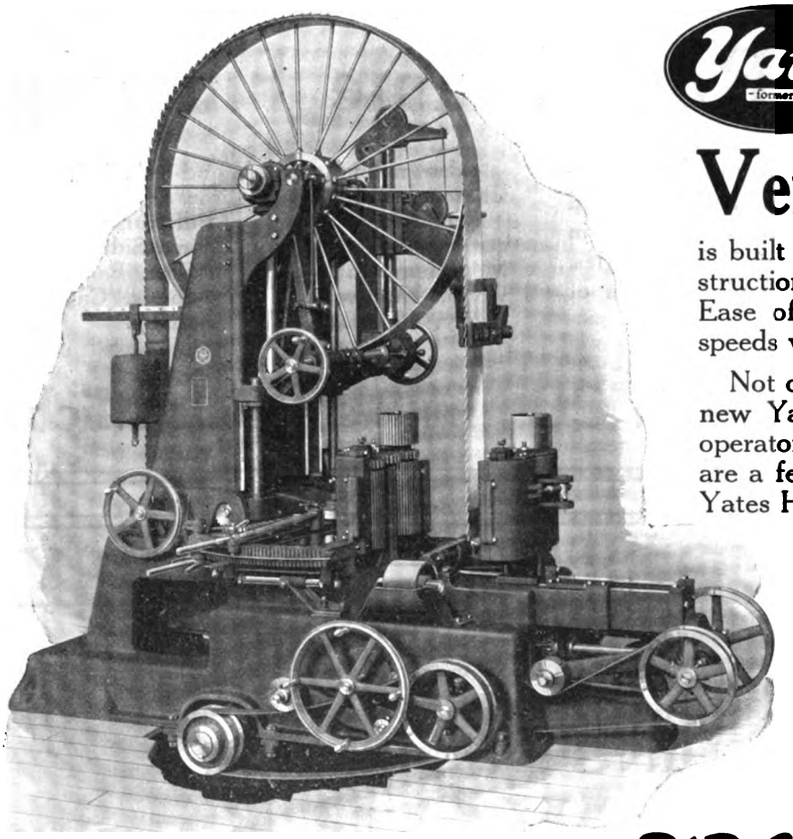
The Resaw Feed Works

The mill man who possesses a keen sense of the importance of a well designed Feed Works seldom goes wrong in his selection of a Sawmill Resaw.

He has a right to assume that its builders know, or should know, enough of the principles of band sawing to build a machine that will properly carry the blade and give it the necessary protection—yet even on that point there is plenty of chance to go wrong. But when it comes to the matter of properly getting material to the saw and keeping it everlastingly at it, he knows that depends entirely on the resaw feed works. Into



Yates —formerly BERLIN **Heavy Duty Vertical Band Resaws**

is built every element of successful feed works construction—Speed, Power, Activity, Accuracy and Ease of Setting, and a carefully selected range of speeds with single hand wheel control.

Not content with this, we have recently added the new Yates Selective Yield Set Works enabling the operator to saw to gauge either side of blade. These are a few of the things that the buyer gets with his Yates Heavy Duty Resaws.

And these are the reasons why users say these machines meet every operating contingency.

Our new book, "Band Sawing Machinery," tells all about these capable machines. Write for a copy while you have it in mind.

COLEMAN FEED ROLLER
that never wears out

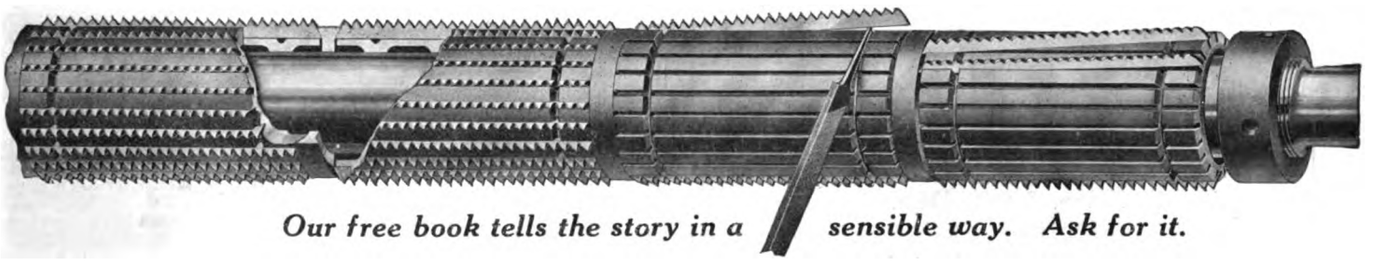
We don't "Claim" —We PROVE it

The time is long past when we were obliged to come before you with arguments as to what the Coleman Edger Feed Roller will do in the way of saving you time and money and raising the average grade of your output.

It will save hundreds of dollars per edger per year. It costs but little, if any, more than what you are using. It will last a lifetime (or two).

This is all because it can be sharpened ANY DAY AT NOON while in its bearings, at the tiny cost of a few new "feed bars." Thus it is always sharp and so makes it easy for the edgerman to run straight lines and carefully watch his grades without being crowded by the sawyer.

TO PROVE IT: FIRST—WE OFFER YOU 30 DAYS' FREE TRIAL
SECOND—WE REFER YOU TO HUNDREDS OF USERS



Our free book tells the story in a sensible way. Ask for it.

He Who Looks Before He Leaps

Did you ever worry over how good business is? Did it ever occur to you that a great big volume of new business sometimes causes more worry than a lack of business?

This is something of an anomaly, but the volume of business is so pleasing, and the supply of empty cars is so displeasing, that it is torture to open the mail in the morning and read the complaints at delayed shipments. Further than this, the knowledge that there is no immediate relief in sight adds to the troubles.

While it is true that CYPRESS-OK is proportionately receiving a greater supply of cars than most other woods, because of the movement of cars to tide water and the location of CYPRESS-OK producers close to tide water, it is also true that CYPRESS-OK does not need a car shortage as a trade stimulus for the reason that orders are in excess of the production, which has been the situation all of this year. It is hard lines to create business and then to be unable to promptly take care of that business, but the situation is just as here described.

We cannot this time conscientiously write an advertisement soliciting orders. We can promise to render the best possible service on those orders which are received, but we must admit that we are not strenuously seeking new business.

In the meantime, however, our plans for the future of CYPRESS-OK are being thoroughly and carefully rounded out and you will soon hear a great big trade-mark splash!

BIG CHIEF

THE BEST SHINGLES IN THE WORLD

When you order BIG CHIEF brand British Columbia Red Cedar Shingles, you will receive shingles not equaled in quality by any other brand of shingles manufactured anywhere.

BIG CHIEF brand Shingles are DRIED—NOT COOKED—and are otherwise prepared so that when finished, they are as nearly perfect as experience, skill and equipment can make them.

Note the packing and uniform thickness

BIG CHIEF
BRAND
BRITISH COLUMBIA RED CEDAR SHINGLES

SPECIFICATIONS: 16 inches long; 5 butts measure 2 inches and each bundle measures full 10 inches in thickness when dry, and they are 100 per cent vertical grain, 100 per cent clear, 100 per cent heart and 100 per cent covering efficiency. Contain positively no sap; random widths, but no shingle less than 3 inches wide. Smoothly sawn, squarely jointed, and otherwise perfectly manufactured.

Straight cars always enroute to Minnesota Transfer and available for diversion to points taking through rate from there. Mill shipments to any point can be made on 24 hours notice.

Are You One?

MANY Progressive Dealers have availed themselves of the NORTH CAROLINA PINE advertising helps, and have reported most satisfactory results in increased trade.

IT PAYS to advertise, and we are ready to serve you. There have been prepared a series of a dozen attractive cuts which will be furnished you gratis. Below is one of them. The others vary in size and character, and YOUR NAME will be inserted without charge. We will be glad to send you a folder showing all of the cuts, and telling you of other things that are being done to make business for YOU.

This Property Shows a Net Profit Each Year
FOR SALE
This Property Each Year is a Tax Loss
Build Now
Prices are going up
AN empty lot is a poor investment. Particularly when it can be turned into a paying proposition. Many house builders succeed in borrowing almost as much on their properties as their houses cost and the equity they hold shows a nice annual profit in rentals over their investment. This is particularly true where the owners use
North Carolina Pine
"The Wood Universal"
If this material is used, a really handsome building is the result; a building that does not represent excessive investment. We handle a complete line of North Carolina Pine. Not only does it have the stamina required in wood for exterior purposes, but its beautifully figured grain is ideal for interior decoration.
We will be glad to talk over ways and means of building your house; we may be able to give you just the information you desire.
DEALER'S NAME HERE

LANTERN SLIDES are also included in the plan. These illustrate Mount Vernon, the home of Washington, and several modern home exteriors. They are yours for the asking.

OUR lumber is thoroughly Kiln Dried, strictly Graded under the supervision of the Official Inspectors of the North Carolina Pine Association, and properly Manufactured. This spells SATISFACTION.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four thousand, three hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into not one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it **makes.**

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

Can You Answer

When a customer asks for advice on painting and finishing?

It is to help you answer such questions authoritatively whenever the query relates to

Arkansas Soft Pine

that we recently arranged a test on painting and finishing twenty-five specimens of Arkansas Soft Pine by the Institute of Industrial Research at Washington, D. C., under the personal supervision of Henry A. Gardner, Assistant Director.

These experiments are now completed and the results have been compiled by Mr. Gardner into a set of directions for painting and finishing our product. We have put them in pamphlet form and will be glad to send you a copy, Mr. Dealer.

These same directions are also being incorporated into a more elaborate book on painting and finishing which will be ready for distribution to homebuilders a little later on. Every person receiving the book will, of course, be advised that Arkansas Soft Pine is sold *only through local dealers.*

Just another instance of how we help you sell Trade Marked Arkansas Soft Pine—by studying our product, by educating the public to its use through national advertising, by standing behind the product with an identifying trade-mark, and by referring direct inquiry to local dealers.

There is a distinct merchandising advantage to you in selling a specific wood for a specific purpose, rather than mere "lumber." Arkansas Soft Pine is nationally known as "The Satin-Like Interior Trim."

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

ON WHAT SHALL WE QUOTE?

Arkansas Lumber Co	*Warren, Ark.*
Cotton Belt Lumber Co	*Bearden, Ark.*
Crossett Lumber Co	*Crossett, Ark.*
Eagle Lumber Co	*Eagle Mills, Ark.*
Edgar Lumber Co	*Wesson, Ark.*
Freeman-Smith Lumber Co	*Millville, Ark.*
Fordyce Lumber Co	*Fordyce, Ark.*
Gates Lumber Co	*Wilmar, Ark.*
Southern Lumber Co	*Warren, Ark.*
Stout Lumber Co	*Thornton, Ark.*
Wisconsin & Arkansas Lumber Co	*Malvern, Ark.*
Arkansas Land & Lumber Co	*Malvern, Ark.*

To secure quotations with the least delay, price inquiries should be sent direct to any of the above companies. Literature, samples and information will be supplied promptly on request, by the

NOW COMES THE REAL AUTUMN TIME, with the long freighters hugging down in the cold water and the black smoke falling low over the wide expanse of the lake with a sky line as well defined as the edge of a draftsman's rule.

The month of October has become the season of logging congresses, and before the LUMBER WORLD REVIEW again goes to press for its great "Logging Congress Edition" of November 10, there will have been held the Pacific Logging Congress at Portland, Ore., and the meeting of its first cousin, the Western Forestry & Conservation Association, which jointly form what the West Coast people call Forest Products Industry week, and the Southern Logging Congress at New Orleans, La.

The Appalachian Logging Congress, a brief review of which we print in this issue of the LUMBER WORLD REVIEW, will be covered fully in the issue of November 10.

This Logging Congress Carnival, which began in Knoxville, Tenn., with the opening of the Appalachian Congress, on October 18, and was next taken up on Tuesday morning, October 24, by the Forest Industries week at Portland, and which will break out in New Orleans on the morning of Wednesday, October 25, will, it is hoped, bring out many new and practical thoughts in the science of logging in this country; and if the programs of these various gatherings are carried out one-half as well as they have been planned, there is no doubt about the usefulness of this sort of lumber gathering, and we bespeak for the congresses a large attendance by the manufacturers of lumber, who, too often in the past, have stayed at home and "let George do it."

To those who are compelled, for business reasons, to refrain from attending any of these congresses, we recommend the complete stories of these congresses which we will print in the issue of our publication which goes to press on the evening of November 9.

Incidentally, there occurred at Portland, Ore., on October 23, a gathering of the manufacturers of lumber, to which we understand invitations were issued for the attendance of lumbermen ranging in location all the way from Vancouver to Arizona. We hope to print a detailed account of that affair also in our issue of November 10.

It is not often that the editor consents to give up space in this "Wide East Window" department for the purpose of printing an announcement, but these congresses are of great moment, and if by this means we can induce the attendance at one of these meetings of any person who had planned otherwise, we will consider the use of editorial space by this announcement as altogether worth while.

A Little Serious Talk About the Railroads.

WHATEVER MAY BE YOUR PERSONAL BIAS, Mr. Reader, and whether you think that railroads should be "regulated" or not, it will not hurt you a little bit to read some facts concerning railways, that are not based upon political bias, or from that "sun parlor" of convenience known as an "attitude."

Inasmuch as the future of the standing timber and the lumber industry of the United States is inextricably interwoven with that of the railroads, a summary of the facts connected with recent railroad history is interesting. The statistical statements used are authoritative, and are to be credited to Slason Thompson, manager of the "Bureau of Railway News and Statistics."

The railways of the country, in spite of everything, have made a remarkable showing in their efforts toward extension. From 1890, when the population of the country was 384, for each mile of line, mileage extension was greater than population increase, in proportion, and in 1907 represented a mile for each 370 of the whole population. Since the panic condition of 1907 it fell back, so that at the beginning of the present year the population per mile of road increased to 391 "official," or 404 "Bureau" figures.

* * *

Comparing our conditions with Europe, the disparity in favor of the American citizen is 5 to 1, the ratio in Europe being one mile to 2,142 of population, while in this country it is a mile to 404, according to "Bureau" figures.

Concerning equipment this statement may be evolved: "The returns on equipment, both that owned June 30, 1914, and that built during the calendar year, together with the record of surplus freight cars at the end of the year, prove that the railways of the United States were fully prepared to handle a volume of traffic, 15 percent beyond that offered.

"The year 1907 is chosen as the dividing line in these comparisons, because in that year the equipment and facilities proved inadequate to meet the demands of traffic."

* * *

Beginning with about 1870—to be retrospective—the tremendous capital invested in American railways began to make its power for evil manifest, and in association with almost all other important vested interests, working both separately and together, introduced many of the modern problems of social and public policy. A wholesale abuse of power by railway managements then provoked defensive measures of law in those states in which the abuses were most flagrant and conspicuous, and, therefore, most directly felt by the people.

The logical human result, under the conditions, was a well developed attitude of animosity, which was the active principle in most of the so-called "granger" legislation against the railroads in the middle western states, which for a time ran riot.

Aided by the revolutionary decisions of the federal courts, announcing that they "would not consider any legislation as confiscatory, if it left the railroads one cent of net profit above expenses," state legislative enactments soon became persecutions, and were worse than the evils they were at first intended to correct, and they kept multiplying even up to and after the introduction of state railroad commissions, until the middle western roads had been reduced to a state of financial prostration. The result was a reaction, and much of the "granger rate-making" and other populistic legislation was declared unconstitutional in spite of the almost incredible attitude of the federal courts.

It is remarkable in the restrospect that no attempt at federal regulation or standardization was undertaken until 1887, after the separate states and the roads had been fighting for seventeen years, under conditions ruinous to all concerned.

In 1875 rebating was considered at common law "but a doubtful practice, at worst." In the next ten years it came to be generally accepted as an "illegal practice," and the roads which still practiced it—in self-defense in large measure, be it said—observed as much secrecy as possible in connection with it.

The handicaps against the great and constantly increasing number of small shippers and the discriminations in favor of the large and growing interests, which had become powerful enough to demand and secure them, finally aroused a broad and specific public indignation, which obtained federal intervention in the form of the interstate commerce legislation of 1887.

* * *

The force and value of the first definite federal step in the right direction—which introduced the Interstate Commerce Commission—was seriously negatived by the supreme court, which ruled that the commission "had no power to fix rates." This again left the country and the small shippers at the mercy of the roads, and, they, in turn, absolutely subject to the rapacious demands of the large shipper.

Competitive conditions among railroads compelled them to grant to the heavy produc[illegible]ost any rate above actual operating expenses, while the ordinary shipper was charged exorbitantly, and because of the supreme court decision the latter was debarred from redress, because of the costly and dilatory litigation and repetitions it entailed.

The next development, of course, was a recrudescence of the "granger" attacks by the states most afflicted, or rather by the states where the affliction was most perceived by the people.

In February, 1903, an act of congress, known as the "Elkins law," to "further regulate commerce with foreign nations and among the states," was approved, but it contributed little, or nothing of value to the interstate commerce legislation of 1887.

The Evolution of Railroad Regulation.

EFFECTIVE FEDERAL INTERVENTION and the real regulation of railroads was brought about in 1907 by the passage and approval of the "Hepburn act," which broadened and fixed the powers of the Interstate Commerce Commission, and virtually put a stop to all rebating.

In the meantime, on July 2, 1890, the president had approved the Sherman anti-trust law, which in 1892 was invoked in the case of the United States against the Trans-Missouri Freight Association and the Atchison, Topeka & Santa Fe railroad. The trial court held that the Sherman act did not apply to railroads, but, on appeal, the supreme court, in March, 1897, decided that it applied to the roads, and "that it renders illegal all agreements which are in restraint of trade." The case was, therefore, remanded to the United States circuit court, "for further proceeding in conformity with this opinion."

* * *

Bringing the subject up to the present, the following list represents the important developments in the evolution of railroad regulation:

May. 1906—The supreme court upheld the constitutionality of the "commodities clause" of the "Hepburn act."

1907—Working hours of trainmen limited.

1908—The supreme court decided the limits to which states might interfere in matters of interstate commerce, and a law was passed relating to the liability of common carriers by railroad to employes in certain cases. The Missouri rate case was tried and permanent injunction against the Interstate Commerce Commission was issued.

1909—The New York Central was fined $134,000 for rebating.

* * *

At the end of the first decade of this century, American railroads were permanently branded with the hot iron of federal regulation, and since then the effort has been to work out and systematize the overwhelming mass of detail entailed in applying the definitely established principles and ridding the situation of the inevitable exasperations and abuses consequent to such a wide scheme of reorganization.

Under the conditions which brought about the demand for national supervision, the attitude of railroad officials toward the general public and the small shipper lacked consideration—to put it mildly—and this so penetrated railroad organizations that the public had few, if any, rights which railroad men were inclined to respect.

The common feeling among operating employes was that they were doing the shipper a direct personal favor to handle his goods under any circumstances. The claims for loss and damage that ensued were handled in the same high-handed manner and spirit, and claimants, even in the rare cases of ultimate partial recompense, were worn out with the obstacles and delays interposed between them and settlement.

* * *

The new order of things brought about a condition wherein any disgruntled shipper—at practically the expense of a two-cent stamp and a few minutes of time—might lodge a case, the subsequent and abundantly heavy burden of which, in deciding, fell upon the government on the one side and the railroad on the other. Therefore the old domineering and inconsiderate attitude of railway officials toward the public became as abject and cringing as it before had been overbearing. This was particularly manifest in the settlement of claims for loss and damage.

* * *

The application of the principles of "federal regulation" in detail have not failed to develop abuses and one of the most serious of them is the manner in which administrative officials are bedeviled by the great volume of petty demands made upon them, from which—for the present, at least—there seems no prospect of escape.

Methods of accounting and reporting are provided the railroad companies by the Interstate Commerce Commission and state commissions. If a commissioner desires information upon any point or subject, he asks for a "special report" from the railroad company. The answer made to him cannot be that the matter is covered and available and should be in his files; the report must be made and supplied.

A little more friendly collaboration between the railroads and the lumber shipping interests upon matters mutually important would be remarkably profitable to both, in correcting this and other unfortunate conditions incident to the real shaping of the new system.

Specifications for Wood Block Paving

Presented by Sub-Committee on Wood Block, October 13, 1916, and Adopted Same Date by the American Society of Municipal Improvements, at the Twenty-Third Annual Convention, Newark, N. J.

Prior to the adoption of this report, the subcommittee on Wood Block Paving of the American Society of Municipal Improvements held two open meetings attended by manufacturers interested in the specification. When the report came up before the convention, it was adopted without a dissenting vote.

This specification was adopted at a joint meeting of representatives of the various technical societies, held in New York September 12. There were representatives present from the American Society for Testing Materials; American Society of Civil Engineers; American Railway Engineering Association; American Wood Preservers' Association; American Society of Municipal Improvements, and Southern Pine Association. This specification embodies the result of much work by the various committees of the above mentioned standardizing bodies.

We omit the introductory and explanatory paragraphs of the committee's report, and print the specifications in full.

SPECIFICATIONS FOR TIMBER.

Kind: The wood from which the blocks are to be manufactured shall be southern yellow pine, Douglas fir, tamarack, Norway pine, hemlock or black gum. Only one kind of wood shall be used in any one contract.

Quality: The blocks must be sound and must be well manufactured, square butted, square edged, free from unsound, loose or hollow knots, knot-holes and other defects such as shakes, checks, etc., that would be detrimental to the blocks.

The number of annual rings in the one-inch which begins two inches from the pith of the block shall not be less than six, measured radially, provided, however, that blocks containing between five and six rings in this inch shall be accepted if they contain 33⅓ percent or more summerwood. In case the blocks do not contain the pith, the one-inch to be used shall begin one-inch away from the ring which is nearest to the heart of the block. The blocks in each charge shall contain an average of at least 70 percent of heartwood. No one block shall be accepted that contains less than 50 percent of heartwood.

Size of Blocks: The blocks shall be from five to ten inches long, but should preferably average two times the depth; they shall be—[1] inches in depth. They may be from three to four inches in width, but in any one city block all of them shall be of uniform width. A variation of ⅛ inch shall be allowed in the depth and ⅛ inch in the width of the blocks from that specified. In all cases the width shall be greater or less than the depth by at least ¼ inch.

SPECIFICATIONS FOR PRESERVATIVE.

Kind: The preservative to be used may be either a Coal-Tar Paving Oil or a Coal-Tar Distillate Oil as herein specified; or where refined

[1]The committee recommends blocks 4 inches in depth for very heavy traffic streets; blocks 3½ inches in depth for moderate traffic streets; for light traffic streets blocks 3 inches in depth may be used, but where 3-inch blocks are used, no block shall be longer than 8 inches.

DR. HERMANN VON SCHRENK, OF ST. LOUIS, MO.

water-gas tar is desired, the specification suggested below may be used.

Coal-Tar Paving Oil: The oil shall be a coal-tar product, of which at least 65 percent shall be a distillate of coal-gas tar or coke-oven tar, and the remainder shall be refined or filtered coal-gas tar or coke-oven tar. It shall comply with the following requirements:

1. It shall not contain more than 3 percent of water.
2. It shall not contain more than 3 percent of matter insoluble in benzol.
3. The specific gravity of the oil at 38° C. shall not be less than 1.07 nor more than 1.12.
4. The distillate, based on water-free oil, shall be within the following limits:
   Up to 210° C. not more than 5 percent.
   Up to 235° C. not more than 25 percent.
   The residue above 355° C., if it exceeds 35 percent, shall have a float test of not more than 80 seconds at 70° C.
5. The specific gravity of the fraction between 235° and 315° C. shall not be less than 1.02 at 38°/15.5° C.
   The specific gravity of the fraction between 315° and 355° C. shall not be less than 1.09 at 38°/15.5° C.
6. The oil shall not yield more than 10 percent coke residue.

Coal-Tar Distillate Oil: The oil shall be a distillate of coal-gas tar or coke-oven tar, and shall comply with the following requirements:

1. It shall not contain more than 3 percent of water.
2. It shall not contain more than 0.5 percent of matter insoluble in benzol.
3. The specific gravity of the oil at 38° C. shall be not less than 1.06.
4. The distillates, based on water-free oil, shall be within the following limits:
   Up to 210° C. not more than 5 percent.
   Up to 235° C. not more than 15 percent.
   The residue above 355° C., if it exceeds 10 percent, shall have a float test of not more than 50 seconds at 70° C.
5. The specific gravity of the fraction between 235° and 315° C. shall be not less than 1.02 at 38°/15.5° C.
   The specific gravity of the fraction between 315° and 355° C. shall be not less than 1.09 at 38°/15.5° C.
6. The oil shall yield not more than 2 percent of coke residue.

In view of the fact that some cities are using a water-gas tar, your committee deems it advisable to suggest a specification for their guidance. This specification is the one submitted and agreed to by C. N. Forrest, Chemist of the Barber Asphalt Paving Co., and A. H. Fulweiler, Chemist of the United Gas Improvement Co., and is as follows:

The preservative shall be refined water-gas tar, and shall comply with the following requirements:

1. The specific gravity shall be not less than 1.12 nor more than 1.14 at 38° C., referred to water at the same temperature.
2. Not more than 2.0 percent shall be insoluble by hot extraction with benzol and chloroform.
3. On distillation, which shall be made as hereinafter described, the distillate, based upon water-free oil, shall be within the following limits:
   Up to 210° C. not more than 5.0 percent.
   Up to 235° C. not more than 15.0 percent.
   Up to 315° C. not more than 40.0 percent.
   Up to 355° C. not less than 25.0 percent.
4. The specific gravity of the total distillate below 355° C. shall not be less than 1.00 at 38° C., referred to water at the same temperature.
5. The oil shall not contain more than 2.0 percent water, and due allowance shall be made for all water and insoluble foreign matter it may contain, by injecting a corresponding additional quantity into the blocks.

SPECIFICATIONS FOR TREATMENT.

The timber may be either air-seasoned or green, but should preferably be treated within three months from the time it is sawed. Green timber and seasoned timber shall not, however, be treated together in the same charge. The blocks shall be treated in an air-tight cylinder with the preservative heretofore specified. In all cases, whether thoroughly air-seasoned or green, they shall first be subjected to live steam at a temperature between 220° and 240° F. for not less than two hours nor more than four hours, after which they shall be subjected to a vacuum of not less than 22 inches, held for at least an hour. While the vacuum is still on, the preservative oil, heated to a temperature of between 180° and 220° F. shall be run in until the cylinder is completely filled, care being taken that no air is admitted. Pressure shall then be gradually applied not to exceed 50 pounds at the end of the first hour, nor 100 pounds at the end of the second hour, and then maintained at

Digitized by Google

not less than 100 pounds nor more than 150 pounds until the wood has absorbed the required amount of oil.[2] After this a supplemental vacuum shall be applied, in which the maximum intensity reached shall be at least 20 inches, and shall continue for a period of not less than 30 minutes. If desired, this vacuum may be either preceded or followed by a short steaming period.

In any charge the blocks shall contain at least 16 pounds of water-free oil per cubic foot of wood at the completion of the treatment. The blocks after treatment shall show satisfactory penetration of the preservative, and in all cases the preservative must be diffused throughout the sapwood. To determine this, at least 25 blocks shall be selected from various parts of each charge, and sawn in half at right angles to the fibres through the center, and if more than one of these blocks show untreated sapwood, the charge shall be re-treated. After re-treating, the charge shall again be subjected to a similar inspection.

The surface of the blocks after treatment shall be free from deposit of objectionable substances, and all blocks that have been materially warped, checked or otherwise injured in the process of treatment shall be rejected.

HANDLING BLOCKS AFTER TREATMENT.

Blocks shall preferably be laid in the street as soon as possible after being treated. If they cannot be laid within two days, provision shall be made to prevent them from drying out by stacking in close piles and covering them, and if possible sprinkling them thoroughly at intervals. The blocks shall be well sprinkled, under direction of the purchaser, about two days before being laid.

INSPECTION OF MATERIAL.

All material herein specified and processes used in the manufacture of the blocks therefor shall be subject to inspection, acceptance or rejection at the plant of the manufacturer, which shall be equipped with all the necessary gauges, appliances and facilities to enable the inspector to satisfy himself that the requirements of the specifications are fulfilled.

The purchaser shall have the further right to inspect the blocks after delivery upon the street, for the purpose of rejecting any blocks that do not meet these specifications, except that the plant inspection shall be final with respect to oil and treatment.

FOUNDATION OF PAVEMENT.

The foundation for the pavement shall be of concrete made in accordance with the specifications for concrete paving foundations and shall be —[3] inches in thickness. At no place shall the surface of the finished concrete vary more than ½ inch from the given grade.

CUSHION FOR BLOCKS.

"A"—Bituminous.—Over the concrete foundation, laid as specified above, shall be spread a layer of cement mortar composed of one part Portland cement and two parts of sand. This mortar shall be of such a consistency that it may be easily spread, and must be applied to the surface of the concrete not more than 45 minutes after the placing of the concrete foundation. This mortar must be struck by templates to a surface parallel to the grade and contour of the finished pavement in such a manner that when the blocks are set the surface of the pavement shall conform accurately to the established grade. After this mortar coating is thoroughly set and hardened, it shall be painted with a coal-tar pitch as specified under bituminous filler, or other suitable waterproofing paint. The paint coat must be applied as thin and as smoothly as possible, and at no place shall it be over ⅛ inch in depth. The blocks shall be laid as specified below, directly on this paint coat, within at least 30 minutes after it has been applied.

"B"—Mortar Bed.—The concrete foundation prepared as specified above shall be cleaned and swept, and shall be thoroughly dampened immediately in advance of the spreading of the cushion course. Upon the surface of the foundation thus prepared shall be spread a layer of mortar not exceeding ½-inch in thickness and made of one part Portland cement of the character specified for use in the foundation, and three parts of sand. Only sufficient water shall be added to this mixture to insure a proper setting of the cement, the intention being to produce a granular mixture which may be raked or struck by templates to the desired grade. The mortar shall be thoroughly mixed and shall be spread in place upon the foundation by means of templates immediately in advance of the laying of the blocks to such a thickness that when the blocks are set and properly bedded in the mortar, their tops shall conform accurately to the finished grade of the roadway.

"C"—Sand.—Upon the concrete foundation shall be spread a cushion of sand one inch in thickness. The sand cushion shall be struck by templates to a surface parallel to the grade and contour of the finished pavement in such a manner that when the blocks are set and thoroughly bedded in the sand, the tops shall conform accurately to the finished grade of the pavement. The sand used in this cushion shall all pass the ¼ inch screen and must contain between 10 percent and 25 percent of loam or clay.

LAYING THE BLOCKS.

Upon the bed thus prepared the blocks shall be carefully set with the fibre of the wood vertical, in straight parallel courses, leaving a space next to the curb one inch in width for the expansion joint.

They shall be placed closely together on the prepared cushion and no joint shall be more than ⅛ inch in width. Nothing but whole blocks shall be used except in starting a course, or in such other cases as the purchaser may direct; and in no case shall the lap joint be less than 2 inches. Closures shall be carefully cut and trimmed by experienced men. The portions of the block used for the closures must be free from checks or other fractures and the cut end must have a surface perpendicular to the top of the block and cut to the proper angle so as to give a close, tight joint. The angle of the course with the curb shall be determined by the purchaser.

After the blocks are placed, they shall be rolled parallel and diagonal to the curb by a tandem roller weighing between four and seven tons, until the surface becomes smooth and is brought truly to the grade and contour of the finished pavement. In case of a mortar bed, the rolling shall be completed before the mortar bed has set. All mortar that has set before the blocks are in place and rolled shall be discarded and replaced by fresh mortar.

FILLER FOR PAVEMENT.

"A"—Bituminous.—After the rolling is completed, the joints between the blocks shall be filled with either a pitch or asphalt filler as specified hereafter. The filler shall be brought to the proper temperature and shall be poured into the joints, and any filler on the surface of the pavement must be spread as thin as possible by means of squeegees. The receptacle in which the filler is heated shall be equipped with suitable thermometers.

After the joints are filled as prescribed, the surface shall be completely covered by a thin coat of clean, coarse, dry sand, and a similar coating of sand shall be spread over the pavement, if required by the engineer, before the acceptance of the pavement.

(a) Pitch Filler: The filler shall be a straight run residue obtained from the distillation of coal tar, and shall comply with the following requirements:

1. The melting point shall be not lower than 140° F. nor higher than 150° F.
2. It shall contain between 22 percent and 37 percent of free carbon insoluble in hot chloroform and benzol.
3. Its specific gravity at 77° F. shall not be less than 1.24 nor more than 1.32.
4. The specific gravity of the distillate up to 355° C. shall not be less than 1.07 a 38° C. compared with water at 15.5° C. The pitch shall be heated to a temperature not exceeding 325° F., and shall be poured at a temperature between 250° F. and 300° F.

(b) Asphalt Filler: The filler shall be an asphalt filler and shall comply with the following requirements:

1. It shall contain at least 98 percent of bitumen soluble in carbon di sulphide
2. It shall have a penetration within the following limits:
   When tested at 32° F. for 1 minute under 200 grams, 10 to 20.
   When tested at 77° F. for 5 seconds under 100 grams, 30 to 550.
   When tested at 115° F. for 5 seconds under 50 grams, 150 to 300.
3. It shall show a ductility of at least 30 centimeters when tested at 77° F.
4. When 50 grams are heated in an open tin to a temperature of 325° F. five hours, the loss shall not exceed one percent, and the penetration at 77° F. of the residue left after such heating must not be less than two-thirds of the penetration of the original asphalt cement before heating when tested at 77° F.

"B"—Sand.[4]—After the rolling is completed, the joints between the blocks shall be filled by sweeping dry, clean sand into them, after which the surface shall be covered to a depth of about ½ inch with fine sand. This sand is to be left upon the pavement for such a time as may be directed by the city, after which it shall be swept up and taken away by the contractor.

When the blocks are laid on streets having grade of 3 percent or over, it is desirable that the blocks be spaced by laying creosoted wood lath of about ⅛ inch thick between each course. The space above the lath shall then be filled with heated crushed stone (containing no dust) and bituminous filler as specified above. The bituminous filler shall first be poured into the bottom of the joint, care being taken to get

[2]This treatment is recommended for yellow pine only. It is probably also suited to Norway pine, hemlock, black gum and tamarack, but not to Douglas fir. Further recommendations on the treatment of these species are reserved for the future.

[3]The committee recommends that the concrete base be at least 5 inches in thickness, and under heavy traffic 8 to 9 inches is recommended.

[4]Sand filler and sand cushion have caused many failures, and where used special care should be exercised.

Digitized by Google

none on the surface of the pavement. The crushed stone shall then be swept into the joint and the space around the stone filled with the bituminous filler to the top of the joint. It is essential in open joint pavement to drive the blocks together every four rows to prevent tipping of the individual blocks.

METHODS OF SAMPLING AND TESTING PRESERVATIVE.

Continuous Drip Sample.—Wherever the oil is being loaded or discharged by means of a pump the following method shall be used:

The pipe line through which the material is being pumped shall be tapped on the discharge side of the pump, preferably in a rising section of the pipe line. The sample shall be taken by means of a ½ inch pipe extending half way to the center of the main pipe, and the inlet of the ½ inch pipe shall be turned to face the flow of the liquid. This pipe shall discharge into a barrel or drum of 50 to 100 gallons capacity, and the plug cock regulated so as to secure a uniform stream during the entire pumping of the shipment. The barrel, or preferably the iron drum, should be provided with a small steam coil, sufficient to keep the contents thoroughly liquid. The temperature shall not exceed 120° F. The contents of the barrel or drum shall be very thoroughly agitated and small samples for testing taken immediately. The amount of the drip sample collected shall be not less than one gallon to 1,000 gallons of material handled, excepting in the case of large boat shipments, where a maximum of 100 gallons will suffice.

Storage Tank Samples.—In sampling from storage it is necessary to secure samples from different levels, and where possible this may be done by means of small outlet cocks at regular intervals from the top to the bottom of the storage tank. In such cases, about one gallon of tar or oil shall be drawn from each outlet cock and thoroughly mixed and a portion taken for testing. The stream from each cock shall always be allowed to flow for sufficient length of time to empty the outlet pipe and nipple before commencing to collect the sample.

When tanks have no outlet cocks a vessel having a string attached to the cork may be lowered to measured depth representing a number of the different levels in the tank and the cork removed when the vessel has reached the proper level. These samples shall be combined for an average as above.

(Diagram of Distilling Apparatus. See page 462, 1915 Proceedings, American Society of Municipal Improvements.)

APPARATUS FOR DISTILLATION TEST.

(a) Retorts: This shall be a tubulated Jena glass retort of the usual form with a capacity of 250 to 290 c.c. The capacity shall be measured by placing the retort with the bottom of the bulb and the end of the off-take in the same horizontal plane, and pouring water into the bulb through the tubulature until it overflows the off-take. The amount remaining in the bulb shall be considered its capacity.

(b) Condenser Tube: Any suitable form of glass tubing may be used.

(c) Shields: An asbestos shield shall be used to protect the retort from air currents and to prevent radiation. This may be covered with galvanized iron, as such an arrangement is more convenient and more permanent.

(d) Receivers: Erlenmeyer flasks of 50 to 100 c.c. capacity are most convenient form.

(e) Thermometers: The thermometer shall be of glass, well annealed, and shall undergo no serious change at the zero point when heated up to 400° C. The space above the mercury column shall be filled with gas, either carbon dioxide or nitrogen, and the thermometer shall have an expansion chamber at the top.

The scale shall read for 0 to 400° C., in graduation of 1° C., which shall be etched on the stem.

The tip of the thermometer shall carry a ring for the purpose of attaching tags. The thermometer shall have the following dimensions:

Total length, 375 mm.; tolerance, 10 mm.

Bulb length, 14 mm.; tolerance, 1 mm.

Distance from zero mark to bottom of bulb, 30 mm.; tolerance, 4 mm.

Scale length from zero mark to 400° C., 295 mm.; tolerance, 5 mm.

Diameter of stem, 7 mm.; tolerance, 1 mm.

Diameter of bulb, 6 mm.; tolerance, 1 mm.

When standardized the accuracy of such standardization should be as follows:

Up to 200° C.....to the nearest 0.5° C.
200 to 300° C.....to the nearest 1.0° C.
300 to 360° C.....to the nearest 1.5° C.

ASSEMBLING FOR DISTILLATION TEST.

The retort shall be supported on a tripod or rings over two sheets of 30-mesh gauze, 6 inches square. It shall be connected to the condenser tube by a tight cork joint. The thermometer shall be inserted through a cork in the tubulature with the bottom of the bulb ½ inch from the surface of the oil in the retort. The exact location of the thermometer bulb shall be determined by placing a central rule graduated in divisions not exceeds ⅛ inch back of the retort when the latter is in position for the test, and sighting the level of the liquid and the point for the bottom of the thermometer bulb. The distance from the bulb of the thermometer to the outlet end of the condenser tube shall be not more than 24 nor less than 20 inches. The burner should be protected from draughts by a suitable shield or chimney.

DISTILLATION TEST.

Exactly 100 gr. of oil shall be weighed into the retort, the apparatus assembled and heat applied. The distillation shall be conducted at the rate of at least one drop and not more than two drops per second, and the distillate collected in weighed receivers. The condenser tube shall be warmed whenever necessary to prevent accumulation of solid distillates. Fractions shall be collected at the following points: Up to 210° C.; up to 235° C.; 235 to 315° C.; 315 to 355° C. The receivers shall be changed as the mercury passes the dividing temperature for each fraction. The last receiver shall be removed at 355° C., and drainage from the condenser, etc., shall not be considered as part of the fraction. For weighing the receivers and fractions, a balance accurance to at least 0.05 gr. shall be used. During the progress of the distillation the thermometer shall remain in its original position. No correction shall be made for the emergent stem of the thermometer.

When any measurable amount of water is present in the distillate it shall be separated as nearly as possible and reported separately, all results being calculated on a basis of dry oil. When more than 2 percent of water is present, water-free oil shall be obtained by separately distilling a larger quantity of oil, returning to the oil any oil carried over with the water, and using dried oil for the final distillation. A copper tar still is a convenient means of obtaining water-free oil.

(Diagrams of hydrometer and cylinder. See page 465, 1915 Proceedings, American Society of Municipal Improvements.)

SPECIFIC GRAVITY TEST.

A standardized hydrometer shall be used. A set of two ranges, 1.00 to 1.08 and 1.07 to 1.15, will suffice. The reading should preferably be taken at 38° C. (100° F.), because at this temperature almost all oils are completely fluid.

Before taking the specific gravity the oil in the cylinder should be stirred thoroughly with a glass rod, and this rod when withdrawn from the liquid should show no solid particles at the instant of withdrawal. Care should be taken that the hydrometer does not touch the sides or bottom of the cylinder when the reading is taken, and that the oil surface is free from froth and bubbles. If the specific gravity is determined at a higher temperature than desired, correction should be made by adding 0.0008 to the reading for each degree Centigrade excess of temperature.

COKE TEST.

In making the coke determination, hard glass bulbs are to be used. The test is to be carried out as follows:

Warm the bulb slightly to drive off all moisture, cool in a desiccator and weigh. Again heat the bulb by placing it momentarily in an open Bunsen flame and place the tubular underneath the surface of the oil to be tested and allow the bulb to cool until sufficient oil is sucked in to fill the bulb about two-thirds full. Any globules of oil sticking to the inside of the tubular should be drawn into the bulb by shaking or expelled by slightly heating it, and the outer surface should be carefully wiped off and the bulb reweighed. This procedure will give about one gram of oil. Cut a strip of thin asbestos paper about one-quarter inch wide and about one inch long, place it around the neck of the bulb and catch the two free ends close up to the neck with a pair of crucible tongs. The oil should then be distilled off as in making an ordinary oil distillation, starting with a very low flame and conducting the distillation as fast as can be maintained without spurting. When oil ceases to come over, the heat should be increased until the highest temperature of the Bunsen flame is attained, the whole bulb being heated red hot until evolution of gas ceases and any carbon sticking to the outside of the tubular is completely burned off. The bulb should then be cooled in a desiccator and weighed, and the percentage of coke residue calculated to water-free oil.

FLOAT TEST.

Method: The float apparatus consists of two parts, an aluminum float or saucer and a conical brass collar. The two parts are made separately, so that one float may be used with a number of brass collars.

In making the test, the brass collar is placed with the small end down on the brass plate, which has been previously amalgamated with mercury by first rubbing it with a dilute solution of mecuric chloride or nitrate and then with mercury. A small quantity of the material to be tested is heated in the metal spoon until quite fluid, with care that it suffer no appreciable loss by volatilization and that it is kept free from air bubbles. It is then poured into the collar in a thin stream until slightly more than level with the top. The surplus may be removed after the material has cooled to room temperature, by means of a spatula or steel knife which has been slightly heated. The collar and plate are then placed in one of the tin cups containing ice water maintained at 5° C.,

Digitized by Google

and left in this bath for at least 15 minutes. Meanwhile the other cup is filled about three-fourths full of water and placed on the tripod, and the water is heated to any desired temperature at which the test is to be made. This temperature should be accurately maintained and should at no time throughout the entire test be allowed to vary more than one-half a degree Centigrade from the temperature selected. After the material to be tested has been kept in the ice water for at least 15 minutes, the collar with its contents is removed from the plate and screwed into the aluminum float, which is then immediately floated in the warm bath. As the plug of bituminous material becomes warm and fluid, it is gradually forced upward and out of the collar until water gains entrance to the saucer and causes it to sink.

The time in seconds between placing the apparatus on the water and when the water breaks through the bitumen is determined by means of a stop watch and is taken as a measure of the consistency of the material under examination.

The Banker and Our Business Problems

An Address by Edward N. Hurley, Chairman of the Federal Trade Commission, Before the Annual Meeting of the Ohio Bankers' Association at Columbus, Ohio, September 13, 1916

I am glad to meet with you here today because I have something to say to you. We stand face to face in this country with great business problems of pressing urgency. As patriotic men of affairs in intimate touch with manufacturing and merchandising interests of the nation you have your part to play and your duties to perform in the solution of these problems. I am, therefore, pleased to have this opportunity of briefly discussing some of them with you.

INDUSTRIAL CHANGES IN EUROPE

When we think of Europe we think of a continent engulfed in war, devastated and disordered, but I want to say to you that we must correct that conception. While in many respects we know little of what is going on in the warring nations, we do know that within sound of the guns, almost within reach of the falling shells, Europe is reorganizing her industries. Under the stress of a life-and-death struggle every effort is being made to obtain the highest efficiency in the production, the distribution and the use of commodities of all kinds. Conservatism in industrial ideals and methods has been blasted and shattered to pieces in the shock of war, old systems that normally would have hung on for years have been discarded in a day, old equipment that would have been retained for years has been scrapped as fast as possible for new installations of the most advanced types. New processes are being discovered, new inventions are being made, and new forms of organization are being created. Let me illustrate. Industrially, France has been preeminently the land of small-scale, highly individualized production, but she now lacks human hands. In France little farms that for generations have been farmed practically by hand or with the aid of a horse or two, are being thrown together and farmed co-operatively by tractors, gang plows and modern agricultural implements. France must rely on machinery. Her business men are studying and are applying American systems of manufacture in factory construction, in equipment, and in large-scale, highly systematized production.

England industrially has been preeminently the land of yesterday. Conservatism was the dominant characteristic of British business. While Massachusetts was making textiles with automatic looms under conditions that permitted one operator to tend from 16 to 24 machines, Lancashire clung to old equipment and conditions under which one operator could tend but 4 machines But at last England is aroused, and today American books on efficiency and scientific management are being bought by the hundred and studied all over England. The war has compelled Great Britain to make thirty years of industrial progress in thirty months.

Before the war Germany was probably the most highly organized and efficient manufacturing nation in the world, but in Germany organization and efficiency have been still further developed, and, no matter whether victorious or defeated, the Germany that emerges from the war will be years ahead of the Germany we knew in 1914.

COMMISSIONER EDWARD N. HURLEY, WASHINGTON, D. C.

WE MUST KEEP STEP.

These changes are of great concern to us. We may not realize this today, because things are coming our way now, but we must look ahead to the future conditions we must prepare to meet. Almost before we know it we will find a new Europe competing against us with war-sharpened brains and war-hardened muscles, not only in our foreign markets but also right here at home. If our industries are not to be caught slow of mind and flabby of muscle we must improve our business organization. must increase our manufacturing and merchandising efficiency and must keep pace with every step in Europe's industrial progress.

In considering our position after the war, I wish to talk chiefly about what we must do here at home, but I cannot talk to you on this subject without first referring briefly to what we must do in our foreign business. Next to England we have the greatest foreign trade of any nation in the world. Our exports and imports reach billions of dollars in value. Gentlemen, we must keep and expand that great trade. It means the full tide of prosperity for our factories and farms. It means the best comforts and conveniences of modern civilization for the families and homes of this country. But if we are to keep that trade and make it grow as a healthy business should grow, we must have the organization and the facilities needed. The government is alive to this fact Through the shipping bill it is striving to improve our merchant marine. The Webb-Culberson bill, which has passed the house and which I hope will pass the senate in December, will legalize co-operative joint exporting agencies by American manufacturers and producers, even among competitors, and will enable Americans to compete on more nearly equal terms with the powerful combinations of foreign manufacturers that play so large a part in international commerce. Through the Federal Reserve Act and the amendment thereto that has just been made law, American banks can now deal in foreign drafts and acceptances and can co-operate with each other to engage in foreign trade banking. Thus the government is doing its part; now the business men of this country must do their part, and gentlemen, you must do yours.

THE BANKER AND OUR FOREIGN TRADE.

One of the most significant factors in foreign trade is the banker. As the wonderful foreign trade of Great Britain developed, British banks established branches and agencies all over the world. British foreign trade banks do business, for example, not only all over South America, the Orient, the East Indies and all along the coast of Africa, but far inland as well. There are branches of British banks 300 miles up the Niger, 800 miles up the Zambesi, and 1000 miles up the Nile. When Germany began her "drive" for foreign trade she established her own banks in South America, Africa, the Orient, and the Levant. She understood the necessity of having her own banks in foreign markets if her importers and exporters were to finance their shipments as they wished, were to have the credit information needed, and were to extend the credits required.

So far as the United States is concerned we are almost without foreign trade banks of our own. Only one bank has gone into this business on any extensive scale and it has only begun. The total capital and reserves of the 57 British overseas banks exceed $500,000,000. Excluding the Bank of England, these 57 banks have a greater total capital and surplus than the 56 domestic banks of the United Kingdom with their 8,000 branches. On the other hand, although our domestic banks, loan and trust companies have a capital and surplus of $3,400,000,000, which equals that of all the domestic banks of all the rest of the world combined, the capital and surplus represented in our oversea banking is less than $7,000,000. And that condition exists in the face of the fact that our foreign trade is the second greatest in the

Digitized by Google

world, is valued in billions of dollars, and calls for tremendous banking and financial transactions every day. This means that we are permitting our commercial rivals to do our foreign banking for us and to obtain the profits and commercial advantages that naturally result.

To establish foreign branch banks and agencies, to place at the disposal of our exporters American financial facilities instead of compelling them to depend on British, German and French, to give the necessary information of foreign credits, and to assist our exporters and importers to finance their transactions—all this is the province of the American banker. That is his part in the organization of American business, so as to hold and extend our foreign trade. It is not merely a duty. It is an opportunity. It means more business and more profits for our banks. For example, British and German foreign trade banks are well paid for carrying the credits of Latin American merchants and importers. British banks annually earn some commission or make some profit on every dollar of the nine billion dollars' worth of international bills drawn on London.

FOREIGN TRADE OPPORTUNITIES OF INLAND BANKERS

This is not merely the opportunity of the bankers of the coast cities. Inland bankers have their foreign trade opportunities, and you have yours right here in Ohio. In Cleveland, Cincinnati, Columbus, Toledo, Dayton, Springfield, Akron, Youngstown, Niles, Canton, Newark, Marion, Shelby, Mansfield, Hamilton and other Ohio cities overseas trade is growing rapidly and export shipments are made constantly. Furthermore Ohio merchants and manufacturers import millions of dollars worth of commodities every year. I presume that Akron alone buys one-fourth of all the crude rubber of the world. All these transactions involve the services of bankers. In short, gentlemen, foreign trade banking business that you ought to handle passes your doors every day on its way to New York or London. This war has thrown the spotlight on the opportunity; the government has opened the door; it is now up to you.

THE BANKER AND MORE EFFICIENT DOMESTIC BUSINESS

Important as our foreign trade is to us, our domestic business is far more important, and I am deeply desirous of seeing it placed on the footing of efficiency that we must attain. You may say that this is the problem of the manufacturer and the merchant, not of the banker, but, gentlemen, as I see it, you bear a heavy part of the responsibility for that problem and you must do your part in its solution.

BETTER COST ACCOUNTING ESSENTIAL TO EFFICIENCY

Among the essentials of efficiency in any business, correct and adequate knowledge of that business is the first That is the foundation, and the corner stone of a knowledge of business is the knowledge of costs. But the unfortunate fact is that a large proportion of the business men of the country do not know their costs accurately. Most of the big companies have good cost systems, but thousands of the smaller concerns have neither adequate nor accurate cost accounting.

Many concerns that report to the Federal Trade Commission manufacture four or five different articles. In these reports we ask them to give us the sales of each product separately, and nine times out of ten they cannot do more than give us the total for all their products together. If they do not departmentalize their sales accounts they certainly do not departmentalize their costs; hence they make prices on particular articles without knowing what those articles cost. Since they cannot tell where they are making money and where they are losing it, they cannot tell where to introduce economies.

Another still more serious feature of the situation is the fact that out of the 60,000 corporations that report an annual income of $5,000 or over, half do not charge off a single penny for depreciation. Obviously their cost systems are neither adequate nor reliable. They even go on paying taxes to the government on inflated values and inflated earnings. But no business knows its true condition till it has made allowance for depreciation, and no cost of production is a true cost which does not include depreciation of plant and equipment.

It is not the intention of the Federal Trade Commission to assume the attitude of scolding business men. We understand how these conditions have come about. But do you not think it is time for someone to call the attention of the business community, and particularly the bankers, to the significance of these facts?

THE FEDERAL TRADE COMMISSION AND COST ACCOUNTING

The Federal Trade Commission is doing all it can to help in this matter. In the first place we have prepared two pamphlets giving plainly and briefly the fundamentals of cost accounting, one for manufacturers and one for merchants. Thousands of requests are coming in for these pamphlets. We are surprised at the earnest response.

In the second place, the commission is cooperating with many trade associations which are endeavoring to get their members to adopt sound accounting systems. We send our experts to meet with them and discuss the features of cost accounting that are peculiar to the particular industry. We tell them to work out a system of cost keeping. When they bring it in the commission will counsel with them and will approve it as a basic system for that industry. With this general standard officially approved, details to vary, of course, with the individual companies, the association has a strong argument to bring its members into line with sound accounting.

Such co-operation in order to put our industries in possession of the facts of cost is a vital function of the trade associations; for only when correct cost systems are generally in use can an industry intelligently attack the problem of improving scientifically its methods of production and distribution. This kind of co-operation counts most, and it can look the anti-trust laws squarely in the eye. Let me say right here that I do not believe in agreements to fix prices. I have no sympathy for associations or combinations that attempt it. In the first place it is illegal, and in the second place, even if it were legal, it would still be a bad thing. It simply covers up inefficiencies instead of getting rid of them. It is not a remedy for the disease that ails business. It is merely an opiate.

THE BANKER AND COST ACCOUNTING.

You bankers have an interest in every movement that makes for the welfare of American business and the general prosperity of the public, for that welfare and that prosperity constitute the security for your loans. But you have also a public responsibility, which I am sure you are proud to acknowledge, for the wise and healthful distribution of capital among the enterprises of the country. It is to your interest and is a part of your responsibility to do your share toward bringing about better knowledge of business costs and higher efficiency in business.

Suppose three manufacturers come to your bank for loans. Smith lays before you his cost sheets. They are detailed and clean cut; he explains some recent economies they have taught him. He shows you his balance sheet. He has a carefully considered depreciation charge. He shows just what that business is worth, and you know he is right. Brown's cost sheets are very general. They don't give him a real analysis. He doesn't carry any depreciation charge; but guesses he ought to a says that when a good business year comes along he will write off four or five thousand dollars. Then Jones comes in. He says he hasn't any cost system; it costs more than it's worth; besides he knows what his goods cost him, carries it in his head. When you speak of depreciation, he asks, "What's that?"

Now, what are you going to do with these three types of manufacturers? The Smith type, of course, gets his loan. But what is your duty to Brown and to Jones? If you give them a loan, don't you think you ought to condition it upon the establishment of an accounting system that will show their real costs and their real financial condition?

I think you ought to do this not simply for their sakes and to protect your loan to them, but to protect your loan to the man who is sound and to protect business as a whole. For the man who does not know his true costs is just the man who prices his goods foolishly, and thereby impairs the business of his sound competitors at the same time that he ruins his own. Too low price-making, based on guesswork or on partial costs, is a menace to sound business. Please understand me, the menace is not in underselling, for a business concern must expect to face the low prices that are due to efficiency. But even the most efficient concern may not be able to meet cutthroat prices based on ignorance.

A PLAN TO INSURE BETTER COST ACCOUNTING.

Let me outline, in closing, a suggestion which it seems to me will go far to enable the bankers of the country to give intelligent help in the movement for business efficiency. I hope that in the not very distant future each industry in this country will have developed a basic cost system that will fit its particular needs; that the question of a reasonable and adequate basis for depreciation will be worked out for each industry; and that these basic systems will be approved by the Federal Trade Commission. Moreover, I hope that it will be possible for any public accountant, by conforming to certain tests and rules laid down by the Federal Reserve Board, to have a United States registry.

Under this plan the balance sheet of tomorrow, as presented to a banker, will have the certificate of a public accountant and, in addition, bear a registration stamp or number of the Regional Reserve Board. When this is brought about the banker will be particularly benefited. It is a well known fact that the certified public accountants are willing and ready to do their part in seeeing that the banker is presented with a statement or balance sheet that will show the real facts in regard to a particular concern whose books they may have examined. The trouble is that many manufacturers are unwilling to agree with their accountants as to what amount shall be charged off to depreciation. When a public accountant attempts to make a proper charge for this, he is confronted by the manufacturer with a state-

Digitized by Google

ment like this: "My machinery and building are as good as they were ten years ago, and your charge for depreciation is too high." The accountant, although anxious to do what is right, realizes that unless he is willing to agree with his client he is likely to lose him, and compromises by charging off an insufficient amount for depreciation. The next year similar conditions arise; and after this has continued for two or three years, it is a very hard matter to treat this item in such a way that the balance sheets will be on a correct and sound basis. But when we have an officially approved basis for depreciation in that manufacturer's industry, the accountant and the banker working together will be able to bring the manufacturer into line.

I do not want you to get the impression from this that I am advocating that all books should be kept under governmental supervision, nor that public accountants should not be allowed to certify business accounts without a United States registry. But if a public accountant has his registry number, and if the manufacturer complies with the fundamental system, then let the accountant make and seal his certification in his capacity as a United States registered accountant.

My suggestion may not be popular, and I appreciate that many criticisms will be aimed at it by business men, and even by some accountants. But, gentlemen, when we are confronted by such conditions as I have outlined, don't you think something of this kind ought to be done?

In my judgment, such a system of accounting and certification would give much greater assurance to national, state and private banks in financing the business of the United States and would go far toward developing the efficiency and financial soundness that are imperative for the industrial future of this nation.

Establish such a system; add to it all that can be gained through co-operation in trade associations for greater economy and intelligence in production and distribution; stabilize our industry and increase our prestige by taking advantage of the new legislation for advancing foreign trade; and you have a program which will prepare American business to face the reorganized industries of Europe.

As for the bankers, I am certain that they will carry out their part with honor. A program such as we have been discussing implies full confiednce in their integrity and fairness, and I know that this confidence is abundantly justified.

"The Utilization of Southern Pine Mill and Woods Waste"

Address by Howard F. Weiss, Director, Forest Products Laboratory, Madison, Wisconsin. Prepared for the Salesman's Conference of the Southern Pine Association, St. Louis, Mo., June, 1916

To make something from nothing is impossible. There are some who feel that the practical utilization of southern pine waste is on a par with this statement. While the problem of successfully using such waste is a complex one, nevertheless, it is felt that much can be done towards its solution. Encouragement comes when we realize that the average length of a board in final place is about 4 feet. Furthermore, the problem is of such enormous magnitude that a strenous effort to successfully solve it must be made. From some measurements of the amount of waste in southern pine operations, it appears that only 31 percent of the standing forest is marketed as lumber. One thousand feet board measure of lumber represents 83 cubic feet of wood and to produce this 83 cubic feet it is necessary to destroy 268 cubic feet.

Now, then, this 31 percent of the standing timber has to pay all costs for promotion, protection taxes, logging, milling, depreciation, the salaries of salesmen and, in addition, a profit to the owner. I believe you will admit that this is a tremendous burden to ask lumber to carry by itself, and it is this factor which is largely responsible for many of the difficulties the lumber industry has been and is having. Then again, there is little likelihood that any of these cost items will come down. In fact, the tendency is for them to advance.

THE PROBLEM DIFFICULT.

Furthermore, the price of lumber can not rise appreciably above past levels because of competition with other materials. The problem, therefore, which the manufacturers of southern pine lumber have to face is a most difficult one and any method which will distribute the burden of over-head and operating costs over more than 31 percent of the standing forest is worthy of most serious consideration.

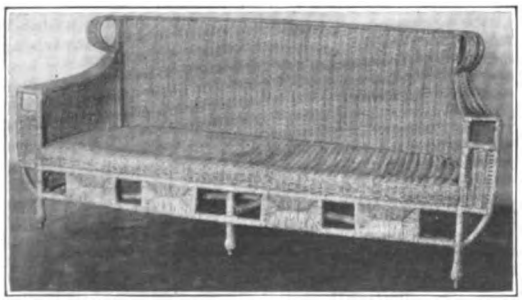
It is gratifying that much progress in the utilization of waste has been made and several of the lumbermen in this association are now successfully working their waste into commercial products at a profit. But even under the most efficient management, there is much which yet remains to be done. It is the purpose of this paper to briefly analyze the waste situation and to suggest certain remedial measures,

HOWARD F. WEISS, DIRECTOR FOREST PRODUCTS LABORATORY, MADISON, WIS.

Many important details must of necessity be eliminated.

AMOUNT OF WASTE NOW PRODUCED.

If we assume that the total annual lumber cut of the United States is 40,000,000,000 feet, our sawmills produce about 62,000,000 cords of waste containing 100 cubic feet of solid wood each. Of this amount, approximately 24,000,000 cords are produced in the mill and 38,000,000 cords in the forest. In southern pine we may assume that the annual cut is approximately 16,000,000,000 feet and that the total waste now occurring in your industry approximates 25,000,000 cords.



COUCH MADE OF SPUN PAPER REEDS WOVEN OVER A WOOD AND RATTAN FRAME.

PRESENT METHODS OF UTILIZING SOUTHERN PINE WASTE.

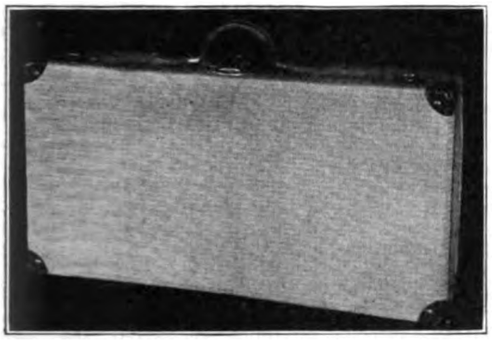
Present methods of successfully utilizing the waste of southern pine may be roughly divided into two large divisions. First, mechanical utilization or the manufacture of wooden articles; second, chemical utilization, or the production from wood of products other than wood. It is with the former that you gentlemen can be of greatest assistance to your industry.

Southern pine woods waste is now being utilized for the manufacture of cross-ties, fence posts, mine timbers, small poles and poles and piling, pulpwood and cordwood. According to our records, southern pine mill and factory waste is now being used in the manufacture of 287 separate classes of articles, as shown in Table 1. It is my suggestion that you gentlemen study very carefully the various articles listed, as this may furnish you with suggestions for more satisfactorily solving the disposal of the waste of your company. I regret that I do not have information at present, on the sizes of the various pieces of wood used in the articles mentioned or specifications giving the quality of wood required.

The chemical utilization of southern pine waste has also made gratifying progress. The most important processes now in successful operation are: the destructive distillation process which converts the waste into turpentine, wood oils, and charcoal; the extraction process which converts the waste into turpentine and rosin: the sulphate process whereby southern pine waste is converted into kraft paper; and, the ethyl alcohol process which produces ethyl (grain) alcohol. This is not the place to enter into a discussion of the technique of these processes but from a hasty inventory, it appears that 250,000 cords of southern pine waste are now being used annually by the processes just mentioned, or, roughly, about one percent of the total waste of the southern pines.

It is of interest to note that the chance for extending these processes is very good, par-

Digitized by Google



SUIT CASE MADE OF SPUN PAPER MATTING. THIS MATTING HAS A COTTON FILLING.

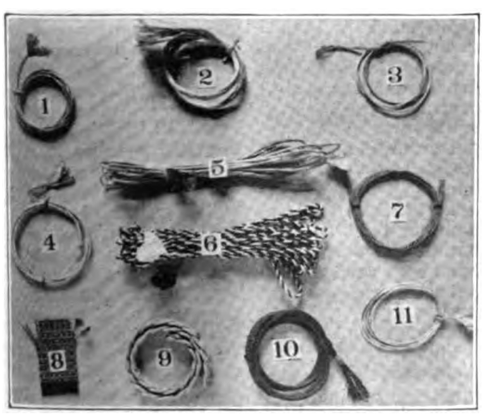
ticularly in so far as the manufacture of paper and fiber products, grain alcohol and rosin are concerned.

ARTICLES MADE FROM "WOOD WASTE."

I want to show you some articles which can be made from wood waste, in order that your conception of the value of wood may be broadened. It is my firm conviction that it is in the production of articles like these that the future of wood utilization looks brightest, and that such increased production will revolutionize the profitableness of timber operations. (Mr. Weiss exhibited here kraft paper, paper twine and rope, onion sacks, coffee bags, barrel tops, fiber rugs, silk cloth, silk stockings, sausage cases, and a number of other articles made from wood.)

SUGGESTIONS TO IMPROVE THE WASTE PROBLEM.

After this brief consideration of the importance of the waste problem, the amount of waste now occurring, and the extent to which it is being used, I wish to discuss with you certain suggestions, which if made effective would, in my judgment, greatly increase the returns now derived from the utilization of southern pine waste. The problem is so big, reaching not only into the field of salesmanship but into manufacturing efficiency and science, that you gentlemen can not be held responsible for its solution, but you can, undoubtedly, do much to assist in its solution. In addition to your efforts it is absolutely necessary for both the manufacturers of pine lumber and for technical workers to devote much brains and money to it. Do not feel that I advocate converting you lumber salesmen into drummers for babies' silk stockings or ladies' dresses. You are too old for that. These processes when finally established will require a specially trained corps of salesmen; for example, the products of the paper mills will be sold by paper salesmen but all of you will be working in a common cause—the increased utilization of wood. I believe that your field lies in pushing a better utilization of wood along the mechanical lines mentioned above.



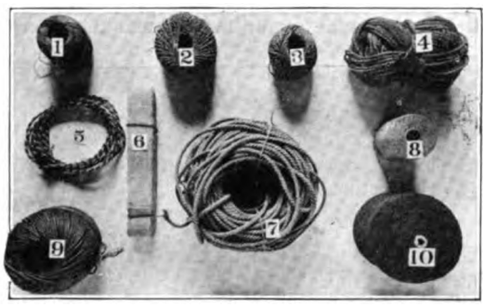
TWINE AND BRAIDS MADE FROM SPUN PAPER PRODUCTS: ALL OF AMERICAN MANUFACTURE.

INTENSIVE STUDY OF WOOD REQUIRED.

The specific suggestions to improve the utilization of southern pine waste which I wish to consider with you are: First: An intensive study should be made of the kinds, dimensions and quality of wood required by the various wood using industries.

As a rule, salesmen of lumber are not sufficiently informed in regard to the manner in which lumber is finally worked by the wood using industries, and I believe that many salesmen would strengthen themselves if they studied the operations of various wood using factories and saw with their own eyes the manner in which boards are cut and used. It is along this line that I believe you can be of greatest assistance in the solution of the southern pine mill waste problem. You can by such study collect a fund of information in regard to the dimensions and quality of wood required by the wood using industries which if reported to your association or to your concern would undoubtedly suggest ways and means of disposing of much waste now produced.

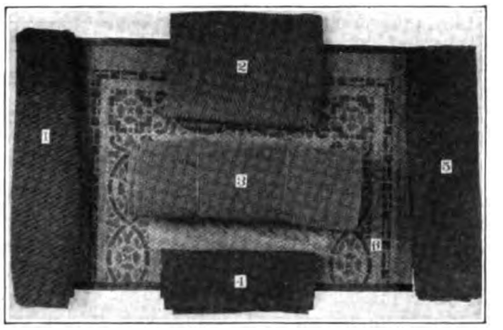
It might interest you to know that the United States Forest Service has established in Washington what is known as a "Wood Waste Exchange." It has listed the names of various manufacturers who have waste to sell and also the names of various consumers who wish to purchase waste. These lists give the names of the concerns, the kinds of woods they require, sizes, and quantity annually consumed or produced. I believe the lumber associations of the United States would profit by building up similar lists for their own special requirements, making it available to all of the manufacturers who belong to the association.



SAMPLES OF CORDAGE MADE FROM "WOOD WASTE" MANUFACTURED IN THE UNITED STATES AND IN SWEDEN.

At the risk of making myself unpopular with the lumber secretaries who are already comfortably occupied, I think that the problem of successfully utilizing wood waste is of sufficient importance to justify their association in employing a man who could specialize on this problem and who would report to the association facts and figures concerning market for waste. It is my judgment that this procedure would prove more effective than placing the responsibility upon the salesmen, since the question of wood waste utilization is a special one and requires concentrated and continuous application.

The second suggestion to bring about improvement in the utilization of waste, is that greater attention should be given to the manufacture of lumber. In other words, this phase of the problem belongs to the manufacturing rather than to the sales end of the lumber business. I allude specifically to the cutting of log lengths, to the sawing of lumber, to careless edging, trimming and planing, improper and careless kiln-drying and yard seasoning, etc. Let me illustrate:



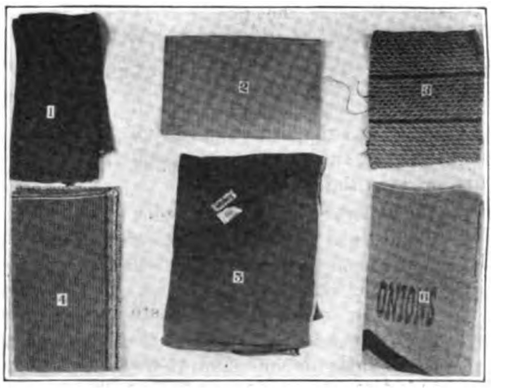
FLOOR AND WALL COVERINGS MADE FROM WOOD WASTE.

In a study which we made at two sawmills in Oregon which manufactured Douglas fir we found that at one mill planing 4/4 C-select, the planer was fed at the rate of 150 feet per minute, the blades making 2,800 revolutions per minute. At the other mill manufacturing the same kind of lumber, the speed of feed was 73 feet per minute, the planer making 3,400 revolutions. The degrading at the first mill attributed to the machine was 70 cents per thousand and in the second 10 cents.

It is estimated that lumber manufacturers lose annually about $33,000,000 due to improper seasoning and kiln-drying of their lumber. We made a study of the extent of depreciation in air-seasoning lumber at a western yellow pine mill and found that the 4.4-B-select western yellow pine depreciated 15.2 percent in air-drying representing a loss of 6.19 per thousand. Some tests made at another mill in the same locality where the lumber was carefully graded and where greater care was taken by the management in properly piling the lumber, the loss for the same grade of boards was only 2.6 percent or $1.13 per thousand. Another study was made in a sugar pine mill in California which showed excessive losses in air-drying. I give below a table showing what was found in this study. You will note that the deterioration of the No. 1 and 2 clear sugar pine amounted to $17.90 per thousand.

TABLE 2.

Cause of Deterioration	Amount Ft. B. M.	Percentage of Pile	Percentage of Deterioration	Loss per M
No deterioration	1,380	24.5	0	0
Check	426	7.5	9.9	$1.77
Check and stain	178	3.1	4.2	.75
Blue stain	2,917	51.7	68.2	12.21
Stain and pitch	121	2.1	2.9	.52



BAGS AND BAGGINGS MADE FROM WOOD WASTE: BOTH AMERICAN AND SWEDISH MANUFACTURE.

Digitized by Google

Stain and hookholes	37	.6	.9	.16
Stain and flume	115	2.0	2.7	.48
Pitch	145	2.5	3.5	.63
Flume damage	208	3.8	4.6	.82
Hookholes	57	1.0	1.3	.23
Cross grain	73	1.2	1.8	.33
Total	5,657	100.0	100.0	$17.90

Unfortunately we have not conducted studies of this kind in the Southern pine region so I am not able to give you specific figures from your locality, but I feel that if you would examine critically into the deterioration or loss of your lumber caused by improper manufacturing, kiln-drying and piling you would be astonished at what is now occurring.

CO-OPERATION TO PREVENT WASTE.

As our third suggestion: I believe the lumber manufacturers should co-operate more closely with the manufacturers of wood working machinery in the development of machines to reduce the cost of handling and manufacturing waste. While in specific instances this co-operation is close, I believe it is not close enough and that if the lumber manufacturers worked more closely with the manufacturers of wood working machines greater progress in the successful utilization of waste would result.

One of the most difficult problems to be solved in the successful use of waste, is the elimination of excessive costs for handling waste. When waste is handled by hand, the cost of making a product from it is frequently as high that little or no profit can be realized. Lumber manufacturers through their associations, should call their specific problems to the attention of these wood working machinery concerns and encourage them in testing out such machines, as they may develop.

UNIT COST KEEPING SYSTEM.

My fourth suggestion is that an effective unit cost keeping system should be adopted which will give the manager a sharp knowledge of the cost at all stages in manufacturing lumber. Without such a knowledge, a business cannot be run most successfully. At this point, I wish to call to your attention the results of two tests we made to determine the rate at which lumber is sawed from large and small logs and the cost per thousand feet of manufacturing lumber from such logs. I might state that these tests were made at two different sawmills, a stop-watch being kept on the various stages of the operation and where no change in the regular method of sawing was made. The first study was in a Douglas fir mill sawing grade 2 logs 24 feet long. It furnished the following data.

Sound Douglas Fir.

Mostly 2-inch stock but a little 1-inch stock and a few timbers cut uniformly from logs of various sizes.

Diameter of Logs ins.	Rate Production per Hour	Cost per M Net Lumber Tally
12	4,860	$5.70
30	8,820	3.09

Another test make at a hardwood mill in the south where the stock was sawed into 1-inch lumber gave the following data:

Sound Red Oak.

Plain sawn 16'. Mostly 1" stock but a few ties.

Diameter of Logs ins.	Rate Production per Hour	Cost per M Net Lumber Tally
15	3,215	$2.37
25	4,581	1.66

Of course the process of sawing logs into lumber is simply one stage out of several which ought to be studied. It is my feeling that if such an accurate analysis of logging and milling costs were made, it would result in materially modifying the products into which many logs are now sewed, and would assist in the solution of the wood waste problem.

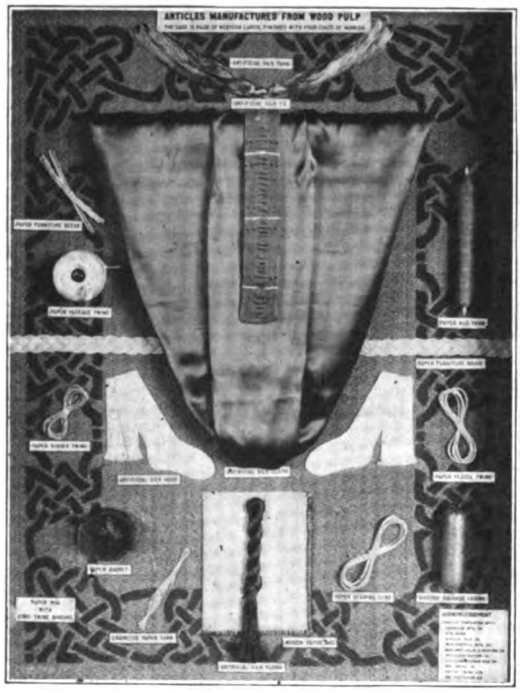
DEMAND FOR SCIENTIFIC STUDY.

The fifth suggestion is that lumbermen should take an active interest in and co-operate closely with, all institutions that are scientifically studying the manufacture of merchantable products from wood. I have in mind such institutions as the one I represent. I believe that by a closer co-operation much more could be accomplished in reducing the losses now occurring in the manufacture of lumber through the production of inferior lumber and waste.

It is my feeling that not only should the lumbermen make it a point to co-operate very closely with such technical organizations already established, but that they should have institutions of their own which would study their specific problems.

USING "WOOD WASTE" PRODUCTS.

My sixth and last suggestion is that the lumbermen should encourage the purchase and use of all articles made from wood waste in so far as they can. I have in mind, for example, such articles as the wooden box and paper twine made from mill waste. Such use on the part of the lumbermen themselves will encourage concerns struggling to manufacture wood waste, and will in the long run react to the direct advantage of the lumber manufacturers.



ALL THE ABOVE SAMPLES MADE IN THE UNITED STATES EXCEPT THE SAUSAGE CASE WHICH WAS MADE IN CANADA, THE ENAMELED PAPER YARN MADE IN ENGLAND AND THE ARTIFICIAL SILK FLOSS AND YARN MADE IN GERMANY.

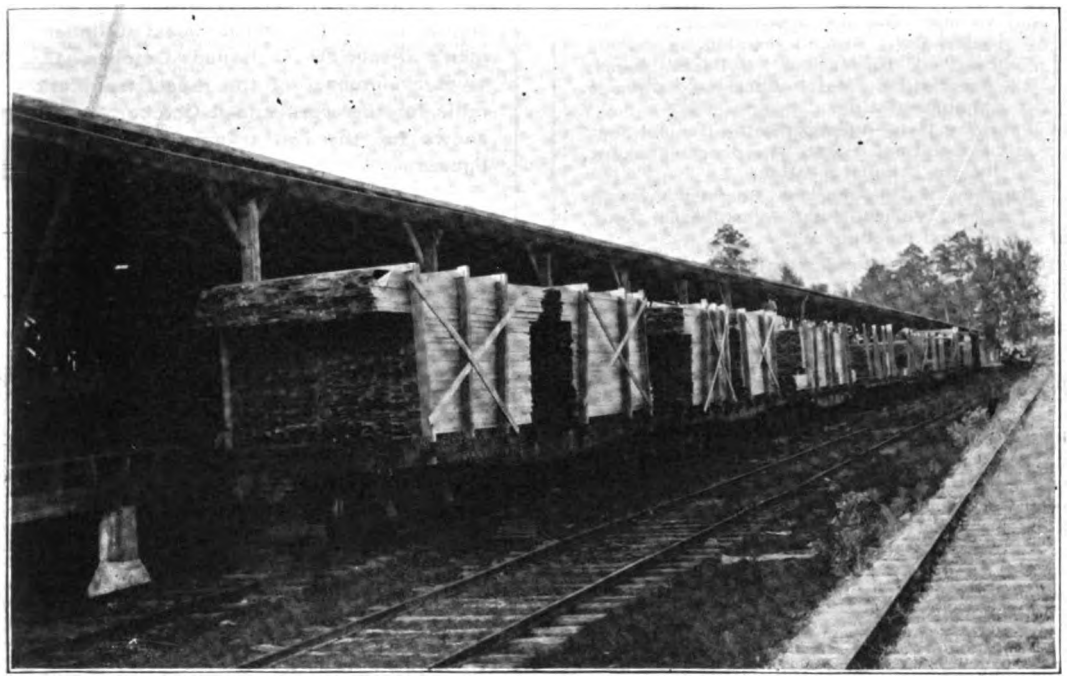
Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Demand for factory products has kept up right through the month and from all appearances will not show any falling off until the holidays, if then. While the lumber trade, of itself, is not particularly active, the sash and door demand is unqualifiedly so, a condition of affairs that does not often occur. For several months the sash and door men have been well occupied in prosecuting their affairs and are looking forward to an equally good period of activity in the next month. One or two advances in price have been made in the last few months, but manufacturers state that there is a prospect of further advances because of the strength shown in window glass and the higher prices of raw material, generally caused by car shortage.



THE ABOVE VIVIDLY ILLUSTRATES THE ACTUAL BOX CAR SITUATION IN ARKANSAS.

Some nervousness is felt because of the foreign situation and securities are inclined to be unsettled and hence business men are not making plans very far ahead. The presidential campaign has caused some distraction and as a rule the average buyer is not going far afield in the volume of his purchases.

In the Retail Trade.

The retail business in the smaller centers is falling off to some extent, as not so many new buildings are being put under way. However, there are many structures that are now ready for their interior trim, doors and windows and this is what is causing much of the current activity. Besides, stocks in the retail yards have run down to very small proportions and with car scarcity and the natural desire to insure against a further advance in price, the dealers are buying somewhat more liberally and are stocking up in a conservative way.

The Firmness in Prices.

As a usual thing it has been difficult to get the sash and door distributing trade to think and act alike as regards values, but within the recent month there has been a considerable change for the better. Those distributers who have been accustomed to shade their quotations whenever there was an order in sight are now assuming a slightly different attitude. They see that the goods they are selling cannot be replaced at less than they were purchased for and have gradually arrived at the conviction that the market is in a substantial condition and likely to go a little higher. Discounts that were in effect October 1 are still ruling and on lots less than 100 openings, are as follows: No. 1 and 2 doors, 69 percent; No. 3 and painted doors, 64 percent; white pine mouldings, 55 percent; glazed sash, 73 percent. For over 100 openings the discounts are, generally speaking, about 1 percent additional to the above.

The Window Glass Market.

There is a feeling of relief in the trade over the general improvement seen in window glass, perhaps due to the fact that the factories are starting up at this date and there will be a general filling out of consumers' assortments, now badly broken. For some time past the reduction in stocks has been going on very rapidly until there is little of the staple sizes available. According to the latest reports A single strength window glass, first three brackets, is selling at 88 off; B single strength at 90 off. In double strength A is quoted at 88 off and B at 89 off. Plate glass is ruling very strong on account of low stocks and also lack of importations. The price is now about two and a half times that ruling the first of the year, the ruling discount now being 87 percent off.

Southwestern Trade Reports.

Owing to the practical crop failure in the southwest, sash and door men are rather astonished, as well as pleased, to witness the excellent business coming to them. Not for several years has the trade at this season been as good at Kansas City or St. Louis, demand being largely for country delivery and mostly special work. Business throughout the far southwest, owing to the high prices derived for grain, is fairly good and the lumber trade is coming in for its share of the better trade. The factories are, therefore, well filled up with orders, mostly of the smaller size and in special work. The market on both doors and sash is quite firm, prices being based on about the same level, with freight differentiated, as are ruling over the rest of the country.

Pacific Coast Market.

Door men on the coast say that they are not able to ship their stock, owing to the car shortage, but their business is fairly good. There has been considerable inquiry for eastern shipment, both at Tacoma and Seattle, especially for fir doors, and if there were cars available the factory men believe that they could do a splendid business. At the pine door mills in California, operations are proceeding steadily and demand is reported fairly heavy, but shipments are being greatly retarded. Some complaint is heard at San Francisco because of the inability to raise prices on local deliveries on doors and millwork, owing to heavy competition.

Eastern Trade Developments.

Trade in several of the eastern cities has been uniformly active thus far this fall and enough business is in sight to keep local distributers well occupied. At Buffalo everything is being rushed forward before cold weather comes and the demand for doors and trim is quite urgent. At New York the sash and door market is rather quiet, although many buildings in the district are reaching the stage where the factory work is needed. At Baltimore the local plants are well filled up with orders for both stock and odd work and the outlook for a good trade for the next month or so is first class. At Philadelphia the demand is only fair, as little outdoor work is being started and that already under construction has not yet reached the stage where the mill work is wanted. Building is hampered also by the scarcity of carpenters.

In the Middle Northwest.

Evidences of the approach of winter may be seen in the door industry of the Twin Cities. There is a rising a good demand for storm sash and storm doors and this will likely be the principal feature of the door trade at Minneapolis and St. Paul during the next six weeks. There is not so much buying from the country yards, as they, too, are feeling the approach of cold weather. Whatever is needed is for rush delivery, which gives an appearance of activity at the distributing warehouses. Prices are being maintained with a considerable degree of firmness.

AGAIN BUYING AEROPLANE STOCK.

The entente allies are again buying Pacific coast spruce aeroplane stock, after having been practically out of the market for several months. According to information furnished by the West Coast Lumbermen's Association, shipments of spruce for aeroplane purposes amounted to 2,353,355 feet, valued at $125,243, during September, being the heaviest of any one month since the war started.

General News of Associations and Clubs

CALL FOR SEMI-ANNUAL OF CYPRESS MANUFACTURERS.

Jacksonville, Fla., Oct. 5, 1916.

To all Members:

The semi-annual meeting of this association is hereby called to assemble at the New Mason Hotel, Jacksonville, Fla., at 10:30 o'clock a. m. on Wednesday, November 1.

Announcement has already been made of very important business to come before this session and it seems superfluous to mention, in this call for the meeting, the fact that this will be one of the most important sessions ever held by our association. With a complete revision of the constitution and by-laws, and with the contemplated action on trade-mark and grades, it would seem to require no urging to induce every member to be present. We trust there will be a full attendance.

Very truly yours,
Frederic Wilbert, President,
Geo. E. Watson, Secretary.

WEEKLY YELLOW PINE BAROMETER.

The trade barometer issued by the Southern Pine Association, October 16, gives the figures for the week ended Friday, October 13, from 152 mills as follows:

	Cars	Feet
Orders on hand	25,276	533,576,360
Orders received during week	4,586	96,810,460
Total	29,862	630,386,820
Shipments during week	3,666	77,389,260
Balance orders on hand	26,196	552,997,560

Orders exceeded production 7,678,815 feet or 8.62 percent and exceeded shipments 19,421,200 feet or 25.10 percent. The orders, shipments and unfilled cars for each week from July 21 to and including October 13, were as follows:

Week Ended.	Mills Reporting.	Average Orders Feet.	Average Shipm't Feet.	Total Unfilled Cars.
July 21	150	697,933	504,758	18,130
July 28	158	894,095	617,704	20,590
Aug. 4	154	687,671	638,443	30,552
Aug. 11	165	703,996	643,840	23,020
Aug. 18	162	704,955	641,079	22,674
Aug. 25	164	669,024	659,150	23,487
Sept. 1	152	625,570	610,499	19,962
Sept. 8	157	538,353	565,145	23,284
Sept. 15	164	669,579	606,197	24,122
Sept. 22	168	671,331	558,540	24,539
Sept. 29	153	641,717	522,626	24,242
Oct. 6	160	514,549	435,300	24,409
Oct. 13	152	636,911	509,140	26,196

WEST COAST ASSOCIATION EXPANDS.

The West Coast Lumbermen's Association announces the opening of a special service branch for its Oregon members, the new department to be in charge of Chester J. Hogue, who will have temporary headquarters at 207 Oregon building, Portland.

Mr. Hogue, who is an expert in structural and architectural engineering, comes by lumber industry work "honestly" his grandfather having built the first sawmill in what is now the city of Portland some sixty-five years ago. His father, for forty-one years, was one of the leading lumbermen of the Columbia river district.

After spending his boyhood around the mill, the younger Hogue studied structural and architectural engineering at the Massachusetts Institute of Technology and was engaged in the practice of his profession in New England for fifteen years.

Mr. Hogue has developed a type of "mill constructed" building, in which exterior walls of timber or reinforced concrete skeleton frame have all the advantages of light, and the strength of a reinforced concrete structure, at much less cost and with greater flexibility for remodeling and additions, making such buildings very practical for factory purposes of limited capital.

It is said these buildings have the advantage of the same insurance rates as concrete buildings and that they rank very high in the structural building world in regard to fire resistant qualities.

CONVENTION DATES.

October 26—South East Kansas Lumbermen's Association, Independence, Kansas. Annual meeting.

October 26—North Carolina Pine Association, Charleston, S. C. Monthly meeting.

October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.

October—27—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Fall meeting.

November 1—Southern Cypress Manufacturers Association, New Mason Hotel, Jacksonville, Fla. Semi-annual meeting.

November 7—Louisville Hardwood Club, Louisville, Ky. Annual meeting.

November 11 — Southern California Retail Lumber Dealers' Association, Los Angeles, Cal. Annual meeting.

February 11-12—National Builders' Supply Association, Hotel Sherman, Chicago. Annual meeting.

February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.

January 18-19—American Forestry Association, Willard Hotel, Washington, D. C. Annual meeting.

January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.

January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

January 30-31—Hardwood Manufacturers Association of the United States, Hotel Sinton, Cincinnati, Ohio. Annual meeting.

February 7-8—Retail Lumber Dealers' Association of Pennsylvania, Fort Pitt Hotel, Pittsburgh, Pa. Annual meeting.

February 7-8-9—Nebraska Lumber Dealers' Association, Hotel Rome, Omaha, Neb. Annual meeting.

February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.

FALL MEETING OF THE MICHIGAN HARDWOOD MANUFACTURERS' ASSOCIATION.

Detroit, Mich., Oct. 24.—The Michigan Hardwood Manufacturers' Association will meet tomorrow at the Statler Hotel for the regular fall meeting.

A full attendance of the members is expected as many important subjects are up for discussion; among these are proposed changes in the hardwood rules, market conditions, amendment to the constitution increasing hardwood assessments, uniform terms of sale, and continuing the work of the Forest Fire Protective Department.

RITE-GRADE SHINGLE MANUFACTURERS VISIT THE VANCOUVER MILLS.

Following out a policy of keeping in close touch with manufacturing conditions at all mills participating in the national campaign for a trade-marked quality-guaranteed shingle, Rite-Grade manufacturers met at Vancouver, B. C., on September 22nd and 23rd, for the purpose of inspecting the mills in British Columbia which are participating in the Rite-Grade movement.

On the morning of September 23, the shingle manufacturers held their business session in the rooms of the British Columbia Shingle Manufacturers, Ltd., during which routine business in connection with the Rite-Grade movement was transacted. The British Columbia mills at this session surprised the Washington manufacturers in the strength of their marketing of Rite-Grade shingles in the Canadian northwest provinces.

Following the business session the Washington millmen were guests of the British Columbia shingle manufacturers at a luncheon at the Terminal City Club, following which came an afternoon of recreation at the Shaunnesy Town and Country Club.

In the evening there was a business session during a dinner at the Vancouver Club, at which time practically every Rite-Grade manufacturer present gave his personal views and experience as to the Rite-Grade movement.

The second day of the meeting was spent at the four Vancouver Rite-Grade shingle mills. The first visited was the Vancouver Cedar Mills, Ltd. The second, the Thurston-Flavelle Lumber Co., then the Westminster Mill Co., Ltd., and finally the Hunting-Merritt Lumber Co., Ltd.

WEST COAST ORDER FILE.

The weekly report of order file and shipments of the West Coast Lumbermen's Association, issued October 17, gives a summary of the report from 113 mills for the week ended October 14. It shows for the rail trade the following figures:

	Cars
Unfilled orders week ending October 7	6,472
Orders accepted week ending October 14	2,154
Total	8,626
Orders shipped week ending October 14	1,512
Balance of unshipped orders	7,114

Rail orders exceed rail shipments, 11,984,605 feet or 18.04 percent.

For the cargo trade, both domestic and export the figures are as follows:

	Domestic Feet.	Export Feet.
Unshipped orders week ending October 7	46,793,084	49,463,537
Orders accepted week ending October 14	10,497,825	2,070,240
Shipments week ending October 14	7,292,216	4,834,980
Totals	57,290,909	51,533,777
Balance unshipped orders	49,998,693	46,698,797

SHIPMENTS OF WESTERN PINE.

Spokane, Wash., Oct. 16.—Members of the Western Pine Manufacturers' Association during August shipped 4,285 cars containing 103,696,000 feet of lumber, according to the report of the association issued from the head offices in Spokane this week. The shipments in August, 1915, were 4,089 cars, containing 101,196,000 feet. The cut for the month by 35 mills in 1916 was 124,534,000 feet, as compared with 111,901,000 feet in August, 1915.

CONFERENCE OF LUMBERMEN SEEKING RELIEF FROM CAR SHORTAGE.

Memphis, Tenn., Oct. 21.—About fifty lumbermen, representing the Southern Hardwood Traffic Association, cooperage industries, the Gum Lumber Manufacturers' Association, and the Lumbermen's Club of Memphis, attended the conference held here yesterday for the purpose of taking action looking to relief of the shortage of cars situation. It was the consensus of those present that it was impossible to secure more than 40 percent of the cars necessary for the filling of orders for lumber. It was agreed that the present shortage of cars has come about from the fact that a majority of southern railroads do not own a sufficient number of cars for the mileage operated by them, and resolutions were adopted voicing this fact, and providing that legislation be promoted requiring southern roads to operate a sufficient number of cars. Shippers who participated in the conference represented conditions prevailing on 25 different railroads. Jno. W. McClure, president of the Southern Hardwood Traffic Association, occupied the chair.

Immediate relief, however, is to be sought through recourse to the Newlands congressional committee and the Interstate Commerce Commission.

The Interstate Commerce Commission will be asked to put into effect by November 1, for the imposition in congested districts, rules providing for higher demurrage charges than those now in use. It is desired that these proposed regulations remain effective until February 1.

The demurrage rules to be asked are: That after the first 48 hours the charge shall be $2; that on the third day the charge shall be $3; that on each succeeding day the charge shall be $5; that these rules shall apply on cars in use for export shipments after the expiration of the usual 10 days' free time.

A claim of southern lines that their cars are being held by northern roads, which continue to use them, instead of returning them to their owners, will also be presented to the commission.

These recommendations were embodied in a resolution prepared by a subcommittee, which provided, further, however, that all other shippers' associations of the country be interested in a concerted movement to present the measure to the Newlands congressional committee in November.

EXPORTERS OF SOUTHERN PINE TO ORGANIZE SELLING AGENCY.

New Orleans, La., Oct. 17.—At a meeting held here today definite steps were taken toward forming an export selling agency of pine exporters and the special committee appointed by the Southern Pine Association.

The meeting was called to order by Secretary-Manager Rhodes of the association, who reviewed the steps already taken by the association in disussing plans and appointing the special committee on September 28. He stated the opportunities for doing business in Europe after the close of the war were so promising that full advantage of them can be taken only by the organization of a strong selling agency representing such producing capacity as would make it possible to handle the largest available orders. He reviewed the work of the Southern Pine Association in connection with the exhibit recently made in Paris and the necessity of following up the possibilities.

Edward Hines was then introduced as chairman of the special committee; he emphasized the necessity of organizing an export selling agency to meet the opportunities for foreign trade, such as the industry had never before experienced. Mr. Hines invited free discussion by all present. Without exception, all present, representing many manufacturers, expressed the opinion that measures should be taken without delay to create such an organization, and many of these speakers expressed a desire that their companies should maintain in any selling organization with which they may co-operate, those brands and trademarks whose reputation their companies has spent years in establishing. And it was stated that there could be no legal objections to the proposed organization.

After a general discussion the resolutions prepared by the committee were read and adopted.

Mr. Hines was nominated as permanent chairman, but declined to serve, stating that he had not the requisite time to serve, nor sufficient familiarity with the export business. M. B. Nelson, of the Long-Bell Lumber Co., was nominated as permanent chairman and elected.

The meeting was then adjourned, subject to the call of the chairman.

MEMPHIS LUMBERMEN IN SEMI-MONTHLY MEETING.

Memphis, Tenn., Oct. 20.—There were sixty-nine members and visitors present at the regular semi-monthly meeting of the Lumbermen's Club, of Memphis, held at Hotel Gayoso, on Saturday, October 14. S. M. Nickey, presided. Among the prominent guests present was N. H. Walcott, of Providence, R. I.

George C. Ehemann, chairman of river and rail committee, called attention of the members to the importance of the decision which is shortly to be handed down by the Interstate Commerce Commission with respect to the proposed advances on cottonwood and gum from southern producing points into Central Freight Association and Western Trunk Line territory. The railroads are seeking to advance gum and cottonwood to the same basis as oak and other hardwoods, and are likewise seeking to secure an advance of about one cent per hundred on all hardwood to the territory indicated. Mr. Ehemann also emphasized the conference to be held here Friday, October 20, by the Southern Hardwood Traffic Association and the Gum Lumber Manufacturers' Association, dealing with the shortage of cars and the alleged discrimination on the part of the railroad in favor of cotton and cottonseed, as against lumber.

Three new members were elected as follows: Sam Thompson, manager of the lumber department of the Anderson-Tully Co.; Fred Ferguson, southern manager for the N. B. Farrin Lumber Co., Cincinnati, with headquarters at Memphis, and N. M. Nichols, of the Lansing Wheelbarrow Co., Parkin, Ark.

A STEP IN EUROPEAN LUMBER INVESTIGATION.

Washington, Oct. 12.—As a preliminary step to the European lumber investigation, the Bureau of Foreign and Domestic Commerce has sent out to some 250 representative lumber exporters, associations, and trade papers, throughout the country, a list of questions covering the methods employed by the different sections, in the export of their lumber, and its manufacturers. It is desired to have on file exhaustive information as to the export trade practice, when lumber is shipped to Europe, South America, or the Orient, in order that the bureau may be in a position to advise lumber manufacturers promptly of the ways and means available for disposing of their product abroad.

As the returns come in, they will be compiled, and a brief summary published.

Pacific Logging Congress Annual Meeting and Program

The eighth session of the Pacific Logging Congress will be held at the Portland hotel, Portland, Ore., Thursday and Friday, October 26 and 27. The interest which has been manifested by loggers and lumbermen from all sections of the west is indicative of a very large attendance. The program covers a number of very interesting and timely topics. On Friday night the delegates will leave Portland on a special train for Hoquiam, Wash., where they will arrive early Saturday morning. After breakfast at the Grayport hotel, they will be taken to the camp of the Polson Logging Co., the largest logging firm in the west, where lunch will be served and an opportunity given to see the big timber of the famous Grays Harbor country and a modern logging camp. The Grays Harbor Loggers' Association have appointed a committee to entertain the visitors which will conclude with a banquet. The visit to the camps and mills of Aberdeen, Hoquiam and Cosmospolis is worth the time of every visitor to the Forest Industry Conference. This is a rare opportunity to see one of the greatest lumbering sections of the Pacific coast.

Program.

Headquarters—Portland hotel.

Sessions—9:30 a. m. and 2:00 p. m.

President's address.

Appointment of Committees.

Presentation of Gavel—George H. Himes, Secretary, Oregon Historical Society.

"Practical First Aid in Lumber and Logging Industry," with demonstration by picked teams from Portland Lumber Co., Dr. M. J. Shields, Field Agent, American Red Cross.

"Topographical Surveys and Their Value," R. M. Fox, Roach Timber Co., Sutherlin, Ore.

"Falling and Bucking," A. H. Powers, Smith-Powers Logging Co., Marshfield, Ore.

"Increased Efficiency in Felling and Bucking," Paul E. Freydig, Cathlamet Timber Co., Cathlamet, Wash.

"The Use of Hydraulic Power in Supplying Water to Donkey Engines," Walter L. Stout, Coast-Fordney Logging Co., Aberdeen, Wash.

"The Diesel Engine and its Adaptability for Logging Purposes," H. W. Sumner, Mechanical Engineer, Seattle, Wash. Discussion: A. S. Kerry, Kerry Timber Co., Westport, Ore.

"The Availability of Log Flumes for Transporting Heavy Timber," W. D. Starbird, Mechanical Engineer, Portland, Ore.

"Cost Accounting for Legging Camps," J. E. Frost, Seattle, Wash.

"Time Study of Logging Costs," W. W. Peed, Hammond Lumber Co., Eureka, Cal.

"How I Hope to Teach Logging Engineering," John P. Van Orsdel, Professor of Logging Engineering, Oregon Agricultural College, Corvallis, Ore.

"The Locomotive Crane in the Logging Camp," J. D. Young, Inman-Poulsen Logging Co., Mount Solo, Wash. Discussion: Dan McGillicuddy, Wilson Bros. & Co., Aberdeen, Wash.

"Electric vs. Steam Logging," W. D. Peaslee, Electrical Engineer, Oregon Agricultural College, Corvallis, Ore. Discussion: E. J. Barry, Electrical Engineer, Tacoma, Wash.

"The Transmission of Electric Power in the Logging Industry," Allen R. Ransom, Electrical Engineer, Portland, Ore.

"The Geologist in Logging Operations," H. N. Lawrie, Oregon Statue Bureau of Mines, Portland, Ore.

"The Value of Co-operation Between Employer and Employe," D. S. Painter, McCloud River Lumber Co., McCloud, Cal.

"Camp Sanitation and Hygiene," Dr. M. J. Shields, Field Agent, American Red Cross.

"The Use of Dynamite in Removing Tree Tops in High Lead Operations," Harry Eagles, Index-Galena Co., Index, Wash.

"California's Proposed Logging and Sawmill Safety Orders," James C. Bennett, Safety Engineer, California Industrial Accident Commission, San Francisco, Cal. Discussion: R. D. Swales, Union Lumber Co., Fort Bragg, Cal.; Oregon Industrial Accident Commission, Washington Industrial Insurance Commission, British Columbia Compensation Commission.

"High Lead Yarding," H. B. Gardner, Gardner Timber & Land Co., Gardner, Wash.; F. C. Riley, Bloedel-Donovan Lumber Mills, Alger, Wash.; James O'Hearne, English Lumber Co., Mt. Vernon, Wash.; S. A. Stamm, Hamilton Logging Co., Hamilton, Wash.; C. S. Martin, Cherry Valley Timber Co., Stillwater, Wash.

Welfare dinner, Thursday evening, October 26.

Complimentary dinner, Friday evening, October 27. Courtesy Columbia River Loggers and Lumbermen.

Trip to Grays Harbor, leaving Portland Friday night, arriving at Hoquiam, Wash., on Saturday morning, guests of Polson Logging Co. and Grays Harbor loggers.

ENTERTAINMENT COMMITTEES.

Columbia River Loggers' Association—J. S. O'Gorman, chairman; John C. Bradley, J. A. Byerly, E. A. Holmes.

Grays Harbor Loggers' Association—Frank H. Lamb, chairman; A. W. Callow, Robert Polson.

THE APPALACHIAN LOGGING CONGRESS HOLD ANNUAL MEETING.

Knoxville, Tenn., Oct. 19.—The second annual meeting of the Appalachian Logging Congress was held here today and yesterday.

The session closed today with the re-election of W. B. Townsend, of Townsend, Tenn., as president, and Henry Grinnell as secretary-treasurer John Raine, of the Meadow River Lumber Co., Rainelle, W. Va., was elected vice-president.

There were about fifty delegates present, besides a number of representatives of the various supply houses to the total number of about 80, and the meeting was generally voted a success.

The addresses were confined to logging methods and operations in mountain timber. The first address given, however, was that of R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, who gave a detailed outline of some of the splendid things that are being accomplished by his association for the benefit of the lumbermen and loggers.

George L. Forester, of Asheville, N. C., delivered an interesting address on the subject "What Co-operative Association Work May Accomplish in Obtaining Equitable Lumber Freight Tariffs." In it he quoted at length from the article in the LUMBER WORLD REVIEW of October 10, written by H. D. Langille, of Portland, Ore.

Wednesday noon the lumbermen were treated to a splendid luncheon by the Lidgerwood Manufacturing Co., J. H. Dickinson, sales manger.

At Wednesday afternoon's session S. F. Chapman, of Asheville, discussed "The Possibility of Securing Lower Freights on Low Grade Oaks and Hemlocks." In this paper Mr. Chapman brought up a question which later will undoubtedly result in much benefit to the mountain loggers and lumbermen in enabling them to market low grade stock which will not stand the present freight rate for distribution in eastern territory.

Secretary Henry Grinnell said that much of the timber estimated to be on these mountain lands is not merchantable. The hemlock, he said, is from 400 to 500 years old and over-ripe and not suitable for lumber. He said it was the poorest timber grown in this country.

An interesting discussion on the better adaptation of the narrow-gauge railroad or the standard gauge to logging operations was started by W. T. Latham, a well-known logger, who favored the narrow gauge, and J. P. Murphy, general superintendent of the Little River Lumber Co., who believed in the superiority of the standard gauge.

It transpired that the narrow-gauge road cost about $1,200 a mile to grade for ties and rails, while the standard gauge averaged in some cases about $6,000 a mile.

At Thursday morning's session, which was executive, there was much of interest accomplished. Secretary Grinnell gave an account of his stewardship as both secretary and treasurer. In the latter instance, he reported receipts of $130 during the year for membership fees, being the dues for thirteen new members received, making the total membership 41. However, the congress has a net balance of $36.48 on which to start the new year, but is devising ways and means by which its revenues will be greatly increased.

A unanimous vote of thanks was extended to Lewis Doster and his associates among the supply men for the splendid entertainment afforded.

It was unanimously decided to extend the eligibility clause for membership in the association by accepting as associate members lumber manufacturing corporations, mill and logging supply men, machinery men and lumber newspaper men, they to pay dues of $5 a year and having every privilege but that of voting.

The nominating committee reported in favor of electing W. B. Townsend for a second term as president. This was much against his wishes, but he finally consented to accept. President Townsend said that he would take the position again only on condition that he be given the undivided support of the membership, and this was pledged him.

S. F. Chapman moved that the president appoint a committee for consultation with a committee of the Western Forestry and Conservation Association for the purpose of taking up the question of lower freight rates on low grade lumber with the officials of the Southern railway.

A luncheon was given the congress Thursday noon at the Hotel Atkin by the Board of Commerce and the Commercial Club, at which some most enjoyable speaking was listened to by the members.

At the Thursday afternoon session W. W. Ashe, of the Forest Service, Washington, spoke in place of Forester H. S. Gr[illegible] could not leave his post. Mr. Ashe's [illegible] the attitude of the government [illegible] national forests and the lumber[illegible]

R. C. Staebner, of the Little River Lumber Co., delivered a very interesting address on the subject: "Would Comparative Logging Costs Benefit Members of the Congress?"

D. G. Manges, woods superintendent of the Babcock Lumber Co., Tellico Plains, Tenn., made the address upon "Electrical Logging Devices," in which he prophesied some radical improvements in the use of electrical devices in place of the ax and cross-cut saw.

Following the conclusion of the regular program, moving pictures were shown by the Clyde Iron Works, of Duluth, Minn., the subject being logging operations in the Black mountain district. Through the courtesy of Secretary R. S. Kellogg, films were also shown of southern pine logging operations, where Lidgerwood skidders were shown in operation in logging for the Long-Bell Lumber Co. at Longville, La.

Thursday evening there was a theatre party, and on Friday the members went to Elkmont and Townsend, Tenn., to visit the operations of the Little River Lumber Co.

CONFERENCE OF SOUTHERN PINE MEN AND RETAILERS.

Two important conferences were held in Chicago, October 10 and 11 for the purpose of discussing a revision of the grading rules of the Southern Pine Association, from the standpoint of the interests of the retail lumber dealer.

On Tuesday the members of the grading rules committee of the Southern Pine Association met at the Congress hotel, and members of the committees of retailers representing Michigan, New York, Ohio, Pennsylvania, Wisconsin, the Northwestern, Southwestern, Nebraska, Illinois, Indiana and Texas associations met at the Hotel Sherman. At the Hotel Sherman conference the retailers embodied in a report just what they wished in the way of changes in southern pine grading rules, and this report was presented to the representatives of the manufacturers Wednesday morning. The southern pine representatives considered the report during the forenoon, and in the afternoon a joint session was held between the representatives of the retailers and the manufacturers.

The representatives of the retailers in making detailed suggestions as to desired changes in the rules accompanied their report with a preamble setting forth their position in the matter of grades.

After spending the entire morning Wednesday in consideration of the report and recommendations of the committee of retailers, the grading rules committee of the Southern Pine Association, Wednesday afternoon, called the retailers to meet with it in a joint conference, during which the recommendations of the retailers were taken up seriatim and the committee was asked in each instance to explain why the changes were desired and in what way they would benefit the yellow pine industry.

Very frank and full discussions were indulged in by the retailers and the manufacturers, and it soon became clear that both sides had given very serious thought to the matter in hand, and that both were acuated by the same motive, that of bringing about closer co-operation between the dealer and the manufacturer and that they more thoroughly understand the wishes of the retailers to work out the problem to the satisfaction of all concerned.

As a result of the joint discussion of the recommendations of the retailers, with an occasional concession being made by each side, a harmonious agreement was reached on practically all the items on which changes were recommended, covering what is commonly termed the left hand side of the list.

The meeting was entirely harmonious throughout, and evidenced a sincere desire by both retailers and manufacturers to work out a solution of the problem in a way that would result in the greatest good to the yellow pine industry.

SEPTEMBER EXPORTS ON WEST COAST.

Pacific northwest lumber exports amounted to 30,220,798 feet for September as compared with 13,386,473 feet for August and 41,486,561 feet for September, 1915.

These figures are contained in the monthly summary of overseas and coastwise business issued by the West Coast Lumbermen's Association. The statement shows the distribution of last month's export lumber movement as follows:

	Feet
United Kingdom	7,643,169
Chile	6,283,967
Australia	5,107,147
Peru	3,939,286
China	3,137,555
British Columbia	2,567,416
Cuba	810,649
Japan	727,897
Mexico	3,712
Total	30,220,798

Mexico also took 21,693 mining props.

In the offshore domestic trade shipments amounted to 11,736,905 feet for the month, a very heavy increase over the previous month. The off-shore domestic cargoes were distributed as follows:

	Feet
Panama Canal Zone	4,537,016
Alaska	3,657,382
Hawaii	3,542,507
Total	11,736,905

The total offshore water movement of lumber in September was 41,957,703 feet, which was 37 percent. below normal for September during years immediately preceding the European war.

NATIONAL HARDWOOD ASSOCIATION'S NEW HANDBOOK.

The official handbook of the National Hardwood Lumber Association, volume XXIV. is ready for distribution. It furnishes a convenient means of reference for members. It contains the constitutions and by-laws of the association, the inspection rules, a brief history of the rise and progress of the association and a list of its membership, now the strongest in the history of the association.

THE BUFFALO LUMBER EXCHANGE AT PLAY.

Buffalo, N. Y., Oct. 23.—The Buffalo Lumber Exchange held its annual outing on the 12th, when a party of about sixty visited the woods at Boston, near this city, in search of chestnuts and a good time. Both were secured, though the chestnuts the crisp October air and the dinner of beefsteak and supper of chicken, as well as the baseball and quoit pitching that came between meals.

CINCINNATI LUMBERMEN'S CLUB.

Cincinnati, O., Oct. 23.—At the October meeting of the Cincinnati Lumbermen's Club, held at the Hotel Metropole, President Christie appointed C. C. Hagemeyer, S. Earle Giffen and Samuel W. Richey a committee to look after the interest of the club in regard to the reclassification proposal now before the Interstate Commerce Commission. Particular attention will be paid to the reconsignment privilege, the retention of which is strongly urged by practically all Cincinnati lumbermen.

The club decided to lend its efforts in assisting the Cincinnati Chamber of Commerce and the Lumber Exchange in inviting the Ohio Retail Lumber Dealers to hold their 1917 convention in Cincinnati.

ILLUSTRATING THE "WOOD UNIVERSAL."

There have recently come to hand two of the most beautiful booklets ever designed in the interests of wood. These are issued by the North Carolina Pine Association and are beautifully printed and illustrated with artistic covers in color combining the green of the pine boughs, the soft brown of the tree boles and the blue of the Virginia skies.

One book, "North Carolina Pine for Architects and Contractors," describes the wood from the standpoint of the architect and contractor, giving its characteristics for exterior and interior uses. It contains ten beautiful illustrations of historic mansions of Virginia, built of North Carolina pine.

The second book, "North Carolina Pine for the Home," gives such a description of "the wood universal" as will appeal to the home-builder who has no technical knowledge of woods, and some ten illustrations of historic Virginian homes, and an equal number of designs for modern homes.

These booklets are for distribution to those applying for them to W. B. Roper, secretary of the North Carolina Pine Association, Norfolk, Va.

THE BLUE BOOK.

The October Blue Book, the twenty-sixth volume of the credit rating book of the National Credit Corporation, is ready for distribution. It presents the usual fine appearance, and evidences even more than the usual care in preparation.

The information contained in the Blue Book is of incalculable advantage to its subscribers, covering as it does complete information as to rating, capital, etc., and much other information as to location, shipping facilities and banking.

The Latest News of the Lumber World

CAR AND PAVING BLOCK ORDERS.

Big orders in prospect for railroad cars and extensive paving contracts specifying blocks provide some elements of prosperity for the lumber industry.

Among the railroads which have recently issued inquiries and the number of cars and the approximate amount of lumber which will be required are the following: Pere Marquette railroad, 1,000 box cars, 4,500,000 feet; New York, Chicago & St. Louis Railroad, 500 steel underframe automobile cars, 2,500,000 feet; Chicago & Alton railway, 200 automobile cars, 1,000,000 feet; Atlantic Coast Line, 50 to 100 stock cars, 250,000 to 500,000 feet; Chicago & Alton railway, 300 furniture cars, 2,000,000 feet.

In the paving field contracts let or to be let are for over 40,000 square yards in Kansas City, 75,000 yards in New Orleans, 21,000 yards in Fort Dodge, Ia., while the entire length of Battery street in San Francisco, will have Douglas fir blocks, making it the biggest stretch of wood block paving in California. Norfolk, Va., is contemplating contracting for 36,000 square yards, requiring approximately 1,300,000 feet of lumber.

CHANGES IN THE TRINITY COUNTY LUMBER CO.'S SALES FORCE.

Groveton, Tex., Oct. 16.—W. E. Satterwhite who has been assistant sales manager for the past seven years of the Trinity County Lumber Co., will hereafter represent the company in central and north Texas, and his position will be filled by B. L. Miller, who has recently severed his connection as sales manager of J. A. Bentley Lumber Co., Zimmerman, La., and who was formerly with the Central Coal and Coke Co. and with Foster Lumber Co.

The Trinity County Lumber Co. have added to its sales force G. L. Cash, formerly of Muskogee, Okla., and C. L. Vickery, formerly of Luddington, La.

SECRETARY KELLOGG ISSUES STATEMENT OF LUMBER PRODUCTION FOR THIS YEAR.

An official statement by secretary R. S. Kellogg of the National Lumber Manufacturers' Association, on the lumber production for this year, based on the comparative production and shipments of over 500 firms, in 1915 and 1916, is as follows:

"The totals of these figures for the first eight months of 1916 compared with the same period in 1915 show the following:

Increase in softwood cut	13.4 percent
Increase in hardwood cut	14.2 percent
Increase in total cut	13.5 percent
Increase in softwood shipments	9.2 percent
Increase in hardwood shipments	30.0 percent
Increase in total shipments	10.5 percent

"These reports indicate 13½ percent more lumber produced and 10½ percent more lumber shipped by the end of August, 1916, than at that date in 1915. Since car shortages and less favorable market conditions may result in a somewhat smaller production during the last four months of 1916 than during the last four months of 1915, it is possible that by the end of the year the total production will be in the neighborhood of 10 percent greater than in 1915.

"The best estimate of the U. S. Forest Service is that the lumber production of the United States did not exceed 38 billion feet in 1915. On the basis of the statistics received by this office it looks, therefore, as if the total production in 1916 would be in the neighborhood of 42 billion feet."

CALIFORNIA REDWOOD, "NATURE'S LUMBER MASTERPIECE."

A wonderful book about a wonderful wood is truly descriptive of the publication entitled "California Redwood Nature's Lumber Masterpiece," gotten out by the California Redwood Association. Beautiful is every page with its quaint border suggestive of the redwood forests and its quiet toned illustration, dignified illustrations of interiors in redwood, of structures entirely of redwood, or panels of the wood illustrating grain and finish.

The Douglas Fir Exploitation and Export Co. Completes Organization.

Seattle, Wash., Oct. 12.—After three years of intensely discouraging legal, political and inter-industrial difficulties the Douglas Fir Exploitation & Export Co. was formally organized in Seattle on October 11th.

It is the first big selling combination of independent manufacturers, to legitimately pursue foreign trade in a new era of world-wide trade expansion for American industries.

Its organization would not have been possible without the aid of the Bureau of Foreign & Domestic Commerce, the suggestions of the Federal Trade Commission, and the constructive efforts of the United States Forest Service.

The new organization which will deal exclusively with export markets, at all times will be open to governmental inspection and regulation. It will not attempt to fix prices; neither will it seek to disturb the old channels of export trade solicitation.

It recognizes the legitimate but financially restricted efforts of lumber brokers and shipping concerns which have brought the north Pacific's over-seas lumber trade to a certain level of development, and while closely co-operating with these marketing factors, the new organization will launch world-wide propaganda and salesmanship that will supplement the campaigns for Pacific coast forest products in established export markets and, at the same time, seek to introduce those products in countries where Douglas fir, western hemlock, cedar and spruce are not now recognized as standard building materials.

There are sixty mills in the Pacific northwest which are equipped for export business. Forty-nine of these have either signed Douglas Fir Exploitation & Export Co. contracts or have indicated intention of so doing at the first opportunity. Five of the remaining eleven cargo mills have the matter under advisement. Thirty-eight mills, having a combined daily cutting capacity of 6,790,000 feet of lumber in ten hours, subscribed stock and signed contracts at the Seattle meeting.

Ink was scarcely dry on the last signature when a European inquiry relayed from San Francisco, resulted in the Douglas Fir Exploitation & Export Co.'s first quotation, though the company will not formally enter the field until November 1.

At its meeting the new company elected W. H. Talbot, of San Francisco, president; J. H. Bloedel, of Seattle, and C. A. Thayer, of San Francisco, vice-presidents; Charles E. Hill, of Tacoma, secretary, and E. G. Ames, of Seattle, treasurer.

Additional vice-presidents will be chosen to represent Grays Harbor, Willapa Harbor, the Columbia River and the Oregon coast districts.

Trustees of the new organization are J. H. Bloedel, Seattle; W. H. Talbot, San Francisco; O. M. Clark, Portland; L. J. Wentworth, Portland; J. T. Gregory, Tacoma; S. W. Hauptman, San Francisco; C. A. Thayer, San Francisco; E. A. Christenson, San Francisco; James Tyson, San Francisco; E. G. Ames, Seattle; W. H. Boner, Everett; Charles E. Hill, Tacoma; A. L. Paine, Hoquiam, Wash.; E. G. Griggs, Tacoma; A. W. Middleton, Aberdeen, Wash.; R. H. Burnside, Raymond, Wash., and Charles L. Lewis, Raymond, Wash.

Headquarters will be in San Francisco, with branch offices in Portland, Tacoma and Seattle.

Mills that signed export agency contracts yesterday were: Beaver Lumber Co., Prescott, Ore.; Puget Mill Co., Seattle (two mills); Willapa Lumber Co., Raymond, Wash. (two mills); Crown Lumber Co., Mukilteo, St. Paul & Tacoma Lumber Co., Tacoma E. K. Wood Lumber Co., Bellingham, St Helens Lumber Co., St. Helens (two mills); Bloedel Donovan Lumber Mills (two mills); E. K. Wood Lumber Co., Hoquiam; Danaher Lumber Co., Tacoma; West Oregon Lumber Co., Linnton; South Bend Mills & Timber Co., South Bend; Siler Mill Co., Raymond; Quinait Lumber Co., Raymond; Kleeb Lumber Co., South Bend; Raymond Lumber Co., Raymond; Hanify Lumber Co., Raymond; Canyon Lumber Co., Everett; Defiance Lumber Co., Tacoma; Knappton Mills & Lumber Co., Knappton; Weyerhaeuser Lumber Co., Everett (two mills); Portland Lumber Co., Portland; Clark & Wilson Lumber Co., Linnton; Peninsula Lumber Co., Portland; Schwager & Nettleton Mills, Seattle; National Lumber & Manufacturing Co., Hoquiam; Northwestern Lumber Co., Hoquiam; Dempsey Lumber Co., Tacoma; Puget Sound Mills & Timber Co., Port Angeles; Hoquiam Lumber & Shingle Co., Hoquiam, and A. J. West Lumber Co., Anderson & Middleton Lumber Co., and Wilson Bros. & Co., of Aberdeen.

Three years ago D. E. Skinner, now head of the Skinner & Eddy shipbuilding corporation of Seattle, and president of the Port Blakely Mill Co., one of the Pacific Northwest's leading lumber exporters, conceived the idea of grouping the Pacific northwest tide water mills in an export selling agency, which would be financially strong enough to send experts in lumber salesmanship all over the world for the purpose of extending the use of Pacific coast woods in established markets, and introducing sample cargoes into markets where Pacific coast woods were practically unknown except for special size and strength purposes.

The expense of such an ambitious trade undertaking was considered too great for any one of the Pacific coast mills to even attempt, but Mr. Skinner's plan was to prorate that expense among a sufficiently large number of mills to make the plan practical.

Accordingly the Douglas Fir Exploitation & Export Co. was incorporated with a capital stock of $200,000 but when submitted to the government for approval the question of conflict with the Sherman anti-trust law was raised, although it was specifically not the purpose of the agency to engage in domestic trade.

The plan then was temporarily abandoned until the Federal Trade Commission visited the Pacific coast something more than a year ago, at which time, the government recognized the need of a foreign outlet for Pacific northwest lumber production. Similar investigations of other American industries is said to have strengthened the official attitude at Washington, D. C., and as a result the Webb bill was introduced at the last session of congress. This bill clears the legal title of Americans wishing, under certain government regulation, to combine in selling agencies for the introduction and exploitation of American goods in foreign markets. It passed the house at the last session, but coming up in the senate just before adjournment the administration leaders decided to postpone action until congress reconvenes in December.

NEW SAWMILL PLANT OF THE FOSTER CREEK LUMBER & MANUFACTURING CO.

One of the largest sawmill plants ever erected in the south is in process of construction by the Foster Creek Lumber & Manufacturing Co., of Madison, Wis., at Stephenson, Miss., which is seven miles north of Gloster, on the main line of the Yazoo and Mississippi Valley railroad.

This mill will be of particular interest to lumbermen because it will be completely electrically driven in every detail, as ample power has been provided for each individual drive, so that this mill should prove the most successful completely electrically driven mill in the south.

The main mill building will be 70 ft. wide and 248 ft. long with a timber dock extension 192 ft. long. There will be a double drop sorter and a separate green lumber sorter equipped with all the labor saving devices.

The equipment of the sawmill itself will consist of two 9 ft. Prescott band mills, an 8 ft. Prescott vertical resaw, one five-block 44 in. carriage and one three-block 44 in. carriage, complete with steam sets and steam receders; two 72 in. x 8 in. edgers direct connected; slasher and air operated trimmer; complete lath mill equipment.

The power house will be of brick and steel construction 80x92 ft. The fuel house will be of brick and steel, 30x72 ft. The power plant will consist of eight 84x18 high pressure boilers with Dutch oven fronts and steel case marine setting.

The power will be furnished by two 600 KW and one 300 KW General Electric high pressure condensing turbines; one General Electric 10 KW turbine driven exciter; one General Electric 25 KW motor driven exciter; one Ingersoll-Rand barometric condenser with capacity sufficient for the three turbines described above. One motor driven circulating water pump will be installed. This pump will take water from the creek located 1,000 ft. from the mill, and the condenser hot well will be provided with overflow to mill pond. Boiler feed water will be taken from hot well, and thus one pump will furnish water for the entire plant. A total of thirty-four motors will be installed in the sawmill and ten motors in the planing mill, each equipped with the latest protective devices.

Edw. D. McKellar, electrical engineer of New Orleans, representing the General Electric Co., designed the power plant and complete electrical installation.

The planing mill machinery will be furnished by the P. B. Yates Machine Co., Beloit, Wis., and the dry kilns by the L. Moore Dry Kiln Co., Jacksonville, Fla.

The general layout and arrangement of mill, sorters, dry kilns, yards, planing mill, etc., have been made with the idea of manufacturing their lumber and handling and shipping it with the greatest convenience and at the lowest possible cost.

The Foster Creek Lumber & Manufacturing Co. is incorporated under the laws of the state of Wisconsin. The officers are as follows: Fred M. Stephenson, president, Chicago; Edw. J. Young, vice-president, Madison, Wis.; A. E. Proudfit, treasurer, Madison, Wis.; Geo. L. Stephenson, whose headquarters will be at the plant, secretary and general manager. J. W. Atkins, Minden, La., is superintendent in charge of all construction work.

SOME REMARKABLE FIRE PREVENTION BULLETINS.

The Lumber Manufacturers' Inter-Insurance Association of New York printed, in July, 1915, and in March, 1916—and how many other times we know not—some very remarkable fire prevention bulletins for distribution to the saw mill manufacturers of the United States, which bulletins should be in the hands of all saw mill manufacturers in the United States.

Probably there are other bulletins just as attractive and just as instructive as these to which we refer, but we do not happen to recall them just now, and why not make business affairs like this just as palatable as we can?

We do not know that these bulletins are out of print, but we suspect that at least a limited supply are available upon request, and would therefore suggest that anyone interested write to Willcox, Peck and Hughes, No. 3 South William St., New York, for a copy.

These bulletins are printed on high-class paper, are beautifully illustrated, and the text is very illuminating. The July, 1915 bulletin contains about 8 pages of "Electrical Hazards in Saw Mills," which is of particular [illegible] advanced sawmill builders.

BUILDING OPERATIONS FOR SEPTEMBER, 1916, SHOW SATISFACTORY CONDITIONS.

Building operations throughout the country are in a satisfactory condition. There is a firm maintenance of the generous construction activities, that have been the feature of most cities during the present year, and there is a gradual expansion of building work. The official reports of building permits, issued in 111 of the principal cities of the United States for September, as received by The American Contractor, Chicago, total $72,735,764, as compared with $68,681,798, for September, 1915, an increase of 6 percent.

Another favorable element in the present showing is that the increase in the number of permits for September, 28,349, as compared with 25,243 for September last year, is greater than that of the estimated cost, 12 percent against 6. This indicates that the present activities are running more to the smaller structures, or to homes, than they did a year ago. Chicago's total last month was greater than all the boroughs of New York combined. Of the 111 cities, 66 make gains, while 45 show comparative losses. Details follow:

Cities.	September, 1916 — No. of buildings.	September, 1916 — Estimated cost.	September, 1915 — No. of buildings.	September, 1915 — Estimated cost.	Per cent. Gain.	Per cent. Loss.

NATURE AND USES OF "PECKY" CYPRESS.

The latest addition to the Cypress Pocket Library, "Pecky-Cypress," has just come to hand and we are informed can be had free on application to the Southern Cypress Manufacturers' Association, New Orleans and Jacksonville.

The introduction serves to awaken the curiosity and interest of even the most apathetic in the "really important part" of the volume—the description of "pecky" cypress—written by Dr. Hermann von Schrenk. Dr. von Schrenk's treatment of his subject is thoroughgoing and scientific and deals particularly with the adaptation of "pecky" cypress to practical uses.

This addition to the Cypress Pocket Library cannot be too heartily recommended as an authoritative reference book for retail lumbermen, architects, builders and consumers of lumber.

IMPRESSIVE CEREMONIES AT BREAKING OF FOUNDATION OF BOGALUSA PAPER MILL.

Bogalusa, La., Oct. 16.—On Friday, October 13, which he says is his "lucky day," G. H. Wood, general manager of the Bogalusa Paper Co., broke the first dirt for the foundations of the gigantic enterprise that will make Bogalusa the biggest paper manufacturing city south of New York state. And this is only the beginning.

In the present of more than five thousand people, including nineteen hundred school children, who marched in a body, the impressive ceremonies, ending with the breaking of dirt, were conducted. Several prominent paper men from different sections of the country were present, including Joseph L. Skeldon, of Toledo, Ohio; L. H. Breyfogle, who will be general superintendent of the plant; James Gilmore, the engineer who will construct the buildings; P. DeLin, who will be superintendent of the pulp department, and others.

Five-minute talks were made by Mayor W. H. Sullivan, ex-Governor J. Y. Sanders, B. D. Talley, city attorney; Judge C. Ellis Ott, and H. E. Hoppen, secretary of the Y. M. C. A. Mr. Wood also made a few remarks before turning the first shovelful of dirt.

At stated, the new paper mill will mean much for Bogalusa and Louisiana, as well as the entire south. After its completion Bogalusa will have two big paper mills manufacturing pulp and container liner boards from the sawmill and woods waste developed in the operations of the great Southern Lumber Co. The pulp mill will produce from 75 to 90 tons, and the container liner board mill will produce over 100 tons daily. It is estimated that the mill will be ready in ten months. Mayor Sullivan also promised that soon after it began operating a box factory would be added to manufacture all kinds of paper boxes.

Starting working on the paper mill, as well as the many municipal improvements soon to be under way, means a big building boom for Bogalusa. When completed the paper mill will employ 400 men. The buildings will require in excess of two million bricks.

All the principal business houses of the city closed their doors and turned out to witness the exercises. The big sawmill of the Great Southern Lumber Co. shut down at 10:30 a. m., to allow all the employes to attend. Promptly at 10:20 every whistle in the city was blown for five minutes. Altogether, it was one of the most remarkable ceremonies in the history of Bogalusa, destined to be not only the largest sawmill town in the world, but the most important paper manufacturing point in the south.

A STRUCTURAL TIMBER HAND BOOK ON PACIFIC COAST WOODS.

The LUMBER WORLD REVIEW acknowledges the receipt of a beautiful and useful handbook published by the West Coast Lumbermen's Association. This book is the most complete ever published on this subject and is expected to fill a long felt want in the construction field. Much of the information contained in it has never been published before. Although of a technical nature and prepared especially for engineers, architects and contractors, this book also contains data valuable to the layman and lumberman.

The first part of the book deals with the lumber production and timber supply of the Pacific coast. A study of the individual species, their properties, adaptability, and availability, is presented in detail. The subject of strength of wood is thoroughly discussed. Grading rules are given for structural timbers of Douglas fir and recommended working stresses shown for construction work of all classes. A chapter on the creosoting of Douglas fir, with description of processes used and strength tests on bridge stringers and ties treated by the "boiling under a vacuum" process, presents data of value to railroad and bridge engineers.

The second part of this handbook is devoted to the presentation of technical data on timber in practically every form. It consists chiefly of tables of safe loads on beams and columns under various conditions. The figures contained in these tables are all based on the surfaced or actual size of the timbers. Figures and diagrams for determining the economic sizes of rectangular beams and columns, and tables of board measure and weights of timbers of any available size are included.

The remaining pages of the book discuss in detail the various uses to which these woods are being successfully put. A chapter on mill constructed buildings gives figures on the cost and insurance rates on modern timber-brick mill buildings. Diagrams for estimating costs of buildings of various widths and heights make it possible to determine readily the cost of this type of construction for any conditions.

MEETINGS OF FOREST INDUSTRIES WEEK OPEN WITH ENTHUSIASM AND GOOD ATTENDANCE.

Portland, Ore., Oct. 24, 1916—(Special Telegram)—The first session of the annual meeting of the Western Forestry and Conservation Association was carried out according to the program announced, except that Secretary Cornwall read a letter of regret from Honorable W. R. Ross, Minister of Lands of British Columbia, who was unable to attend. One hundred and fifty are already registered and much interest and enthusiasm is evinced. Although the meeting is but beginning, there is evidenced a strong sentiment for nationalizing this association by putting it in along with all national effort for the good of wood, as was foreshadowed in the preliminary report of the nation wide committee by H. G. Langille and his associates, as printed in the LUMBER WORLD REVIEW, in the issue of October 10.

This sentiment for national effort along lines already worked out by the National Lumber Manufacturers' Association seems to prevail above all other lines of thought. No one has yet suggested how to get the money to do this thing or even where to find the Moses competent to guide the willing children to the edge of the promised land.

Judge Fiewelling, one of the happiest presiding officers in the entire west, was brighter than usual, adding to his already great reputation of keeping abreast of the schedule by adjourning on time and meeting each requirement.

There is to be a banquet tendered by the Oregon lumbermen to the members of the Western Forestry and Conservation Association Wednesday night, the Welfare dinner Thursday night, the Pacific Logging Congress Friday night, a luncheon by the Grays Harbor people and a banquet by the Grays Harbor people on Saturday night.

The Logging Congress excursion to Grays Harbor leaves Portland late Friday night and returning arrives in Portland about 7 o'clock Sunday morning.

BOLLING ARTHUR JOHNSON.

(Special Telegram) Marinette, Wis., October 23, 1916.

Bolling Arthur Johnson
Lumber World Review
Chicago, Ill.

Am fully in accord with your presentation of Forest Products Federation. The great need of lumber industry is better co-operation among lumber associations of all shades and all regions, and the active support of individual and corporation timber owners.

Our National Association should be extended and enlarged along lines of Mr. Langille's report.

Your splendid work calling lumbermen to a realization of the effect of substitute advertising and promotion is only an incident compared with the man's job you have started now. Complete association co-operation, complete individual participation will solve every problem of the industry.

R. B. GOODMAN.

BIRMINGHAM REPEALS ORDINANCE PROHIBITING USE OF SHINGLES.

Birmingham, Ala., October 24.—(Special Telegram)—The five members of the Birmingham City Commission this afternoon unanimously voted to repeal the ordinance enacted some time ago prohibiting the use of shingles for roofing within the city limits. The lumber dealers of Birmingham led by J. H. Eddy, of the Kaul Lumber Co., and W. Thornton Estes, of the Estes Lumber Co., took up the fight of the lumbermen and were bitterly opposed by the insurance interests. They were aided by citizens who make complaints of serious defects in composition roofing. Wooden shingles can now be used in every part of Birmingham excepting the down town district, or in forty out of forty-eight square miles within city limits.

LUCIUS E. FULLER.

F. H. McCORMACK SEVERS CONNECTION WITH WISCONSIN & ARKANSAS LUMBER CO.

Malvern, Ark., Oct. 20.—F. H. McCormack, who for the past fifteen years has been prominently identified with the Arkansas soft pine industry as manager, and for the past two years as treasurer of the Wisconsin & Arkansas Lumber Co., has announced his resignation from the management of that plant, to take effect January 1. He will retain his interest in the Walco company, but will devote his attention to a manufacturing plant of his own, to be operated in connection with a line of personally owned retail yards in the state. Mr. McCormack is one of the old growth Wisconsin white pine lumbermen, coming to Arkansas from Merrill to build and operate the present Walco mill. He has been a leader in the steady and effective movement to place Arkansas soft pine before the eyes of the purchasing public, as well as in other progressive developments of the yellow pine industry, and the wide circle of friends will wish him success in the new enterprise.

HENDRICKS' COMMERCIAL REGISTER.

The twenty-fifth annual edition of Hendricks' Commercial Register of the United States for Buyers and Sellers which has just been issued rounds out a quarter of a century of usefulness by this standard publication. The work is especially devoted to the interests of architects, contracting, electrical, engineering, hardware, iron, mechanical, mill, mining, quarrying, railroad, steel and kindred industries, containing about 350,000 names and addresses with upward of 45,000 business classifications. Full lists are included of producers, manufacturers, dealers and consumers, listing all products, from the new material to the finished article, together with the concerns handling these products, from the producer to the consumer.

There are 1,512 pages of text matter and the index of contents numbers 149 pages covering over 50,000 trade references. The list of trade names, brands, titles of identifications, etc., is published for the first time and numbers 202 pages. This list furnishes ready references for purchasing agents and prospective buyers to distinctive products manufactured by firms listed in the work.

Hendricks' Commercial Register is depended upon for reliable information in thousands of business offices, and the new edition will be found more than ever valuable and available.

AUSTRALIAN COMMISSION TO STUDY AMERICAN LUMBER CONDITIONS.

Washington, D. C., Oct. 20.—An Australian commission is soon to be sent to this country to investigate the timber and other industries, and to look into the conditions of employment in the trades.

The commission is to be composed of six manufacturers and six representatives of labor organizations. It is expected that the commissioners will be in the United States from four to six months.

All of the expenses of the commission are to be borne by the Australian government.

L. M. LAMM, Staff Correspondent

LUMBER PRODUCTION IN NEW BRUNSWICK IN 1916.

Washington, D. C., Oct. 20.—Officials of the Department of Commerce have just received a rather interesting report from the American consul of St. Stephen, Canada, relative to the production of lumber in New Brunswick this year. In part the report says:

"Timber production in New Brunswick is fairly well maintained this year according to reports of the cut thus far from the Crown lands alone. The estimate of the Minister of Lands and Mines of stumpage collected for the year ending October 31, 1916, is $352,625, compared with $385,625 and $422,909 for the years ended October 31, 1914, and 1915, respectively. The amount for 1915 was the largest yet recorded, and was due in great part to unusually favorable weather conditions.

"While the amount collected for 1915 was greater than is estimated for 1916, the cut of the former year was the greatest recorded except that of 1911, and up to 1915, every year with two exceptions shows an increase over the preceding one. Whether the increase in timber cut should continue is a debated question. The annual growth on the Crown lands is estimated at about 300,000,000 superficial feet, only slightly in excess of the cut from these lands in 1915.

A RAILROAD MAN'S VIEWS ON RAILWAY REGULATION AND CONTROL.

Washington, D. C., Oct. 21.—In an address this week before the American Association of Passenger Traffic Officers, Frank Trumbull, chairman of the Chesapeake & Ohio Railway and also chairman of the Railway Executives' Advisory Committee, outlined the attitude of the railways toward the forthcoming investigation of railway regulation and control.

"Under the joint resolution by congress," he said, "a joint committee composed of five members of the Senate Committee on Interstate Commerce and five members of the House Committee on Interstate and Foreign Commerce is about to make a thorough investigation of the entire subject of railroad regulation. It is the hope of the railways that out of this investigation will come a much-needed plan of co-ordinating and simplifying our system of transportation regulation.

"Probably a hundred million dollars is going over the dam every year as a result of the lack of co-ordination and our present methods of handling this important problem and our present system of conflicting regulation by the federal government and by the several states. Transportation cannot be regulated by state lines."

At the hearings before the Newlands committee, Mr. Trumbull said, the railroads would advocate a centralization of railroad regulation in the hands of the federal government, which, in the opinion of the railroads, can best be accomplished by federal incorporation of interstate roads. They will also advocate a reorganization of the Interstate Commerce Commission along regional lines with subordinate district commissions or branches in order that local conditions may receive due consideration, somewhat along the lines of the organization of the Federal Reserve System. They also feel that the regulation of the issuance of railroad securities should be placed in the hands of the federal government but that it should not be divided between the federal government and the states. Nineteen states are now rgulating the issuance of securities.

HARDWOOD MEN TO HAVE A HEARING AT MEMPHIS.

Washington, D. C., Oct. 19.—The hardwood lumbermen of the country are to be given a hearing at Memphis, Tenn., on October 30, according to a telegram sent to the Lumbermen's Club of Memphis today by Commissioner Will H. Parry.

Some months ago the club petitioned the commission to grant them a special hearing to take up their particular problems, competition, transportation, etc. [illegible] hearing has been granted at the s[illegible] the Lumbermen's Club the commission has made it quite plain that all hardwood lumbermen will be heard without regard to their affiliation with the club.

INTERSTATE COMMERCE COMMISSION INVESTIGATING CAR SHORTAGE.

Washington, D. C., Oct. 23. (Special Telegram).—Inspectors of the Interstate Commerce Commission are making an investigation of the car shortage famine affecting every section of the country. Complaints are coming in daily from shippers telling of the enormous needs and the almost unprecedented lack of facilities. Southern railroad officials contend that the shortage is due to cars being held in the north, but investigation showed that hundreds of cars were being used as warehouses at ports of export in the south. LAMM.

LUMBERMEN ORGANIZE TO CAPTURE FOREIGN TRADE.

Washington, D. C., Oct. 20.—A rather interesting statement has recently been issued here, especially as it was given out by a department of the Federal government relative to lumber corporations. The statement was as follows:

"The American campaign to capture foreign lumber markets has resulted in the organization of an export sales company by western lumber manufacturers," announces the Bureau of Foreign and Domestic Commerce. "This company represents 80 percent of the Douglas fir cut in this country and its object is to exploit Douglas fir and western hemlock in the world's lumber markets. It is expected without violating the present anti-trust laws, to give American manufacturers some of the advantages that were hoped for from the Webb bill, which the last congress failed to pass.

"The organization of this company is regarded in Washington as the most important and far-reaching step the industry has taken to broaden its markets and meet the competition of the thoroughly organized lumber exporters of northern Europe. In conjunction with the investigation of European lumber markets recently undertaken jointly by the lumbermen and the bureau, it should give American lumber a decided advantage over all competitors in the trade struggle that will follow the war. Immediate attention will be given to standardization of grades, to the conditioning of export lumber, and to active propaganda in foreign countries. Lack of attention in the past to those very important details accounts in large measure for the failure of American lumber to hold its own against more efficient competitors."

ORAL EXAMINATION FOR TRADE COMMISSIONERS.

Washington, D. C., Oct. 23. (Special Telegram).—Oral examinations were commenced today at the Bureau of Foreign and Domestic Commerce of the twenty candidates for positions as trade commissioners, to investigate the lumber markets of Europe.

The twenty candidates were those who passed the best examinations out of the 150 who took the examination several weeks ago. Among the candidates here are: B. P. Kirkland, Seattle, Wash.; P. T. Coolidge, Bangor, Me.; H. J. Hegel, Schenectady, N. Y.; F. H. Smith, Washington, D. C.; R. Rosenbluth, New York City, N. Y.; W. Munro, Boston, Mass.; J. A. Peterson, Brooklyn, N. Y.; O. D. Ingall, Melrose Highlands, Mass.; J. H. T. Stempel, Chicago, Ill.; E. B. Ford, Louisville, Ky.; N. C. Brown, Syracuse, N. Y.; A. H. Oxholm, San Francisco, Cal.; A. P. Dennis, Princess Anne, Md.; F. H. Forester, Jenkins, Ky.; J. R. Walker, Washington, D. C.; J. C. Nellis, of the Forest Service; E. A. Ziegler, Mt. Alto, Pa.; S. Manness, Scranton, Pa.; R. E. Simmons, Oshkosh, Wis.; P. L. Buttrick, New Haven, Conn., and E. Fay, Wilmington, Mass.

All of the larger lumber associations were invited to have representatives present at the examination today. It is expected that they will be completed by tomorrow and the four successful candidates will be announced within the next few days. It is understood, among these present in addition to the examiners and Dr. Pratt, Chief of the Bureau, were federal trade commissioner Will H. Parry, Robert H. Downman, president of the National Lumber Manufacturers' Association; E. A. Selfridge of the California Redwood Association; C. I. Millard, a director of the National Lumber Exporters' Association, and others. LAMM.

INTERSTATE COMMERCE COMMISSION HEARINGS

Following are the lumber hearings on the commission's docket before our next issue:

October 30, at Washington, D. C., before Examiner Burnside, in I and S docket, No. 490, concerning lumber transit privileges at Buffalo. Also on the same date a hearing in case No. 7506, of the Buffalo Lumber Exchange, et al., vs. the Alabama Central Railroad, et al.

November 3, at Washington, D. C., an argument before the commission, in case No. 3878, of the Davis Bros. Lumber Co. vs. the C., R. I. & P., et al.

November 6, at Minneapolis, Minn., before Examiner Gartner, in case No. 9019, of the International Lumber Co. vs. the Big Fork & International Falls Railway Co., et al.

November 9, at Memphis, Tenn., before Examiner Fleming, in case No. 9080, of the Lamb-Fish Lumber Co. vs. the Yazoo & Mississippi, et al.

INTERSTATE COMMERCE COMMISSION DECISIONS.

In the first lumber decision handed down by the commission this autumn they have the following to say relative to their investigation into the lumber rates to New Mexico points and fourth section applications dealing with the same:

"Proposed increased rates on lumber and articles taking the same rates from points in California to points in Texas and New Mexico on the El Paso & Southwestern railroad, shown to be reasonable. Fourth section applications denied."

This proceeding involved the reasonableness of the proposed increased rates on lumber from points in California north of Santa Barbara and Mojave to points on the El Paso & Southwestern north of El Paso, Texas, and to certain stations on the line of the Atchison, Topeka & Santa Fe east of Albuquerque, N. M. The California Redwood Association and the Weed Lumber Co. were the protestants in the case.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until April 13, 1917, the operations of Southern Pacific Co.-Atlantic Steamship Line-I. C. C. tariff No. 28-S. S.

The suspended tariff names proposed increased rates on lumber, carloads, from Bayou Sara, La., and other points of origin on the Louisiana Railway & Navigation Co. to New York city, the operation of which was suspended from June 15 to October 13, by an order previously entered in the same docket.

The operation of certain items appearing in I. C. C. tariffs of Eugene Morris, agent, C. E. Fulton, agent, and the Southern, have been suspended by the commissioners until April 13, 1917.

The suspended items provide for an increase of two cents per 100 pounds on lumber, carloads, from Troy, Tell City, Cannelton, Rock Hill and Rockport, Ind., to points in Central Freight Association territory located west of the Indiana-Illinois state line.

Personal News Notes

James P. Soper, of the Soper Lumber Co., Twenty-second and Loomis streets, this city, returned a few days ago from his annual summer outing in the Adirondack mountains.

Fred J. Schroeder, of the John Schroeder Lumber Co., Milwaukee, Wis., has been recently looking over his company's operations in the Georgian Bay district of Canada. He passed through Chicago October 15.

Peter Vredenburgh, president Vredenburgh Sawmill Co., Vredenburgh, Ala., spent several days in Chicago last week. Mr. Vredenburgh was in Chicago on business, but found time to call upon the LUMBER WORLD REVIEW and other friends, who welcomed his genial presence. Mrs. Vredenburgh accompanied him.

George J. Farnsworth, president of the Oconto Co., this city, received some very important information by wire week before last, which was to the effect that a large army of mallard ducks had invaded Swan Lake and the members of the Swan Lake Club at that popular duck headquarters called urgently for help. Mr. Farnsworth responded at once and accompanied by his trusty armament spent the rest of the week in a noble effort to help his fellow members of the club avert the duck peril. The record of casualties had not been fully compiled at latest accounts.

W. J. Rasmussen, who has been with the Manufacturing Woodworkers Underwriters, Lee Blakemore, manager, during the last six years, has tendered his resignation, to take effect November 1. Mr. Rasmussen has built up for himself an excellent reputation in insurance circles. He has now become affiliated with the National Lumber Manufacturers' Inter-Insurance Exchange, of this city, C. F. Simonson, manager, to represent that institution on the Pacific coast, with headquarters at Portland, Ore. Mr. Rasmussen expects to leave for his new post about November 10. The LUMBER WORLD REVIEW takes pleasure in commending him to the lumber manufacturers of the coast.

A. J. Parker, who has represented the Blackwell & Panhandle Lumber companies of Spokane, Wash., in this territory for some time, has associated himself with S. C. Lawrence under the firm name of the Acme Lumber & Shingle Co., with offices at 1505 Great Northern building. Mr. Barker has built up a very fine trade in the Blackwell-Panhandle products in this territory and will continue to look after the Blackwell-Panhandle business; and the new firm will represent the following mills in this territory: Cascade Lumber & Shingle Co., Snohomish, Wash.; Ferry-Baker Lumber Co., Everett, Wash.; Heybrook Lumber Co., Heybrook, Wash.; Canal Lumber Co., Seattle, Wash., and the Chas. Nelson Lumber Co., San Francisco, manufacturers of redwood products.

George B. Rookwood, of Peoria, Ill., well known in the cypress industry, spent several days in Chicago during the middle week of October and visited several of the contiguous cities in this territory. Mr. Rookwood covers northern Illinois and southern Wisconsin for the Burton-Swartz Cypress Co. of Florida, which has a large cypress manufacturing plant at Perry, Fla., same interests operating the Burton-Swartz Cypress Co. at Burton, La. Although at somewhat of a disadvantage as to rates of freight from the Florida plant, as compared with the Louisiana cypress manufacturers, Mr. Rookwood has built up a very encouraging volume of business in this district. He reports the demand for cypress steadily increasing, owing to its more extended use and predicts a whopping good demand during the coming winter and spring.

INFORMATION ABOUT LUMBER.

A Chicago lumber concern recently received the following letter asking for information and "B. L. T.," of the Chicago Tribune, printed it in his column "A Line o' Type or Two." It is a gem:

"Dear Gentlemen: In your letter to me quoting prices on lumber, let me know what you mean by M feet of lumber. Does that mean one mile of lumber? And do you lay it out and measure how much is it a mile of lumber? You know the place I want to build should not reach a mile but would be only a little house for chickens. Be sure to let me know right away how much is it a mile of lumber. Yours very respectable,

TIM———, Ottumwa, Ia."

GRANDPA SCHREIBER'S HOLIDAY.

William C. Schreiber, of Wm. C. Shreiber & Co., with wholesale lumber yard at Throop and Twenty-second streets, this city, had this year his first summer vacation since he left school—and that was some time since. He left Chicago on the morning train July 4, and returned on the evening train of the same date. However, he had time to have his picture taken at Pistakee Bay, Ill., as he spent his somewhat extended vacation of four hours all at one place. With him in the accompanying photograph are Mrs. Schreiber and their two charming grandchildren, William Schreiber Mole, age three, and Edna Mole, age one. It may be inferred from the picture that "Billy" enjoyed to the full his first vacation.

MR. AID MRS. WM. G. SCHREIBER AND THEIR GRANDCHILDREN.

THE INCREASING USE OF BIRCH.

One of the prominent members of the Northern Hemlock & Hardwood Manufacturers Association states that he recently interviewed a Chicago hardwood dealer, who stated that a short time ago 80 percent of his stock was of oak, but that he was now stocking about 80 percent of birch for his mill trade. He said that the demand for birch was increasing to such an extent that he had to get out and hustle for good manufacturing connections. He expressed the opinion that the birch market, especially for No. 1 common, is strong, and he would not be surprised to see an advance of $4 to $5 a thousand between now and April 1.

OBITUARY

CHAS. P. BOWEN.

Charles Parnell Bowen, formerly a prominent figure in the northern lumber trade, died Tuesday, October 10, at his residence, 3621 Pine Grove avenue, Chicago. Mr. Bowen was 63 years old. He entered the lumber business in his uncle's firm, the Anawalt Lumber Co. at Rock Island, Ill. Later he became connected with the Weyerhaeuser lumber interests. He is survived by three children, Mrs. S. J. Feeney and Benjamin and Charles Bowen. Funeral services were held October 13 and the interment was at Calvary cemetery.

ROBERT C. LIPPINCOTT.

Philadelphia, Pa., Oct. 10.—Robert Cook Lippincott, 71 years old, died Thursday evening last at his home, 266 Tulpehocken street, Germantown, a suburb of this city. He was taken ill in the west with acute indigestion, complications setting in after his return home.

Mr. Lippincott, who was one of Philadelphia's oldest wholesale lumbermen, had his offices in the Land Title building, Broad and Chestnut streets. He was a former president of the National Wholesale Lumber Dealers' Association, former president of the Union League, and a former director of the Lehigh Valley Railroad.

Business Changes, Incorporations and Fires

New Concerns

Martinsburg, Ind.—White Wood Products Co.; $50,000 capital. George W. White, Harlan B. White, Herbert C. White.

McAlester, Okla.—The Cain Lumber Co. Z. T. Cain, former manager of the South Texas Lumber Co., is local manager and owner.

Oklahoma City, Okla.—Grant-Sprague Lumber Co.; $25,000 capital. H. W. Sprague and others.

Waverly, N. Y.—Southern Pine Sales Corporation; $100,000 capital. P. S. Hill, H. A. Fluckiger, E. T. Magoffin, East Orange, N. J.

Albany, N. Y.—West Virginia Waste Wood Chemical Co.; $330,000 capital. H. M. Ward, R. Kirby, W. M. Baldwin.

Terre Haute, Ind.—The P. S. Mace Co., to purchase and sell timber and lumber; $30,000 capital. P. S. Mace, Scott Mace and W. L. Mace.

Jersey City, N. J.—Nu-style Window Sash Co.; $200,000 capital. Philip L. Mieser, John N. Turner.

Portland, Me.—New England Cabinet Works, Inc.; $25,000 capital. Robert T. Whitehouse, Clement F. Robinson, Raymond S. Oakes.

Jonesboro, Tenn.—Young Timber & Land Co.; $6,000 capital. B. G. Young, S. S. Preston, W. F. Graham and others.

Montgomery, Ala.—Pine Plume Lumber Co.; $50,000 capital. Stuart MacKenzie, W. S. Hollister and D. L. Whetstone.

Omaha, Nebr.—The Brown Lumber & Coal Co.; $30,000 capital. Milton Dodds, George M. Livengood and Daniel C. Braven.

Buffalo, N. Y.—The Buffalo Lumber Dealers' Credit Corporation; $1,500 capital. Gabriel Elias, Clark W. Hurd, H. E. Montgomery, R. T. Bennett and others.

Wewoka, Okla.—Sturgeon-Elliott Lumber Co.; $20,000 capital. A. D. Norvell, J. P. Stringfield, O. J. McCann and others.

New York, N. Y.—Wood & Melvin, to deal in lumber; $10,000 capital. C. J. Gillem, F. L. Wood and L. F. Wood.

Muncie, Ind.—Grouleff Bros. Lumber Co.; $30,000 capital. C. Frits Grouleff and others.

Colville, Wash.—The Kettle Bayou Boom Co. E. A. Holston, Dale Jones, E. L. Curtis and G. W. Peddycord.

Chicago, Ill.—Treece Lumber Co.; $25,000 capital.

Kangman, Ariz.—Mohave Lumber Co.; $100,000 capital.

Duluth, Minn.—American Lumber & Construction Co.; $30,000 capital.

New Mills

Montgomery, Ala.—The Cramton Lumber Co. has started on the erection of a new plant which will take the place of the one recently destroyed by fire.

Thorsby, Ala.—The R. J. Williams Lumber Co. will erect a large lumber plant to take the place of the small one recently burned.

Hood River, Ore.—The West Fork Lumber Co., Inc., will erect a mill.

Marquette, Mich.—The Marquette Box & Lumber Co. will build new mill.

Baker, Ore.—A large sawmill will be built to handle the 124,000,000 feet of government timber on the John Day river.

NEW CORCERNS

Edmonton, Alta.—Woodland Lumber Co.; $20,000 capital.

Quebec, Que.—Le Parc Des Allies, Ltd.; $20,000 capital. To conduct a business as sawmill proprietors and operate timber limits and pulp mills.

Wilmington, Del.—Standard Hardwood Co.; $100,000 capital. F. D. Buck.

Washington, D. C.—W. A. H. Church; $36,000 capital.

Wood River, Ill.—Wood River Lumber & Supply Co.; $15,000 capital. Purchasing department, P. J. Lawrence Lumber Co., St. Louis, Mo.

Greenville, Ky.—Green River Lumber & Tie Co.; $15,000 capital. D. M. Roll, W. E. Drake and H. L. Drake.

Hardy, Ky.—Mitchell Lumber Co.; $25,000 capital.

Quicksand, Ky.—Federal Parquetry Manufacturing Co.; $100,000 capital. Representative, Lawrence Ottinger, of New York.

Presque Isle, Me.—Aroostook Holding Co., to operate a planing, molding and wood working mill; $10,000 capital. P. N. Hight, president; Nathan F. Perry, treasurer, and S. C. Page.

Nichols, N. Y.—Rex Lumber Co., Inc.; $10,000 capital. B. J. Cotton, C. E. Young, F. R. Young.

Palmico, N. C.—Clement Veneer & Lumber Co.; $50,000 capital. W. L. Clement and H. F. Dargan.

Montpelier, O.—Montpelier Hoop & Lumber Co.; $10,000 capital. Samuel E. Hollopeter, Frances E. Hollopeter and others.

Portland, Ore.—Bramhall Timber Co.; $15,000 capital. R. B. Montague, G. C. Frisbie and Omar C. Spencer.

Portland, Ore.—J. A. Pattison Lumber Co.; $10,000 capital.

Bolivar, Tenn.—Tennessee Handle Co.; $5,000 capital.

FIRES

Windsor, N. S.—The new sawmill of W. R. Patterson burned with 5,000 feet of lumber.

Glencolin, Ont.—The sawmill of Gordon Staley burned. Mill will be rebuilt.

Odanah, Wis.—Two warehouses owned by the J. S. Stearns Lumber Co. were partially destroyed; loss estimated between $40,000 and $50,000.

Thorsby, Ala.—Plant of R. J. Williams, a few miles west of here, burned, together with 50,000 feet of lumber; loss $2,500.

Montgomery, Ala.—Plant of the Cramton Lumber Co. burned; loss $75,000.

Crawfordsville, Ind.—The factory of the Pioneer Box Co. burned; loss $50,000.

Indianapolis, Ind.—Two large sheds filled with lumber at the yards of the R. S. Foster Lumber Co. damaged by fire to the extent of several thousand dollars; covered by insurance.

Toledo, O.—A large stock of red cedar shingles, storage sheds and staining plant of the C. A. Mauk Lumber Co. burned; loss $100,000.

Business Changes

Cottonwood, Ida.—J. B. Krieger has sold out to the Madison Lumber & Mill Co., of Lewiston.

Troy, Kans.—H. D. Kent has sold out to the Arkansas Valley Lumber Co., of Wichita.

Winfield, Tex.—Cobb & Gingle is now known as the Cobb Lumber Co.

Polk, Neb.—Geo. A. Hoagland & Co. have sold out to the Aspegren & Strand Lumber Co., of Lincoln.

Jamaica, Ia.—The C. Dennis Phillips Co. has sold out to Dalbey & Hardwick.

Aurora, Minn.—The Colvin-Robb Lumber Co., of this place, also of Biwabik, Eveleth, Gilbert and New Duluth, has sold out to the Northern Lumber & Coal Co., of Duluth.

Hibbing, Minn.—The Hibbing Lumber Co. has sold out to the Northern Lumber & Coal Co., of Duluth.

Lincoln, Nebr.—Aspegren, Tanner & Co. have sold out to the Schuck & Yost Lumber Co.

Red Elm, S. D.—Ross Simeon Lumber Co. has sold out to the J. F. Anderson Lumber Co., of Mitchell.

Seattle, Wash.—Columbia Valley Lumber Co. has purchased the business of the Stevens Lumber Co., of Douglas, Mansfield, Waterville and Withrow.

Duluth, Minn.—The Northern Lumber & Coal Co. has purchased the business of the Hibbing Lumber Co., of Superior, Wis.

Pine Bluff, Ark.—McGehee Smith Lumber Co. has changed its name to Pine Bluff Lumber Co.

Pine Barren, Fla.—McMillan Mill Co. is now Finlay Lumber Co.

Maize, Kans.—The A. H. Hill Lumber Co. has sold out to R. C. Jackman.

Wauzeka, Wis.—The Krone Lumber Co. has sold out to the C. B. Hopkins Co., of Fennimore.

Cowley, Wyo.—The Cowley Lumber Co. has sold to Welch Bros.

Minneapolis, Minn.—The Fullerton Lumber Co. has purchased the business of the Coleson Swanson Co., of Concord, Nebr.

Findlay, O.—The Duttweiler Lumber Co. has sold out to M. L. Fasset.

Tacoma, Wash.—The Hague Box & Lumber Co. has sold out to the Northwestern Woodenware Co.

Ranchester, Wyo.—The Ranchester Lumber Co. has sold out to the Johnston Saunders Lumber Co.

Huntsville, Tex.—The Huntsville Lumber Co. has decreased its capital from $10,000 to $7,000.

New Albany, Ind.—Roberts & Connor Co. has changed its name to Roberts Veneer Co.

Chicago, Ill.—Lincoln Sash & Door Co. has increased its capital from $30,000 to $40,000.

Lindsay, Cal.—George A. Wright has been succeeded by Wright & Riley.

Goodrich, Colo.—The Riverside Lumber Co. has been purchased by the Warren Lumber Co., of Fort Morgan.

New London, Conn.—The Thames River Lumber Co. has increased its capital from $150,000 to $250,000.

Fenn, Ida.—The Madison Lumber & Mill Co. has gone out of business.

Chicago, Ill.—The Miller Lumber Co. is succeeded by the Miller Lumber & Supply Co. with capital of $10,000.

Granger, Ia.—Grigsby & Grigsby have been succeeded by C. L. Hardinger.

Paducah, Ky.—The offices of the Ferguson & Palmer Co. are removed to Memphis, Tenn.

Lake Charles, La.—Samuel Kinder & Co. have been succeeded by H. D. Taylor & Co.

Boston, Mass.—The Hooker-Baird Lumber Co. is closing out its business here.

Fountain, Mich.—Reek Bros. are selling out to the Booth-Schoenhurr Co.

Whitehall, Mich.—The Nufer Cedar Co. has moved to Marquette.

Meridian, Miss.—The Crescent Lumber Co. has discontinued its office here.

New Orleans, La.—S. T. Alcus & Co. have purchased the business of the Tylertown Box & Manufacturing Co., of Tylertown, Miss.

Parker, S. D.—W. R. Wood has been succeeded by the Big Sioux Lumber Co., with headquarters at Sioux Falls.

Fires

Howebrook, Me.—More than 300,000 feet of lumber burned in the Dean Lumber Mills; loss $30,000.

Salem, Mass.—Dryhouse of the N. P. Gifford Lumber Mills burned; loss $50,000.

Prairie du Chien, Wis.—Mill of the W. F. Shaw Lumber Co. burned; loss $5,000.

Kola, Miss.—Kilns, planing mills, a dry shed and 750,000 feet of lumber, property of the Kola Lumber Co., burned; loss estimated at $100,000.

Phelps, Wis.—The sawmill of the Hackley-Phelps-Bonnell Co. burned; loss between $300,000 and $400,000.

Hoboken, N. J.—Fire in the lumber yard of the Farr Lumber Co. caused loss of $25,000.

Punxsutawney, Pa.—The planing mill of James K. Long & Son almost totally destroyed by fire, entailing loss of $10,000; no insurance.

Green Cove Springs, Fla.—The sawmill of the Dowling Shands Lumber Co. burned; loss about $150,000.

Bellingham, Wash.—Two dry kilns and about 2,000,000 shingles were recently burned at the plant of the Siemons Lumber Co. The kilns will be immediately rebuilt.

News Miscellany of the Lumber World

South Atlantic News

Jacksonville, Fla., Oct. 17.—Port business picked up during September and incidentally some new records were established. The

JACKSONVILLE, FLA.

record established by the lumber steamer "William O'Brien" in passing to sea from the eastport terminals with cargo of over 3,000,000 feet of lumber and drawing twenty-four feet and seven inches at low water has stimulated the desire of shipowners to send deep water draft steamers to this port.

Two barges, recently completed by the G. A. Baxter & Co.'s new shipyard, were last month loaded with sixty thousand ties and proceeded north in tow of the tug "Eastern."

The fourth of a fleet of barges being constructed by the G. S. Baxter & Co., is being completed and will start loading within a week. Three other barges have already been completed, loaded and sent to New York with crossties, being placed in harbor service there. It has been found that by building barges here, where lumber is cheaper, the New York concerns can save money. The barges measure 115 feet in length over all, 32 feet beam and draw 10 feet of water. About 6,000 ties can be carried on each.

A total of 33,825,462 feet of lumber went forward in September in coastwise steamers, barges and two schooners. In addition to the regular coastwise shipments, the Norwegian steamship Viator, barge Doctor Brooks and schooner M. E. Eldridge carried lumber to Cuba. There is now at this port an Italian steamship Italia, loading a cargo of over 2,000,000 feet of lumber for export. The exports consisting of lumber and crossties, totalled $66,824.

* * *

Savannah, Ga., Oct. 16.—I. H. Fetty, president Savannah River Lumber Co., placed an order for three new dry kilns of the Moore

SAVANNAH, GA.

moist air type for the plant at Wiggins, South Carolina.

The Newport Lumber Co., operating in McIntosh county, has purchased 12,000 acres of virgin timber bordering the Sapelo river. It is expected that the purchasing company will soon make announcement as to its manufacturing plans. The purchase price was in excess of $200,000.

The first of several shipments of lumber to Havana was made by the Hirsh Lumber Co. on the steamer Paris; the concern has a big contract.

* * *

Charleston, S. C., Oct. 16.—Domestic and railroad troubles continue to complicate the lumber situation; in spite of adverse con-

CHARLESTON, S. C.

ditions, however, the general trade is in a healthy condition. This is evidenced by the fact that new mills are being erected, and timber holdings are being taken by purchase or on option.

Farr-Barnes Lumber Co., St. George, S. C., have placed order with L. Moore Dry Kiln Co., Jacksonville, Fla., for 20,000 daily capacity dry kiln which will be constructed at its new plant at Harleysville, S. C. It is also building a modern planing mill. The entire plant will be ready for operation by the latter part of October.

Inland Empire News

Spokane, Wash., Oct. 20.—Because of the great shipments of grain, fruit and lumber, but especially of lumber, to the middle west,

SPOKANE, WASH.

local railroad officials are reporting a car shortage which has never been equaled. The Northern Pacific reports heavy shipments of lumber to Chicago and other middle western cities, and the Great Northern also reports big shipments of lumber.

"The general business of loading cars on the western lines is 15 percent ahead of this period for last year," said H. B. Earling of Seattle, vice-president of the Chicago, Milwaukee & St. Paul railroad, who was in Spokane recently. "We have business for all the cars we can furnish. The principal shipments east are lumber and grain."

Spokane's building activity continued during September, and the value of building permits issued the first nine months of 1916 is 30 percent over those of the corresponding period of 1915. To October 1 this year the value of construction authorized is $1,276,130, compared with $977,069 the first nine months of 1915, and $847,597 for the corresponding period of 1914.

George H. Gray & Son finished the season's cut of logs at Entiat, Wash., last week. Gray & Son have secured large timber rights in what is known as the Oklahoma country near Winesap, and will erect a sawmill and box factory there. It is estimated that there is 125,000,000 feet of splendid yellow pine in the Johnson creek district alone.

* * *

Coeur d'Alene, Ida., Oct. 17.—A solid train of Idaho white pine, consisting of more than 40 cars left Couer d'Alene recently

COEUR D'ALENE, IDA.

on the Northern Pacific railway, consigned by the Edward Rutledge Timber Co. to the Eastern Lumber Co. at Tonawanda, N. Y. The train will be unloaded at Superior, and the remainder of the journey made by boats on the Great Lakes. The train was decorated with large banners bearing in huge letters the slogan "Genuine old fashioned white pine—and plenty of it." It is a significant fact that the lumber will be sold to New Englanders, the first users of the "old fashioned white pine."

National forests in northern Idaho may become ranging grounds for 200,000 to 300,000 sheep, under a new plan by the forestry department, according to a statement made last week by District Forester F. A. Silcox of Missoula, who was at Coeur d'Alene. The attitude of the department in respect to the future building of roads adjacent and through national forest reserves was outlined by Mr. Silcox, and possible effects of the new federal bill covering road extension work outside of the forests were discussed.

* * *

Kalispell, Mont., Oct. 20.—The sawmill at Egan, Montana, located on Lake Five, formerly operated by T. D. Farrow, which has been

KALISPELL, MONT.

idle the past year is being overhauled and repaired by the Conrad National Bank of this city, and will be leased to John Laux who will operate it to full capacity. The mill is on a splendid site, and in the center of a vast tract of government timber, a large proportion of which is tributary to the site.

W. B. McDonald, R. P. McLaughlin, J. D. Warner, P. N. Bernard and J. R. White left Wednesday morning for Bigfork, Montana, to take photographs and complete an estimate on the timber and water power there for the prospectus they have been arranging for some time to forward to big paper manufacturers throughout the United States and Canada and try to interest them in opening a plant here.

Henry Schoknecht of the Montana Western Lumber Co., which he recently organized with headquarters in this city, returned the first of the month from Warland, Montana, from which point he has made arrangements to handle the output of the Baird and Harper mill, aggregating close to 12,000,000 feet per year.

S. J. Dalberg, a pioneer logger and railroad contractor, has just completed a logging contract of 2,000,000 feet for the Eureka Lumber Co. Mr. Dalberg is now arranging to make a permanent logging camp in his timber holding, consisting of several thousand acres, from which he will deliver several million feet of logs to the Eureka Lumber Co. this winter.

You Can Insure Your Investment in Standing Timber

In timberland transactions a mistake is worse than a fire. In what other field than lumbering will you find men investing a half-million or a million dollars in raw material on a MERE GUESS as to what they are getting for the money? Yet how many lumbermen do you hear lament that a tract doesn't cut over two-thirds of what the "cruise" indicated.

A LACEY REPORT will INSURE you against that sort of thing. It is much more than a "cruise"—is, in fact, the nearest possible approach to modern scientific accuracy of actual knowledge — made under a system of notes, measurements, original volume tables and cross-checks which it has taken the LARGEST TIMBER FACTORS IN THE WORLD, James D. Lacey & Company, thirty-six years to perfect.

The cost of the insurance afforded by a LACEY REPORT is scarcely a fair insurance premium on the values protected.

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., Oct. 23.—Business men here are very much interested in the proposal to establish river terminals at Memphis. There has been a distinct movement during the past few months toward an increase in the handling of traffic by water and the need of larger facilities for taking care of this business is fully recognized. The Business Men's Club has been the leader in this movement but the Lumbermen's Club and other organizations have appointed committees to investigate and report. The representatives of all these bodies will hold a meeting in the near future and it is expected that something definite will be accomplished at that gathering. The terminals will be either under the control of the city government or actually owned by the city itself. Unless the car shortage is unexpectedly relieved, there is no doubt that lumbermen as well as other interests will make immediate use of the river as soon as the stage is more satisfactory. Lack of adequate terminals has been a serious handicap and the removal of this difficulty will also stimulate the handling of traffic on the river.

It is announced that the Kelsey Wheel Co. will remove its plant from Detroit to Memphis. This company has operated a big branch plant at Memphis for several years and has very greatly increased its capacity during the past twelve months. The local plant is turning out about 2,200 automobile wheels per day and is now prepared to manufacture these wheels complete, machinery for this purpose having been installed very recently.

The Eellgrade Lumber Co. has purchased the sawmill belonging to the Ferd Brenner Lumber Co. at Zwolle, La., and will remove this to the site to be selected for the development of the timber on 7,500 acres of land acquired by the company some time ago in Sharkey and Yazoo counties, Mississippi.

* * *

BIRMINGHAM, ALA.

Birmingham, Ala., Oct. 17.—According to an ordinance just adopted by the city commission of Birmingham, shingle roofs will be permitted outside of the old fire limit of the city. The ordinance requires that the shingles must be painted with a fire retarding paint, approved by the building inspector.

The Lindsay Lumber & Export Co. of Mobile are constructing a logging railroad into their timber lands near Saraland in Mobile county. Four miles of the road has been completed. Several months will be required to complete the road.

Birmingham leads all southern cities but Chattanooga and Dallas in the percentage of gain in building operations during the month of August. There was an increase of 8 percent for the month in Birmingham.

* * *

KNOXVILLE, TENN.

Knoxville, Tenn., Oct. 21.—The new double band mill of the Babcock Lumber Co., near Maryville, about twenty miles south of Knoxville, is being erected rapidly and will be ready for operation early next spring. It will comprise two 9-foot bands and a re-saw and will be one of the largest mills in eastern Tennessee. The company owns a large body of timber tributary to the mill.

Work on the new mill of the Little River Lumber Co. at Townsend, Tenn., erected to replace the plant destroyed by fire last July, will be completed in about two weeks. It has a Clark Bros. equipment throughout, including one 9-foot and one 8-foot band.

Northern States News

MINNEAPOLIS, MINN.

Minneapolis, Minn., Oct. 23.—A car shortage of most serious proportions is affecting the movement of lumber. There is no congestion of rolling stock in the northwest, railroad officials saying cars that belong here are at or near the eastern seaboard and very hard to get back.

Northern pine and hemlock mills, however, have not been pinched for cars as badly as manufacturers to the west and south

Great strength has developed in the hardwood market. Buying has been heavy this month, building operations calling for considerable flooring and interior finish. As loggers are finding it hard to get laborers, it is predicted hardwood taken out this winter will sell at advanced prices next year.

City building operations for nine and a half months this year surpassed the total for 1915, and this activity has resulted in heavy demands for sash and doors. The demand is now setting in for storm sash, and local factories are as busy as in midsummer.

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., Oct. 23.—Not enough men can be obtained to handle lumber coming in or going out, in spite of the repeated efforts made through advertising to get additions to the forces. Lumber sometimes remains on the docks much longer than usual, just because not enough men can be secured to handle it expeditiously. Many delays have occurred at all yards handling lake lumber this season, although higher wages than formerly are paid for laborers.

Yellow-pine piling has been in good demand in this city recently. Two hundred and seventy cars of it, partly furnished by G. Elias & Bro., are being used for the foundation of the new Central elevator. A lot of this kind of piling is also being used for foundations at the new power plant of the Buffalo General Electric Co., near the city line.

The McNeil Lumber Co. has gone into the hands of a receiver, the court appointing James A. White, of this city and Boyne City, Mich. The company is an old one and its president, Peter McNeil, has many friends in the trade who will hope his affairs may be satisfactorily straightened out and the business continued.

The Buffalo Lumber Dealers' Association has elected officers, with K. C. Evarts, who comes here from Rochester, as secretary. He has for several years been secretary of the New York State Retail Lumber Dealers' Association and is thoroughly familiar with retail lumber conditions.

Pacific Coast News

SEATTLE, WASH.

Seattle, Wash., Oct. 20.—Shippers as a rule see little encouragement in the car question. The Chicago, Milwaukee & St. Paul has promised some relief within a week and conditions on this line are said to be improving. The Northern Pacific and Great Northern lines have little to offer.

The chief topic of interest in lumber and financial circles of the northwest is the permanent organization of the Douglas Fir Exploitation & Export Co., which took place here at a meeting of representative lumbermen from almost every section of the Pacific coast.

There has been some improvement in the waterborne lumber trade recently. Vessels have become slightly more plentiful, although the tonnage rates have not dropped, and in some cases have reached new records. The balance of unshipped cargo orders was increased in the coastwise trade and decreased in the export trade.

The second big vessel for the lumber trade to be built at the Skinner & Eddy Corporation's plant here will be launched to-morrow. This craft will be named the Hanna Neilsen and she will have a carrying capacity of 12,500 measurement tons.

* * *

TACOMA, WASH.

Tacoma, Wash., Oct. 20.—Actual operations will be commenced about November 1 by the new Douglas Fir Exploitation & Export Co. which was formally organized and officers elected at Seattle, October 11. The company will open a branch office in the Puget Sound district but that the location of the office has not been selected. It will almost certainly be either in Tacoma or Seattle.

Two more lumber schooners, in addition to those already contracted for, will be built by the Seaborn Shipbuilding Co., of Tacoma, according to an announcement made by the company's officials. This makes six vessels the company has contracts for. Two are now under construction and will be launched early in November, the keel of another will be laid before the end of October, and the contracts for three others are in the hands of the firm. The latest ships ordered of the company will be 240 feet in length with auxiliary engines.

Digitized by Google

The Northern Pacific railway will build 500 new box cars in its Tacoma shops, the work to commence at once. Order were received on October 1 from St. Paul to rush the construction of the new equipment.

Southwestern News

LITTLE ROCK, ARK.

Little Rock, Ark., Oct. 20.—The 1,600-acre tract of timber owned by Dr. M. R. Regan of Eureka Springs, which lies a few miles east of Mena, Ark., was last week sold to Ford Yancey of Ridgeway, Mo., and some associates. These men expect to install a mill on the tract to manufacture the hardwood timber into axe handles, while the pine timber will be cut and sold to the local mills.

A hub factory is being erected at Mountain View, Ark., and will soon be ready for operation. Timber for use in manufacturing hubs is now being assembled and stacked on the yards.

Spice Brothers, who own a hoop factory at Pocahontas, have closed a deal with the Chapman & Dewey Lumber Co. for a site for a new plant at Jonesboro. The new plant will be erected without delay. Elm will be the principal kind of timber used at the new factory.

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Oct. 21.—Unnecessary holding of cars not their own by eastern railroads has greatly intensified the car shortage in this section, according to local transportation heads. Figures compiled by a New Orleans official of one of the southern lines show that the eastern roads have in their possession over 100,000 cars that they do not own. These cars belong to western and southern carriers, and the latter, with less than the normal equipment, are experiencing great difficulty in handling the enormous business of the districts they serve.

According to building material dealers, prospects are exceptionally bright for building operations in New Orleans this fall and winter, both in the commercial and residential districts. Many architects are preparing plans for buildings which have not yet been announced, and general indications point to a building revival such as has not been seen here in ten years. Many attribute this to the organization of the Allied Building Council, which has inspired confidence in the public and offers assurance of honest work and full measurements.

Offerings of the mill work plans for the sash and door manufacturing plants of the city continued last week up to a good average for the fall business.

Local lumber exporters, although realizing the possibilities of serious menace to commerce, have largely ignored recent German submarine operations off the New England coast and rumors that the under-sea war would be carried next into the Gulf of Mexico. Several ships with lumber cargoes are now loading here, and will sail on time. Most of these vessels fly the American flag and are thus virtually immune from attack. Others are British or belong to the neutral nations of Europe, and have long ago become accustomed to the hazards of sea trade during war times.

The Edwards Lumber Co., Inc., of Mobile, interior wholesalers and exporters of yellow pine lumber, piling and ties, have opened an office at 515 Hennen building, this city. C. H. Edwards, who is president of the company, will make his headquarters at New Orleans.

The Riggs-Terrell Lumber Co., occupying offices in the Metropolitan Bank building, this city, the old and well-established hardwood wholesale concern, has recently added a yellow pine wholesale department, in charge of W. B. Switzer, a lumberman of long experience, he having been in the yellow pine wholesale game at Shreveport, Houston and St. Louis for many years.

* * *

HATTIESBURG, MISS.

Hattiesburg, Miss., Oct 16.—Advices from George R. Wright, capitalist interested in the million-dollar paper mill to be erected here, are to the effect that work will begin on the plant in November.

D. C. Bramlette, an attorney of Woodville, Miss., was in Jackson last week filing a charter for the new town of Stephenson, near Gloster. The town is being built by the Foster Creek Lumber & Mfg. Co., the stock of which is owned by the Stephenson family of Michigan. Foundations have been laid for the new mill and part of the machiney is on the ground ready for placing as soon as the mill frame is ready. It is thought the new mill will be ready for operation early next spring.

The Tallahatta Lumber Co., which is controlled by the Natalbany Lumber Co. of Hammond, La., and who own several hundred million feet of choice yellow pine timber in Jones and Perry counties, are building a logging railroad from Petal into their timber. As soon as their road is completed they will begin shipping logs over the tracks of the Gulf & Ship Island railroad to their sawmill at Ora.

It is understood that R. E. Gulledge, formerly in the sawmill business at White, Ark., will soon begin the erection of a fifty thousand capacity sawmill at or near Mendenhall, Miss., which is located about thirty miles south of Jackson on the Gulf & Ship Island railroad.

Ohio Valley News

CINCINNATI, OHIO.

Cincinnati, O., Oct. 23.—For a while Thursday night last week flames crept dangerously near to three huge tanks of creosote in the yards of the Compressed Wood Block Co., on Spring Grove avenue, but firemen managed to ward off the flames in time, thereby saving the entire plant from destruction. As it was, the flames were confined to several piles of wood blocks.

Big lumber interests are concerned in the formation of the Fidelity Coal Mining Co., which recently was started and which will operate at Exodus, Ky. The new firm has under lease 1,000 acres of coal land, said to also contain some valuable timber rights. The incorporators of the company are J. E. Butler, R. L. Stearns, K. W. Dyas, S. C. Trent and R. W. Henderson. The coal will be handled by Mr. Dyas, of the Stearns Coal and Lumber Co., at Stearns, Ky.

George M. Anderson, of the well known architectural firm of Elzner and Anderson, Cincinnati, and for the past two years president of the Cincinnati chapter of the American Institute of Architects, died last week at his home on Grandin Road, East Walnut Hills, after an illness of several months. Mr. Anderson was probably the most widely known and considered one of the best architects in the middle west and was associated with Mr. Elzner for over twenty years.

A new plant will be constructed early in the new year by the Champion Tool Co., of this city, one of the largest concerns of its kind in the country. It is estimated by President Harvey W. Kreuzberg that about $100,000 will be expended in the new structures, which will be located in the extreme northern suburb of Winton Place.

* * *

LOUISVILLE, KY.

Louisville, Ky., October 23.—Lumber handling is being greatly handicapped in this section by the car shortage, and the trade is generally apprehensive over future developments in this connection. Only a small portion of the needed cars can be obtained and orders are being received faster than they can be shipped. Every dealer and manufacturer is carrying good orders on his books at this time both for immediate and for future delivery.

A prosperous fall building season has struck Louisville and will aid considerably in improving the showing for the year, which was rather quiet during the summer months. The Alfred Struck Co. has two contracts, totaling $300,000, one a church, and the other a boarding school; and several smaller contracts, which are considered exceptionally good.

* * *

EVANSVILLE, IND.

Evansville, Ind., Oct. 23.—A few days ago, D. C. Amerine, manager of the Indiana Board and Filler Co. at Vincennes, Ind., announced an increase in wages and shorter hours for all employes of the company. The mill has been operating two shifts of twelve hours each, but under the new schedule the men will work in eight hour shifts and be paid the same wages. In the filler department the men will work ten hours, but will obtain a substantial increase in wages.

Building operations are fairly active at this time. Sash and door men report a steady trade. Contractors say that they have enough work in sight now to keep them busy the balance of the season.

The Current Trend of the Lumber Market

General Market Review

The car shortage has been the supreme dominating factor in all departments of the lumber trade during the past several weeks. At no time in recent years has the shortage been of such vast proportions and so widespread, being felt in every lumber producing field in the country. Where yard room is scarce, many mills have been compelled to close down, being unable to move anything near their volume of output. In almost every section from which reports have been received, the shortage varies only in intensity. Numerous large concerns have been compelled to withdraw their salesmen from the market, as they had not wished to sell when they could make no promise as to shipment. Not only are the manufacturers in trouble because of this shortage, but retailers and consumers everywhere are hampered in their operations because of the inability to get needed supplies.

Many have asked the question, "Where have the cars gone?" They say that the lumber industry is not getting any of them, in spite of the comparatively low volume of demand. They can only explain the shortage by the absorption of many cars for the grain and cotton crops, steel and ore shipments, automobiles and one or two other avenues of industry in which the activity seems to be rather pronounced at this season.

Some of the lumber manufacturers of the south and west are able to derive a small degree of satisfaction from their railroad trade, as in some cases the roads are furnishing cars for shipping their own lumber, but in only a few cases are the railroads able to do this.

There was some relaxation shown in building circles during September as compared with August. The value of permits issued in Chicago last month was $8,579,550, which, however, is $10,000 over September, 1915, and is $207,000 greater than the value of permits issued last month in New York, Brooklyn, and the other boroughs combined. The reports, furnished by the American Contractor, from 111 cities show a total value of permits last month of $72,735,764, as compared with $68,861,798 in September, 1915, an increase of 6 percent. In looking over the various sections of the country, it is observed that the greatest decreases in building operations were in the southern states, southwestern states and in the states west of the Rocky mountains, while a considerable gain is shown in the middle western states, with the eastern and New England states about holding their own, as compared with last year.

With such a pressure for cars, it is but natural for the lumber market to show considerable strength at the distributing end and it is noted that where cars can be secured the market for the stock shipped is absolutely firm.

NORTHERN AND WESTERN PINE.

The market for soft pine is in good condition at eastern points generally, but shipments are greatly delayed by the car shortage. In California the scarcity of cars is greater than ever before experienced, it being almost impossible to obtain cars at some of the California pine mills. In the Idaho white pine and western pine district there is a very decided shortage and only a fraction of the cars needed can be obtained. In the northern pine section the supply of cars is somewhat more liberal, but great difficulty is experienced in trying to get anything like an adequate number of cars.

It seems likely that the car situation will not be relieved in time to bring forward sufficient lumber for ordinary requirements and in consequence stocks in wholesale and retail yard hands will have to be heavily drawn upon. However, such stocks as there are available will probably bring good prices. Shop lumber is in low supply at the sash and door factories and woodworking plants, and northern shippers are apt to reap a considerable advantage because of the unfortunate conditions in car supply prevailing on the west coast and in the Inland Empire.

SOUTHERN PINE.

The question of car shortage has been the all absorbing topic of discussion among the southern pine manufacturers and distributors throughout this month. Many of the small mills have been compelled to shut down because of lack of piling room and also because they are unable to finance a large accumulation. There is considerable strength in values, prices being up on practically every item of yard stock, as well as car material, from $1 to $3 a thousand above the values prevailing in midsummer. Where cars are available buyers frequently are offering a premium of a dollar or more a thousand for shipment within a certain period. However many manufacturers and shippers are unable to make any promises whatever regarding date of delivery. As it seems to be a matter of pure speculation and an injustice to their customers as well as to themselves, they will not quote.

Even when shipments have been made cars are frequently delayed en route by reason of crowded traffic and buyers are causing considerable worriment to their shippers by insisting upon their tracing the cars and hastening delivery.

It is seldom that there is not some drawback in the yellow pine business; and while prices are firm and there is a fair profit in sight, the benefit is annulled by the inability to make shipments. Authorities in the yellow pine trade fear that when cars are again available, there will be such an anxiety to move stock that almost any price offered will be accepted and the market will be again demoralized.

There has been a heavy inquiry for car material during the last two or three weeks and inquiries were afloat in the Chicago market for fully 10,000,000 feet, some of which was placed. However, the railroads are finding difficulty in getting stock forward and the car building companies are laboring under a serious handicap. There are many inquiries out also for track material, bridge timbers and the like.

NORTHERN AND SOUTHERN HARDWOODS.

Reports from various hardwood manufacturers and distributors are somewhat at variance as regards the strength of the demand and of the market. Locally the average hardwood dealer is getting out a fair quantity of stock right along, but he is not able to get shipments from the mills to replenish his depleted yard stocks and car shippers are, therefore, at a great disadvantage. The car shortage shows no symptoms of lessening and the duration of the tense situation now shown is indefinite, although it cannot be expected that the trouble will continue for very long after the crops are moved. At the same time, when there has been a scarcity of cars early in the fall it has not usually relaxed to any extent until after the first of the year. The scarcity is the greatest in the cars the hardwood lumbermen usually ship in, flats and boxes.

Probably the best demand shown for any variety of hardwood lumber is that for red birch, which is particularly plentiful and there being hardly more than sufficient stock for even an ordinary requirement. Because of the car shortage in the north the delivery of stock is much handicapped. Prices on birch are holding fairly well around $40 to $42, Chicago delivery. Red gum is in fine request, but sap gum is off in both demand and price.

Shippers of red gum are considerably bothered by the car shortage and by low and broken stocks in yard. Oak is quiet, but as stocks of its competitive woods are rather reduced, it is likely to again go into its ordinary channels. There is considerable demand for quartered white oak and while this product has been rather neglected, the recent inquiry is indicative of improvement. There is even some demand for plain oak and some dealers say that they are getting a much better inquiry than thirty days ago. Oak flooring stock is in particularly good request. Most of the hardwood markets report a good call from the furniture industry.

Chicago dealers say that they are having some gain in their business owing to the inability to secure direct shipments from the mills and that many factories are buying from the yards in car loads and wagon lots as is most convenient.

CYPRESS.

In common with other southern woods, the cypress market is decidedly firm where shipment is at all possible and a premium is being paid for much of the stock. An unusually good requirement is noted for cypress from the eastern markets and from the yards in the central western territory, but any degree of activity is dependent largely upon the ability to secure cars, which is now practically at a zero point at most mills. There is a decided firmness to prices and there are some who predict that several items will be advanced in the not distant future.

HEMLOCK.

Reports from the hemlock territory are uniformly good, trade being restricted only by the car shortage which is now in evidence generally throughout the north. Eastern buyers figure prominently in the inquiries and while shipments are reduced, it seems likely that they will be further restricted owing to broken stocks at mill points. Preparations for the winter's logging are now going forward and it is likely that if men can be secured the input of logs will be along the average volume in recent years.

SHINGLES AND LATH.

The shingle market has been active during the last fortnight and prices have been rather uncertain, but generally with a marked upward tendency. The quantity of stock on hand is not heavy and shipments are being greatly delayed, not only by car shortage, but by the desire of the mills to get better prices and hence a reduced number of transits have been started. Prices on clears are $3.51 and on stars $2.97, Chicago delivery. Northern white cedars are practically unchanged at previous quotations. Lath are in good request and are not very plentiful, with no particular variation in price.

Northern States Markets

MINNEAPOLIS, MINN.

A correspondent sends the following report from Minneapolis: "Country demand for northern pine is coming in rather slowly. Manufacturers are expecting larger orders from now on from yards, as yard stocks have grown low in many staple lines. Factory trade continues good, and the box factories are taking all the low grade stuff at good prices. The general run of northern pine prices is considered good.

"The steady increase in city building operations is making for a good hardwood market. Maple and oak, with all grades of birch are moving at high prices, higher than a year ago. The local furniture and other woodworking factories are steady buyers.

"Sash and door factories are busy getting out orders for the many dwellings and apartment houses being erected here. Country trade so far has been rather spotted, but some stock goods have been ordered and greater volume is expected to develop. Prices have been maintained at a high level."

* * *

MENOMINEE, MICH.

Lumber manufacturing conditions in Menominee are reported as follows: "So far as I can see it there is enough dry lumber. Orders are satisfactory, but labor and cars are short. Shipments usually crowd at this time of the year, before cold weather sets in, and the close of navigation. If things were working right I believe everybody could accomplish more than they are now doing."

* * *

RICHMOND, IND.

A manufacturer of northern hardwoods writes as follows: "It strikes us that stocks of lumber on the few items are pretty well sold up in dry stock and may be rather difficult to secure for prompt shipment within the next 30 days or so, although most mills have been running and are now running full blast. No doubt

Digitized by Google

there will be plenty of stock, although it may take some little time for it, especially the thick items, to get dry.

"Regarding the car shortage, we cannot say that we are bothered at this point, although quite a number of our southern shippers advise us that cars are quite difficult to secure."

South Atlantic Markets

An operator in yellow pine writes as follows: "Conditions appear favorable to us for a firm market for the balance of the year, although there is apparently some weakening in prices on some items which appear to be rather over-supplied. The export demand is holding up remarkably well, and operating conditions throughout this section are now ideal.

JACKSONVILLE, FLA.

"The serious trouble is the car shortage, and for the past six or eight weeks we have had only about 50 to 60 percent. of our requirements, this condition necessitating delays in shipments which are very exasperating both to our customers and ourselves. We believe, however, that all other southern lines are doing their utmost to relieve the situation.

"The labor situation with us is normal, although during the past few weeks some of our employes have gone north to some of the large cities where higher wages and higher cost of living prevails. In our opinion the approaching cold weather will put a damper on further immigration of this kind.

"As to relief from the car shortage troubles, we can get nothing definite from the railway officials. We believe, however, that the car shortage will have a good effect later on, in that we understand that bids are being asked for a large number of freight cars of every description.

* * *

This letter comes to us from a Florida lumberman: "There has been quite an unusual activity in the lumber market for the past two weeks, and from our point of view, it looks as if we were going to have a strong market for the next few months, with probably advanced prices, especially on railroad stock.

AYCOCK, FLA.

"There has been a slight improvement in the car situation within the last ten days, though we are by no means getting the number of cars that we should have. By loading the cars to their capacity, we are managing to keep our stock from increasing beyond the limit of our storing capacity, though we must have some relief within a short time, or the situation is going to become critical. Those who are supposed to be in touch with the railroad situation, do not give us any encouragement for relief in the near future, and if the situation stays where it is, it will curtail the manufacture to such an extent that lumber prices will advance higher than they have ever been, though the manufacturers will not be in position to derive any benefit from the advances."

Central Southern Markets

This cheerful report comes to us from a manufacturer of Louisiana: "The outlook for business during the next thirty to forty days looks exceptionally good.

ALEXANDRIA, LA.

"The demand for long leaf timbers and special cutting is very heavy and at satisfactory prices. The demand for yard stock is about normal for this season, with the volume of orders received increasing each day.

"All the mills in this section have as much business as they can take care of, with the scarcity of cars. The car supply is about 50 percent of the requirements."

* * *

A correspondent writes us from Memphis as follows: "One of the most significant developments recently has been the placing of large orders by the more important railroad systems for new equipment, involving considerable quantities of hardwood lumber and yellow pine. Advices received here suggest that orders involving more than 10,000,000 feet of lumber have been placed and that others are pending. The railroads were some years ago among the largest consumers of lumber and among the best customers of the lumbermen. During the past three or four years, however, they have added comparatively little to their equipment, which is only another way of saying they have bought very little lumber. Their re-entrance into the market is regarded as a most favorable development. The railroads have done very little repair or reconstruction work, but they are now handling such a large volume of business that it is regarded as logical that there should be a renewal of activity along this line."

MEMPHIS, TENN.

* * *

A lumberman with large hardwood interests in Tennessee writes us as follows: "Business here would be highly satisfactory were it not for the car shortage, which may now be called the controlling factor in the local hardwood market. Several mills will be obliged to suspend operations unless relief is soon secured.

NASHVILLE, TENN.

"Inquiries are plentiful, and prices are strong, with some items advancing. Building operations are active and the demand for finish and flooring is especially strong."

Middle States Markets

A lumberman writes from New York as follows: "The various labor troubles that have so long vexed the local trade have in most cases been settled, and there is unusual activity in the demand for lumber. Lumbermen are optimistic, and if it were not for the shortage of stocks resulting from car shortage throughout the producing districts, prospects for the winter trade would indeed be bright.

NEW YORK, N. Y.

"The factory demand for lumber has shown an unexpected increase during the last two weeks; and the establishment of two new automobile plants in New York and one on Long Island, together with several wood consuming factories on Long Island insure a greater demand."

* * *

A correspondent well informed on conditions in the Buffalo district writes as follows: "The question of car shortage is having a great deal to do with the lumber situation just at present and it is helping to sustain the market at a firm level. The supply of cars here is not as good as some weeks ago, but it is not as low as at many other lumber centers. Wholesalers are able to make shipments with some delay, but there is more difficulty in getting lumber in by rail than in shipping it out. A lack of vessels for lumber carrying is also having an effect. The lack of labor at the lumber yards is also a source of much dissatisfaction.

BUFFALO, N. Y.

"The hardwood demand is about the same as a month ago and runs largely to maple, oak and ash, with a fair amount of activity in poplar and basswood. Birch is also doing about as well as usual. Prices are holding firm, because of the scarcity of stock and the lack of cars with which to make shipments from the mills.

"White pine and yellow pine are being advanced in price, as stocks are not heavy and the demand is about up with the supply. It is reported that white pine stocks will be much curtailed next year and sellers are looking for higher prices in consequence.

"Shingles show an advancing tendency, owing to the lack of cars at the coast.

* * *

How the car shortage is affecting the trade is shown by this letter from a Philadelphia lumberman: "We have been quite busy for the past several months, receiving a considerable volume of business in all classes of lumber we handle, and if the weather continues fair and favorable we anticipate continued activities during the next six weeks to two months. We rather expect the market will be stronger instead of weaker.

PHILADELPHIA, PA.

"We do have considerable trouble about getting cars for our shipments, and we are compelled to disappoint a number of customers because of the delay, due to no fault of ours, but to the inability of the railroad company to furnish equipment.

"We are informed on good authority that on August 1 the railroad companies of the United States had 10,000 empty cars in excess of requisitions for empties. On September 15 they had requisitions for 14,000 empty cars in excess of their supply of empties, and as a good many people in the south are holding the cotton, and the movement of cotton is liable to be greater and not less during the next two months, it looks to us as though the car supply will be worse, not better."

American Forest Trees

By the late Henry H. Gibson
Edited by Hu Maxwell, Wood Utilization Expert

The book is beautifully printed, and is handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

The work is illustrated in sepia with more than 100 full-page halftones from photographs covering all the chief commercial varieties of virgin forest timber growing in the United States, and also with numerous engravings from drawings showing leaf and flower forms, etc.

The price of the work is $6.00, delivered by express or mail.

The Lumbermen's Headquarters

Ohio Valley Markets

CINCINNATI, OHIO.

The serious effect of car shortage on the Cincinnati market is shown by this report: "Owing to the serious car shortage at the producing centers, both the yellow pine and general hardwood market, particular southern woods have been held back considerably, although the demand in this section is considerably more lively than a few weeks back. The car shortage seems to be the only serious drawback to a generally rising market.

"The heavy volume of inquiry from the railroads recently has put considerable action in the lumber market and while the furniture manufacturers are not ordering so liberally of oak as usual, their requests for birch and gum have correspondingly increased. Birch at this writing is considerable of a feature of the market here, easily leading the northern hardwood list. Stocks of cypress are getting rather low and poorly assorted, with the result that the supply of lath is getting considerably below the request. The factory trade is picking up nicely. The implement manufacturers and carriage and wagon building are buying hickory in good volume, this business increasing steadily through the last few weeks. Elm is moving in good volume also with the hub manufacturers. There is a fairly sustained call for cottonwood, while box boards are in excellent request with the supply rather light. Walnut prices are beginning to sag a little, although the demand has been fairly well sustained. Black walnut especially seems to be in a rut."

* * *

LOUISVILLE, KY.

This report of satisfactory conditions in the Louisville market has been received: "The hardwood manufacturers and dealers of Louisville are generally optimistic, and are all reporting a good run of business. Orders are coming in rapidly, and many inquiries are being received. Plain oak is in better demand than at any previous time in months. Quartered white oak is also showing improvement, while the woods in largest demand are gum, ash, elm, cypress and cottonwood, the latter being very scarce. Walnut is exceedingly active, and mahogany is holding its own in both a domestic and export way. There is also a good demand for veneered and glued-up stocks, cabinet manufacturers and furniture factories being busy.

"It is reported that in spite of the scarcity of bottoms the export demand for high grade lumber is showing up well, and there is some speculative buying in gum, buyers figuring on high prices and a big demand at the close of the war. Poplar has shown a vast improvement during the month, and the demand for pine is also active, although receipts are light just now on account of the car shortage."

* * *

EVANSVILLE, IND.

A man well informed on the hardwood lumber situation in Evansville and southwestern Indiana writes as follows: "Things are moving along all right for the hardwood lumber manufacturers of this section and trade right now is a whole lot better than it was this time last year. All the up town mills are being operated on steady time and the outlook for future business is good. Prices are firm and collections are reported up to the standard.

"The demand for quartered white oak is not so strong as it was a few weeks ago, although plain oak is holding its own very well. Poplar is in fair demand, elm is picking up and gum is in better demand than it has been for some time past, this being due to the fact that the furniture factories are being operated on full time and are using a great deal of gum. Walnut still remains off and hickory is in normal demand."

New England Market

BOSTON, MASS.

A lumberman writing from Boston says: "With few exceptions dealers report increased activity in the lumber market in all the trade centers of New England. At no time has building activity been in such volume as at the present. Rising prices seem to have no restraining effect upon the demand.

"The scarcity of cars, especially at the southern mills, and the scarcity of labor at the mills are somewhat restricting stocks, and higher prices are being obtained for many items, particularly in cypress, spruce and maple.

"An unusually active winter trade is looked for in the New England markets."

Pacific Coast Markets

PORTLAND, ORE.

One of the leading manufacturers of Douglas fir sends us the following expressions on the market: "Labor is scarce and inefficient and wages are 15 percent higher than last year. The car shortage is severe and serious.

"Stocks are low at the fir mills, the last report showing an average of only two million feet per mill, covering a report of seventy-five mills. It would seem that the fall buying is about over and that all of these factors should spell a strengthening in the fir market.

"If non-movement of product will give the market strength, it would seem that the next sixty days should bring it."

* * *

TACOMA, WASH.

This letter from Tacoma indicates the seriousness of the car situation: "The present situation in the lumber market is largely influenced by the car shortage which is extremely serious. Prices are undoubtedly higher, but manufacturers are finding it extremely difficult to get shipments out. Inquiries are increasing but the difficulty of making deliveries is holding up a large amount of business. The same situation prevails in the offshore trade as cargo bottoms are very scarce. Railroad men predict an improvement in the car situation before the end of the month.

"Shingles have also been affected by the car shortage. Prices are very strong and the mills which are able to make deliveries can pretty nearly name their own quotations. The average price is said to be $1.85 for clears and $2.10 for stars but quotations vary considerably at the different mills. The demand for shingles is unusually heavy."

* * *

SEATTLE, WASH.

We have received this report of the Seattle market: "Owing largely to the car shortage in the Pacific northwest, lumber values have stiffened considerably in the last week. Eastern line yard buyers caught short on many items have attempted to place orders in considerable volume, but the manufacturers have not been caught napping and there is no disposition to take on much business at present prices. There is a comparatively small amount of business moving. It is the general opinion that if shipping facilities could be obtained there would be a brisk business.

"No. 2 vertical grain flooring is getting scarcer and the market has stiffened considerably. There seems to be a plentiful supply of drop siding. Some manufacturers are holding for an advance of fifty cents on fir dimension, which is generally quoted at $6.50 off the list.

"Red cedar shingles are enjoying a brisk flurry as a result of the scarcity of cars and the closing of the lake and rail route. Stars are quoted at $1.65 to $1.70 and clears as high as $2.25, while some brands of premiums are going at $2.40 and $2.50. Dealers declare these prices are not likely to hold when cars become plentiful."

* * *

SAN FRANCISCO, CAL.

A correspondent sends this report of conditions on the Pacific coast: "Heavy snowstorms have been noted in the Sierras and a number of mills have been closed, although it is possible that some of these may reopen for a month or two. However, they cannot be operated to their normal capacity and the lumber cut of the state will be slightly lighter than was anticipated. The poor condition of mountain roads is preventing many small mills from making late deliveries and the market for California mountain pine is just a little steadier than it has been, as a result.

"The car shortage, which has been quite serious in the northwest for some time, is now commencing to be felt here and eastern shipments are being delayed. Prices are without change in the local market, fir cargoes being steady at $14.50 base price, with the usual advance of $1 for San Pedro and San Diego. The lack of transportation facilities is the greatest handicap in the lumber business, but this promises to be remedied soon, as far as water transportation is concerned, as ships

Digitized by Google

for this trade, with an aggregate carrying capacity of at least 30,000,000 feet are now building on this coast.

"Redwood shingles, which advanced five cents early in the month, are back at the former figures, but there is no break in the market. Cedar shingles are firm at the advance made in August and stocks are lighter than they have been, on account of a scarcity of tonnage and the fact that some of the mills in the northwest are closed."

Gulf Coast Markets

NEW ORLEANS, LA.

The New Orleans market is reported as follows: "No material change is observable in the yellow pine market from what it was a week or ten days ago. Prices are still going up on practically everything, due entirely to the difficulty in securing equipment. Demand is not very strong. Yards are buying from hand to mouth to supply their urgent requirements and are having to pay top prices for the stock they are getting. The car situation is worse, if anything.

"Mills stocks are heavy, owing to inability to ship, but nobody is making any concessions, as the few cars that are furnished can be used to load orders on which good prices were secured. Some railroad inquiries are being offered. Timber cutting is plentiful at first-class prices, and orders for this class of stock are hard to place.

"The export situation is about the same. Orders are coming in slowly. The Cuban market, which has been booming for some time, is now reported bad, owing to overstocking.

"As in other lines, the car shortage is still proving a most serious factor in the hardwood market. Gum inquiries are still coming thick from consumers, which of necessity means activity among jobbers and middlemen. Gum is by far the strongest item on the hardwood list. There are not many inquiries for oak, though the tendency is to put prices up on the higher grades of oak. In general, hardwood evidences a very healthy condition, and local operators anticipate an unusually good fall and winter business.

"A plentitude of orders and lack of equipment in which to forward the materials asked for very fairly summarizes the situation now confronting cypress operators in this section. Most mills are obtaining about 25 percent of the cars needed. Mills located along main lines of travel are experiencing a great deal less trouble than are those out of the regular channels of rail commerce. Prices continue good."

* * *

BEAUMONT, TEX.

A lumberman writing from Beaumont says: "There has been an advance on yellow pine during the last two weeks that will average $1.50 on all grades. The local market is strong, but the car shortage is acute, with slight prospects for abatement. The shortage of cars accounts in a measure for the advance in prices, but inquiries received by manufacturers here indicate a fine winter trade, as soon as the car movement becomes normal."

* * *

HATTIESBURG, MISS.

A correspondent well informed on local conditions writes us as follows: "The lumber manufacturers in this section are centering their attention on the car situation at the present time, as it has reached an acute stage, and if relief is not secured soon, a number of mills will be forced to close their operations. Some of them now are running on short time with their planing mills and those cutting timbers are having to close their sawmills and wait for cars. Some mills are not getting over ten percent of the rolling stock they need and orders are being turned down because no guarantee of reasonable shipment can be made.

"No trouble is had in getting all the orders needed for almost all kinds of cutting and prices are strong on a number of items."

Southwestern Markets

HOUSTON, TEX.

A lumberman writes us from Houston as follows: "While the demand for lumber is the heaviest in years, lumber manufacturers are so handicapped by car shortage that they cannot take advantage of the demand. Many mills in southeastern Texas are unable to operate at more than 50 percent capacity.

"Car material is still active and the retail trade along the border is picking up; yard trade in general is reported only fair.

"Prices in yellow pine continue to show an advance."

* * *

ST. LOUIS, MO.

A lumberman writes us as follows of conditions in the St. Louis market: "The lumber market of St. Louis has been fairly active this week, but the prevalent car shortage and the scarcity of common labor is working to the disadvantage of the yards.

"The railroad demand is increasing, especially for ties and bridge timbers, but the country trade has not yet developed as was expected several weeks ago."

* * *

SHREVEPORT, LA.

Conditions in the Shreveport lumber market are described by a leading lumberman as follows: "According to all information we can gather, the lumber market promises considerable improvement in the next sixty days.

"Orders with us are coming in faster than we can take care of them owing to the limited car supply for loading that we are able to receive, which is about 75 percent of our capacity."

* * *

KANSAS CITY, MO.

A lumberman writes us from Kansas City as follows: "The lumber market here is held in the grip of the car shortage. Firms that two weeks ago were getting 50 percent of the cars required are now getting from 30 to 25 percent only. Many firms have called in their salesmen and are practically out of the market. Prices in general are stronger.

"If the car shortage can be relieved to any extent, the fall and winter trade here ought to be of an unprecedented volume, as the prosperity of this region surpasses that of any period in its history."

Inland Empire Markets

BOISE, IDA.

We are in receipt of this letter from a leading lumberman of the northwest: "We have had a very good business for the last two months. Our stock is all western pine and shop trade has been exceptionally good. We have also had a very good trade for our low grade boards.

"The car situation has handicapped us to a certain extent but is nothing compared to what they have suffered in other places. Labor is rather scarce, although we have been able to run our plant at full capacity."

* * *

KALISPELL, MONT.

A thriving condition in the Inland Empire is reported as follows: "The mills in this district are all running at full capacity, and orders are plentiful.

"Labor conditions are more satisfactory than 30 days ago, and the car situation, while far from satisfactory, is much better than in other producing districts.

"The yard trade throughout the vast section served by the Inland Empire mills is very active, and crop conditions warrant the belief that an unusually good fall and winter trade may be expected."

* * *

SPOKANE, WASH.

A lumberman writing for Spokane says: "The lumber trade throughout the Inland Empire is good. There has been some trouble over scarcity of labor, but this is largely past now that the men engaged in harvesting are seeking winter jobs. Car shortage has been far less severe than in most districts.

"Mills are operating night and day forces, and while the demand is exceptionally good the mills are keeping up well on the orders.

"Lumbermen express the opinion that conditions are excellent and that they are permanent."

CALIFORNIA REDWOOD BUNGALOW.

The Pacific Building Material Co. of San Francisco has erected a California bungalow in its store on Market street, the lumber and shingles for which was furnished by the California Redwood Association.

ZELNICKER

FOR SALE.
MODERN SASH AND DOOR FACTORY.

This is an exceptionally well located, well arranged and well built plant, located at North Bend (Coos Bay), Oregon, having the Southern Pacific Railroad on one side and deep water on the other, and covers a ground area of about 4½ acres.

The plant has a capacity of about 500 doors and 800 sash per day, and an additional capacity for other mill work.

Coos Bay is the home of Port Orford cedar, generally known as white cedar, which is the best known wood for doors, sash, and inside finish. Tributary to this location is also a large quantity of fine old growth fir, spruce, and red cedar.

The Southern Pacific Railway has just completed its line into Coos Bay and has granted us a Pacific Coast Terminal rate. This will enable the manufacturers to ship to all Eastern points at as low a rate as any factory situated on the Pacific Coast.

This plant is not a run down proposition, having lately been thoroughly rebuilt, and with our terminal rate, deep water shipment, and low cost of raw material, we know of no better location on the Pacific Coast for a sash and door factory.

We want to sell and will make the right price.

BUEHNER LUMBER COMPANY,
North Bend, Oregon.

FOR SALE—MODERN SAWMILL.

And 300 million feet of standing timber in British Columbia most advantageously located on beautiful lake and main line of Transcontinental Railroad, having advantage of $3 per thousand feet in freight rates to best markets on the continent. Logging and manufacturing conditions ideal and very economical. A fortune for the right parties. Will sell on easy terms, and may accept other desirable property in part payment. Principals only. A. C. FROST CO., Corn Exchange Building, Chicago, Ill.

BARGAIN IN YELLOW PINE TIMBER.

$3.50 per thousand—⅔ cash, balance good note—will buy 20,000,000 feet Yellow Pine timber, both long and short leaf. Two miles from railroad.

This is a bargain. Don't deal in real estate. Is a business proposition. Above are facts. Don't write if you can't handle the deal.

Address Box 66, Garrison, Texas.

FOR SALE—WISCONSIN HARDWOODS.

Lidgerwood Skidders and Loaders—Clyde Skidders with and without Loaders—Locomotives—Steam Shovels—Drag Line Excavators—Cableways—Logging Cars—Hand and Power Cars—Railroad Iron—Wire Rope, etc.

All machinery in first class condition, for prompt delivery.

Address: W. G. WILMOT, 1917 Fisher Bldg., Chicago, Ills.

WONDERFUL CHANCE
TO SECURE
YELLOW PINE
BARGAIN

Have 60 day option on mill with 15 miles of railroad contiguous to 180,000,000 feet finest long leaf pine in the South, which can be contracted at $5 stumpage, with ample time in which to cut it.

Mill and railroad cost $800,000 less than three years ago.

CAN HANDLE THIS FOR
$150,000

Address C. W., care Lumber World Review.

THE LUMBER WORLD REVIEW ESTIMATE BOOK should be in the hands of every dealer. It make a complete record of your sales and deliveries. Size of book, 8½x14 in. It contains 200 leaves, 100 original and 100 duplicate. Price $2 the copy, ½ dozen, $10; 1 dozen, $18. Sent prepaid on receipt of price. LUMBER WORLD REVIEW, Chicago.

Positions

WANTED—POSITION AS SALESMAN.

In Chicago or adjacent territory in hardwoods. Knowledge of both trade and markets. Twenty years' experience. Address "F. I.," care LUMBER WORLD REVIEW.

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care LUMBER WORLD REVIEW.

WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open this fall. Correspondence invited. Address "T. M." care LUMBER WORLD REVIEW, 1740 Transportation Building, Chicago, Ill.

L. M. LAMM,

208 District National Bank Building, Washington, D. C. In charge of the Washington Bureau of the LUMBER WORLD REVIEW. In close touch with lumber matters at Interstate Commerce Commission. Able to watch for decisions, etc. Prices reasonable.

WANTED—POSITIONS FOR SALESMEN.

Lumber concerns desiring traveling salesmen will do well to correspond with T. H. Nelson, secretary Central Association of Traveling Lumber & Sash & Door Salesmen, State Life Building, Indianapolis, Ind.

BOOKS OF PRACTICAL VALUE.

There have just been issued from the government printing office at Washington two pamphlets that evidence the practical work of the Federal Trade Commission. These two pamphlets were prepared under the direction of Commissioner Hurley by Robert E. Belt, chief accountant, and R. W. Gardiner, assistant accountant; they are entitled "Fundamentals of a Cost System for Manufacturers" and "A System of Accounts for Retail Merchants."

In his introduction to the work on costs Commissioner Hurley says: "With the object of aiding in the improvement of business generally we have endeavored to show briefly the importance of accurate manufacturing costs and the fundamental principles underlying them." The importance of an accurate determination of costs is shown and the objections to installing a system such as usually arise in the minds of business men are met, questions of method answered, and general questions of distribution, accounts and statements, discussed and a system of accounts illustrated. Lumber manufacturers, among whom there is growing up a realization of the importance of an accurate determination of costs as related to manufacturing efficiency, will welcome this publication.

With reference to a system of accounts in the retail business, Commissioner Hurley says: "There must be a decided improvement in this direction before competition can be placed upon a sound basis and before we can expect a decrease in the heavy business death rate among retail merchants."

The importance of an accurate accounting system to the retail merchant is shown in enabling him to properly price his goods and conduct his business on sound business principles and to enable him to present his financial condition to his banker in such manner as to obtain the credit to which he is entitled.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of the LUMBER WORLD REVIEW, published 10th and 25th each month, at Chicago, Illinois, for October 1, 1916.

State of Illinois, } ss.
County of Cook }

Before me, a Notary Public in and for the state and county aforesaid, personally appeared R. S. Johnson, who, having been duly sworn according to law, deposes and says that she is the secretary of the LUMBER WORLD REVIEW, and that the following is, to the best of her knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, Lumber Review Company, 608 So. Dearborn St., Chicago, Ill.

Editor, Bolling Arthur Johnson, 608 So. Dearborn St., Chicago, Ill.

(My commission expires May 17, 1919.)

FIRE HAZARD INCREASE IN THE FALL.

The Lumbermen's Underwriting Alliance in its Bulletin No. 92 issued September 30, urged upon its membership the importance of joining in a national movement for fire prevention to conserve the country's resources.

The Alliance bulletin, as usual, gives excellent practical advise. We quote the following:

"Our losses last fall between October 1st and November 2nd, totalled $125,937.76. Those for October and November, 1914, amounted to more than $140,000. As an example of what may happen during a few hours of hurricane weather we recall that on September 29th, a year ago four lumber plants in the middle section of the extreme southern territory were attacked by fire, with a total damage (largely covered by the lumber insurance mediums) exceeding a quarter million dollars. Even during the present summer—which has been one of comparative freedom from cyclones and windstorms—a week of high wind during the early part of July caused extensive loss to timber and by fire at a number of lumber plants, both north and south. When the wind first begins to rise detail men for emergency patrol work, especially at the divisions most acutely exposed to sparks from slab pit, boiler stacks and railways. It is far better, as one mill manager expressed it, to close down the entire works voluntarily for a day during a time of peril than to experience a forced shut-down for months to rebuild a burned mill, or to be obliged to close the order books and call in the salesmen for lack of stock to fill demands."

Three Great Time Savers

You can use electric power to increase factory efficiency as profitably as you use the telephone and telegraph to increase personal efficiency.

The perfect reliability of electric power from G-E motors and controllers keeps the wheels turning twenty-four hours a day, year in and year out, if necessary—production is greatly increased.

This power from G-E motors and controllers meets every requirement of your machines—whether you wish quick or slow starting and braking, constant, variable or varying speed—which means more and better product.

Our engineers have applied electricity to many industrial power problems. You are invited to avail yourself of their suggestions when considering means for increasing production.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

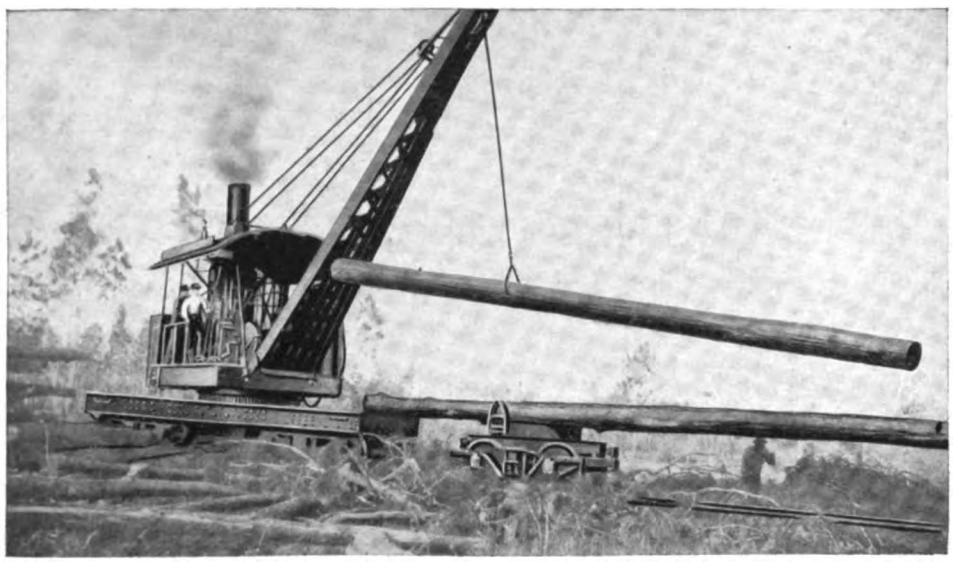
FOREST INDUSTRY CONFERENCE AND LOGGING CONGRESS EDITION, 1916

One large lumber company saved $1.00 per thousand feet by loading logs in tree lengths with an

"AMERICAN" Locomotive Logging Crane

This crane was specially designed for logging work and has the widest range of useful service of any machine the lumberman can buy. It has world's of power, speed and accuracy, and loads the long, heavy trees quickly and safely.



Loading a Tree Length Log

Tree length log handling cuts down the cost between woods and mill and is the ideal way of handling logs under certain conditions.

In addition to the actual loading of logs, there are many other important jobs on the logging operation which the "AMERICAN" Logging Crane does efficiently and at a pronounced saving over ordinary methods. It takes up and relays logging spurs very rapidly, handling its own cars and doing away with the expense of a locomotive and train crew. It quickly clears up the wrecks and spills which ***will*** occur where the care given the roadbed must necessarily be limited. Its full circle swing permits material to be picked up from all sides.

Where a new mill is to be built, the "AMERICAN" Locomotive Crane will come mighty near to saving its cost erecting the timbers and unloading and placing the heavy machinery.

It will also build bridges and and trestles, drive piles and take out material for fills, using a clam shell bucket.

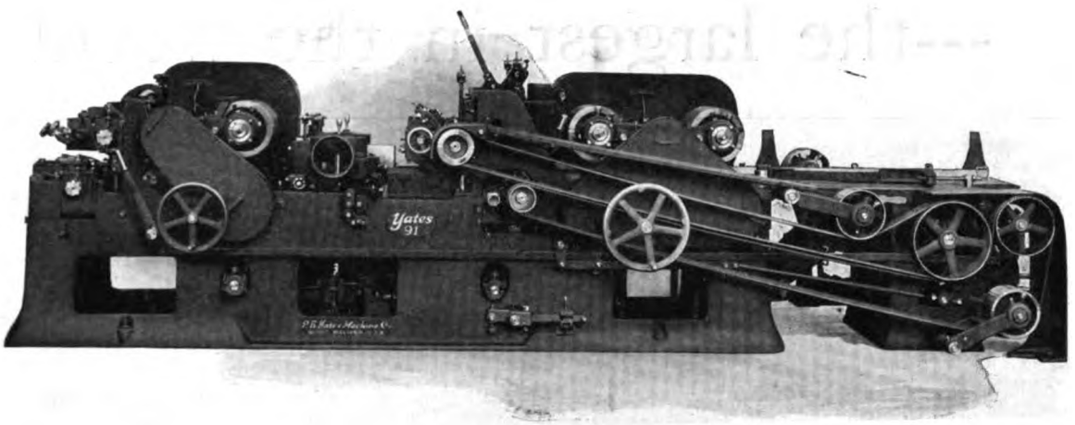
Where Big Things Are Done—



There's a Yates (Formerly BERLIN) "Ninety-One"

IN the Yellow Pine of Georgia, the Cypress of Louisiana, the White Pine of the North and Northwest—at Bend, Tacoma or Bogalusa or any of the great lumber producing centers where daily output runs into or close to the million mark, one invariably finds the Yates No. 91 Planer and Matcher.

Why? Because companies like these choose equipment solely on the basis of what that equipment will PRODUCE.

The Yates No. 91 Planer and Matcher is the only matcher built whose designers have thoroughly taken into consideration the peculiarities of all the different varieties of woods on which this machine is now operating.

It has the lowest average upkeep cost of any matcher built. Its working parts and their adjustments are without exception the most accessible.

All of which spells the Highest Quality of Output, the Greatest Production, and the Lowest Manufacturing Costs.

We can tell you of No. 91's in your own vicinity. Ask us where you can see one in operation.

LUMBERMEN.
Laurel, Mississippi, 8/4/09.

Natalbany Lbr. Co.,
Hammond, La.

Gentlemen:

Replying to your favor of the 31st. ult., would say that the NATIONAL BLOW PIPE & MANUFACTURING CO., of New Orleans, overhauled the blower system in our planer last year and installed their low power and low speed system.

The system as installed has been perfectly satisfactory and is doing good work for us. It is rather difficult to figure out how much of a saving is accomplished, but it has made considerable difference in the amount of power required to drive same, as well as a saving in belt expense. Under our old system with the high power fan and the greater amount of power required to drive it, we had a great amount of difficulty with our fan driving belt. With the low speed system there is a good deal less wear and tear on the belts, and a saving in time as well, as under former conditions we frequently were obliged to shut down our machines until the belt could be repaired.

We think you will find Mr. Posner fully competent and able to carry out any contract he may make, and the saving to be what he claims.

Very truly,
EASTMAN, GARDINER & CO.,
FGW-B F. G. Wisner, Treas.

Bogalusa, La., January 9, 1912.

National Blow Pipe & Mfg. Co.,
New Orleans, La.

Gentlemen:

For your information I beg to quote you below telegram which I received this morning from the Madera Company, Ltd., Madera, Mexico.

"Wire if you would recommend the National Blow Pipe people of New Orleans over any others you know of and if their system is entirely satisfactory."

to which I replied:

"We have always given the National Blow Pipe Company all our work because we consider them the best blow pipe concern that we know of. Their work has always been entirely satisfactory."

Yours truly,
W. H. SULLIVAN.

Delay Won't Get You Anything—Act Today
Here's the Reason

The principle of Emerson Dry Kilns has proved successful in every woodworking industry requiring the highest efficiency in Dry Kilns.

Although we have exploited Emerson results on many kinds of woods, it is quite possible that we have not exploited the kind of work most interesting to you.

Why delay getting the facts on your own proposition?

There is no obligation and we will consider it a favor if you will give us the opportunity to explain the advantages of our System for the purpose of helping you to cut costs.

In its Automatic Regulator, the Emerson has a feature of economy and efficiency you can't buy elsewhere for any price—as it's patented. Being Automatic, you simply charge the kiln, turn on steam, and our System does the rest. It will save you half the boiler power or exhaust steam over any other process, and give you a far superior quality of dry stock, that will work through your machines with much less labor and waste because of its softness.

We can convert your old building to our System at very little expense. At least let us send you the full particulars—as our proposition will positively pay you.

The Emerson Dry Kiln Company
Broadway and 23rd Street, NEW YORK CITY

Speed in the Lumber Office

is as essential as speed in the yard or mill—only more so in that office labor costs more to start with and in most offices a whole lot more than it should at the finish. But whatever your objections may have been in the past toward mechanical aid you can't afford now to overlook the

Dalton Adding, Listing and Calculating Machine

In actual practice it has demonstrated its efficiency in the lumber office not only in addition, but in the auditing of invoices requiring multiplication. For example it took an ordinary operator on the Dalton but **67 seconds** to audit the following invoices:

Lumber World Review, November 10, 1916.

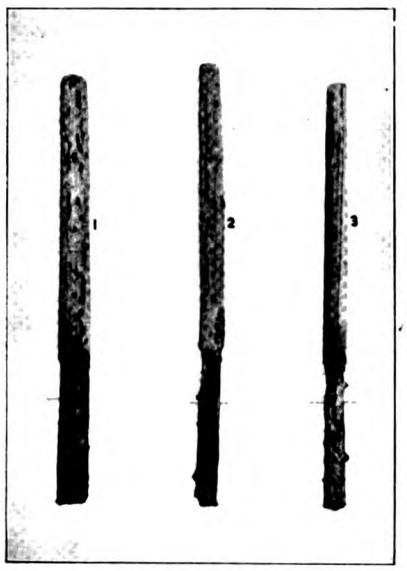
Digitized by Google

These Ash posts were *treated* with Creosote in 1905, and when photographed in 1914 showed absolutely no decay. Experts believe they will last 15 to 20 years longer.—*Photos courtesy Iowa State College of Agriculture.*

Proper Creosote Treatment to Increase the Life of Fence Posts

TWENTY-FIVE million fence posts, with a value of about $4,000,000, are used annually by the farmers of but one of the agricultural states of this country, as reported in Bulletin No. 158 of the Iowa State College of Agriculture.

The value of creosoting these posts is indicated by the following table which shows the comparative life of treated and untreated fence posts of five species of wood commonly used.



Untreated. These Cedar posts were set in 1905 and taken up for examination in October, 1914. In each case the sap-wood was entirely gone; in post No. 1 about one-third of the entire bottom rotted away; in post No. 2 one-half of the bottom decayed.

Estimated Average Life In Years

Species of Wood	Untreated	Creosoted
Ash	6 years	25 years
Cottonwood	3 years	25 years
Red Oak	6 years	20 years
White Cedar	14 years	30 years
Willow	4 years	25 years

Further interesting facts are quoted from Bulletin mentioned above:

First—"By effective creosote treatment it is probable that woods commonly used for posts may be doubled in life (white cedar, oak, etc.)."

Second—"By treatment, many species at present almost valueless, can be made to last twenty-five years or more, with only a small addition in cost for treatment (willow, soft maple, cottonwood, elm, etc.)."

Third—"Figuring the investment at 6% simple interest, creosoting reduced the annual cost of the less durable fence posts by about one-half."

Fourth—"In selecting posts for treatment take the native soft-wooded trees and save the oak, hickory, black walnut, etc., for other purposes."

Fifth—"In creosoting select small posts, those 4½ inches in diameter, if of sufficient strength. They are cheaper and when creosoted will last as long, or longer, than seven inch posts."

Sixth—"See that the posts are thoroughly peeled of the inner as well as the outer bark."

Barrett's Grade B Carbosota Grade-One Liquid Creosote Oil

Seventh—"The posts should be thoroughly seasoned before treatment is attempted, or a poor penetration of creosote oil will be secured."

The Best Creosote for all practical purposes is *Barrett's Carbosota Grade-One Liquid Creosote Oil.* It comes ready for use, in convenient sized packages, and requires no apparatus or skilled labor for its application. Anyone can use it properly at any time. It has been especially developed to meet the needs of the average consumer.

In addition to fence posts all lumber exposed to decay, such as sills, joists, etc., should be treated with *Barrett's Carbosota Creosote Oil.*

Barrett's Carbosota is the "Standard" wood preservative for use in the Brush and Open Tank methods of treatment. It is economical, effective and convenient.

Barrett's Carbosota should be carried in stock by every lumber dealer.

It is dependable, easy to sell and profitable to handle.

Illustrated booklet free on request.

He Who Looks Before He Leaps

When it is one's duty to prepare advertising copy for a certain coterie of lumbermen the situation is tremendously eased when it is known, not only to the copy writer but to those who ultimately read the advertising, that the copy is being prepared for the most energetic and foresighted bunch of pace-makers in the lumber business. (And these remarks are here written down by the copy writer without the knowledge or sanction of those whose names here appear.)

Elsewhere in this issue is a somewhat abbreviated account of another of those epochal CYPRESS conventions. It describes a meeting which it would have paid every retail lumber dealer in the country to have attended. It indicates that the trade-mark game is about ready to be played and the cards will soon be dealt to those who desire to sit in.

Something which will mean much to the retail dealers was the movement to bring about a uniform system of grade marks for use by the manufacturers, these grade marks to be copyrighted and to be made familiar to all retail lumber dealers, but not to actual consumers. Each board will then show for itself how it was graded by the shipper and, as the trademark will identify the shipper, the natural result will be much more closely graded lumber. The full obligations of the trade-mark are recognized by all the CYPRESS manufacturers.

It is only a certain coterie of CYPRESS manufacturers who have organized for the purpose of bettering general lumber conditions and who know that this can best be done through the retail dealers by giving the best possible service. Those whose names are here signed are a part of the organization and are prepared to furnish trade-marked lumber and the best possible CYPRESS service.

"He Who Looks Before He Leaps Builds of Cypress and Builds for Keeps"

(If he uses the right kind of Cypress)

Many believe there is ONLY one kind of Cypress. Don't let them fool YOU. There is Yellow and White Cypress. Some claim that either one is "as good as" RED CYPRESS. Experience has clearly proven that the

GENUINE LOUISIANA RED or TIDEWATER CYPRESS

is far superior. We will furnish you the

GENUINE article---all END BRANDED

with the Official Brand of the Southern Cypress Manufacturers Association or Trade Mark as shown below.

No White or Yellow Cypress can be thus branded because only Mills manufacturing the

REAL GULF or TIDEWATER CYPRESS

can be members of that Association and have the right to use that Trade Mark.

Demand TRADE MARKED LOUISIANA RED CYPRESS for

Trunking and Capping when Installing Block Signal Systems, Stakes for Supports, Snow Fence Material, Car Siding and Roofing, Crossing Signs — and obtain entire satisfaction.

We have been furnishing RED CYPRESS Cross Arms to the Western Union Co. for more than twenty-five years.

Standard Pecky CYPRESS TIES from our kind of timber have been in continuous use twenty-five to thirty years, in some cases for a longer time, in the main line tracks of several of the leading Railroad Lines. Bridge and Switch Ties, likewise Bridge Stringers and Caps are used extensively, and no preservative treatment whatever is required to insure durability.

No other wood equals the GENUINE RED CYPRESS for Greenhouse construction

Our Mills produce annually about 250,000,000 feet of

GENUINE LOUISIANA RED CYPRESS

We have the **Best** of Planing Mill facilities and can give the **Best** of **Service** to the **Retail Yard, Planing Mill** and **Factory Trade,** supplying their needs with Rough or Dressed Stock.

We will furnish freely upon request U. S. Government and other convincing reports to back up our statements

LET THOSE SERVE YOU WHO CAN SERVE YOU BEST—THAT'S US

Any information cheerfully furnished.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four thousand, three hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into not one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it makes.

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

1751 -:- 1916

Old Masonic Temple at Williamsburg, Va., built of white cedar in 1751. In good condition despite neglect.

A Roof that Will Outlast the Building

"Roper" White Cedar Shingles

Weather the Centuries

A house is no better than its roof. Remember that.

In planning the house investigate the lasting qualities of "ROPER" White Cedar Shingles. A roof of these shingles will endure for generations without the use of paints, stains or preservatives.

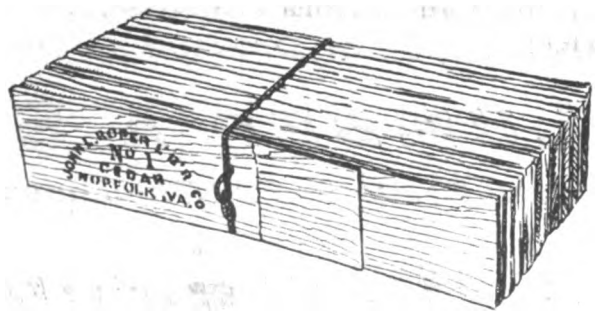
Next to their durability, "ROPER" White Cedar Shingles are noted for their beauty. After a few months' exposure they weather to a uniform steel-gray color of decidedly artistic shade.

"ROPER" White Cedar Shingles absorb practically no moisture, which means that a "ROPER" roof will not sag from added weight.

The distinctive bundle of fifty shingles, stenciled with the name "ROPER" and the grade and width, is your guarantee of roofing satisfaction.

John L. Roper Lumber Co., Norfolk, Va.

Write for interesting booklet about shingles and cedar.



Look for the name "ROPER" on each shingle.

Prices are going up
AN empty lot is a poor investment. Particularly when it can be turned into a paying proposition. Many house builders succeed in borrowing almost as much on their properties as their houses cost and the equity they hold shows a nice annual profit in rentals over their investment. This is particularly true where the owners use
North Carolina Pine
"The Wood Universal"
If this material is used, a really handsome building is the result; a building that does not represent excessive investment. We handle a complete line of North Carolina Pine. Not only does it have the stamina required in wood for exterior purposes, but its beautifully figured grain is ideal for interior decoration.
We will be glad to talk over ways and means of building your house; we may be able to give you just the information you desire.
DEALER'S NAME HERE

LANTERN SLIDES are also included in the plan. These illustrate Mount Vernon, the home of Washington, and several modern home exteriors. They are yours for the asking.

OUR lumber is thoroughly Kiln Dried, strictly Graded under the supervision of the Official Inspectors of the North Carolina Pine Association, and properly Manufactured. This spells SATISFACTION.

AS WE LOOK OUT THROUGH OUR WIDE EAST WINDOWS, which —odd to relate—this time exactly face to the west and towards the sunset and down upon a court rather than the blue of the lake and the shimmer of white sails in the keen November air—as—we say we turn lightly to our task the country is just drawing a long breath and just yawning and putting one foot out of bed preparatory to rising once more to go out to honest labor after a season of very uninteresting politics, the result of which is the election of—either Wilson or Hughes—as president of the United States.

This department was never inaugurated, has not been maintained and will not be PERPETUATED by painting word pictures of political intrigue or the building of tributes to political ambition; neither shall we launch at this time into any explanation of why this department exists except to say that it is simply a "sky line" or "lookout" peak" from which the editor gazes down upon the lumber world, ALL directions being EAST and every worth-while happening of the industry being most readily seen through the windows which give UPON the EAST—the source of ALL KNOWLEDGE!

The great Logging and Conservation Congresses have had their days and nights and have gone their ways and there has been left on the editorial table positively hundreds of columns of literature which no lumber trade newspaper will ever print in full and which, as usual the various secretaries most likely will have printed in large, unwieldly lumber-trade-newspaper-sized official reports, where this literature will be crowded into fine print to save space.

Given all this to be true, we AGAIN want to know why?

The attendance at the Pacific Logging Congress and the Western Forestry & Conservation Association, the Southern Logging Association and the Appalachian Logging Congress was this year far and away ahead of any previous annual meetings.

The papers read were better than ever before and we have reason to believe also that the discussion of those papers has been more USEFUL than ever before and by the same token it has also been more interesting.

Now these Congresses have been all very interesting for their active members, who have had the enterprise to attend them; but how about the 90 percent who have stayed at home, either through INDIFFERENCE or on account of BUSINESS reasons?

These stay-at-homes, at first blush, do not seem to have any rights; but whether or not they have rights they have potential influence and

some means should be invented of putting all this literature into the hands of the stay-at-homes and put it up in such sugar-coated and palatable form that it will be read and will thus be of real service to the lumber trade instead of being put out in big thick books which no person, however loyal to the lumber trade, will ever read.

Time and again we have suggested that these papers be printed in the form of the old fashioned "tract" with which the Nations of the Earth have been evangelized by the various religions; and that these so-called "tracts" be sent out from week to week through the intervening time of association annual meetings so that their constant dropping into the correspondence basket of the "stay-at-homes" may have some chance to wear away their stony indifference.

We HAD hoped to see this thing done in connection with the International Salesmanship Congress, but so far the thing has come out in book form in a private magazine, to no purpose, so far as we can see, other than to collect all the papers, in one book, for reference.

We are not fussing about this thing at all; we are just calling attention to a thought that will not die and should not die until the same is some day accomplished.

At all events a wonderful series of meetings has been held and a great benefit has been extended to the entire lumber trade of the country in SOME form or another.

Before we look out of the window again we must—modestly if possible—call attention to the fact that we have AGAIN assumed our province of telling the story of the Logging and Conservation conferences and congresses in such form that any man who has the least interest or curiosity may read it all at one sitting.

We refer our readers to page 60 of this issue; and incidentally, while we are in the reference business, we want to recommend this issue of the LUMBER WORLD REVIEW very highly in many ways and incidentally to thank a rapidly increasing number of friends in the United States for the patronage that has made this issue possible.

As usual this issue—Logging Congress Edition—of the LUMBER WORLD REVIEW is the most interesting lumber trade newspaper of the year. In fact, we believe this issue of the LUMBER WORLD REVIEW to be the most interesting as to its contents of any we have ever printed. In this connection we call attention particularly to a series of impromptu speeches that were made recently at the Forest Products Industry Conference at Portland, Oregon, upon a variety of subjects very dear to the lumber heart which symposium of eloquence is crystallized in type, beginning on page 43 of this issue.

If Not the "Forest Products Federation" What?

IF THERE IS EVER TO BE a National Lumber Conscience, a National Forest Policy, a national standing together of the traffickers in trees and the owners of timber lands in America; AND if the Forest Products Federation, which has been voluminously suggested in the report of the "Nation-wide Committee," of which H. D. Langille has been for a year spokesman and chairman, is NOT the thing, to bring this affair about—then PRAY TELL US what is it that we must do?

We shall maintain that the Forest Products Federation idea SHOULD stand until some evangelist comes along who is able to tell us something BETTER to do.

MAYBE, though, we don't care—as a trade—for a National Lumber Conscience, or a National Forest Policy!

MAYBE we just want to enter the competition for a decoration as the "Greatest National and International Waster of Natural Resources"—known to the world?

MAYBE we ought to keep on running our yellow pine propaganda, our fir propaganda, our redwood propaganda, our cypress propaganda, our maple propaganda, our red gum propaganda, our hemlock propaganda, our white pine propaganda, etc., etc.,—up to the end of time (some hundreds of years from now) when the TREES are no more?

MAYBE we just want to be optimistic and sit around on the edge of things with our hands in our laps and smile and feel good and jolly each other into the belief that "Oh, we are all right"; "Lumber will come back"; "Just wait till the war's over and see us expand"; "Demand will take care of the supply, and the supply will take care of the demand"; etc., etc., just like we've BEEN doing since the beginning of the rasp of the first saw?

There are about forty or fifty people who believe otherwise—people connected with publicity bureaus and secretaries' offices and lumber trade newspapers—HIRED men generally—"rule of thumb" people sometimes; but in most cases "scientific" men who study things out by rule and know that the column adds up correctly when they SAY it does.

There are also PROBABLY, in the United States, three hundred lumbermen who believe in Trade Extension in all its branches, in Scientific Research, in working with the government, in ironing out our differences by Co-operation.

There are several thousand lumbermen who would like to "see something done" and who PROFESS to be in favor of all these things; whose profession is really a joke to the initiated and; whose FAITH we doubt on account of their WORKS—because—try how-ever-much you may you cannot get away from the Biblical rule that "faith without works" doesn't get you very far along the road to success.

The fact is that most of the people in the lumber industry are looking upon the lumber business as a sort of God-given and Providence provided-for business that is going to get along by a kind of Divine Right of the sort that "doth hedge about a king."

The fact is there are several thousand of us simply fooling ourselves and the time is coming very soon when somebody or another—some individual with a stout heart and a big pocketbook—who don't give a pop of his finger what ANYBODY thinks so long as he is HIMSELF right, who will just naturally reach out and evangelize this whole proposition and bring us together under one flag so that whenever the business takes a shot at anything we will have some knowledge of what the business is shooting AT; and so there will be more certainty that it will hit something—more certainty that our blows are better directed than if some well intentioned woman were endeavoring to throw a ball to third base!

We are not in any position YET to reform ANYBODY or to tell ANY trade that is contemplating with us just where it is weak and where we are strong!

We are NOT ready YET to go out as evangelists, either as free lances or ordained preachers; we are not even interesting old time "circuit riders" in our line of work.

Of course, we've done a lot, but that lot is not so much that we need to be so proud of it as to believe that our troubles are now all solved.

We have made an INVENTORY only of our troubles and not over 5 percent of us believe the INVENTORY is correct!

There are a great many people who believe there is a lot more WRECKING to come, a lot more trial and tribulation to go through, a lot more turning back at the edge of the Red Sea, and a lot more going back to Pharaoh for another helping of plague, before ANY condition will open up the waters that we may walk over dry shod on our way down to the Land of Canaan!

So if any one knows a better starter on the road to nationalizing than the Forest Products Federation, let him stand up and mention his ideas.

A Substitute for Trade Marking.

C. I. MILLARD, PRESIDENT OF THE JOHN A. ROPER Lumber Co., of Norfolk, Va., suggests a substitute for trade-marking—or really, after all, is it a substitute?

Mr. Millard, in addressing himself to this subject, says in regard to the action which the North Carolina Pine Association should take in the matter of trade-marking: "The members should rigidly adopt and use a protected and uniform method of marking each grade of all the lumber shipped.

"As I now understand it, the general practice is for each company to adopt and the graders to use some sort of hieroglyphic for each grade, which may have been at one time supposed to be valuable on account of its secrecy, but which has by custom, degenerated into an obsolete method of marking stock.

"If all the mills were to adopt 'M' for No. 1, 'C' for No. 2, 'P' for No. 3 and 'A' for No. 4, the lumber shipped by our association's mills could be readily identified.

"If it is not possible to protect the use of letters by copyright, some other symbols should be used."

Mr. Millard thought that this might be a method of escaping the criticism challenged by the unions.

These suggestions of Mr. Millard's are offered for their probable value and just to open up the question of trade-marking and to help to keep it alive.

We have been raised in the idea that uniform inspection, uniform trade-marking and uniform grading of lumber were the three desirable things above all other desirable things that should happen to lumber; also we have been led to believe that a mechanical device for trade-marking, absolutely perfect in its every detail, had been offered to and accepted by two or three branches of the trade.

We are yet wondering if the lumber manufacturing industry is to control the patents and build its own trade-marking machinery, or is it again going to overlook the great opportunity and by not doing that invite into the field a dozen or so trade-marking machines which will have to be sold at an enormous sum as opposed to association-owned machines; because when a trade-marking machine is put upon the market as a speculation, it will but invite many another inventive genius into the field, will result in a lot of competition and will not reduce the price of a machine at all, but vastly increase it and militate against the unanimity of its use. And if there is any one thing that should be unanimous in order to add to the solidarity of any association, it does seem that it should be the trade-marking of that association's product.

Remarkable Impromptu Addresses Delivered at the Portland "Forest Industries Conference"

By Gifford Pinchot, H. R. MacMillan, George S. Long, George M. Cornwall, Everett G. Griggs, J. H. Bloedel and J. J. Donovan

At various sessions of the Portland "Forest Industry Conference" there were several remarkable impromptu addresses which it would be a literary crime to take excerpts from or to condense.

They are offered below without specious introduction or comment, the heading carrying with it the subject and all given in as few words as possible.

"TIMBER OWNERSHIP—PUBLIC AND PRIVATE."

By Gifford Pinchot.

"I hardly had a forest talk in my head when I came to this town, coming here for another purpose, but I am particularly glad to get a chance to meet such a gathering as this, just because it is a refreshment to the spirit to get away from politics and talk about the things that a man really cares about.

"It has struck me, in thinking over what I wanted to say to you, after Judge Flewelling was kind enough to ask me to speak, that this was the most important thing, to my mind, that I could say:

"It seems to me that we have accomplished one of the two big jobs that are to be done in forestry in the United States; that is, we have accomplished it in the sense of having made it certain that the thing will be carried through and carried through in good shape before it is done.

"Government forestry is established in this country, and there is no longer any doubt as to whether or not the national forests are to be saved; there is no longer any doubt, either, as to whether or not they are going to be properly handled. There is a lot of work to be done, but it is a good deal like the battle of Gettysburg in the civil war. After that battle was fought, it was decided and known that the south could not win out, that the north would. Now it is decided and known that government forestry is here to stay and will be successful in the United States. We have done that, and all that remains to be accomplished, so to speak, is to trim up the job and carry it along.

THE PRIVATE OWNERS' "JOB."

"You are here on the second great job that confronts the American people, and that is to bring about a proper condition in the handling of private timber lands. That task is a very much more difficult one, as I see it, just as in a sense it is a very much more important one than government forestry can be under the present situation. You have got four times or five times as much timber as the government has—the private owners throughout the country. Your multiplicity of holdings and, therefore, multiplicity of control makes your task very much more difficult in a sense than the government's task. Your organizations such as this, which tend to unify, help along, and therefore make more efficient the methods by which you protect your forests from fire, and by which ultimately other measures of forestry will be carried out; but nevertheless there remains to be done along your line what seems to me to be far and away the most important, the most difficult and the most necessary task in forestry in this country.

"It is no use for us to go back now and say, what is probably true, that the private timber land owners of the United States would be far better off if not a single acre of any timber had ever been parted with in fee simple to the now owners; if the government had kept control of its forests and had borne the load of the carrying charges and had simply allowed those forests to be utilized somewhat on the line that has now been adopted by the Forest Service! Probably you would have been better off, but it does not matter now whether that be true or not. The FACT is that you, on the one side—and the American people, as the other party to the bargain—have got to get together and devise a method by which this tremendous problem can be solved.

"It is going to be solved, of course. You have made immense progress already; but it is going to be solved along lines which cannot represent alone either the interests of all the people combined or your own interests combined. You are going to have to make concessions, just as the people are going to have to make concessions; and the ultimate result, as I see it, is going to be a kind of quasi-public control, or public control, over your forests—(and in this you may disagree with me)—just as much as in the end we must have a quasi-public control, or a public control over other public utilities.

Meaning of the Portland Meeting

By E. T. Allen, Forester of the Western Forestry and Conservation Association.

"For some time forest industry has been like a wrestler with his shoulders near the mat. It has been hard to tell whether it would succumb or rally to its feet.

"It is hard to gauge the tide of any struggle of great issues and great strength. Neither Gallipoli nor Verdun decides. Least of all can those engaged measure their own strength, courage, tenacity and intelligence. Accidents happen. Yet, now and then a wound heals, scattered forces close again into fighting formation, a powerful ally enters the field. A new and better plan is made. The shoulders at the wheel press for the first time in unison. There is a sharp advance and attack, the advance is permanent; the momentum is gained.

"The Portland conference called by the Western Forestry and Conservation Association was the most conclusive evidence the industry has had of unmistakable constructive progress. It revealed a situation often hoped for, but never before existing.

"It was the first occasion when the government has dropped its air of suspended judgment and proclaimed in certain terms both its analysis of the industry and its decision to co-operate with it. The industry's regeneration, the suggestion of a national advisory board to this end with the industry invited to sit on this board, freed of suspicion and welcome in public council, in itself was the most significant thing that has occurred in American forest history. It is the guide board to the future road.

when the basic problems of manufacturers, forest owners and public have been frankly presented together, with their relations to each other in impartial proportion for mutual discussion and mutual solution.

"It was the first occasion when all branches of the industry and all regions have conceded the need for solidarity of organization in order that they may be united, representative, responsible and articulate.

"It was the first occasion when the problems of forest industry have been considered as international between this country and Canada, and have been discussed as such by a representative international gathering.

"The program of this meeting was symbolic of the program the industry will hereafter follow, perhaps falteringly at first but of a certainty; not individualistic, contradictory and helpless; not dealing in a futile way with the symptoms of the moment, but with mutual council and with public co-operation building a far-seeing American forest policy under which the interests of industry and public alike are defined and stabilized. This will take time, perhaps some radical surgery; but we have at last seen the unpleasant facts faced and the determination made."

Digitized by Google

"When you come down to the facts, the forest is the most important and the most delicate, the most absolutely necessary of all public utilities, and the interest of the public in what you do and in what you own is (from the point of view of the forester) more vital and more far-reaching than in any railroad, in any trolley system, in any water supply, or in any other public utility of any kind whatsoever.

"You are in control now of the first of the great necessities for the life of this people, and it is a matter to me of the profoundest satisfaction that these meetings of yours have been held year after year as conferences between the government's men and yourselves, and that you are bringing about by these meetings a type of understanding which without them would be entirely impossible.

"The thing I should most regret to see would be the settlement of this question by CONFLICT between the PRIVATE owners of timber lands and the PEOPLE at large, rather than the settlement of it by the methods which you are adopting, the methods of mutual understanding and discussion and ultimately the arrival at mutual conclusions.

"I am thoroughly glad that you doing this work. I congratulate you on it, and I look for very great and beneficent results to come from the mutual concessions which must be made to the prosperity of the public and the prosperity of the lumber industry; for if there is anything sure about this problem, it is that it will NOT be settled and that it OUGHT NOT to be settled SOLELY from the point of view of either of the two sides."

AN APPRECIATION OF W. B. GREELEY'S PAPER.

By George S. Long.

"I think first of all it ought to be the privilege and the duty of this assemblage here to recognize in the presentation made by Mr. Greeley the most profound analysis that I have ever heard pertaining to the lumber industry; that ANY one, coming from the Forest Service of the United States, could turn the X-ray upon the situation that pertains to the lumber industry in our country and shed light on it that the best of us have NEVER seen, and with that vividness, that truthful viewpoint, that I think is so thoroughly reflected all through what he has said to us this morning.

"My first feeling is the profound impression he has made on me by what he said; and then the next, the very highest appreciation, not only of the ability and the logic of the correctness of his viewpoint, but the tone of sympathy that runs all through it.

"It is only a very few years ago when we assumed (possibly incorrectly), but we believed THEN that the government attitude was hostile to the lumber industry. It is only a few years ago when he knew—and we know it yet—that the sentiment of the great public at large is hostile to the so-called lumber interests. Incorrect, they will not believe us when we say anything about it; but when Mr. Greeley's report, coming from the Forest Service, will go as a message to the American people, you will have the stamp of approval of the government; and that setting forth of the real condition that pertains to the lumber industry will make more friends for the lumbermen among the lumber consumers of America than any effort that we have ever put forth or CAN put forth. And for THAT reason its SYMPATHETIC tone, its JUST tone, I think we are especially and deeply indebted to that presentation which he calls a 'wet blanket.'

"It is a 'wet blanket,' gentlemen.

"He has told us, probably better than we knew, how bad off we are; and we ARE in bad shape. The industry is in bad shape, and it has been the gradual accumulation of conditions which no man foresaw and no man could correctly anticipate; and in his endeavor to point out the remedy, we may not entirely agree with him.

THE FUTURE ADJUSTMENT.

"I, myself, hesitate to ever get in the frame of mind when I believe that the government of the United States shall assume a paternal form. I think its practice, its laws, the privileges which it extends, should be that it will give to man, give to the individual, give to the corporation, give to its citizens, that freedom which will make it unnecessary for the government EVER to assume paternal interests in properties. If that is not possible I believe our government is in a measure a failure. I don't believe the government can do many things better than the government can arrange for its own people to do. That is the hope I have, that is the belief I have.

"Maybe it is wrong, but with a sympathetic government, with one which does not look upon you with suspicion and with a people who should not put themselves in a position where they are worthy of being looked upon with suspicion—we have got to have clean hands, we have got to have wide views, we have got to be fair to ourselves and to the public; and if we are not, the government won't treat us right. But I deplore the idea, I differ with that viewpoint suggested by Mr. Greeley about the possibility of government ownership.

"He is correct in his logic. If we can't handle it ourselves, if it is impossible for us to handle it, then possibly the government will have to take it; but I believe its first great function is to try out and see if it cannot so shape its laws and shape its policies that we can carry this load.

"I am like the Honorable Chairman; I am optimistic. I think there is hardly anything too big that cannot be attempted, if we are allowed the natural freedom which big enterprises call for. So that, first of all, and again, I want to repeat my profound admiration for that magnificent address which we have just heard. It stamps I think, the beginning of a more cordial, friendly and sympathetic relation; not only that, but it stamps the beginning of the mental condition of knowing where we are at—and we have NOT known it.

THE OFFICIAL ATTITUDE.

"Now if this information comes from that source that will be acceptable to the public, and be ACCEPTED because it is from a public official; and it will be accepted by the lumbermen because we can't help but believe that, way down deep in the heart of Mr. Greeley, he has been convinced that the lumber industry is not a monopoly; that the lumber industry has been struggling like a great big, awkward giant, to do the best it could and often doing awkward things and crude things and being too optimistic, then we will have accomplished much.

"If today the industry has the sympathetic attention of the government—and I think it has—if through that we can get the sympathetic treatment from the people at large—and I believe we can—he has suggested a connecting link—with the Federal Trade Commission, the Department of Commerce, the Forest Service are government units working on great plans and ideas of all kinds of business enterprises.

"He suggested an advisory committee where the lumbermen can come to them with their troubles, with their ideas, with their hopes, with their necessities and place them directly before those government agencies which in the future are going to have more to do with the upbuilding of American commerce, American trade and American development than they ever have before.

"So I think that we should heartily endorse the idea of this advisory committee and have on it our best exponent in a man who truly represents the lumber interests in all its phases.

"Once more, and with the words DEEPLY underscored, I wish to say that we ought to thank Mr. Greeley for his profound and sympathetic 'wet blanket.'" (Applause.)

"ORGANIZATION."

By Everett G. Griggs and J. H. Bloedel.

One of the most interesting debates of the Forest Industry Conference at Portland, which was also of national interest, occurred following the reading of a paper by Dr. Rutter, which had been written by Dr. E. E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce. Here is the text:

MR. BLOEDEL: Mr. President, I want to say a word or two on the question of the work that has been initiated by the Department of Foreign and Domestic Commerce, which has been represented here today by Dr. Rutter, and I want to put what I have to say in the way of an appreciation on the part of the lumber industry of the Pacific coast for the efforts which they are making, not only to help us in foreign markets, not only to show us the way in which to get into the foreign markets, but to urge co-operation among ourselves, which the Lord knows we need.

"These gentlemen tell us that the way modern business is conducted is by co-operation, by organization, by co-ordination of organizations, and that it is the height of business efficiency to co-operate, and it is an evidence of lack of business efficiency when we do NOT co-operate.

"I have had a bit of experience on that recently in trying to present to the exporters of the Pacific coast the value of an export organization.

"Dr. Rutter has explained to you that we have organized the company, we have launched it, we are ready to go ahead. We have as yet not succeeded in getting 100 percent of the capacity. We have, however, such a capacity agreed to join that we feel that the company is a success and we are about to go ahead and do business. (Applause.)

"The thought came to me while Dr. Rutter was speaking—and it is one that I have had in mind quite perceptibly—and that is that our domestic markets are declining on us, and if there is any future to the lumber business at all, if there is anything that the timber owner, the stumpage owner and the manufacturer has got to look forward to, it is the increased consumption of our foreign market.

"I was exceedingly interested in the pamphlet prepared by Mr. Greeley in which he outlined that there has been a decreasing consumption per capita in the United States in the last ten years. Some ten years ago this country reached its maximum lumber consumption of about forty-four billion of feet per annum, which meant something over 500 board feet per inhabitant per annum, something close to 550 feet.

"Last year, the year 1915, the census bureau's report shows there was approximately thirty-eight billions of feet of lumber produced and consumed.

Digitized by Google

"That would reduce, on the increased population, the per capita per annum consumption to 375 board feet approximately. It only illustrates what has been illustrated in Europe before and what is illustrated by the growth of urban population, by the growth, we will say, of civilization, to get away from lumber consumption and to get towards the lines of more permanent construction material.

"Do what we please to lay the merits of lumber before our own domestic consumers but there is a limit to the consumption of that lumber arising from the fact that as we build cities we get permanent construction, a class of construction which lumber cannot supply. There is a place for lumber, but the place for lumber is not in a fireproof building, like this, except for scaffolding and the forms to build it.

"If we are going to find a market for the constantly increasing production, we must go to the foreign markets. The Bureau of Foreign and Domestic Commerce has taken steps here to show us that there are these foreign markets, and that they can be exploited if we will only take heed and take their example and follow it. We have exported approximately, during normal times, nearly 650,000,000 feet from this coast per annum (including British Columbia) to foreign countries—I imagine something like 550,000,000 feet.

"All of Europe has taken less than 75,000,000 feet from us, and yet a warm friend of ours, a colonel in the Canadian Volunteers, who has recently been in the trenches, told me that one-seventh of France and all of Belgium, before this war was over, would be like a Sahara desert; what the Germans have not destroyed in driving westward, the Allies must destroy in driving the Germans back. Every resource available in France, and even the forests around Windsor Castle in England, are being cut in order to furnish quick lumber supply for the needs of the Allies in the trenches, and for their domestic commerce.

"Now, then, with all of that available supply cut, with all the demand which will come with the rebuilding of the cities in this devastated territory, it would seem to me there is some hope for us in future to exploit—not the domestic market so much as it is the foreign market.

"That is the function we expect to perform through the services of the Douglas Fir Exploitation & Export Co. We are seeking, not only the light of publicity, because we have done nothing but what we want the public to know and come into our confidence with; we have done nothing but what we want the government to know, and we want to see to it that instead of fighting among ourselves here, like dogs for a bone, in order to get $9 a thousand for this valuable lumber at our mills, that we can go to a foreign market and get a fair price and return to this country a fair remuneration and a fair profit for the benefit of this country and not for the benefit of foreigners, for that fine lumber that we are now giving away." (Applause.)

MR. EVERETT G. GRIGGS: "Mr. Chairman, I scarcely dare trust myself on this floor; I have been talking so MUCH recently. Mr. Bloedel has so fitly said that we have been trying to convince some of our own friends, lumbermen, exporters, etc., of the wisdom of forming an exploitation company that is backed by the United States government, and we are here in this community now talking to some of your own exporters in order to close a deal which we think bids fair to bring about just the conditions that we all so much desire.

"I am a good deal of a Democrat and always have been.

"I have been joshed by the Republicans a good deal, but the fact is we went through about seven years of inactivity, and in all of these commercial inactivities I have been connected with we had the government on our trail ready to put us in jail. Now we have got somebody in here—I don't know whether it is due to Democracy or due to Republicanism, or what—but we have got somebody that has given the country generally an idea about this lumber business, which I think we all ought to pat on the back. (Applause.)

"This is the first time in my judgment, gentlemen, that you ever had a diagnosis of this case from an uninterested party. I say uninterested, but I mean from the United States government; and the only criticism I have got to offer on Mr. Langille's suggestion is that he does not put on right there the United States government as one of these departments.

"It is the biggest owner of timber, and it has more to say about this situation than any of us; and we can't do anything unless we have the United States government behind us.

"I have been in association meetings and I have been identified more or less with the National association, when we were afraid to go to Washington.

"I said at the time that the National association (of which I happened to be president that year) should put its headquarters in the CITY of Washington; and I believe today that is where it ought to be. We ought to be right there consulting with the Forest Service, with the government, and when we do that and put our books on the table and the cards on the table and get this government to help us and back us, we are going to do something for the industry.

"I think it has been eminently proved by the paper which Mr. Greeley has prepared. I did not hear his paper. I am sorry I did not hear him talk. But I did read every word of his paper, which will be published later. I have done that in the past week. And I want to say it is the most excellent demonstration of a thorough investigation that could be put forward. It is done because the government is behind it. These men are not supposed to be practical business men, but they are telling us all the points that we have been trying to get at and certain features of the development of our business which some of us know and some of us appreciate.

"We talk about the use of by-products; we talk about spending money for exploitation; we talk about sending money abroad, and Good Lord, these lumbermen owe so much money, and they owe the bank so much the last five years, that they can't meet their payrolls. That is what is the matter with us. Two dollars a thousand today on the price of lumber throughout the country; that is what is the matter with the industry; if we could get it we would be all RIGHT. (Applause.) I only know of one way to get it, and that is to co-operate; and when you co-operate you are going to get all of these fellows with their heavy investments and taxes to co-operate if you can show them RESULTS.

A CRUCIAL MOMENT FOR THE INDUSTRY.

"I feel this has been a crucial moment in the lumber business. I told Mr. Bloedel I thought if this exploitation company could be consummated it would be the zenith of associated effort. On the Pacific coast today has been brought about an organization, an inspection, which is second to none in ANY business. The inspection department was organized about nine or ten years ago by this very association with which we are all identified, and it has developed to such a point that our certificate goes the world over.

"I want to say one further word, Mr. Chairman. I think I appreciate the situation that presents itself to Mr. Downman, the president of the National association, as well as anyone else. Mr. Downman today could accomplish and does accomplish a great deal, but he could accomplish so much more if he had the money behind him and if we contributed generally into the coffers and the avenues which have been already arranged for; he could accomplish so much more that the results would simply be surprising.

"We have often in the National association run against this particular feature. The men identified in the various associated activities in the different parts of this country are looking just to THE feature that affects their OWN particular business. You have got to get a little beyond that; you have got to get out of this back yard.

"You may arrange this 'Mother Hubbard' organization we are talking about, but if you don't give it money it will never DO anything or GET anywhere. We have got to forget something about these contentions and the difficulties we have had. And I want to say we are facing, through this government co-operation, a new era in the business." (Applause.)

"PROHIBITION."

By J. J. Donovan and George M. Cornwall.

"For fear that I may work too far afield from the subject, I will answer at once that prohibition has lessened accidents among the men, has increased efficiency, has brought about more homes, better clothed, better fed and more contented women and children in the state of Washington (applause), from which I come and about which only I will speak, because there are others here who can speak for the state of Oregon and the state of Idaho.

"How do I know that? My observation, the observation of any other man, is necessarily limited, but my time of observation extends over more than the ten months on which I was expected to speak, because it so happens that in the three northwestern counties of the state of Washington, being the most northwestern counties of the United States, we have had prohibition, not for ten months, but for six years, if you please, gentlemen, with a few exceptions in small towns; and I claim for our city of Bellingham, from which I come, the proud distinction of being the largest seaport in the world that ever voted itself dry with male votes alone and then kept the faith. (Laughter and applause.)

"Now, we did that deliberately; we did it with our eyes open; we did it in the face of strong and able opposition from some of the very best men in that community, who could not agree with us. And I have had many of those men, whom I was forced very much against my will to oppose, come to me and thank me for the position that I took at that time; and one of the finest things in my life, one of the things that I value most, is what three or four of those men have said to me within the last year, because that is the proof, the conversion of men who are sincere, the conversion of men who felt that their personal liberty was being encroached upon, the conversion of men who felt that the finances of the community would not stand it and that it was a foolish thing; that we could not enforce the law, and that a law not maintained by a majority of the community should not go on the statute books. And right there, gentlemen, I agree with them.

Digitized by Google

THE VALUE OF PUBLIC SENTIMENT.

If you cannot develop public sentiment to a point where it respects the law, then that law should be changed. And that is the weak point of the existing situation in the large cities of this coast, that several of them were made dry—not by the vote of the local unit itself, but by the greater power of the state of Oregon, exerted, properly perhaps, and now being exerted, but it should be re-inforced by such discussions as these, such meetings as these, such plain talk as I hope we will have when I sit down in a few moments by those who may not agree with what I say.

"I remember so well when that first contest was on six years ago, going out to one of our roughest and newest camps, on the morning after election, and unexpectedly running into a group of about thirty of the men. I knew a few of them, and the leader called out, "How did the election go?" I undertook to answer by naming a few of the men who were elected. He says, 'Oh ——, no—that is not what I want to know. Is it wet or dry?' I said, 'Dry.'" And there came, to my intense surprise, a hurrah from that rough set of men, and the further statement, 'Now those —— —— —— booze-punchers in town will come out here and have to go up against the saw log and have to earn an honest living.'"

"I don't want you to think every man who drinks whiskey, every man who drinks to excess, likes to be classed as a drunkard, likes to feel that that temptation is put before him every time he comes into town. It is not so. A great many of those men have proved it in the last few years; and now in the last ten months, since the whole state of Washington became dry, the conditions up there are such that the saloon is gone. It will never come back. It interfered with politics, among other things, and it committed suicide.

"I will give you just a few instances from my own personal observation. First, on that committee of fifty who were the business men's committee, six years ago was an eminent doctor, one of the most respected men in the community. After the election and before the next one he became a convert to the dry side. Why? Because he visited the homes of the workingmen. He found food and clothing and comfort where it had never existed before. And that honest man became intensely in favor of prohibition. His help was a great benefit in the second fight, because the money value that is involved in this matter, the easy money taken from you and me for whiskey which cost a tenth part of what is paid for it, makes it worth while for men to work and put large pages of advertisements in every paper of the country to tell you of the benefits of the old regime. Why, that sort of thing will keep up until it is shown that the people have definitely made up their minds. But they are making them up in a way that was never anticipated, and with greater rapidity than was ever anticipated. Oregon, Washington, Idaho, British Columbia and Yukon Territory, lacking only two votes, if you please—and Arizona—why, the world seems upside down.

"There may be some interference with rights that people thought they had; there may be some hardship; there may be some men whom we respect who still fail to quite agree with the situation, but the situation, at least to the extent that it has come in Oregon and Washington, is here, and it will not be put to one side. You have to pass upon some things at this coming election; we have to pass on some things up in Washington. Something is going to be done down in California but in places like my home, where public sentiment sustains the law, the conditions are incomparably better than they were in the old days.

IMPROVEMENTS AND THE SALOON TAX.

"Some of you gentlemen came up to Bellingham three years ago. We had already made some improvement in the face of the threatened ruin of the city; we have made a great many more improvements since, in the face of the hard times. We have many new buildings, many new pavements, many new sidewalks, things that have gone on so the city of six years ago was revolutionized, metamorphosed, modern, up-to-date, and on one-third of our municipal revenue in order to follow this cause.

"The contest has been waged three times, and three times we have stood for what we stood for six years ago, until the rest of the state came to our way of thinking.

"Now I agree fully with what my Presbyterian clerical friend at the other end of the table had to say about efficiency of the men, about the necessity of men feeling more in accord with their employer, about the necessity of having more pride in the work of the employee. I have known an old Irish ditch digger to show an honest pride in the fact that the lines of his ditch were straight, that the bottom of it was on a true grade, that he dug more yards per day than the man who was against him. I have a respect, and we all should, for even the humblest working man who takes that honest pride in his work. And one great trouble with the northwest is that we lack men of that character; that, as one gentleman has said, we have had a rising tide of socialism that has undertaken to tell the workmen that two hours' work is all they need give, that is all the employer is entitled to get, that the rest is profit.

"Every one of you knows how false that is, how difficult it has been for us to pay the men, how difficult it has been for us to meet our interest and all those things, but there are thousands and tens of thousands of workmen who believe that, and we need something to counteract that, a greater feeling of interest on the part of the employers themselves.

"We need, too, more true religion, more real religion, and I stand here, a Roman Catholic, to say that we should co-operate in all of the churches for the uplift of mankind, with less criticism of each other, with more respect, with more sympathy for every honest man and woman who is trying to benefit their fellow man, less of those things that degrade the name of Christianity and which bring reproach upon it; more of the kind of work that is being done by the Young Women's Christian Association and the Young Men's Christian Association and organizations of that kind, while working for religion—RESPECT the different UNITS of religion that come into their organization.

"That is what we need. And I cannot close what I have to say here tonight better than to drop just a word of respect for the fine gentleman who presided over this meeting, or SPOKE at this meeting three years ago at Spokane. I don't know what church he attended; I do know that he has passed on to his reward in the great hereafter; and that in closing a thrilling testimony he said:

"Had I but two loaves
One would I sell,
And buy a hyacinth
To feed my soul." (Applause.)

RARE ELOQUENCE FROM GEO. M. CORNWALL.

At the close of Mr. Donovan's talk, Toastmaster Laird said:

"Mr. Donovan said he spoke for Washington. I heard a very interesting statement made today regarding a place called the Pisgah Home here in Portland, and I am going to ask George M. Cornwall to just recite a few facts about the Pisgah Home, which perhaps may reveal some of the truth regarding the working of the prohibition law in Oregon.

(As Mr. Cornwall arose he was greeted with applause.)

MR. CORNWALL:—Mr. Toastmaster and ladies and gentlemen: After the wonderfully strong statement made by our friend Donovan in behalf of the cause of temperance, I almost feel that I should not even intrude with a remark regarding the Pisgah Home, of which our good friend, John Pearson, manager of the Western Timber Co., happens to be president.

"As you well know, as the years went by and these men who have lived in the woods made the little money which came to them year by year, the saloon got most of it. It was a very common occurrence to spend four months in the woods, five days in Portland, and go home broke.

"As these men got older and they got less able to fight and you found they were not able to take their places as formerly, you felt that you did not have a place for them, and perhaps one of the saddest things there is in life is the old man without a position, who, nevertheless, has given of his strength and of his character, whatever it may have been, to the industry which needs him no more.

"I remember on a visit I made to this Pisgah Home, which is located in Columbia county upon a tract of land which our good friend, Pearson, helped the colony to acquire, that one particular character came to my observation and I remember Mr. Pearson pointing him out to me as 'Peg Leg Joe,' whose total contribution to the Pisgah Home, after forty years of labor, was a thirst, a contrite heart, and a Chinese gander which wailed so piteously for his mate, as my friend John said, that he had to be sent to market. This was the result of forty years of labor in the woods; this was the result of forty years bucking logs; this was the result of a lifetime—a thirst, a contrite heart and a Chinese gander.

"Now, gentlemen, that in itself is only one of many types. Now that Oregon has gone dry, we find less of the 'Peg Leg Joes;' at least, we find fewer men who have to have the helping hand of the Pisgah Home.

"The Pisgah Home has been denominated as the loggers' repair shop. Since the state of Oregon went dry we find some complaint made by some employers that the boys don't come back from town as rapidly as they did in the days gone by, because they have a few nickles in their pockets and they don't feel as if they have to return in four days, because the money on hand will last four weeks.

RESPONSIBILITY OF A GREAT INDUSTRY.

"Now, while some complaint may be temporarily made on that score, I appeal to you as men representing a mighty industry, whose output, as we stated this morning, represents ten billion feet of lumber, we do not want to be classed with any kind of a system where we have to have the boys drunk in order to get them to come back. (Applause.)

"Gentlemen, the lumber business is too big for that, and the men who stand with the captains of industry in the lumber business can't

Digitized by Google

afford to have that stigma attached to them, that the only man that is good for anything is the fellow that gets drunk and has to come back.

"Now, you ask me inferentially what has been the attitude of the people of Oregon, and more particularly the attitude of the city of Portland in this matter of prohibition. It is with the most profound pleasure that I state that the newspaper men who handle and mold the policies for large metropolitan papers of this city, have stood like the 'Rock of Ages' in behalf of an honest enforcement of the law. (Applause.) These men full well understand the responsibilities and duties of the profession.

"This community owes to itself a place where every boy that comes up will not have the temptations of the open saloon. As to the seductive arguments that are made and were made before the election as to the cost of the administration of the city, I will just give you one instance which appeals to me as a father most powerfully.

"One of my friends said, 'Mr. Cornwall, who is going to pay for the improvements of the streets of Portland, if you do away with the saloon?' I said to him, 'My dear brother, I have only one boy, of whom I am intensely fond, and for whom his mother would give her life. If you want to say to me that my George must become a common drunkard and that through the medium of his stomach the city of Portland is to get money with which to pave its streets, you just tell me now how much George's part is and I will give you a check for it—but SAVE ME THE BOY.' (Applause.)

"I came from a country in that part of Scotland where drunkenness is rampant. I brought with me to this new land all the feelings that a preacher does who has seen the depths of degradation produced by alcohol.

"When we take the Pacific coast and look at it from the California line clear to the base of the Rocky Mountains, and find prohibition in British Columbia, in Idaho, in Washington, in Oregon—(and Utah will follow suit and Montana is on the way)—we are going to say, 'It don't pay; and any institution which has to make its money out of the life blood of these boys who work for us is not an institution we are going to maintain.'

"I noted the other day that Lloyd George—who is probably one of the world's foremost citizens, had a survey made of the liquor business of Great Britain.

"His country, which is the country of my birth, is, as you know, at the present time going through all the struggles and tribulations that any nation could go through; and Lloyd George looks over the blood-stained field of battle and tries to see if he cannot mobilize the forces of Great Britain to greater effect. So he had a survey made of the breweries and he found out how many million tons of coal had been burned in those furnaces since the war commenced; found out how many thousand men had been employed, how many horses had been employed and the amount of feed it took to keep them going, and then he said to them: "Gentlemen, I find here is the balance. We have got nothing out of this except smoke. We have got nothing out of this but wasted men; and, as for me, as far as it is in my power and the nation's, of which I happen to be a directing head, that as for us in OUR HOUSE it will be my utmost aim that Great Britain shall take its place at least among the SOBER nations of the world." (Applause.)

"Gentlemen, that attitude of Lloyd George stirred me to the depths. I could see that the world had made up its mind that the days of the dram-shop, the days of the liquor place are over; and as my good friend, Donovan, said, if whiskey reduces efficiency and increases the liability of accident, we are done with it; and hence, any effort that this congress can make, any effort that you men who direct the destinies of this great business can make, should be along the lines that we shall lead at least sober and better lives." (Applause.)

"INTERNATIONAL CO-OPERATION."
By H. R. MacMillan.

"I have been listening very carefully to the chairman's constant expressions of optimism that a great foreign market will develop in some hitherto undiscovered part of the world and take care of all of these problems. Now, it is just that kind of optimism I want to condemn. It is not going to get anybody anywhere (laughter), and I am surprised at the chairman that he should so constantly reiterate one of the basic evils of the business.

"This association is very properly the place to discuss co-operation. They introduced co-operation and, consequently, success, into the fire protection business; and now they are coming around to co-operation in something which is much more important than fire protection. I suppose at the very most our losses from forest fires have not been greater than $2,000,000 or $3,000,000 a year. Just this $2 a thousand, which we can get any minute we really WANT it, and go AFTER it, on a Douglas fir cut alone, would be $20,000,000 a year. (Applause.)

"So co-operation in marketing is just ten times more important than co-operation in stopping forest fires. In fact, so long as the people in this country are content to sell these 400-year old trees on a $9 basis on an export list, I don't see why we should not continue to have forest fires; we would be money ahead. (Laughter and applause.)

"I am down here to speak of the necessity for international co-operation. International co-operation is necessary here on three different points; and from the Canadian standpoint, so far as I know it, the Canadians are extremely anxious to expand, and work in international co-operation. The first thing is educating the public to a knowledge of the conditions under which the lumber industry labors.

PROGRESS DEMANDS CO-OPERATION.

"Supposing you carried out this work, as you are certainly doing, and in a short time have adjusted your stumpage situation; what good is that going to do you in the foreign market if the Canadians have not kept pace with you? We all know that we have not got nearly so much timber as you have. We probably have about a third that is available for export, a third as much as you have in the Douglas fir region. That little third is just enough to upset all your combinations and calculations for as long as anybody in this room is going to live. Therefore, so far as the coast is concerned, the Canadians and the people of the United States must operate together. You can do nothing unless the Canadian progress is made equal to your progress. And at the present time, in a public understanding of the lumber situation and in the preparation of adequate and expert machinery to take care of the lumber situation, the Canadians are not on a par with you here in the United States. It is a very humiliating confession to make, but we must make the progress that you are making, and the only thing, or one great feature of encouragement, is that we speak a common language and can learn from what you have done.

"The second part of the international co-operation is not so necessary. It is simply a case where we should add our little to what you are going to do; and that is that these foreign countries must be taught to use our lumber more wisely and to use more of it.

"I was very glad to hear the gentleman who just spoke refer to the conditions in South America. I was not in South America, but every place else I was I found the situation ludicrous, if it had not been so pathetic. I found no person selling lumber in any place I visited, which was the whole of the British Empire and some other countries. There is no person selling our timber anywhere. I argued for the best part of two days with the Society of Civil Engineers in South Africa to induce them to believe that Douglas fir was a good timber to use for temporary bridge construction. I saw them pull down old buildings in Cape Town and take out second-hand pitch pine timbers that were cut in every conceivable direction with mortises and tenons and saw them up and use them for railway carriage building at the large cost of 7s 6d per board, when Douglas fir, a fresh cargo from this coast, was offered to them in absolutely sound timbers at a third the price. They don't believe in Douglas fir. I mentioned Douglas fir, as it happened to be the only wood in which Canadians are interested. The same condition applies to every west coast wood.

"It is inconceivable to believe that hundreds of millions of dollars can be invested here in holding timber lands and bringing the manufacture of lumber to the highest point of manufactured production and not a particle of care taken of the cargo after it is loaded on the ship. (Applause.) But that is the condition that exists.

AMERICAN LUMBER IN CHINA.

"The chairman mentioned yesterday morning, I think, what a wonderful opportunity China presented. China will be a market for railway sleepers, but if you went over there at the present moment and attempted to give them creosoted Douglas fir railway sleepers you could not do it. The people who have been creosoting Douglas fir for export here have evidently had their whole ambition staked on selling one cargo; they probably did not care about selling another. At least, that is the only thing an observer in that country can judge. Cargoes have been sold in India that have fallen to pieces in the ship's slings, and others have only lasted from two months to two years in the track; and the result is every potential purchaser of Douglas fir sleepers in either China or India is now an enemy of the Douglas fir business.

"We found people in almost every town selling cement, iron and all manner of substitutes; and for every little thing that develops which is wrong with any commodity on the market, there is an expert there, in a MINUTE, to adjust the situation. A Douglas fir cargo arrives, some little thing goes wrong about it, and there is nobody there to look after it, and they immediately look for something else.

"I can give you an instance which will show you how the foreign purchaser learns about woods. The city engineer of the city of Melbourne, a city of about 700,000 people, depending almost entirely upon imported soft wood, is in a position to condemn any wood going into any public building. Naturally his condemnation of a wood for public buildings leads to similar condemnation by private owners. They are very largely guided by government authority. If the

Digitized by Google

wood is not fit to put into a public building, the retailer hesitates to carry it in stock and it is condemned throughout the trade.

INTRODUCTION OF REDWOOD INTO MELBOURNE.

"The city engineer of Melbourne was looking for a fireproof wood to use in halls, stairways and in all public buildings. He was building a lattice work fence around his garden at home and he had a lot of redwood lath. He built the fence himself and had a lot of short pieces and shavings left, and the boiling of their washing was done over an open kettle outside. He left those shavings and short pieces and thought they would be very fine to light the fire with for the washing. The washwoman came and struggled all day without lighting the fire, and when he came home at night he ran into a domestic tempest. Then he discovered "here was fireproof wood;" and since that day every public building in Melbourne has had to be lined with redwood and all the halls. That is where the man got his information. (Applause.)

"Now that is simply typical of what is going on amongst millions of potential users of west coast woods. That same man, it happened, built a house for himself. Somehow or other he discovered dry rot through defective ventilation in the basement joists of his building. These joists were Douglas fir. Something went through the floor, I don't know what it was, a stove or something like that, and since that time in no public building in Melbourne is Douglas fir allowed to be used for basement joists. That is the way they get their information, by blundering blindly from one fact to another, and very often, when they arrive at it, if it is not a fact, it is a prejudice.

DOUGLAS FIR IN SOUTH AFRICA.

"I remember one incident that occurred in the gold mining district on the Reef in South Africa. The price of the Swedish 3x9 deals that they had been using for scaffolding in the mines went so high that one of the mine purchasing agents, a keen chap, who controlled the purchase of about 30,000,000 feet of timber annually and only for one group of mines—thus controlling to a certain extent the purchases made by other mines, because if he brought in a large quantity of timber the others used the same stuff—endeavored to introduce Douglas fir 3x9 in the mines.

"The laborers refused to stand on 3x9 Douglas fir for fear it would not hold them and insisted on two thicknesses being put wherever the Douglas fir was used, with the result that it was put out of business. This man had no time to fight labor unions. If he had been deeply interested in using Douglas fir, or some one else had been there who would have produced the facts in favor of the Douglas fir, he might have insisted on using it. At the present time there is enough corrugated iron imported to replace 3,000,000,000 feet of timber, and the proportion is constantly increasing, so far as I can find out. The per capita use of soft wood timber in Australia is only 24 feet per year—almost an unlimited opportunity for the development of the market.

"I could discuss this for hours, it seems to me, because it is a boiling, burning subject—the utter insanity of the manner in which we have sat here at home and howled about hard times and failed to develop the foreign markets.

GETTING MORE MONEY FOR THE PRODUCT.

"The second thing is the question of getting more money for the timber we DO export. With every exporter I met, the very first inquiry he made was as to the mental condition of the people who made and produced and sold this lumber. They cannot understand it. (Laughter.) In fact, they don't believe yet that it is true The first thing is entirely price. We sell lumber here at $8 to $10 base. The freight in normal times is $10 to Australia. The duty is from $2 to $7 a thousand. The landed cost C. I. F. and D. is in the neighborhood of $30. In normal times they retail that lumber throughout Australia for $56 a thousand An extra $2 or $4 to us would make absolutely no difference to the consumers in Australia; they would never hear about it. The only alterations they ever make in their price lists in Australia are alterations of $6 a thousand, 60 cents a hundred; so they probably would not bother with a little increase of $2 in the F. A. S. price. (Laughter.)

"When the freight rates jump from $10 a thousand to $20 a thousand it does not affect in the least, so far as I can find out, the consumption of lumber in Australia. They used the same proportion of lumber in building when the price was a little lower. The difference between $55 a thousand and $60 a thousand in a country using 20 board feet per capita per year does not amount to anything. They would never hear about it.

"The next thing is if we spent a small proportion of the increased price that we get, say 25 cents a thousand, which would be $150,000 a year for the Douglas fir region alone, we could probably pretty nearly double our sales.

'There is another mistake we make in the export market, and that is that the spread in 'G' list, on long timbers, large timbers, selects and clears, is a gift to the purchaser. We are bonusing every purchaser who buys a long timber. I have been greatly interested always in exhibits that this association has had here. I was informed a short time ago that a gentleman here on the Columbia river sold a cargo specification for $8.50 a thousand. I think he would be the most interesting exhibit that this association could have had to present to the lumbermen assembled here. (Laughter and applause.)

"I have in my pocket, or in my hand, rather, a short statement, which is worth reading, taken from a Sydney retail price list of January, 1915. I am talking about Sydney or Melbourne all the time, because there is no use of talking about one hundred places when the conditions in one are simply multiplied in all the others. This refers to what they do to our 'G' list when they get it down amongst the consumers. On a timber 41 to 50 feet long we charge extra $3 a thousand; the Sydney retailer, when it costs him $30, LANDED, sells on a base of $56.80; and then where we add $3 he adds an additional $13.20. So on a timber 12x12—41 feet and 50 feet long, he gets a profit of nearly $30. For 51 to 60, where we add $6, he adds $15.60; 61 to 70, where we add $9, he adds $20.40; 71 to 80, where we add $13, he adds $25.20.

THE QUESTION OF PRICES.

"Now I would like to ask if any person in this room believes that one of these 300 or 400-year-old trees, which we own and protect from fire and stand around here and discuss for a day or two in every year, should be administered wholly for the benefit of the Sydney retailer? And that is just what has happened.

"The same condition exists in the larger dimensions, 31 to 40 feet long. This is an additional charge. For 14x14, we charge $1 extra; they sell it at a profit of a little over $16 base and add $2.40 for having it big. They didn't grow it; we grew it; but they get the money for growing it. For 16x16, we charge $2, and they charge $5. For 18x18, we charge $3, and they charge $15. They appreciate that that was an expensive tree to grow, therefore they tack on $15 profit. (Laughter.) For 20x20 we charge $4, and they charge $20. And they get it, too. There is no cutting on these price lists. (Laughter.)

"For clears we charge, on a 1x6, $7.50 a thousand; the wise Sydney men get together and they say, 'That stuff is scarce upon the west coast of North America; we will charge them $12 a thousand for it.' They charge them $12 and they get it. And that goes on all the time.

AUSTRALIAN BUYERS HAVE US ON THE RUN.

"There is another thing I was pretty nearly going to forget, and that is that these Australian buyers have us on the run. We may flatter ourselves that we have a grading bureau here and we sell them what we want to sell. We sell them exactly what they want to buy.

"After we have cut the price down to a basis where we can't look it in the face, we go to work and compete on grade competition, and the result is that cargoes go in there one after another which grade away above merchantable, even when only merchantable is paid for. That is the fault of the shipper.

"I don't mean to intimate for a moment that it is the fault of the grading organization. The shippers are putting in altogether too good timber. The result is, walking down the main street of Sydney about three months and a half ago I saw a temporary fence put up around a bank building—just one of those fences to keep passers-by from stumbling over the brick and mortar. I counted the first 122 boards in that fence and thirty-six of them were 1x6-6 foot edge grain perfect flooring boards. If they paid for this lumber what they should pay, according to the quality which is inherent in it (it belongs in this country and not Australia), they would not use it for temporary board fences; they would not think of it.

"The trouble is they are being given by us a champagne taste which we have not got the financial capacity to keep up. We cannot continue to feed them this stuff on the present price. They are getting the idea these Douglas fir trees grow to be four feet square, absolutely square, clear to the heart, and all you have to do is slice them off and cut clear boards. They have to buy our timber (so far as I can see at the present moment, they have no other possible source of supply) and what we should do is to get together and insist when they buy they buy the whole log; that every cargo carries a certain proportion of common. They can use common in building a city in Australia as easily as we can use common in building a city in North America. It only requires that we should have control of the trade and assume control and deal fairly with them; but make them take our lowers as well as our upper grades, and then the cargo business will be of some assistance to the interior lumberman. But so long as we sell only the high grades foreign and keep the low grades home to burn or to ship into the interior, the cargo business can only benefit the cargo mills, and it cannot benefit them at the present level of prices.

"The only suggestion I have to make is that having carried out this co-operation in fire protection, in which you have co-operated with us Canadians out of the good of your hearts, that you should now enter with us into a co-operation for the good of your pockets in putting the lumber before the foreign purchaser in such a shape as he will pay for it." (Applause.)

A Review of the So-Called "Forest Products Federation" Proposition

Review of Report of "Nation-Wide Committee", Offered by H. D. Langille, at the Western Forestry & Conservation Association's Annual Meeting, Portland, Oregon, October 25, 1916, and Endorsed by That Body—Views of Prominent Lumbermen

By BOLLING ARTHUR JOHNSON

It takes just about as much courage to endeavor to edit the report of the "Nation-Wide Committee," read by Mr. Langille at the meeting referred to above, as it would take to attempt a boiling down of Pope's Essay on Man or the Sermon on the Mount.

Mr. Langille's paper was printed practically in full in our issue of October 10 and we refer our readers to that for most of the actual TEXT. Mr. Langille, in both his PRELIMINARY and his FINAL reports has dealt with fundamentals and if we were to condense what all the 6,000 words of text MEANS—in a very few words—we should say IT IS AN ENDEAVOR TO LAY DOWN THE RULES BY WHICH MAY BE ACHIEVED A NATIONAL LUMBER CONSCIENCE—something which does not NOW exist.

Mr. Langille discusses in his four opening paragraphs the history of "human achievement;" the development of each "period of progress," which he assumes—and rightly—"develops unwholesome conditions requiring epochal readjustments."

He then traces the pioneer achievements of the lumber interests, shows how they have swung along as a class doing things by "rule of thumb," and sums up the average successful lumberman by stating that "succeeding generations developed a type of lumbermen—mechanics, specializing producers whose vision was narrowed by self reliance, heredity and environment."

There you are. There is the picture. That is the lumberman as we find him. When Mr. Langille has made his picture of the lumberman of today he has him look back, like Lot's wife, for the "coming of relief out of the unknown" and this he alleges is the reason why "the industry has turned to look within itself."

Then Mr. Langille states as a GENERAL truth something that is only a SPECIFIC truth in the minds of a choice few people when he says, referring to the lumber business: "It is beginning to see the need for that effort which will RESTORE it to its FORMER PLACE."

HE SAYS WE HAVE BEEN TO "CONFESSION."

Mr. Langille says the industry "has gone to confession before inquiring bodies and has itself bared its secrets to the world and exposed its weaknesses."

He proved several theorems, which a few of us understood, and which several thousand of us MUST understand before the lumber business will take its next "forward upright regular step."

Mr. Langille's chief points proved are that the "lumber industry differs from every other industry in the visibility of its product and thus its liability to destruction by unskilled workers." That the raw material is all discovered, located, estimated and controlled, "by private or public ownership;" and that it is "so diversified in its distribution and ownership that monopolistic control is impossible;" that the "condition of which the industry complains is lack of FORESIGHT and AGGRESSIVENESS

ILLUSTRATION USED FOR THE COVER OF THE PROGRAM OF THE A NNUAL "FOREST INDUSTRY CONFERENCE" OF THE FOREST PROTECTIVE ORGANIZATIONS COMPOSING THE "WESTERN FORESTRY AND CONSERVATION ASSOCIATION" WITH STATE, FEDERAL AND BRITISH COLUMBIA FOREST INTERESTS, HELD AT PORTLAND, ORE., OCTOBER 24-25, 1916.—THIS IS ANOTHER ONE OF THE PICTORIAL ALLEGORIES OF E. T. ALLEN, FORESTER OF THE WESTERN FORESTRY AND CONSERVATION ASSOCIATION, WHICH OUGHT TO CONSIDERABLY TERRIFY THE SQUEAMISH GENTLEMEN WHO THINK THAT THE "WAR OF THE SUBSTITUTES" IS OVER. IT HAS JUST BEGUN.

Digitized by Google

in seeking and creating new markets or holding ESTABLISHED outlets."

He shows conclusively how "individualism and prejudice have prevailed in a business that is exceedingly complex in its amplitude and the need for the most earnest expression of mutuality."

Mr. Langille shows that our problems do not differ from those which have surrounded every other big industry, the difference between OUR industry and OTHER industries being that most of the OTHER industries have solved THEIR problems.

OURS IS AN INDUSTRY THAT RETREATS.

It is marvelous to this writer that Mr. Langille did not say that the lumber industry is almost unanimously "pacifist" in its attitude towards National and International business life, for that is the condition he proves when he said that we are "apathetic" and "show indifference and fatuous neglect of opportunity." He condemned us when he said that "paucity of thought, inanity of action and looseness of purpose upon the part of those concerned in the ownership and harvest of trees has led the industry to its present unstable conditions."

Then he drew a few parallels, which are certainly "decisive" and a refined method of hammering home the truth. He referred to aluminum, saying that in 1890 only 400 pounds were produced and its uses were unknown, that it was a "substitute" metal and had to be forced into the market, and that in 1915 the production of aluminum had reached 3,000 tons per day and that 3,500 research experts were employed to discover further uses and applications.

THE BLIGHT OF INDIVIDUALISM.

Mr. Langille said: "Co-operation is but co-ordinated common sense."

Addressing himself to the "Blight of Individualism," he said:

"BUT IT IS NOT UPON PRODUCTION AND DISTRIBUTION ALONE THAT THE BLIGHT OF INDIVIDUALISM HAS FALLEN. IN THE OWNERSHIP OF TIMBER AND THE ADMIN-

H. D. LANGILLE, OF PORTLAND, ORE.

ISTRATION OF FOREST LANDS THERE HAS BEEN NO CONCENTRATION OF EFFORT IN DIRECTING PUBLIC THOUGHT TOWARD A REALIZATION OF ITS OWN DEEP INTEREST; FEW FORCEFUL PRESENTATIONS OF FACTS BEARING UPON THE VITAL QUESTION OF TAXATION AND USE OF PUBLIC FUNDS; NO HELPFUL INFLUENCE UPON LEGISLATION; NO ELUCIDATION OF THOSE PHASES OF THE INDUSTRY WHICH CONTRIBUTE TO THE PUBLIC WEAL BUT OF WHICH THE PUBLIC CANNOT INFORM ITSELF. THE TREE IS THE BASIS OF THE INDUSTRY; ITS OWNER IS THE RESPONSIBLE STEWARD TO WHOM THE PUBLIC LOOKS FOR PRESERVATION OF ITS RESOURCES AND ITS ULTIMATE TIMELY CONVERSION INTO WEALTH. THROUGH ORGANIZED EXPERT INTELLIGENCE THE PUBLIC HAS COME TO KNOW ITS INTEREST IN THE FOREST ITSELF AND BY SIMILAR CO-ORDINATION OF EFFORT IT CAN BE TAUGHT ITS INTEREST IN THE PRODUCTS OF TREES. THE LUMBER BUSINESS WILL CONTINUE TO BE PRODUCTIVE THROUGH THE MEDIUM OF MANY OPERATIONS; AND THIS LOGICALLY LEADS TO THE CONCLUSION THAT ONLY BY ORGANIZED CO-OPERATION THAT SHALL BE MORALLY AND LEGALLY WITHIN THE LAW CAN IT BE SUSTAINED, STABILIZED AND MADE PROFITABLE."

Mr. Langille certainly put many lovely old thoughts in new garments in his tribute to association work. Among other things he said "the interest of timber owners runs straight to the core of this issue;" also when he said "a tree in its primal state is an inutile thing, dependent upon labor, refinement and utility of its finished forms for value, hence it is only by amalgamation of interests, REHABILITATION of the INDUSTRY and assured PERMANENCE of utility of wood that the investments of timber owners and manufacturers can be made secure." He further carried this idea home in the statement that "an obligation to give permanence to the value of trees rests upon owners and manufacturers alike; yet the concern of owners should be deepest because manufacturers are often of today while non-operators will be required to carry to distant times the burden of the 'heavy load.'"

But the particular thing in connection with our organization work which the LUMBER WORLD REVIEW desires to compliment more highly than any other thing which Mr. Langille said, is suspended in every letter of this statement which follows, viz.:

"MANUFACTURERS, UPON THEIR PART, SHOULD NO LONGER HOLD ALOOF FROM OTHERS WHOSE RELATIONS TO THE INDUSTRY ARE LEGITIMATE. ON THE ONE HAND ARE TIMBER OWNERS; ON THE OTHER DEALERS AND DISTRIBUTORS. EACH OCCUPIES AN IMPOR-

TANT PLACE BUT THEIR FORCES ARE NOT DIRECTED TO A COMMON END. EACH SEEKS AN INDIVIDUAL ADVANTAGE RATHER THAN THE ADVANTAGES OF THE COMMON GOOD.''

RESPECTS TO THE "NATIONAL" MANUFACTURERS.

This "Nation-Wide Committee" report which Mr. Langille produced in Portland should really REASSURE all REACTIONARIES who think for a moment that this so-called "NEW" proposition, seeks to interfere with or in any sense undermine, kill or change the functions of the National Lumber Manufacturers' Association. Mr. Langille does say—concerning the National Lumber Manufacturers' Association — some very wholesome things which ought to do the executives of the "National" good to hear, and we stand ready to have any one disprove any of Mr. Langille's statements or to give reason why a single one of his statements should not have been made. If we cannot tell each other the TRUTH about these things we'd better jump down into the deep blue and shining sea and make an end of it.

This report stated concerning the National Lumber Manufacturers' Association a few things which we will have to throw up in black-faced capital letters so that no one in interest will overlook them:

''AS NOW ESTABLISHED ITS DUTIES ARE CIRCUMSCRIBED. IT DOES NOT SERVE IN THE WIDE FIELD OF ITS FULLEST POSSIBILITIES.''

''PRIMARILY IT IS A MANUFACTURERS' ASSOCIATION AND AS

CAPT. J. B. WHITE, OF KANSAS CITY, MO.

SUCH IT IS ATTAINING ITS END; BUT IN THE ACCOMPLISHMENT OF ALL THE THINGS THE ASSOCIATION HAS NEED TO ACCOMPLISH ITS VISION MUST BE EXPANDED AND ITS URGE MADE MORE POTENT.''

''THE NAME OF THE ASSOCIATION, AS IN THE CASE OF OTHERS, DENOTES CIRCUMSPECTION AND NARROWS ITS APPARENT PURPOSES BEYOND THE PRESENT SCOPE OF THE THINGS IT SHOULD DO.''

''IT HAS BEEN SUGGESTED THAT IT BE ENLARGED TO EMBRACE THE POTENTIALITIES OF A 'FOREST PRODUCTS FEDERATION, AND YOUR COMMITTEE URGES THAT THIS BE DONE.''

''IT SHOULD BRING PUBLIC, GOVERNMENT, AND INDUSTRY INTO BETTER UNDERSTANDING AND MORE INTIMATE RELATIONS.''

CHART "NO. 1" DESCRIBED.

Mr. Langille's paper—and we beg his pardon for calling it HIS paper, inasmuch as he is such a self-effacing gentleman and wants it understood that the document must be considered a report of the committee—is illustrated by TWO CHARTS which we print herewith, being reproductions of the wall charts with which Mr. Langille illustrated his "paper" in the delivery.

Chart No. 1 was designed to suggest some of the functions which the proposed "Forest Products Federation" might assume, and emphasizes "only those phases of forest economics which are national in scope and fundamental in their relations to the industry and to the public."

The report suggested that "capital, labor and the public" should have in this service bureau "a joint representative qualified to tell the facts about this great industry" when it referred especially to the "trade extension work," and characterized this person as "a policy and sentiment maker, a spokesman and an educator, whose utterances would truly define the position of the industry and carry its messages to

CHART №2

PLAN OF ORGANIZATION OF THE _____ ASSOCIATION

TIMBER OWNERS, LOGGERS, MANUFACTURERS
CONTRIBUTING MEMBERS
ALLIED INTERESTS
BOARD OF TRUSTEES
COMMITTEES
PRESIDENT, 1st VICE PRESIDENT, 2nd VICE PRESIDENT, SECRETARY-TREASURER
MANAGER
(Representing the industry before the public)

ORGANIZATION AND ADMINISTRATION (In charge of Secretary-Treasurer)

Office Functions
- Keep accounts and records.
- Collect assessments and dues
- Secure membership.
- Establish cost accounting for all branches.
- Hold meetings.
- Issue publications.
- Maintain library service
- Prepare mailing lists.
- Develop interest among ousinesses concerned with use of lumber
- Make monthly reports of cut, shipment and stocks.
- Report matters of interest to members.
- Publish lists.
- Report average selling prices.
- Report fluctuations of price and market.
- Prepare statistics of each bureau and branch.
- Make annual reports on the industry.
- Gain co-operation with other assns.
- Attend various conventions, keeping in touch with developments.
- Study insurance rates.
- List logged-off lands.
- Encourage colonization.
- Assist in community building.

Law & Legislation
- Maintain counsel to represent association in all legal matters assigned by proper officers.
- Analyze shipping laws, rulings of I. C. C., Federal Trade Commission, Treasury Dept., etc.

TIMBER (In charge of Expert)

Ownership
- Determine ownership
- Collect assessments.
- Compile forest statistics.
- Suggest forest policy.
- Laws affecting timber lands.
- Provide publicity through press and lectures.
- Represent timber before public.

Taxation
- Compile tax statistics by counties.
- Make analysis of taxation.
- Prepare data for tax arguments.
- Make investigation of levies.
- Make investigation of disbursemt's.
- Establish co-operation with district and county officials.
- Make reports upon public work and improvements.
- Develop sentiment and support of better administration.
- Avert unnecessary expenditures.

Legislation
- Draft and support better laws.
- Aid national association in directing legislation.
- Act as spokesman before legislature.
- Assist officials and legislators by providing information.
- Oppose unjust legislation.

Fire Protection
- Assume duties of state forest fire association.
- Continue sentiment making.
- Co-operate with Forest Service.
- Co-operate with State Board of Forestry.
- Plan efficiency systems.
- Aid in enforcing fire laws.
- Purchase supplies.
- Promote conservation.
- Determine merits of mechanical devices.
- Introduce uniform reports and accounting.
- Issue annual reports of fire losses.

MANUFACTURING (Each section in charge of Expert)

Lumber Manfg. Efficiency
- Influence regulation of production.
- Report on mfg. methods and costs.
- Develop improved methods
- Standardize mfg. equipment
- Make cost studies.
- Develop adoption of strength specifications.
- Develop uniform manufacturing.
- Develop possibilities for closer utilization.

Research
- Maintain laboratory for scientific research purposes or co-operate with Forest Service or state universities suitably equipped.
- Determine relative value of different species, types, sizes, densities, etc.
- Study problem of handling lumber to prevent checking, bluing and other losses after sawing.
- Determine by-product properties, value of products and cost of conversion; demand & possible mkts.
- Seek new uses for wood.
- Demonstrate value for present uses.
- Study utilization of waste.
- Co-operate in development of fire-retardants, fire-proofing preparations and wood preservation.

Engineering Architecture
- Provide plans and specifications for all kinds of buildings for which wood is adapted; designs and suggestions for sleeping porches, trellisses, home conveniences, ornamental structures; ready-made houses, garages, play houses, etc.
- Seek to make wood construction more economical through use of short lengths and lower grades where suitable.
- Educate public to better understanding of durability, adaptability and home-making qualities of wood.
- Foster training in use of wood in trade and manual train'g schools.
- Demonstrate superiority and economy of woods for paving, silos, pipe, containers, roofing and structural purposes.
- Demonstrate fire-resisting qualities of woods; merits of slow-burning wood construction.
- Study proper and improper uses of woods, grades and sizes.
- Advocate use of sprinkler systems
- Co-operate with insurance companies in reducing fire losses.
- Dispel growing objections to wood engendered by substitute makers.
- Hold membership in, and meet with such organizations as American Society for Testing Materials, Institute of Architects, Master Car Builders Ass'n, etc.
- Investigate use of wood by railroads.
- Seek to revive use of wood for ships.
- Investigate failures of wood.
- Determine qualities required in different uses.
- Compile manual for architects, contractors, builders, dealers, etc.
- Compile manual for use of paving companies, contractors and road builders.

Logging
- Report upon logging methods and costs.
- Standardize logging equipment.
- Recommend uniform cost account'g.
- Make studies of factors in logging.
- Standardize log rules and scaling.
- Report log production, grades, prices, supply, and demand.
- Study problem of breakage and waste.
- Determine relative value of log grades.

Shingle Mfg.
- Determine most suitable sizes, widths, and thicknesses; best manner of laying; nails best suited, best methods of fire-proofing, cost and effect of staining, painting, etc.; cost of shingles laid as compared with other materials.
- Show durability, economy, ease of repair, etc., of shingle roofs; conditions under which shingles should not be used.
- Co-operate with Engineering & Architecture Bureau in preparing booklets to show uses to which shingles may be adapted to other forms of wood construction.
- Perform the service suggested under "Lumber Mfg., "Efficiency."
- Find new uses and applications, develop better manufacturing, cheaper production, greater utility, etc., co-operating with other bureaus.
- Co-operate with Marketing Bureau.

Box Mfg.
- Standardize sizes.
- Standardize specifications.
- Recommend economies to users of box shooks; nails and fastenings.
- Study economic loss to buyers and carriers due to substitute packages. Co-operate with carriers in securing remedial legislations.
- Recommend kind of boxes and methods of packing for shipment of different commodities to different markets.
- Compile manual for distribution among manufacturers and shippers.
- Find new uses and applications, develop better manufacturing, cheaper production, greater utility, etc., co-operating with other bureaus.

Sash & Doors
- Install special expert if advisable.
- Do all of the things necessary to build up the industry.
- Participate in all general activities of the association.

Factories ..... Same

Creosoting Plants ..... Same

Cooperage ..... Same

Inspection Grades
- Inspection of grading at mills to insure uniformity.
- Inspection of shipments to export markets and elsewhere if requested.
- Issue certificates of inspection to members.
- Develop grading rules.

MARKETING (Each section in charge of Expert)

Advertising
- Assist specialists handling advertising campaign.
- Prepare local-interest copy for district papers, special issues, booklets, etc.
- Furnish news items to district press and trade journals.
- Prepare for magazines and periodicals articles creating sentiment for wood; papers for meetings of societies, etc
- Handle local advertising to create public sentiment.
- Secure space and arrange exhibits at expositions, fairs, meetings, etc.

Promotion
- Co-operate with Forest Products Federation in developing interest of associations, societies, etc., in wood products; and in trade extension.
- Give publicity to uses, economy and value of wood for schools and other public buildings, bridges, etc.
- Encourage constructive efforts of trade journals.
- Set before the public true facts regarding the lumber industry and the public's interest in it.
- Oppose unjust anti-wood ordinances.
- Cultivate sentiment favoring use of wood blocks on roads, streets, highways, etc.
- Compete with promotion of substitutes for purposes to which wood is best adapted.
- Determine relative value and cost of principal imitations and substitutes.
- Lecture with aid of moving pictures.
- Promote sale of products by assisting dealers to create demand; distributing booklets, plans, specifications and estimates.
- Stimulate use of short and odd-lengths and piece stuff.
- Urge use of brands and trademarks.
- Disseminate knowledge of the qualities of wood to salesmen and dealers.
- Develop salesmanship.
- Ascertain and report conditions in domestic and foreign markets.
- Co-operate with Dept. of Commerce and Federation in developing foreign markets.
- Seek improved methods of distribution.
- Extend installation of miniature lumber yards in stores.
- Determine qualities, grades and specifications wanted in different markets and urge manufacturers to supply them.
- Develop closer relations with wholesalers and retailers.
- Call upon dealers and large consumers, such as railroads, factories, packers, manufacturers of boxed goods, etc., to personally discuss the utility of wood.
- Study sales methods of other producers.

Traffic
- Support competent traffic manager to adjust inequitable freight rates, deal with problems of traffic rules, rate classification, milling-in-transit privileges, switching charges, etc., and adjust claims.

Digitized by Google

the public." Previous to this statement the "trade extension man" had just been presumed to be a "peddler," not a "psychologist."

Usually when anyone tries to see Mr. Langille's "trade extension man" he gazes over on the sky-line as if looking for the second coming of the Messiah; which statement we make for the express purpose of saying right here that THAT sort of speculation is piffle.

The POSITION will GET the man and as a matter of fact he is now SOMEWHERE WALKING THE EARTH getting ready for the JOB.

Concerning the functions of the "Forest Products Federation" outlined by this chart the report suggests: "Special membership should be provided for societies and association whose co-operation the lumber industry needs more than they need the lumber industry." NOWHERE did he say that ALL the "lumber interests" should be admitted to this "Federation"—whether or not they put up money for the privilege—but that they SHOULD be just the same, for the poor man—with only a dime to spare—or nothing at all to spare—for the contribution plate, SHOULD and DOES have the right to take up as much seat room in the average Christian Church as the man who sits down front and pays $1,000 a year for a pew. The principle is JUST the same.

This statement may seem like approaching the subject irreverently but we want to make our statements HOMELY enough to cut in DEEP enough to be understood.

And now comes a place in Mr. Langille's report of the "Nation-Wide Committee" where it can be condensed no more than two red ants may condense a steel rail by pushing it on the ends, and so here we will quote Mr. Langille DIRECT for a considerable space—at least under the next three captions.

WORK OF THE NATIONAL ASSOCIATION.

"It is impracticable to detail here the present work of the National. A financial statement for the fiscal year ending March 31, 1915, shows that there was available during the year for the association proper $31,011.77, received through the payment of $2 per million feet of cut by the twelve district associations represented. The Trade Extension Department had at its disposal $30,550.91, largely made up from individual subscriptions of $1,000 each. The current subscriptions for Trade Extension work from associations and individuals amount to $55,700. In other words, the total fund available for national work seems to be much less than $100,000, a sum absurdly insufficient in its proportion to the value of the industry's products."

THE PLACE OF THE LUMBER INDUSTRY.

"In point of value of products the lumber industry was third in the United States in 1909. The value of its products was $1,156,129,000, to which was added $648,011,000 by further manufacture. It is estimated by the National association that about $600,000 per year is being spent by the different manufacturers' associations for promotion and publicity, which is one-half mill for each dollar's worth of value produced in 1909. Compare this expenditure, and the aggressiveness behind it, with the modern business-getting methods of competitive industries and the cause for the very real and very serious decadence of the lumber industry is found. The manager of the Trade Extension Department has well said: 'For every dollar spent to create a demand for wood $10 have been used to create prejudice against it, * * * One of the most serious phases of the situation is that the highest technical skill and the most exhaustive investigations are being employed to make other materials better and more economical than wood, to the end that they may give the best satisfaction and service to the consumer.' * * * Either lack of realization or commercial necessity has kept in the background the fact that wood and not oak or cypress or pine or fir or any other species is fighting for existence. Each of the individual woods is on the defensive, but the first end of promotion effort should be the defense of wood in the GENERIC, rather than of any particular wood in the SPECIFIC."

VAST SUMS SPENT FOR ADVERTISING.

"The 1915 report of the secretary of the National association shows how far behind the lumber industry is in promoting the use of its goods.

" 'Seven firms spent $23,000,000 in one year to increase the use of tobacco.

" 'The cement interests have a national promotion fund of $750,000.

" 'The California orange growers are spending $300,000 yearly to sell their products.

" 'One ready-made house firm used more than $100,000 worth of space in national magazines in 1915.

" 'The manufacturers of substitute roofings spent over $200,000 for space in national magazines in 1915.

" 'One cracker manufacturer spent $238,000 for magazine ads alone in one year.

" 'California peach growers subscribed $600,000 for a selling organization.

" 'A syndicate of German coal operators spent $14,518,000 for market extension in one year.'

"The lumber industry is incomparably greater than any of these. The efficacy of intelligent efforts to sell lumber has been proved. The inability of lumber to sell itself in these days of changed conditions is shown by the falling off in volume of production. In 1909 the country produced 44 billion feet of timber; in 1915 it produced 37 billion feet. Will the industry supinely sit by and see its market further reduced each year or will it adopt modern methods and regain its rightful place?

"The proposed Forest Products Federation should have $500,000 per annum with which to make the fight for wood. That would mean 1¼ cents per thousand feet on a normal cut of 40 billion— an insignificant amount, indeed, in comparison with the investments involved and the need that exists."

CONCERNING "CHART NO. 2."

The first sentence of Mr. Langille's description of this chart contains a volume of information, the chart should do the rest for anybody that will take the trouble to read it; it is put into this review for that purpose. Mr. Langille says: "Chart No. 2 prescribes in detail the activities which might be undertaken in seeking to relieve the industry from the avoidable adversities from which it complains."

If the lumberman who is not enough interested in the future of his business to carefully analyze Chart No. 2 then there is but very little we can do FOR him. And in the not distant future there is a plenty that will be done TO him by all the business opposition which is organized and ready to fight lumber.

No lumberman who has not either read Mr. Langille's paper or studied especially Chart No. 2, or has not as an ALTERNATIVE read THIS REVIEW of the proposition, is competent to say WHETHER or NOT there is something in this proposition which some of the scientists have not too affectionately, and we suspect facetiously called "The Big Idea."

FINANCIAL ORGANIZATION.

Mr. Langille says much in that division of his article, or report under this caption. These sentences especially appeal to this writer: "IT WERE MANIFESTLY UNJUST THAT THE OWNER OF A BILLION FEET OF STUMPAGE OPERATING ONLY A SMALL MILL OR CAMP SHOULD CONTRIBUTE ON THE BASIS OF OUTPUT ALONE. IN ADDITION TO THE CONTRIBUTIONS OF THE TREE THERE SHOULD BE FURTHER CONTRIBUTIONS BASED UPON EACH PROCESS OF REFINEMENT."

There is one thing under the head of "Financial Organization" that Mr. Langille especially covers, which we will let boogie out in blackface type so that it will not be overlooked, and in doing this we hope the "starring" of this statement will set at rest any idea that the "Nation-Wide Committee" is iconoclastic. Here is the statement:

"ORGANIZATIONS NOW PERFORMING THE FUNCTIONS OF ASSOCIATION WORK SHOULD NOT BE DISPLACED BUT THEY SHOULD BE ENERGIZED AND THEIR ACTIVITIES SHOULD BE EXPANDED TO EMBRACE AS MANY OF THE DUTIES INDICATED BY CHART 2 AS LOCAL SITUATIONS MAY REQUIRE. WHERE THE COMMON MULTIPLICITY OF ORGANIZATION EXISTS THERE SHOULD BE AMALGAMATION. DUPLICATION OF EFFORT SHOULD COME TO A FULL STOP."

A NOTABLE EXAMPLE SUGGESTED.

Mr. Langille referred to the Western Forestry and Conservation Association as the "five state organization of the west," which "has been the most potent single factor in shaping public sentiment to the needs of practical conservation." He thought this association should be broadened and its activities transferred to the proposed "Forest Products Federation," in order the work of many years may not be lost.

SUMMING UP THE CONCLUSIONS.

While Mr. Langille hesitated to suggest how all branches of the lumber trade may contribute to the greater proposition, he was sure that five cents per thousand feet of all lumber produced and an appropriate consideration in proportion for all interests should be turned into a fund with which things may be accomplished. He called attention to the financial arrangements of all other associations.

"REDUCING THESE PAGES TO LINES YOUR COMMITTEE SUBMITS AND URGES:

"THAT THE INDUSTRY AS A WHOLE LOCALLY AND NATIONALLY, SHOULD INTEGRATE AND COORDINATE ITSELF AND BECOME STRONGLY AGGRESSIVE IN BUILDING FOR MORE PROSPEROUS TIMES AND GREATER STABILITY IN THE INDUSTRY.

"THAT VOLUNTEER AND OBSOLETE ASSOCIATION EFFORT BE ABANDONED.

"THAT ALL WHO ARE CONCERNED WITH THE PRESENT OR FUTURE COMMERCIAL VALUE OF TREES SHOULD NOW REALIZE THAT ECONOMIC CHANGES DEMAND APPLICATION OF THE SAME HIGHMINDED AND COURAGEOUS BUSINESS

Digitized by Google

PRINCIPLES AS HAVE BEEN FORCED UPON AND ADOPTED BY OTHER GREAT INDUSTRIES.

"THAT THE NEED OF THE INDUSTRY TODAY IS MEN OF ACTION WHO WILL AROUSE THEMSELVES FROM THE APATHY OF THE PRESENT AND APPLY THOSE PRINCIPLES.

"THAT TIMBER OWNERS, NO LESS THAN MANUFACTURERS, STAND IN NEED OF THE SELF HELP THAT CAN COME ONLY THROUGH THE PURCHASE OF BRAIN EFFORT POSSESSED AND APPLIED BY MEN BIG ENOUGH TO SEE OVER THE HEADS OF THE MULTITUDE.

"THAT NATIONAL PROMOTION CAN BE CARRIED ON ONLY WITH ADEQUATE FINANCIAL SUPPORT AND THAT SUCH SUPPORT MUST COME FREELY AND LIBERALLY FROM ALL.

"IN CONCLUSION YOUR COMMITTEE APPEALS TO THE INDUSTRY TO TAKE LEAVE OF THE STRIFE AND DISCORD THAT HAS INVITED DISREPUTE IN THE PAST; TO RECONSRUCT ITSELF ALONG LINES OF PERMANENT ADVANCEMENT, TO JOIN TOGETHER IN UNITY THAT ITS OWN CONSTITUENTS SHALL NO LONGER BE ITS MOST DISTURBING AND DESTRUCTIVE ELEMENT. EXPERIENCE SHOULD NOW BE AUGMENTED BY LOGIC, REASON AND FINANCIAL STRENGTH."

SOME OPINIONS FROM LUMBERMEN.

Lumbermen generally do not seem to understand what this proposition is, or if they do they hesitate to express themselves.

Just for the information of those who have communicated with us and to show a few of the "straws" which seem to incline before the wind we print excerpts from a few letters and telegrams.

R. B. GOODMAN: "Am fully in accord with your presentation of Forest Products Federation. The great need of lumber industry is better co-operation among lumber associations of all shades and all regions and the active support of individuals and corporation timber owners. Our National association should be extended and enlarged along the lines of Mr. Langille's report. Your splendid work calling lumber to a realization of the effect of substitute advertising and promotion is only an incident compared with the man's job you have started now. Complete association co-operation, complete individual participation will solve every problem of the industry."

H. B. HEWES: "The idea as embodied in report of Mr. Langille and his committee is broad, comprehensive, timely and ideal, and of some practical method can be found to put in effect suggestions made and lumber men and timber owners will give necessary support, it will certainly result in much benefit to entire lumber industry. As the National Lumber Manufacturers' Association has already made a good start, why not enlarge its scope to embrace potentialities of the idea as suggested?"

ARKANSAS OPERATOR: "I do not feel competent to make comments at this time. Personally I believe we have enough lumber organizations in this country now and have as little interest manifested as we can possibly get along with. Since lumbermen do not care to look after their own interests do not see how we could hope to get further interest manifested by new ventures."

WEST VIRGINIA OPERATOR: "Am in hearty sympathy with report made by Mr. Langille. His plan is excellent and the possibility of good to lumber industry, if timber owners, manufacturers, and all interested in wood would lend their hearty support to the movement in a national way—is unlimited."

W. C. HULL: "It is not clear whether you favor a new association or a change in the name of our national association with a view of gaining support to it. Have read Mr. Langille's report with interest; it is alive with truths relating to the industry; and it outlines exactly present plan of organization of the National Lumber Manufacturers' Association. This association has done much to do away with adverse conditions, and it could do away with them entirely, if it only had the support of all the people who are being benefited, among whom should be numbered—as Mr. Langille suggests—not only the manufacturers but timber land owners. The manufacturer alone has made possible the profits of the timber land owner, and also, almost alone borne the burden of the little that has been accomplished along lines of trade extension and publicity. I say 'little' because it is little in comparison to what remains to be done, but is very much considering the few who have given—in some instances—almost their entire time to the work. The enthusiasm which Mr. Langille's very able report, and Mr. Allen's splendid pictorial allegory will arouse, will, I hope redound to the benefit of the National Lumber Manufacturers' Association. I feel confident if any interested timber land owner or lumber manufacturer would call at the office of the National and review the work of this association he would be impressed with its scope; realize the handicap under which it is being conducted; and see there is no necessity for another association and become an enthusiastic supporter of the 'National.'"

JAMES D. LACEY: "I fail to see how the Federal Trade Commission or any other body of men not financially interested in the ups and downs of the business for the last fifty years can work a solution of the problem, the A B C of which is to fit the supply to the demand and keep on working to enlarge the demand for the thousand and one purposes to which lumber can be applied. With present prices of standing timber anywhere in the United States it is impossible to make a profit out of 30 or 40 percent of the tree and spend money to burn it up or in some other way get rid of the other 60 or 70 percent of the wood. With the United States government as an active competitor and stimulator in creating more mills and competing with other standing timber it is a school boy problem to figure out why the price of lumber is so far below par when every other kind of raw material is selling at abnormal prices."

W. H. SULLIVAN: "I was very greatly interested in the plan of the Forest Products Federation. Don't see that we need a new organization; it ought to be worked out through the National Lumber Manufacturers' Association; and I firmly believe that 75 percent of the money spent for advertising by each one of the different associations ought to be turned over to the National association and spent in the interest of wood in general. You are conducting a great campaign and you seem able to do it in a big way, and I congratulate you most heartily, wishing that great success will crown your efforts."

AN ALABAMA MANUFACTURER: "We have a great many men in the lumber manufacturing business who do not seem to be able to comprehend the value of working together to the extent that would make a proposition of this character as easy to accomplish as in some other lines of business. A great many of the large manufacturers and small manufacturers also are men who have come up through their operations in lumber and are quite difficult to make appreciate certain parts of the lumber work. They have been able to produce at the very lowest minimum of cost, but there is a tendency among them to work out their own salvation and not to feel the importance of concerted action."

A. T. GERRANS: "I have read the report of the committee on the 'Forest Products Federation' with a great deal of interest and feel that if the timber owners would get together and furnish the sinews of war that the development of the plans laid out would be of tremendous benefit to all classes and conditions of lumbermen. If some one in the lumber trade could be discovered who could successfully obtain the MONEY, 90 percent of the trouble would be over."

LAMB-FISH LUMBER CO.: For this concern George Land, traffic manager says: "The Forest Products Federation would be a great benefit to the timber trade and is something that we believe should have been inaugurated long ago. The scope of this plan is too immense to attempt to cover and we can only say that we hope that such an organization will become a reality."

JOHN L. KAUL: "I have read with interest the committee report covering the proposed plan for the Forest Products Federation, and the editorial comment thereon appearing in your issue of the 10th instant; I consider the committee's report a classic in so far as it covers the possibilities of the lumber business, but it is also a very strong indictment of the lumbermen as a body for their failure to take advantage of these possibilities and to work out their problems to better advantage. There is, so far as I can see, nothing impracticable in the plan as outlined, the biggest handicap to be overcome consisting of the well known indifference of lumber manufacturers to any movement however great, which might bring their product into its own, and secure to them results reasonably commensurate with the capital and labor investment necessary to a successful lumbering operation. I shall personally be very glad indeed to see the Federation organized and at work, provided it rests upon a sound foundation."

THE LOG OF THE LAB.

Fortunate are those "subscribers" who receive the "Log of the Lab," published "now and then" at the Forest Products Laboratory, at Madison, and whose price is a "friendly interest in our work."

The September number is dedicated to the Oak, "Jove's own tree," is beautifully printed on heavy white paper in black with an impress of the oak leaf bud and acorn in red upon each page. The gay and the serious mingle in its pages; the former in "The Journey of the Stranger" in imitation of Longfellow's lines, and letters of a humorous nature; the latter in much valuable information relating to oak; Timber Tests, Pulp and Paper, Derived Products, Lumber Study, Wood Preservation, Identification of Oak Woods, Timber Physics and other chapters.

Report by Special Committee of the National Lumber Manufacturers' Association

On the Passage of the General Revenue and Income Tax Bill H. R. 16763

By R. H. DOWNMAN, Chairman

This bill was prepared by the Ways and Means Committee of the House of Representatives in collaboration with the Internal Revenue Department; and, as then drafted, was presented by the majority members of that committee to the minority members on the night of July 3 and was passed by the House of Representatives on July 11, 1916.

TIMBER PROVISIONS OF THE ORIGINAL BILL

As first presented, it carried the following provision covering deduction allowed in case of timber: "* * * * and in case of timber, a reasonable allowance for stumpage, not in excess of the cost of, or capital actually invested in the timber sold or removed during the year for which return is made."

The attention of a number of lumbermen was called to this provision of the bill in Chicago on July 15, and, at a meeting called and attended by some thirty prominent lumbermen, Attorneys A. W. Clapp, of St. Paul, Minn., and Joseph N. Teal, of Portland, Ore., were requested to draft a memorandum protesting against this unjust provision, as well as the provision in the bill referring to dividends. This was done and was used with effect by the committee which was appointed to go to Washington for the purpose of protesting against the injustice of such provision, as it appeared that the lumbering and timber interests of the country had been singled out and put in a special class for the purpose of raising revenues.

PRELIMINARY WORK OF COMMITTEE

Your committee proceeded to Washington and reached there on July 19. On arriving, we found that the Ways and Means Committee had agreed to add the following amendment to the above quoted clause at the suggestion of Representative Joseph W. Fordney, of Michigan, and it was presented on the floor of the House of Representatives by Hon. Claude Kitchen, chairman of the Ways and Means Committee: "but, with respect to timber purchased prior to March 1, 1913, a reasonable allowance, not in excess of the fair cash value of such timber on March 1, 1913."

When Mr. Kitchen was questioned by another member as to the purpose of this amendment, Mr. Kitchen had to say: "The constitutional amendment providing for the income tax went into effect on March 1, 1913, and we think that the value at that time, and not what was paid for it ten or fifteen years before the constitutional amendment went into effect, should control." (See discussion in Congressional Record, July 10, 1916, pp. 12329 and 12330.)

The first thing your committee did on arriving in Washington and organizing for activities, was to frankly call on the officials of the Internal Revenue Department and discuss with them the provisions of this bill referring to lumbering and timber. We were very frankly told by them that the so-called Fordney amendment was not satisfactory to them and that they would try to have it eliminated, and that as they had made their recommendations to the Ways and Means Committee, they had nothing further to say and suggested to us, if we expected any relief, that we would have to go directly to congress to get it.

AMENDMENTS OFFERED

Finding the minds of the officials of the revenue department were made up, your committee proceeded to get in touch with the Senate Committee on Finance who, at that time, had charge of the bill. The Finance Committee was not granting any hearings to the various interests affected. The bill had been divided up into sections and such sections had been referred to various sub-committees of the Finance Committee. Hon. John Sharp Williams, of Mississippi, as chairman of one of these sub-committees, had charge of that section which covered the matter of timber and lumbering, and he had, apparently, made up his mind in regard to this matter by offering the

ROBERT H. DOWNMAN, OF NEW ORLEANS, LA.

following amendment in relation to timber: "* * * * and in case of timber a reasonable allowance for stumpage not in excess of the market value of the standing timber actually sawed and sold during the year for which such return and computation are made."

Your committee, very thoroughly, considered Senator Williams' amendment and, after consultation with various senators, they came to the conclusion that his amendment was as much too far in favor of the lumbermen as the original clause against them, and that it would be likely to react and become a boomerang in the future. Consequently, we went to work to try to eliminate it. We got in touch with Hon. Claude Kitchen and explained the matter to him and he stated that he, and other members of the Ways and Means Committee, had intended to change what is known as "Clause C" which appears on page three of the bill as finally passed, to read: "For the purpose of ascertaining the gain from the sale, or other disposition, of property, real, personal or mixed, acquired before March 1, 1913, a fair market price, or value, of such property as of March 1, 1913, shall be the basis for determining the amount of such gain derived," and he requested your committee to get into communication with Senator Williams and tell him that that was their intention and that the conference committee would stand for such amendment in the clause as drafted in the original bill. Of course, it was understood that this clause was to be inserted in such other places where it affected non-residents and corporations which, you will observe from the bill, as passed, was done. This amendment to the bill was framed by us and was presented to the caucus by Senator Underwood of Alabama, and the Finance Committee was instructed to offer this amendment on the floor as a committee amendment, which was done by Senator Williams on the floor of the Senate. A few days afterwards, when this amendment was taken up again, Senator Clark, of Arkansas, offered the following substitute amendment:

> (c) For the purpose of ascertaining the gain derived from a sale or other disposition of real property, the profits realized within the year from the sale or other disposition of any real estate purchased within two years previous to the close of the year for which such income is estimated shall be the basis for determining the amount of such gain so derived from such sale or other disposition thereof.

And the bill actually passed the Senate with the Clark substitute amendment in it, and it was only when the bill went to conference that this provision was changed back to the Kitchen amendment and it finally passed both houses in that shape.

QUESTION OF DIVIDENDS

Under the heading of "Income Defined" Section 2, Page 2, provided: "That the term 'dividends' as used in this title, shall be held to mean any distribution made or ordered to be made by corporations, joint stock companies, associations or insurance companies, out of its earnings or profits, and payable to its shareholders, whether in cash or in stock of the corporations, joint stock companies, associations or insurance companies, which stock dividend shall be considered income to the amount of its cash value." It was very obvious that, in case of liquidation of any lumber corporation, where they would make a distribution of the capital assets, under this clause it would become a dividend and subject not only to the ordinary, but the sur-tax. We called the attention of various senators to this and they agreed with us that it would be improper to tax, as income, accumulations in corporations which had occurred over a period of years prior to March 1, 1913, when the Income Tax Law went into effect, and they finally agreed to an amendment, inserting between the words "profit" and "and" the words, "accrued since March 1, 1913."

For decision and reference as to value of standing timber, see case of Doyle, Collector, vs. Mitchell Bros.

For decisions and reference to dividends paid out of increased value of capital shares on account of increased value of timber, see cases

Digitized by Google

of E. J. Lynch, Collector, vs. Henry Turrish, and E. J. Lynch, Collector, vs. H. C. Hornby.

When the bill went to conference it was decided that "Clause C" of Section 2, on Page 3, and in other sections of the bill, fully covered in its terms all classes of property, making the valuations and deductions as of March 1, 1913; and, therefore, they struck out all special reference to timber. You will observe in Section 10, Page 11, on "Corporations," that the question of dividends is taken care of, and in the last paragraph of Section 10, Page 12, that the question of gain derived, or loss sustained, is taken care of.

We take it that it will not be a hard matter for the lumbering corporations to satisfy the collectors in the various producing districts of the reasonable cash value of their timber, or raw material, as of March 1, 1913.

SEQUENCE OF DEVELOPMENTS

The following is the sequence of the moves made by your committee in bringing about the ultimate passage of the bill as it now stands:

First.—the bill, as it came from the House of Representatives, contained the following:

INCOME DEFINED.

Sec. 2. (a) That, subject only to such exemptions and deductions as are hereinafter allowed, the net income of a taxable person shall include gains, profits, and income derived from salaries, wages, or compensation for personal service of whatever kind and in whatever form paid, or from professions, vocations, businesses, trade, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in real or personal property, also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever: Provided, That the term "dividends" as used in this title shall be held to mean any distribution made or ordered to be made by a corporation out of its earnings or profits and payable to its shareholders, whether in cash or in stock of the corporation, which stock dividend shall be considered income to the amount of its cash value.

Second.—The following is as it came from the Senate and as it was finally passed:

INCOME DEFINED.

Sec. 2. (a) That, subject only to such exemptions and deductions as are hereinafter allowed, the net income of a taxable person shall include gains, profits, and income derived from salaries, wages, or compensation for personal service of whatever kind and in whatever form paid, or from professions, vocations, businesses, trade, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in real or personal property, also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever: Provided, That the term "dividends" as used in this title shall be held to mean any distribution made or ordered to be made by a corporation, joint-stock company, association, or insurance company, out of its earnings or profits accrued since March first, nineteen hundred and thirteen, and payable to its shareholders, whether in cash or in stock of the corporation, joint-stock company, association, or insurance company, which stock dividend shall be considered income.

Third.—Paragraph C, as originally passed by the House of Representatives, was as follows:

(c) Of the gain derived or loss sustained from the sale of real estate, stocks, bonds, securities, or other property, acquired before March first, nineteen hundred and thirteen, not bought and sold in the course of trade by the taxpayer, only such proportion shall be included as the time between March first, nineteen hundred and thirteen, and the date of sale bears to the entire time between the date of acquisition and the date of sale.

Fourth.—Paragraph C, as recommended by the Democratic caucus and offered on the floor of the Senate by Senator Williams, and passed, this being the amendment suggested by your committee and known as the Kitchen amendment:

(c) For the purpose of ascertaining the gain derived from the sale or other disposition of property, real, personal, or mixed, acquired before March first, nineteen hundred and thirteen, the fair market price or value of such property as of March first, nineteen hundred and thirteen, shall be the basis for determining the amount of such gain derived.

FRANK G. WISNER, OF LAUREL, MISS.

Fifth.—Senator Clarke, of Arkansas, offered the following as a substitute for the Kitchen amendment, which passed the Senate and went to conference:

(c) For the purpose of ascertaining the gain derived from a sale or other disposition of real property, the profits realized within the year from the sale or other disposition of any real estate purchased within two years previous to the close of the year for which such income is estimated shall be the basis for determining the amount of such gain so derived from such sale or other disposition thereof.

It was the fear of your committee that this might be construed adversely where timber is held without fee simple title to the land.

Sixth.—The conference committee disagreed as to the Clarke substitute and agreed to the Kitchen amendment, which was finally passed by both houses as follows:

(c) For the purpose of ascertaining the gain derived from the sale or other disposition of property, real, personal, or mixed, acquired before March first, nineteen hundred and thirteen, the fair market price or value of such property as of March first, nineteen hundred and thirteen, shall be the basis for determining the amount of such gain derived.

Seventh.—The following is the provision in reference to deductions allowed as passed by the House of Representatives including the Kitchen-Fordney amendment:

DEDUCTIONS ALLOWED.

Sec. 5. That in computing net income in the case of a citizen or resident of the United States—and in the case of timber, a reasonable allowance for stumpage not in excess of the cost of, or capital actually invested in, the timber sold or removed during the year for which the return is made, but with respect to timber purchased prior to March first, nineteen hundred and thirteen, a reasonable allowance not in excess of the fair cash value of such timber on March first, nineteen hundred and thirteen.

Eighth.—The following is the amendment proposed by Senator Williams and passed by the Senate:

And in the case of timber a reasonable allowance for stumpage not in excess of the market value of the standing timber actually sawed and sold during the year for which such return and computation are made; Provided,

RESULTS OF COMMITTEE WORK

The two above provisions were stricken out in their entirety in conference, as it was properly concluded that Clause C, of Section 2, fully covered the matter of deductions, and lumbermen should see that a fair market value of the timber is allowed by the collectors in making up their returns. For the same reason these provisions were also stricken out in conference where they appeared in reference to timber in Part 2, on "Corporations."

Your committee was instrumental in leaving changes made in reference to "SPECIAL TAXES" where it provided for a tax of 50 cents for each $1,000 of capital, surplus and undivided profits used in any business activities to read 50 cents for each $1,000 of the fair market value of the shares of capital stock.

Your committee was composed of, Capt. E. A. Selfridge, Jr., of San Francisco; Walter P. Cooke, of Buffalo, N. Y.; C. I. Millard, of Norfolk, Va., and F. R. Babcock, of Pittsburg, Pa., and I wish to thank them for their work in the interest of the lumber industry, and I especially want to return thanks to Frank G. Wisner, treasurer of Eastman, Gardiner & Co., of Laurel, Miss., who represented the Southern Pine Association. Mr. Wisner stayed with me from the nineteenth of July until the first of September, and we were constantly on the work, day and night. We saw some forty senators and representatives and found many of them ready to listen to the facts and figures we presented. We are especially appreciative of the assistance rendered us by Representative Pat Harrison, of Mississippi, who was one of the first to see the justice of our contentions. The whole time taken was seven and one-half weeks, from July 20 until September 8, when, by the grace of God, and to the joy of all representatives in congress, and many others, the sixty-fourth congress adjourned.

This report is submitted entire with the belief that it can be used as an example of possible accomplishment by what is familiarly known as "team-work." Your committee represented the National Lumber Manufacturers' Association and as such, represented all affiliat-

Digitized by Google

ed associations. It went at the business in hand with energy and accord and believes the National association can continue to benefit its members by committee work if the committees take their responsibilities seriously.

In order that each individual lumber manufacturer may more fully appreciate the value of the work done by this committee of the National Lumber Manufacturers' Association, as outlined in this report, he should, after carefully reading the changes and improvements made in the revenue bill, apply the results to his own property, and figure out carefully the actual cash benefits to himself individually, or to his firm or company.

Recent Improvement in Skidding and Loading Machinery

By J. H. DICKINSON, of the Lidgerwood Manufacturing Co., Read at the Southern Logging Congress, October 26, 1916

A more appropriate subject than "Recent Inventions and Improvements in Skidding and Loading Machinery" could not have been selected for the proceedings of this congress.

Although Louisiana was not the birthplace of steam logging, yet the loggers of Louisiana first realized the possibilities of the new idea and put it in general use. It is a notable fact that loggers themselves have generally invented the various systems of log handling. Practically every advancement in log handling methods has been the outcome of some logger's practical experience, and has been made to meet some new condition developed in modern logging. In this the logging industry is an exception, as in most industries it is the manufacturers of machinery, not the users, who develop new methods.

THE FIRST SKIDDER.

The first skidder was invented by Horace Butters, of Butters & Peters, and was used by them logging Michigan pine near Ludington, Mich., in 1883. It was an overhead machine, equipped with an ordinary two-drum Lidgerwood hoisting engine, one drum being used for hauling the carriage and the other for hoisting and skidding the logs. No means were provided for pulling slack in the skidding line, this being overhauled by hand. To keep one end of the log suspended while the log was being pulled in, the loaded carriage was pulled in against a slipping brake on the outhaul drum. In spite of these crudities the machine was successful in taking logs out of pot holes, and ten outfits made by the Lidgerwood Co. were sold by Mr. Butters to different concerns in Michigan. The

J. H. DICKINSON, OF NEW YORK.

engines on these latter plants were of the three-drum type, one drum being used for loading, the entire engine being redesigned throughout to meet the severe service required of logging engines.

HISTORY OF SKIDDING IN LOUISIANA.

In 1891 the Ruddock Cypress Co. and the Louisiana Cypress Co., both of Louisiana, purchased several of these skidders. They were equipped with the Butters-Miller high speed outhaul skidding engines. Within the next four years the Lidgerwood Co. sold about eighty of these old type overhead skidders for use in Louisiana alone.

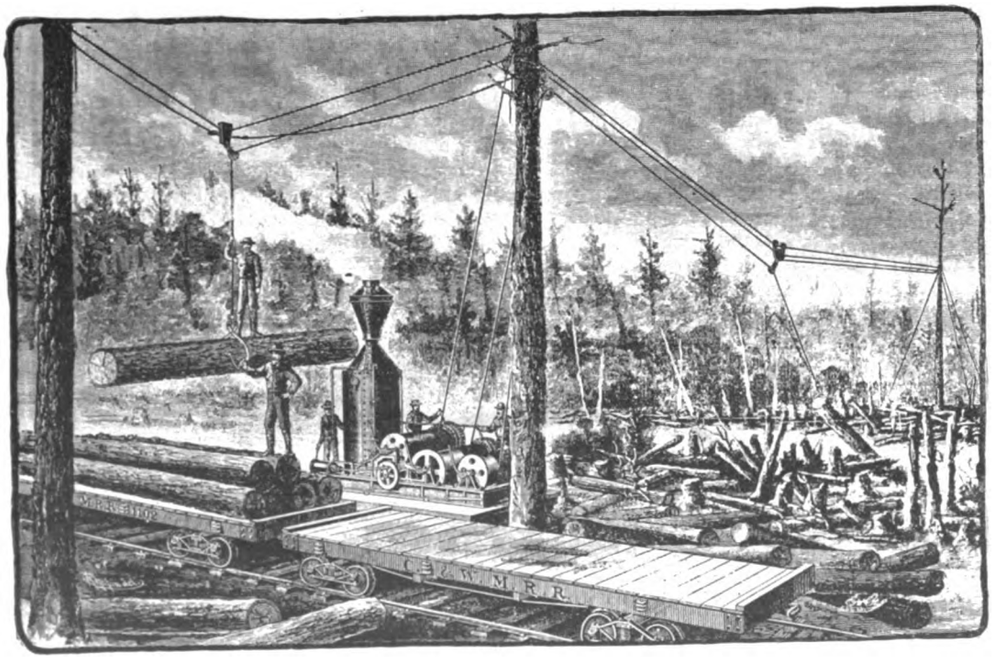
In 1893 the Lidgerwood Co. sold the Louisiana Cypress Co. a two-drum engine, which they mounted on a boat. One drum was used for the outhaul and the other for the inhaul, using a tail sheave in the woods, and also using side lines. This was the first ground haul machine and is today known as the rehaul system. The Lutcher & Moore Cypress Lumber Co., at Lutcher, La., then put in two larger pull boats, each reaching half a mile. Trouble was encountered in the swamps by hang-ups. William Baptist, the logging contractor, invented a steel cone to cap the end of the logs to prevent hang-ups. This system, with the engine mounted on a sled, is in use today on the Pacific coast for yarding.

In 1896 Lidgerwood shipped the first ground skidder for pine logging to Vanderbilt & Hopkins, Pitcock, Ga.

In 1897 W. A. Fletcher, a lumberman, invented the first portable pine logger, the machine being built that year by the Lidgerwood Co. and shipped to W. A. Fletcher, Kirbyville, Texas.

This little history shows that practically every system of logging in use was invented or developed by the loggers of this district.

In this paper I will only touch upon improvements made in skidding machinery. The Lidgerwood Co. had negotiations with the Goodyear Lumber Co. concerning the manufacture of the Barnhard loader. It was shown that this loader would make a saving in the loading of logs, but we felt there were greater possibilities for saving cost in the skidding end. We deliberately devoted ourselves to this branch of the industry. The matter of separate loaders today is admirably taken care of by the Barnhard, American Hoist & Derrick Co. and the McGiffert loaders.



FIRST STEAM SKIDDING SYSTEM USED IN MICHIGAN PINERIES, 1883.

DEVELOPMENT OF THE OVERHEAD SKIDDER.

The development of the overhead skidder in itself is doubtless pre-eminently the biggest improvement in logging methods, for its development has not only cheapened logging, but it has made possible the logging of swamp and mountain lands that could not have been logged by any other method.

At one time it was easy to secure timber lands within half a mile reach along lakes and streams, where the pull boat system could be used. The Ruddock Cypress Co., of Louisiana, had a swamp that could not be logged by pull boats. They purchased overhead skidders, three in all, built railroads, and solved the problem. Swamp lands where the lumber had been inaccessible by other methods immediately became

Digitized by Google

valuable, and in a few years were being logged by overhead skidders.

It was seen that the efficiency of the overhead skidder could be increased. The first step was equipping it with a separate engine for loading, and a utility engine for guy tightening, spotting cars, etc.

Two essentials in operation were seen to be necessary—first, some method for locking the load so it would remain suspended during transit at any desired fixed distance above the ground. This had heretofore been accomplished by keeping a slipping brake on the outhaul drum, the engine pulling against the brake. The loss of power is readily apparent.

EFFICIENCY INCREASED.

It was realized that whatever method was adapted it must be one that would not increase the rope wear, either by increasing the strain on the hauling lines or the number of drums or sheaves over which the ropes passed. An interlocking carriage was first considered. The Lidgerwood Co. had used on cableways for quarries the Harris Miller locking carriage. They abandoned the idea of a locking carriage for several reasons—the logs would have to be raised up to the carriage before locking, which is not always desirable; in logging downhill if the outhaul rope broke there is a possibility of the load running into the head tree, with resultant damage to men and equipment; the use of the locking carriage necessitates the use of a larger main cable.

The method adopted by the Lidgerwood Co. was the direct interlocking of the drum gears, in combination with a slip friction on the outhaul drum, and also a high speed outhaul. The skidding and outhaul drums are of different diameters, so designed that in working over a given span this difference in diameter of the bodies of the two drums, together with the slip friction on the outhaul drum, always compensate the difference in rope speeds caused by the winding on and off of the ropes, keeping the rope speed of skidding and outhaul lines the same, and preventing the dropping of the load in transit.

A LINE-SAVING DEVICE.

Considerable time was lost in the woods due to difficulty in lowering slings and pulling slack by hand in skidding line. When taking logs at any distance from head spar the weight of the empty slings was not enough to overhaul the weight of the slack in the skidding line; sometimes it was necessary to send back a small log on the skidding line. When the skidding line did reach the ground the men had to overhaul more slack by hand to reach the logs. This took time, reduced capacity, increased cost, and limited area of setting.

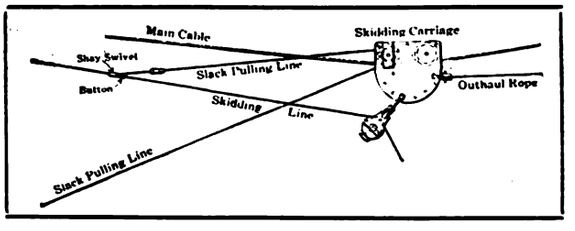
The Lidgerwood slackpuller enables the lever man to pay out all slack required. A slack-pulling line operated by a drum on the skidder runs out to and around the sheave on the carriage, then back and attaches to skidding line at any required distance from the carriage. When the carriage reaches the point when it is desired to pick up logs, signal is given lever man, who stops carriage, holds it stationary by brake on outhaul drum, throws slack-pulling drum into friction, and pulls skidding line down to the ground and continues paying out all slack required. Its action is positive and all done by the engine. The value of this invention lies not only in the great saving of time in getting slack, but enables the men to reach logs at greater distances each side of the main cable, also logs lying beyond tail tree, and keeps lines taut at all times.

PULL BOATS HANDLING LOUISIANA CYPRESS, 1893.

This device made the overhead skidder practicable in mountain land, for it made it possible to readily lower the skidder line down into gorges and ravines at a considerable depth below the main cable.

THE LATEST IMPROVEMENT.

Again it was seen time might be saved in hooking on logs. The skidding line had to be carried to the logs, and there the logs had to be hooked on. If the logs were scattered it took time to reach them, it was difficult to drag the line around stumps in such a way as to prevent hang ups, and frequently the carriage went back with half a load because it would take too long to gather a full load. Remember the skidder was idle while this work was being done; the men after they had put slings on the logs were idle between trips of the carriage. The bunching hand lines, the latest invention of the Lidgerwood Co., saved this idle time.



DETAIL OF AUTOMATIC SLACK PULLER.

Three or more bunching hand lines are employed, each carrying three or more special attachments for carrying the log slings.

In commencing operation the bunching lines

FIRST PORTABLE PINE LOGGER, 1897. W. A. FLETCHER, KIRBYVILLE, TEXAS.

Digitized by Google

NEW METHOD OF ATTACHING LOGS, USING MULTIPLE SKIDDING LINES.

are taken into the woods. The log slings are placed on the logs then attached to one of the bunching lines. The skidding line is lowered, the bunching line is attached to hook on end of skidding line. As the engine overhauls the skidding line it hauls in the bunching line, which pulls the logs together, making one bunch, the end of which lifts up, preventing hang ups. They are elevated to the desired height and conveyed to the head tree. Immediately the carriage commences to run in, the tong men put slings on the logs for the next load and attach the slings to the second bunching line and by the time the carriage returns to the woods the load of logs has been attached to the second bunching line. The empty bunching line is uphooked from the skidder line, the loaded bunching line attached and the operation repeated. The skidder operates continuously. The saving in time and increase in capacity is apparent. Its value is readily appreciated by every lumberman. It is these two features, the slack puller and the multiple skidding line that have transformed the overhead cableway from a conveying, device into a practical log skidder, adapted to work in every kind of country.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

As usual at this season there is a rush in the sash and door industry of the country for doors, glazed sash and interior trim for the completion of buildings before the arrival of cold weather. A large amount of special work is under way at the factories and a not unimportant volume of regular sizes is booked for distribution. Naturally there is no particular effort being made to pile up reserve stocks, the average retailer being accustomed to order only what is needed by his customer and usually wants it quick. However, there is always more or less demand for millwork during the cold weather throughout the middle states territory and in the south and usually it would seem to be quite proper for the dealers to have on hand a few extra openings for the casual local trade. This in the aggregate would amount to a large business. With the factories crowded to capacity on mill work of special pattern and with a continuance of inquiry and demand for special designs, the current activity bids fair to extend to the holidays, if not beyond.

The Situation in Shop Lumber.

There have been indications of increasing activity in shop lumber, but no actual rush of business is yet discerned. However, there is a fair call for northern pine and some of the mill representatives in Chicago territory say that they are shipping as fast as the car supply and other facilities permit, and that they are unable to keep up as closely as they would like with the demand. Business appears to be good in some territories and not so urgent in others, but Inland Empire shippers say that they are having a uniformly satisfactory business from eastern sources. They too are greatly hampered by lack of cars and this has caused considerable firmness in lumber prices where it is possible to make delivery. Quotations are held at from $40 to $42 for No. 1 shop; from $30 to $32 for No. 2 shop, and around $25 for No. 3, on 5-4 and 6-4 thicknesses. The pine shop lumber demand, however, is to some extent affected by large offerings of spruce shop, of which larger stocks than usual are on hand because of a recent large demand for aeroplane stock which takes the best of the spruce and leaves the No. 1 and No. 2 shop for outside shipment. This stock has been selling at about $32 for 8-4 No. 1 shop and $30.50 for 5-4 and 6-4.

Features of Chicago Trade.

Chicago distributors say that they are having a fine trade, much better than usual at this season; that their estimating departments are loaded up with inquiries, while their shipping departments are kept busy getting out the goods. The only trouble they experience is in getting raw material for their interior trim and other special work, this being due to the car shortage. They expect business to continue active right through until the holidays, if not later. The demand is very diversified in extent, coming from practically every part of the country south of the Great Lakes.

The Window Glass Demand.

Since our last report, the window glass factories, both hand and machine, have resumed operations for a seven months' fire. This will prove a considerable relief to window glass jobbers and consumers, as they have been unable to get their assortments filled out for some time and will soon be able to round them up. Stocks of glass on hand are lighter than has been known for many years at this time of the year and it will require a month or two of active manufacture to restore them to normal and take care of the current trade in addition. Window glass prices have been maintained and are likely to continue firm. This week the market is reported at 90 percent discount on A single strength, first three brackets, 87 percent for above, 90 on B single strength; 89 for A and B double strength. Plate glass is holding firm as usual, as the factory output is insufficient for domestic demand and no foreign product is available. In this territory discounts are in the neighborhood of 87 percent on sizes up to 5 square feet, 88 on sizes from 5 to 10 square feet and 89 for above 10 square feet.

Southwestern Trade Reports.

Favorable weather has helped the southwestern trade and the factories and distributing channels of St. Louis, Kansas City and Oklahoma have been doing a good business right along, although inquiries are now falling off to some extent, owing to the probable near approach of winter and a consequent slackening of the building demand. From present indications there is enough business on the books at the principal distributing centers in the southwestern territory to keep them going for forty-five to sixty days longer. Glazed sash is in especially good request and a feeling exists that this item should go higher.

Northwestern Millwork Trade.

While retail demand in the middle northwest is undergoing a natural slump since the cold weather set in, there is still considerable business booked for delivery during this month and next, in special work more particularly. Trade is heavy in the direction of storm goods, which are now coming prominently to the front

Digitized by Google

and in which line there is always an excellent trade visible through November and December. The factories at St. Paul and Minneapolis report a fair demand and are anticipating a fairly large amount of local business throughout the winter, as building statistics show a heavy increase in new construction. Retailers do not handle much stock during the winter, but there is some trade and reports indicate that they are carrying an even lighter supply than ordinary business foresight would justify. Wholesale stocks are also reduced. Glazed sash is strong and there are some who predict that it will be advanced, but other items are unchanged.

Concerning Ohio River Trade.

Advices from trade in the Ohio river district are generally favorable. Reports from the retail trade are to the effect that their business has been good through the fall and this has been reflected at the sash and door houses, at Evansville and Louisville, for instance, where demand continues brisk. Reports from those markets are that building operations are active and that architects and contractors are looking forward to active construction work right up to the close of the building season. At Cincinnati local distributors are reporting a good demand and a healthy volume of business is expected for the next six weeks.

WEST COAST ORDER FILE AND SHIPMENTS.

The weekly report of order file and shipments of the West Coast Lumbermen's Association for the week ended October 28 was received November 6, 117 mills reporting. Orders and shipments for the rail trade were as follows:

	Cars
Unfilled orders week ended Oct. 21	8,123
Orders accepted week ended Oct. 28	2,410
Total	10,533
Orders shipped week ended Oct. 28	1,529
Balance of unshipped orders	9,004

Domestic and export orders in the cargo trade were reported as follows:

	Domestic, Feet	Export, Feet
Unshipped orders week Oct. 21	49,594,851	51,777,670
Orders accepted week Oct. 28	3,921,705	6,352,000
Totals	53,516,556	58,129,670
Shipments week Oct. 28	10,628,671	7,818,044
Balance unshipped orders	42,887,885	50,311,626

The report further states that the actual production for the week from the 117 mills was 69,527,740 feet, as compared with a normal production of 78,411,000 feet, showing that the actual production below normal was 8,883,260 feet or 11.33 percent. The orders were below normal production 4.19 percent and the shipments below normal production 20.99 percent. However, the orders were above actual production 7.45 percent and exceeded the shipments by 17.53 percent.

BEAUMONT HOO-HOO PLAN FOR CONCATENATION.

Beaumont, Tex., Oct. 31.—Plans for a grand concatenation of Hoo-Hoo when it is expected visitors from all over the state and parts of Louisiana will be present, were made yesterday at a luncheon at the Crosby house. Present were three out of the state Hoo-Hoo, two of whom are officers of the organization, and who came to aid Beaumont members in making arrangements for the coming celebration. The visitors were E. D. Tennant of St. Louis, secretary-treasurer of the Order of Hoo-Hoo; Harry J. Miller of Seattle, Wash., past Snark of the Universe and J. C. Valadie of New Orleans, prominent Hoo-Hoo and representative of the Southern Pine Association.

W. A. Priddie, Vicegerent of this district, presided at the luncheon. Several talks were made and committee chairmen were appointed to have charge of the various features of the day.

Hoo-Hoo day at the South Texas State Fair will be November 18, the last day of the fair.

THE WAR'S END!!!

ONE WHO IS IN CLOSE TOUCH WITH THOSE WHO HAVE MOST TO DO WITH THE PRACTICAL PROSECUTION OF THE WAR IN EUROPE HAS ADMITTED TO THE LUMBER WORLD REVIEW THAT THE GREAT INSIDE HEADS MOST CONCERNED ARE OF THE CONVICTION THAT ARMED CONFLICT ABROAD MAY BE STOPPED ANY TIME AFTER MAY 1, 1917, AND THAT IT IS NOW ALMOST ASSURED THAT IT WILL NOT BE PROLONGED BEYOND AUGUST 1.

NO DETAILED ACCOUNT OF THE WHYS NOR WHEREFORES WAS SUBMITTED, BUT THE AUTHORITY IS OF THE VERY HIGHEST.

THE FOREST RESEARCH INSTITUTE AT DEHRA DUN, INDIA.

These items of general interest concerning the Forest Research and College at Dehra Dun, India, are taken from a personal letter to the editor of the LUMBER WORLD REVIEW under date of July 6, 1916, from Ralph S. Pearson, Forestry Economist.

"The Forest Research Institute at Dehra Dun is a relatively new institution, started ten years ago. The staff consists of a president and his assistants, and the work is divided into five branches: (1) Sylviculture and Management. (2) Economy or Utilization. (3) Zoology. (4) Chemistry. (5) Botany. Each branch is in charge of an officer. The officers in charge of Sylviculture and Management, Economy and Utilization and Botany have each a European assistant and one or more Indian assistants, while the branches of Zoology and Chemistry have Indian assistants only. We have also a Pulp Expert and Tan Expert from England.

"The work before us is enormous, we cannot take up one one-hundredth part of the inquiries which demand attention, being very much understaffed. Quite recently we moved into our new buildings, which are large, with good workshops and laboratories attached, which are also well equipped. The Chief Forest Officer of British Columbia, who recently paid us a visit, informed me that we were as well equipped as the Forest Products Laboratory at Madison, Wis., but that our staff was far weaker than theirs.

"In my branch of the work, Forest Economy, I have confined myself to three main inquiries during the last six years: (1) The treatment of timber (I am at present engaged in writing up my records on this subject). (2) The treatment of bamboos and elephant grasses for pulp (this is in conjunction with our Cellulose Expert). (3) The seasoning of timber. Of course minor experiments have also been carried out.

"The Sylviculturist's attention has been chiefly concentrated on the sylvicultural requirements of Shorea robusta and Pinus longifolia, and on collecting a large quantity of information as to the rate of growth of various species from sample plots. The Botanist has carried out important work on Indian grasses, chiefly in connection with their cropping for paper pulp and in preparing local floras. The Chemist has given attention to the preparation of turpentine and rosin from Pinus longifolia, the drip from which is entirely different to that obtained from European and American Pines, also to the preparation of drugs and essential oils of indigenous species. The Zoologist's work has been confined to laying a basis for future research, as zoology, especially the portion referring to forests, is in its infancy in India."

SOUTHERN PINE ASSOCIATION STATISTICS.

The weekly trade barometer of the Southern Pine Association for the week ended Friday, November 3, was received November 8. The report is from 151 mills and makes the following summary of orders and shipments:

	Cars	Feet
Orders on hand	26,578	561,061,580
Orders received during week	4,571	96,493,810
Total	31,149	657,555,390
Shipments during wk.	3,781	79,816,910
Balance orders on hand	27,368	577,738,480

The compilation from these 151 mills shows that production exceeded the shipments during the week by 4,159,402 feet, or 4.95 percent; that orders exceeded the production during the week by 12,517,498 feet, or 14.91 percent, and that orders exceeded the shipments for the week 16,676,900 feet, or 20.89 percent.

The statement is slightly more satisfactory than that of the previous week, showing an increase in orders as compared with the last report of nearly 17,000,000 feet and leaving a total of unfilled orders on hand at the close of the week of 27,368 cars.

The statement for the last ten weeks, showing the increasing number of car orders unshipped, is as follows:

Week Ended	Mills Reporting	Average Orders Feet	Average Shipments Feet	Total Unfilled Cars
Sept. 1	152	625,570	610,499	19,962
Sept. 8	157	538,353	565,145	23,284
Sept. 15	164	669,579	606,197	24,122
Sept. 22	168	671,331	558,540	24,539
Sept. 29	153	641,717	522,626	24,242
Oct. 6	160	514,549	435,300	24,409
Oct. 13	152	636,911	509,140	26,196
Oct. 20	157	524,675	477,058	26,978
Oct. 27	159	524,696	521,244	27,304
Nov. 3	151	639,032	528,589	27,368

CAMP HUGH, ALABAMA, LOGGING Y. M. C. A. CELEBRATES ANNIVERSARY.

Birmingham, Ala., Oct. 25.—The Y. M. C. A., operated at Camp Hugh, Alabama, for the benefit of the employees of the Kaul Lumber Co., held its first anniversary exercises on October 14. A very attractive program was presented, including addresses on "Sanitation and Health" by the camp physical director, J. G. Vance, and on "Association Work," by Dr. E. H. T. Foster, international industrial secretary. J. D. McNair, camp superintendent and president of the association, read the annual report, which was highly encouraging to both company and organization. H. C. Nix, the popular general secretary, reviewed the work done the first year, and spoke of the outlook for the future. Greetings from nearby associations at Kaulton and Tuscaloosa were given by Secretaries Ward and Shedd, respectively.

WESTERN FORESTRY and CONSERVATION ASSOCIATION PACIFIC LOGGING CONGRESS

VIEW OF COLUMBIA RIVER

The four greatest gatherings which occur among lumbermen in the United States have just been held, and we will offer an intimate account of the doings at those four congresses, or conferences, and will group the four stories under this one head in such shape that a business man may sit down by the evening lamp and read the whole thing from beginning to end in one evening.

To print all the discussions and the full text of all of the wonderful and valuable papers delivered is not the province or purpose of the LUMBER WORLD REVIEW, which statement we make thus early in this account, so that there may not be any misunderstanding with any friend who might expect to find this varied tale UNABRIDGED.

We are casting no reflection on the work of any scholar, or analyst or orator by not printing absolutely all and every item of what he may have studied out, put together or eloquently delivered; and with this fair understanding of the proposition we will endeavor to save as much time as possible, even in this foreword.

By far the largest gatherings were those at Portland, to take part in the two days' deliberations of the Western Forestry & Conservation Association, which occurred on October 24 and 25, and the deliberations and excursion of the Pacific Logging Congress, which occurred at Portland and in the Grays Harbor country, October 26, 27 and 28.

The meetings of the Appalachian Logging Congress, at Knoxville, Tenn., on October 18 and 19, and of the Southern Logging Congress, at New Orleans, La., on October 25, 26 and 27, were just as important to the sections of the country which they represent as were the western meetings, but the attendance, in the nature of things, was not so large.

The Forestry Congress and the Logging Congress are the most useful types of lumber meetings which occur in the United States, because they are the most practical, and because from the very nature of them they reflect the personal interests of the participants more than any other lumber gathering.

While they all run in the direction of so-called "set papers," and most of them have the social filigree of banquets and excursions and the like, the community spirit is carried into those social affairs, and with the social affairs always are coupled investigations of logging and forestry methods, which are practical, and while being practical are also entertaining.

Over all of this section of our Logging Congress edition we have flung an illustrative banner—a view of the Columbia river, from Crown Point on the Great Columbia highway. In doing this we have not sought to preserve unities, but to beautify the LUMBER WORLD REVIEW, and to pay our respects to one of the most wonderful scenic highways in the world, which all of those who attended the Forestry Industry Conferences at Portland had the privilege of traversing from end to end.

WESTERN FORESTRY AND CONSERVATION ASSOCIATION.

JUDGE A. L. FLEWELLING, OF SPOKANE, WASH.
President Western Forestry & Conservation Association.

The Western Forestry and Conservation Association was born in the fall of 1909, covers five states in its membership, and is easily the most aggressive and practical association in the entire country, and has accomplished for forestry and conservation a great good which we can make no attempt to review here.

This body has concerned itself more with bringing government and private timber owners together, and concerned itself more with practical fire fighting methods than has any other federated body of its kind.

The successful federation of all fire fighting and forestry associations in the states of Washington, Oregon, California, Idaho and Montana, should certainly hold out great hope to the promoters of the proposed Forest Products Federation, as to the possibility of securing a community of interests in semi-divergent localities which have a COMMON interest in any business program.

We do not remember to have seen anywhere in a lumber trade newspaper a list of the component parts of this federation, and we believe that it is due this body to print them herewith, which we do formally in the list that follows:

Northern Montana Forestry Association, North Idaho Forestry Association, Couer d'Alene (Idaho) Timber Protective Association, Pend d'Oreille (Idaho) Timber Protective Association, Potlatch (Idaho) Timber Protective Association, Clearwater (Idaho) Timber Protective Association, Washington Forest Fire Association, Oregon Forest Fire Association, Klamath-Lake Counties (Oregon) Forest Fire Association, Coos County (Oregon) Fire Patrol Association, Jackson County (Oregon) Fire Patrol Association, Linn County (Oregon) Fire Patrol Association, Oregon Conservation Association, Western Lane County (Oregon) Fire Patrol Association, Columbia County (Oregon) Fire Patrol Association, Clackamas-Marion Counties (Oregon) Fire Patrol Association, Douglas County (Oregon) Fire Patrol Association, Baker County (Oregon) Fire Association, Central Oregon (Oregon) Fire Patrol Association, Blue River (Oregon) Forest Fire Patrol Association, Lincoln County (Oregon) Fire Patrol Association, Polk County (Oregon) Fire Patrol Association, Union-Wallowa Counties (Oregon) Fire Patrol Association, Clatsop County (Oregon) Fire Patrol Association, California Forest Protective Association, Redwood Fire and Protective Association, and numerous co-operative patrols without formal organization.

Since the Western Forestry and Conservation Association has accomplished so great a work since its first meeting in 1909, no one who appreciates a high class association work in these matters and has any information on the subject of the work which this body has accomplished is at all prepared to have it disband or cease in its sentiment making and large planning for lumber and forest betterment, not only for the Pacific coast, but for the nation.

E. T. Allen, who has been the working heart and mind of the association from its beginning, seemed to foreshadow something of the nature of a modification of the functions of this federation in the first paragraph of his annual report, but it is understood that this means only greater devotion to broader matters than forest protection. Let us hope that his statement might mean a willingness on the part of that organization to merge itself into

Industry Conferences

APPALACHIAN LOGGING CONGRESS
SOUTHERN LOGGING ASSOCIATION

the great nation-wide cause which is proposed by the "Forest Products Federation."

The meeting of this body at Portland enrolled the largest attendance ever assembled at any of its annual meetings—258 in number.

The features of this meeting were the final report of the "Nation-wide Committee," by H. D. Langille, a review of which we print elsewhere in this issue; and remarkably able papers by W. B. Greeley, assistant forester of the United States, and Dr. E. E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, the former paper read by Mr. Greeley in person, and the latter paper read by Dr. Rutter, of the Bureau of Foreign and Domestic Commerce.

Of course, too, there was the steam whistle instead of the gavel, which will be referred to later; and Judge Flewelling's annual address, in which he gave out the positive information that the European war would be over in two years. Judge Flewelling is a great prophet in the western world, and many men will undoubtedly "buy" and "sell" on that suggestion.

THE PACIFIC LOGGING CONGRESS.

The Pacific Logging Congress has lived eight years—since that day when George M. Cornwall blew the breath of life into its nostrils, at the Alaska-Yukon-Pacific Exposition, in 1909.

The Pacific Logging Congress certainly demonstrates that individualism is by no means dead, because it has been created by the work of Mr. Cornwall working as an INDIVIDUAL, and yet—while every part of it shows the impress of his individuality—the Pacific Logging Congress has been so WELL builded that Mr. Cornwall might turn over the general plan and ethics of this congress to another and the congress would go on, if the plan and general work were carried out in the future as it has been in the past. We make this statement with the idea that such would be the highest compliment an annalist COULD pay to Mr. Cornwall and his work.

The Pacific Logging Congress was created out of the very crying necessity for such information as could only be gathered together by a congress of this kind working through many years of time and following out a carefully thought out and properly arranged program. The Pacific Logging Congress in the eight years of its life has held meetings in Seattle, Wash., 1909; Portland, Ore., 1910; Vancouver, B. C., 1911; Tacoma, Wash., 1912; Spokane, Wash., 1913; Bellingham, Wash., 1914; San Francisco and Eureka, Cal., 1915, and this meeting at Portland, Ore., just closed—1916.

Where the congress will meet next year has not been determined, but the rivalry for the meeting seemed to hold between Seattle and the Coos Bay country at Marshfield, Ore. C. A. Smith and Mr. Powers, deeply interested in the Coos Bay country, urged the claims of that territory through the last sessions of the meeting.

The value of the Pacific Logging Congress is not only in the immediate value to those in attendance, but in the INFLUENCE of the congress, which runs through the months that follow the annual meeting and bridges over the time between each gathering in connection with the papers that are read at these meetings, and which have become the literature—in fact, practically the only literature of logging in existence.

W. W. PEED, OF EUREKA, CAL.
President Pacific Logging Congress.

George M. Cornwall has in the creation of the Pacific Logging Congress built a monument to himself which will live through the years, no stone of which do we begrudge him, and many more of which we hope to help place in the mound as time rolls on.

If the good which the lumber press has done since its inception in the United States was confined only to what this ONE NEWSPAPER MAN has done in building up the Pacific Logging Congress, it would even THEN be worth all the time and trouble that it has cost its promoters and its public.

The attendance at the four business sessions, the banquet on Friday, October 27, and the attendance on the excursion to the Grays Harbor country were all record breakers, the total registration at this congress being in the neighborhood of 385.

The even quality of all the work that was accomplished at this meeting, makes it difficult really to pick out distinctive spots by their altitude.

The discussion concerning the safety first devices for logging, which it is planned, may be adopted ultimately by the state of California, was a very interesting affair; and the discussions generally this year were better than usual, which is why we are going to give as much space as possible to that feature of this congress, rather than print a greater number of "set papers" than usual.

The crowning feature of the affair to a man previously interested only in logging in the plains of the forest world was certainly the visit to the Polsen Logging Co.'s operations in the Grays Harbor country. Easily the most inspirational and spontaneous occurrence was the banquet at the Grayport hotel, Hoquiam, where no set program had been arranged, and yet where thirty-six people spoke interestingly and entertainingly during a space of two hours' time, which is a splendid indication that prohibition is not going to affect the character of the business banquet, except possibly to help it.

THE APPALACHIAN LOGGING CONGRESS.

The second annual meeting of the Appalachian Logging Congress was held at Knoxville, Tenn., on Wednesday and Thursday, October 18 and 19, and was attended by more than 100 of the sturdy lumbermen of the Appalachian range, including representatives from West Virginia, Virginia, Kentucky, North Carolina and Tennessee. The good people of Knoxville tried to show their appreciation of the presence of the lumbermen among them in every way possible that could contribute to the enjoyment of the visitors. They gave them a banquet, a luncheon and an automobile ride during the two days, and furnished them a place of meeting in the Board of Commerce rooms. On the third day there was a trip into the mountains, which was due to the joint hospitality of the Clyde Iron Works, of Duluth, Minn., and the Little River Lumber Co., of Townsend. This trip was made in an ordinary gondola car, in which seats had been

Digitized by Google

installed, and there were fully forty of the lumbermen who participated. The logging train was taken at Elkmont on the logging road of the Little River Lumber Co. to a height of 4,300 feet, as recorded by H. N. Saxton, jr.'s aneroid barometer. On the next day, Saturday, several of the loggers were conveyed to the logging operations of the Babcock Lumber Co., whose mill is located at Tellico Plains, and whose timber is in the mountains, twenty-five miles back. This trip was arranged by the Lidgerwood Manufacturing Co., and displayed some of its fine skidders at work.

SOUTHERN LOGGING ASSOCIATION.

The sixth annual convention of the Southern Logging Association, held at New Orleans, La., October 25, 26 and 27, was one of its most successful meetings, there being 150 registrations, which was almost double those present at any previous meeting. It was successful not alone in point of attendance, but in the character of the papers read, the instructive influence of the discussions and the live interest displayed by the members. All of this reflected great credit upon James Boyd, of the "Lumber Trade Journal," New Orleans, who organized the association and furnishes much of the motive power which propels it. Every phase of the meeting had its strong points clearly set forth and the logger who does not receive an immense benefit from each of these annual gatherings is he who does not attend them.

It is evident that many large southern concerns are beginning to realize the advantages afforded through this organization, as they are sending to its meetings increasingly large delegations of their heads of departments, notably at the woods end. A delegation was also present from the University of Missouri, in charge of Prof. Ernest C. Pegg, who is at the head of the forestry department of that institution.

The good fellowship side of the gathering was not neglected, for the annual banquet held at the Cosmopolitan hotel on the evening of Thursday, October 26, was in every sense enjoyable. Charles Henry Mackintosh, of the Clyde Iron Works, Duluth, Minn., presided at this function and was voted an ideal toastmaster. Practically all of the members were asked to say a word and the occasion was one of spirited enjoyment throughout. The presence of the ladies added greatly to the embellishment of the affair.

Western Forestry and Conservation Association

TUESDAY, October 24, at 10 o'clock a. m., Judge A. L. Flewelling, of Spokane, Wash., reached over on his desk, picked up a rubber looking thing about six inches long and an inch thick, which was attached by a wire to another odd looking tool over in the corner of the room, and having pressed a button in the first named unit the Loggers' Electric Steam Signal Whistle blew a blast that made the uninitiated look around to see if there was a steamboat approaching the landing with the gang plank out. This whistle assembled the foresters and conservators and their friends and their families, and continued to assemble the citizen congressmen and congresswomen for the next four days, and, also, by the way, to disperse them as well—one long whistle to start and two short, sharp whistles to stop.

Judge Flewelling addressed the meeting in his usual happy style.

PRESIDENT A. L. FLEWELLING'S ADDRESS.

"Being neither a prophet, nor the son of a prophet, it may appear egotistical for me to give public utterance to what I am going to say, regarding the future. However, my conclusions will well define the logical results of my reasoning in the light of past and present events:

"We have entered upon the third year of the most stupendous and epoch-making war in the world's history, the results of which cast shadows on the future, which we must read and interpret aright, if we wish to save the lumber industry from being consigned to the melting pot, with all that the term implies.

EUROPEAN FORESTS DENUDED.

"The brand new set of conditions, to which I called your attention in my address of two years ago, are already confronting us. During the world war, Germany, France and England, by reason of the necessity for haste and on account of lack of ships, have cut and used nearly every available tree within their borders which would make lumber, to line their trenches, make temporary shelter for their soldiers, and to hastily repair and rebuild destroyed railway bridges and trestles; to build warehouses to save their munitions and supplies from destruction from the elements, and in a thousand other ways which are very extraordinary. This enormous demand for trees, and their products, did not only wipe out the supply of lumber on hand in these countries at the beginning of the war, but has heavily taxed the forests of the Scandianavian Peninsula, and it has also wiped out the famous Black Forest of Germany, and all the merchantable timber in the parks and timber reserves in France and in England. So, while our export lumber trade has been curtailed somewhat, the world's available supply of trees and lumber has been enormously decreased.

HOW LONG WILL OUR TIMBER LAST?

"In 1905 and 1906, the lumber industry was led to believe that the then supply of available lumber-producing trees in the United States, would at the then annual rate of cutting, be exhausted in thirty years. So every mill owner and timber speculator in the country proceeded to load himself up with all the standing timber he could buy and pay for, or run in debt for. As the years have rolled by, we have learned a few things.

"The government says now, I believe, that the timber in the United States will last for another 80 years. I think, however, it is wrong again, and that we will see the end of the supply in half that time, or less, and with the added foreign demand, which is bound to come after the war ends, we may yet come back to the prediction of 1905. This, of course, depends largely upon how much of the timber is destroyed by fire.

"The men who bought and bonded their timber ten years ago, when they saw enormous sums of money in interest, taxes and carrying charges, piling up on their investment from year to year, were seized with a panic in a vain attempt to liquidate their investment, built and operated more sawmills, thus overloading the market already curtailed by the war and thus hastening the evil day which collectively they all wished to avoid, and which they could avoid by proper co-operation.

"To add to the general demoralization, the great fires of 1910, forced the premature cutting of an excessive quantity of timber, and even the government had added to the rout by throwing vast quantities of cheap forest reserve timber on the market, and the politicians have shouted, 'lumber trust.'

LACK OF CO-OPERATION.

"There has been very little co-operation between the different ownerships and branches of the industry; each particular district scrambling to see how much cheaper it could sell its lumber than any other district. This has resulted in great waste, many varieties of trees having been left standing in the cutting to feed the ever-ready forest fire in the slash, because lumber was so cheap that nothing but the best could be harvested at anything near a profit. Conditions like the foregoing, reduce the available supply of timber very rapidly, and unless true conservation is practiced by the industry generally, we will soon see the supply exhausted.

SOUTHERN COMPETITION.

"The south with its dollar-a-day black labor, is destructively competing with the Pacific northwest, with its three-dollar-a-day white labor, without regard to the relative value of their stumpage, just on the crazy theory that they must unload. These tactics mean only further demoralization and must be stopped. So we must invoke the power of the Federal Trade Commission to stay the tide of battle till we can 'dig ourselves in' and defend ourselves intelligently against ourselves. A living price stays waste, and stopping the waste is true conservation; destructive competition is the death, not the life of industry.

EFFECT OF WORLD'S WAR.

"The world's war will last at least two years more, and will end in compromise. I shall not attempt to discuss the divine right of kings, but in the end the common people will tire of their relentless war, and internal revolution, which is smoldering in each one of the hostile nations, will break out into flame and force an armistice which will result in a settlement of the war, and which will probably leave the stronger nations about as they were territorially before hostilities began. Then will begin a new era in the lumber industry. Cities which have been destroyed will have to be rebuilt, and rebuilt quickly; docks, warehouses, bridges, railway trestles, wooden ships, cement forms, railroad cars, and innumerable other things will require such an immense volume of wood products, that our capacity will be overtaxed to meet the foreign demand.

"There are also great things being done in treeless China, and she will be clamoring for the products of our forests. And with the abundant money which will by that time be in the hands of the farmer, our domestic trade will be an element to reckon with.

EUROPE WILL REBUILD WITH WOOD.

"You may argue that European buildings, which were of stone, brick and cement, will not be rebuilt with wood, but I say to you, in the light of all precedents, that my statement is well within the facts. When Messina, Italy, was destroyed by earthquake and fire, it was quickly rebuilt with wood, and to supply the lumber for that purpose, taxed the capacity of the lumber industry of this country. The same was true of the great earthquake and fire at San Francisco, and at Kingston, Jamaica, and the great fires of Boston, Baltimore, Toronto, and other similar disasters, although the cities destroyed were not of wood, and the first cry was for wood, for at least the temporary rebuilding.

EXPENDITURES FOR FIRE PROTECTION.

"We who have spent years of time and vast sums of money in our fight to save the forests of the Pacific northwest from destruction by fire, and have many times in the last nine years been tempted to give up the fight, have been asked many times, if, with the conditions of the then timber market, the money spent in organized fire fighting was warranted. We have been asked, if the burning of part of the supply would not help lift the price of what was left, and we were often told that much of the timber we were protecting was worthless and would continue so to be, but to all these things we have turned a deaf ear and have steadily advanced with the perfection of our organization, until today we have the best fire-fighting machine in the world, as the year's forest fire record will show. If we had the same intelligent co-operation in our manufacturing and selling operations, we would not be the only industry in the United States needing a dry nurse.

INDUSTRY SHOULD CO-OPERATE.

"The money we have spent in forest protection has been well spent. The time is now at hand when the timber industry should co-operate; when we should organize and within ourselves, build wooden ships to carry our lumber to all the ports of the world. Foreign trade is the safety valve of the lumber industry, and if extensive enough, will put the price of our timber products where we can live and make a profit which will enable us to utilize every ounce of our waste, in both mill and woods, in by-product plants, from which we can

Digitized by Google

produce untold millions in the form of turpentine, alcohol, acetate of lime, lumber stains, creosote, charcoal, sulphide, paper and many other things. This is making two blades of grass grow where none grew before; this is adding to the wealth of the world; this is true conservation. Let the ghost of fear once be laid; let the government co-operate with the industry in both domestic and foreign markets; let the government build a by-product plant of commercial proportions instead of feeding us documents showing laboratory tests; let the Federal Trade Commission take hold of the foreign markets for us in earnest; they have been studying the animal at short range for a year, and by this time ought to know what remedy to administer; and let us have action and let us have co-operation, and the industry which has been frightened, strangled and smothered, will take on new life and again take its important place among the truly great business enterprises of the world, and the trees which we have struggled so long and faithfully to preserve from destruction by fire, will repay us many fold for the care bestowed.

THE YEAR'S ACHIEVEMENTS.

"The present year of organized effort on the part of the forest protective agencies in the five states represented by this great association, has been the most successful in our history. We have had the hearty co-operation and support of all our members, of the press, of the railroad and telegraph companies, of the public, and of the government through its Forest Service, all of which is duly appreciated.

"The 42-centimeter gun on our program indicates the caliber of our organization, and the quality of the ammunition we shoot, and a glance at the program and the number of subjects which will be intelligently handled by the ablest authorities, will indicate that we also bore with a big auger, and that we are handling all subjects relating to trees and their products without gloves."

Following Judge Flewelling's address, George M. Cornwall, secretary-treasurer of the association, made the treasurer's annual report, which is not published.

Mr. Cornwall's report was followed by the report of the forester, E. T. Allen.

"THE YEAR'S LESSON IN PRIVATE AND STATE PROTECTIVE WORK."
By Forester E. T. Allen.

"It may be that this is the last meeting of our association as at present constituted. Tomorrow we will hear a discussion on organization in forest industry, which, although it may not be decisive, although its significance may not even come home to all of you, and you may let it pass as one more convention dream not warranting serious action, is in reality the announcement of a very insistent pressure due to changing conditions.

"Changes are taking place all through the industry; a ferment which demands relief. Manufacturers are dissatisfied with the traditional conduct of their business. They want more united facilities to improve it. For perhaps the first time, timber owners not only are alarmed but realize that their future is one with manufacture; that they are constrained to help solve manufacturing problems. Finally, the government has at last addressed itself to the formulation of a public policy toward this, one of its greatest industries, and in so doing has already found that the first essential is a co-operation between government and industry which requires that the industry shall not be individualistic and contradictory, but representative, responsible and articulate.

CHANGES SEEM PROBABLE.

"These conditions of the new era which is dawning are not fully met by association work as it exists. The advisable method and measure of correlation remain to be determined, but many early changes seem probable. The influences toward change are already apparent in our own organization. Our annual meetings were once forest fire conferences, devoted wholly to the technique of fire prevention and through their printed proceedings furnishing a standard manual to professional fire fighters everywhere. We now call them forest industry conferences, and no doubt they are widest known as occasions where the fundamentals and important current issues of the lumber business are analyzed in search of true and practical improvement. More than this, our local character seems to have disappeared. No meetings in the United States deal with these general subjects on a broader basis. They have become international.

"Similarly, in reporting the association's work for the past year I must go far afield from the subjects of previous reports. Somewhat hampered by money difficulties, we have kept up the forest protection publicity work fairly well. The northwest still depends on us for its fire warnings, posters and the like. We again put series of slides in the picture theaters of three states. As far as the season required it we put material in the newspapers of the coast. We have worked with government and states in smoothing out co-operation in patrol work. We have prepared new measures for the approaching legislative season. But, on the whole, our services have been mainly for the entire industry, particularly in connection with the government's so-called 'lumber study.'

OUR PART IN THE LUMBER STUDY.

"In my report to you last year I said that our position as impartially representing so many forestry interests—indeed, being practically the only organization that does represent all—seemed certain to involve us in the agitation under way. I said: 'Our voice will be expected and given weight accordingly in hearings and reports to come. Whether we choose or not, the Western Forestry & Conservation Association has become the most important western factor, and cannot evade its responsibility.'

"This is exactly what happened. After the manufacturers' organizations as such presented their case to the government, there was still a wide

A. W. LAIRD, OF POTLATCH, IDAHO.

gap in the evidence. Timber problems were not discussed, although in some ways they were of paramount importance, underlying all others. To some extent their neglect also left a seeming and incomprehensible contradiction between the arguments of different producing regions. We were, therefore, asked by the Forest Service and the Federal Trade Commission to submit a brief on the situation of the industry from the viewpoint of timber ownership. The commission also ordered a special hearing on the subject in Washington, where I discussed it and answered questions. They then called for an additional evidence on several very important subjects. On the ground that we are neutral as between many competitive elements, and upon our reputation as having always represented private, state and federal forests interests impartially, we were called into frequent consultation, both here and in Washington, by both government agencies as their work progressed.

"All of this work has taken a great deal of time since the first of the year. We hope the departure has the approval of our constituents. It raises the question, however, as to the future activities of the association. This sort of work is not over. It has just begun. We are entering an era of constructive improvement of the industry, during which all regions must work together and with the government. The terms upon which we, as timber people, share it with other agencies, and receive support in so doing, are nowhere near so clear as the terms on which we did protective work for the common good. I believe, however, that we should do wrong to withdraw from the place which we have fairly won in public councils and esteem. It is an honored and influential place. We may contribute its advantages, but not relinquish it.

FOREST PROTECTION.

"To make room for lumber questions on our two-day program, it has been necessary to cut down even more than last year the reports and discussions of the work for which we primarily stand—forest protection. I think this is disappointing to many of us, and in many ways a bad thing. There is great need of an opportunity for the leaders in actual field work to get together on technical and practical points. On the other hand, such discussions are probably too technical to interest all who attend these meetings nowadays. The situation clearly points the need of a new departure—special meetings, either just preceding or following these general meetings, or else at other times during the year, of the officials and field men of private, state and federal protective agencies, in order to go into the detail of their joint work. In the meantime it was thought best on this occasion for me to compile and present in one report the results of what was done by all this year.

THE 1916 FIRE SEASON.

"This has been the 'easiest' season in the Pacific northwest since protective work has been organized, with the exception of 1912. It has been practically the same as 1912 in hazard. The usual danger season was easy in both years. In 1912 we had a bad time unexpectedly early in the spring; this year it became unexpectedly dry in late fall. Indeed it has been impossible to make this report exact, for some fire trouble existed up to the last minute of compilation, and many reports are tentative. We know, however, that losses have been negligible; that although even a year like this would have brought considerable loss ten years ago it has not seriously worried the protective system now in force."

Having reviewed the loss by states and districts and given statistics of much value, Mr. Allen said in closing:

"Although it was admittedly a favorable season, we have had such before. But never have we had so infinitesimal a loss combined with as low a protective cost. Private fire work in our association territory for seven years has cost $2,239,575, as follows: 1910, $770,000; 1911, $207,575; 1912, $200,000; 1913, $200,000; 1914, $500,000; 1915, $187,000; 1916, $175,000. The only time we ever had so small a loss was in 1913, when it was about the same, but the territory under protection was also smaller. It means that methods have improved so that in the normal year most fires are either prevented or handled by the regular force before they require fighting. To further reduce cost in the normal years, and retard its increase in bad years, the next step is obviously to perfect the detection system still further. Lookouts, telephone or wireless, and probably aeroplanes—every device to find fires the minute they start, and get help to them, before they really become fires—these are the lines of future progress. But they should not displace realization that probably some time we will have a year so bad that every ordinary method will break down. If this comes, our thickly settled forest region will face a calamity far worse than the historic ones of Canada and Minnesota. The only defense will be perfect co-operation of all agencies to handle men and supplies on a large scale, with trained and military precision. We should build toward this day, with training, and equipment. Fast as each agency is advancing, we are still too independent of each other."

Mr. Allen's paper was enthusiastically received, and this was followed by the report of F. A. Silcox on Railroad Fires."

REPORT OF MR. F. A. SILCOX ON RAILROAD FIRES.

Mr. Silcox had prepared a report in skeleton and gave it very briefly. He said that the total number of fires on the railroad rights of way in the territory covered had been 109. These had been divided as to districts as follows: District No. 1, 70; district No. 6, 118; Pend d'Oreille Timber Protective Association, 8; Jackson County Fire Control Association of Oregon, 1.

These figures were reported: By railroads, 30; by Forest Service, 27; by protective associations, 14; by private individuals, 19; by Forest Service and

Digitized by Google

railroads, 7. These fires had been extinguished: By railroads, 29; by the Forest Service, 122; by protective associations, 6; by private individuals, 16; by the railroads and Forest Service, 16; by the railroad and protective associations, 1. The areas burned over amounted to 1,067.85 acres—no subdivision of grass and timber areas made in the reports received—and the damage done equaled $1,549.50.

The causes were: Burning the right of way, 4; sparks from coal burners, 173; "hobos," 6; dumping ash pans, 11; cigarets and cigars, 2.

All of the damage figures were on four fires: One on the Jefferson forest, $24.00; one on the Lolo, $1,500, which was set by the Milwaukee railroad; one on the Oregon forest for $21.50, and one on the Oregon Lumber Co.'s railroad, $4.00.

There was considerable discussion following Mr. Silcox's address. W. C. Albee, of the Northern Pacific railroad thought that the report showed much improvement in the direction of the avoidance of fires, as well as in the management of those few that had occurred, and he rather deprecated the idea of calling the committee that was to be continued "The Committee on Railroad Fires," but thought it should be called the "Committee on Railroad Co-operation."

Mr. Allen wanted to know if a committee of this character should be kept up.

Mr. Griggs complimented the railroads on their co-operation.

Judge Flewelling said that the railroads still appreciated the difference between the freight income on lumber, as opposed to a doubtful income on ashes as revenues, and wanted a committee.

Following this discussion E. A. Beals, of the United States weather bureau, told of the methods followed by the bureau in keeping timbermen of the Pacific northwest advised of weather changes and of the proximity of the forest fire weather. Below we print excerpts from Mr. Beals' paper:

"THE FIRE WEATHER FORECAST SYSTEM AND SUGGESTION FOR COMING YEAR."
By E. A. Beals.

Having described the fire weather of the year, which was exceptional in amount and distribution of rain and snow fall, Mr. Beals characterized this year as favorable for forecasting fire weather. Fire weather warnings were issued three times in August and three times in September, by telegraph and printed notices, eleven weather bureaus being utilized in making the distribution. Interest and confidence in the weather reports have been sustaind and increased, and the weather bureau has taken official cognizance of the fire weather service, having issued an order making it operative in all parts of the United States. Congress made a special appropriation for promoting the work.

Mr. Beals said, in closing:

"A conference was recently held in Washington, D. C., between officials of the weather bureau and of the Forest Service, and a working plan was formulated whereby the Forest Service is to furnish the observers, and the weather bureau the instruments for the purpose of establishing a limited number of stations in the forested areas. Fire weather warnings will be issued regularly from now on, whenever the conditions warrant them, and upon application they will be sent to those interested, whether they be officials of the Forest Service, or officials connected with privately owned timber lands.

"In case the transmission of the warnings entails expense for tolls to be borne by the weather bureau, these requests will have to be forwarded to our headquarters at Washington, D. C., to be authorized, therefore, those desiring these warnings should apply to the nearest weather bureau office at least two or three weeks before they want the service to begin, in order that the application may be passed upon by the Washington people and their answer received, as the local men cannot start the paid service until it has been authorized at Washington.

"So far as suggestions for 1917 are concerned, none seem necessary. The plans already formulated will be carried out in ample time for next season's work. It is my earnest wish that the service may be of the greatest possible benefit to the forest people, and I can assure you the weather bureau will do all in its power to make it such."

Mr. Beals' paper created considerable discussion very complimentary to the work that has been carried on in that direction.

George C. Joy saw in the work the greatest benefit from the forecasting of the coming of so-called "forest fire winds" or "forest fire weather," saying that Mr. Beals had certainly demonstrated that it was possible of accomplishment; that ANTICIPATION of the event was of more value than anything else; that great benefit had accrued to the timber owners from this work, especially during 1916.

Mr. Ross complimented Mr. Beals' work.

George C. Elliott paid his respects to the efforts of the expert.

THE ABOVE TWO ENGRAVINGS REPRESENT A PANORAMIC VIEW OF A GROUP OF PEOPLE WHICH IN NUMBER EQUAL ABOUT ONE-HALF OF THOSE IN ATTENDANCE AT THE SESSIONS OF THE "WESTERN FORESTRY AND CONSERVATION ASSOCIATION ANNUAL MEETING" AT PORTLAND, OREGON, OCTOBER 24 AND 25, 1916. PHOTOGRAPH MADE IN THE COURT OF THE HOTEL PORTLAND.

Mr. Humbird said that he in the past had occupied the position of "tail twister" to the railroads, a position rather similar to that that Ireland held to England. He thought the railroad committee should be continued, by whatever name it might be called.

B. R. Lewis thought much of the co-operation that had been secured between the railroads and the timber owners, and lumbermen, and wanted the committee continued by all means.

Mr. Albee said that really he had not come to the meeting to talk about so-called "railroad fires," because they had become such a negligible quantity that there was not much for discussion, but rather he had come to see if he could prevail upon the lumbermen for some service, as for instance, the "setting out" of cars and the swifter handling of the same looking toward a relief in the car shortage.

Mr. Benedict, of the British Columbia Fire Service, said that our efforts in that direction had gone much farther than had theirs. He showed a spirit of co-operation.

Judge Flewelling and Mr. Sparhawk said much to the purpose of co-operation and a better service.

Coert DuBois said that the processes of scientifically carrying out forecasting were in no sense a handicap, but rather that all government procedure in that direction was handicapped for lack of instruments with which to do the work.

George S. Long spoke to the question of preventing fires, rather than arresting the fire in full run, and referred especially to the matter of the most destructive fires coming with the east winds. Mr. Long was of the opinion that the department had done splendid work in these things.

Following Mr. Beals' paper the association began the discussion of standardizing association busi-

Digitized by Google

ness systems, with suggestions as to methods and forms for economy and efficiency in financing and directing patrol, fire fighting, and the furnishing of supplies. The subject was fully covered in a paper read by A. W. Laird, chairman of the Committee of Business Systems.

THE STANDARDIZING OF ASSOCIATION BUSINESS SYSTEMS.
By A. W. Laird.

A. W. Laird, chairman of the Committee on the Standardizing Business Systems, presented a comprehensive report of the work undertaken by his committee, which work was of such a character only beginnings could be made in one year.

He described the standard forms decided upon for fire reports and daily reports for fire wardens, the loose leaf books and binders chosen, and the arrangments made for the purchase of standard equipment. He outlined a tentative plan for exchange of information during the fire season with other organizations, and discussed the question of a standardized wage scale, which the committee deems impractical, and urged the advisability of insuring employes of patrol systems, and of utilising the regular patrol force for improvement work.

With regard to financing emergency fire fighting the committee advised that the matter be left for the present in the hands of the several organizations.

Of what the committee has accomplished the report says:

"We believe there is need for further committee work looking to increased efficiency in our business affairs, and we believe that to get the best results any committee working on this subject must meet two or three times during the year to discuss matters of importance brought up at meetings of this kind. Possibly one meeting coincident with the March meetings of the Idaho associations would be favorably considered.

"This committee has left undone much more than it has accomplished, but it has made a start. It is hoped the work will be continued, for it is felt there is real and growing need for it. As stated, however, it is not believed that a great deal will be accomplished unless the committee having this work in hand will, during the year, hold several meetings to discuss means for improving our business systems. The work is of quite sufficient magnitude and importance to warrant this, and it is very difficult to accomplish by correspondence. If a new committee is appointed, we suggest that during this conference it try to hold one meeting at which all association secretaries are present, in order to discuss a plan and the subjects in greatest need of attention."

Mr. Laird's paper was followed by a discussion of much local interest.

C. S. Chapman said that he thought there were too many manners of keeping the records, and that it was important some uniform method of keeping accounts be devised. That it was advisable for the various organizations to keep in closer touch and co-operate toward perfecting the record system.

A suggestion was made by Mr. Allen that a two days' meeting did not allow sufficient time for discussion of various subjects, and that there should be more meetings held during the year. He also recommended a standing committee to meet with fire wardens and foresters. A standing committee was advocated by Mr. Silcox.

Judge Flewelling stated that a standing committee would be appointed.

Mr. Allen remarked also that an assessment date was an important factor.

Mr. Humiston though that the present date of assessment, April 1, should be changed to a later date, as they had no money on hand at this date to meet assessments. He suggested July 1 as a more appropriate date, as then collections would be in hand and a response could be made promptly.

That either May or June was a good time for assessments for the Western Forestry Association, was the opinion of Mr. Bystrom.

Wells Gilbert expressed as his opinion that there were too many assessments. Judge Flewelling stated that the necessity of standardization would be referred to a standing committee, and urged co-operation, the cutting out of duplication in effort. Mr. Long thought the situation should be handled in the manner of a clearing house.

Following this discussion Secretary-Treasurer Cornwall read a very interesting letter from William R. Ross, Minister of Lands of the Province of British Columbia, addressed to Mr. Allen, thanking the president of the association, Judge Flewelling for his kindness in extending an invitation to him to attend the conference, and regretting his inability to be there. Mr. Ross said that although retiring from public life for the time being he should still maintain a keen interest in all matters affecting the development of the natural resources of the Province of British Columbia, as well as those of the western states.

The following committees were named by President Flewelling:

Resolutions Committee: George S. Long, chairman, Wahington; A. W. Laird, Idaho; A. E. Boorman, Montana; Coert DuBois, California; C. S. Chapman, Oregon.

Committee on Railroad Co-operation: F. A. Silcox, for the Forest Service; F. A. Elliott, for the state; R. C. St. Claire, Canadian railways; W. C. Albee, American railroads; T. J. Humbird, patrol associations.

Committee on Business System: C. S. Chapman, chairman, Oregon; W. H. Humiston, Idaho; A. E. Boorman, Montana; R. L. Swales, California; G. C. Joy, Washington.

Committee on Nominations: Wells Gilbert, Oregon; A. E. Griggs, Washington; W. D. Humiston, Idaho; A. E. Boorman, Montana; G. H. Cecil, for the federal government. The association then adjourned for luncheon.

Second Session—Western Forestry and Conservation Association

Beginning the afternoon session George C. Joy, of the Washington Forest Fire Association, read a paper entitled "Motor Vehicles in Fire Work," analyzing different types of motor car trucks and cycles best adapted, their improvements, cost of upkeep; their relations to personnel and organization of patrol and to wage and subsistence allowances. We print an excerpt from Mr. Joy's paper.

"MOTOR VEHICLES IN FIRE WORK."
By George C. Joy.

Briefly reviewing the history of fire control as applied to the forests, and the system of patrol developed, Mr. Joy said:

"How best to make our patrol system meet the requirements of the work is a problem not yet completely solved, and one phase of this problem is up for discussion here today. In the carrying forward to a successful conclusion of any undertaking, one has to consider the means best adapted for the purpose. This usually involves men and materials with which to work, and that which is of more importance, the intelligent application of the two in getting the desired results. In order to obtain the best results, it was felt, in the very beginning, that the more frequently a ranger or supervisor could get over his district, the more satisfactory service could he render, and time and experience have served to prove the correctness of this view.

"Time is a very vital factor in the control of fire; therefore, the matter of getting from one part of a district to another part of the same territory quickly is imperative during the very hazardous part of the dry season. Thus, we were confronted with the question of transportation for our men.

"The means of conveyance at first adopted was largely decided by the character of the country, as regards topography, trails, roads, etc., over which the ranger worked. In mountain districts where trails were bad and roads few, he was obliged to walk; where trails and roads were better and more plentiful, he rode a horse, and in the more level and thickly populated districts, a horse and cart or bicycle was brought into play. The supervising warden was provided with a driving horse or motorcycle. The railroads were also patronized, and occasionally an automobile was brought into play, if the case was urgent. Whatever defects were in this system soon became apparent. The districts covered by foot patrol were too large. The endurance of the horse and bicyclist was limited, which left much to be desired in making an effective patrol. Rough roads, coupled with faulty construction and nondependableness of the motorcycle, soon took them out of the business. The use of automobiles by forest protective organizations in fire work was not considered possible, owing, chiefly, to the high price of machines and a relatively high cost of operation. Then, too, roads were in poor condition for auto travel.

"Thus the matter stood until about four years ago. The past six years have seen a wonderful development in the construction of more and better roads. This has broadened and extended the uses to which the automobile can be put, and coupled with the evolution downward in price and cost of operation, has gradually brought them into popularity and such prominence that they are no longer looked upon as a luxury but are considered a necessity."

Mr. Joy gave an exceedingly interesting account of the history of the motor vehicle as applied to forest patrol work, and an exhaustive report of his investigation into cost of the various makes of motors employed in this work, the maintenance cost, fuel cost, property right, and results as estimated in efficiency, and suggestions for better service, all of great value to the members of the association. He said:

"In conclusion, I want to say that the automobile has come to stay in forest fire work. It is an important factor in the development of a better service. In the future it will probably make necessary some changes in our system of patrol. This will be very certain to occur, especially if Mr. Boeing, who is to discuss Aeroplane Patrol this afternoon, is able to demonstrate that he can, from aloft, spot the fire, leaving it to us to get there and put it out."

After the reading of this paper, the chairman said that he expected that this subject would be productive of much discussion, and that every district should contribute something toward that subject. That the conditions differed in nearly every state. He referred to the use he had made of automobile service in the Clearwater district, where he used a Ford truck. That territory was certainly wild enough to test any kind of automobile service. The chairman called upon W. D. Humiston.

Mr. Humiston used a standard Ford machine, to which had been added a front axle brace, which was advantageous on rough ground, and which could be added for $2.50. He had also found it advisable to add a standard vacuum feed to handle the gasoline successfully. When the season of fire hazard approached they took off the back of the runabout and put on a delivery body that cost $17 to build. With this addition they were enabled to carry a number of men with their "dunnage." Tool boxes were installed on the running board. The Ford was the best car for mountain use.

Mr. Benedict, of Canada, said that he had been convinced that the automobile patrol was better than the foot patrol, but it was yet considered an extravagance in their country, but that Mr. Joy's statistics would help him to change the minds of his people in British Columbia on that subject.

The chairman brought up the mileage cost.

Mr. Allen thought Mr. Joy's paper would probably go a long ways toward establishing a mileage cost, but if there was anything wrong about those costs, it ought to be settled now.

It was developed that gasoline cost from 21 to 50 cents per gallon in the various sections.

Mr. Kimball said that in southern Oregon they used thirteen patrolmen and six automobiles of the cheaper makes, and two motorcycles, to solve the problem of getting to fires quickly. The motorcycles proved very satisfactory. Patrolmen were paid $80 per month, the patrolman furnishing horse and saddle and paying his own expenses; the motorcycle people—owning machines—were paid $100 per month.

Automobiles could not be run for 10 cents a mile in that territory. Their greatest handicap was in the problem of securing experienced mechanicians to take care of them.

At this point Gifford Pinchot entered the meeting and was received with great applause. Being introduced by President Flewelling, he made an address of so much importance that we have printed it elsewhere in this report.

After Mr. Pinchot's exit one of the most interesting and practical papers invading other fields of forest control effort and work entitled "An Idaho Experiment in Perfecting Lookout Methods," was offered by W. D. Humiston, of the Potlatch Lumber Co., of which paper we print this abstract:

Digitized by Google

"THE PERFECTION OF LOOKOUT METHODS IN CONNECTION WITH PATROL."
By W. D. Humiston.

"Lookout development is one of the most fascinating and one of the most important fields of study in connection with the management and protection of our timber resources. When carried to its ultimate conclusion—the accurate relief map—it aids in the work of the logger and finally becomes of important assistance in the disposition of the cut-over land.

Having described the lookout, its importance, methods of scientific observation and the importance of utilizing the knowledge of the "old-timer" and the "forest-wise" in the development of the outlook system, Mr. Humiston praised the work of the college trained men in the forest and expressed the conviction that around such men as a nucleus should the organization be built. In describing the value of accurate maps, he said:

"After the development measures outlined above have been perfected, one can undertake much more intensive studies and broaden the scope of the development work almost without limit. For instance, an accurate relief map is an immensely valuable thing for a lookout watchman as well as for the chief fire warden at headquarters.

"While a relief map is not indispensable during the early development of a lookout, it has many advantages which should be borne in mind so that, if opportunity offers, during a particularly advantageous season, a crew of two or four men can be detailed to do this kind of work. Showing every ridge, knoll and creek, the lookout watchman will be able to locate a fire much more readily and accurately with the aid of a relief map. The foreman of a fire fighting crew needs to know as much about the country he is working in as an army officer does for the proper disposition of his men. When he can glance at a map relief before starting for a fire and fix every feature of the country in his mind, his plan of attack should be pretty fully developed long before he reaches the fire. When a chief fire warden can sit at a telephone with a relief map before him, his grasp of the situation on the fire line, miles away, will be much better and will be reflected in more efficient service.

"A topographic or contour map must be made before a good relief map can be put up, but after the requisite data is secured, it is not particularly difficult and by no means expensive to make as many relief maps are required. These can be made of wall plaster, plaster of paris, concrete or papier maché.

"The topographic map is of great value in the hands of one who is familiar with its use, but its one drawback lies in the fact that the contour lines are sometimes confusing to one who is not used to such maps. A little study soon overcomes this trouble, however.

"While accurately locating trails and marking them with sign boards is rather remotely connected with lookout development, we feel that the work is important and increases the efficiency of the organization by making the control of fires quicker and more certain and all transportation problems easier.

"Assuming that the ideal condition as to the trails of an association is only attained when it is possible for anyone to go any place, any time, and do it quickly without a guide, it will be obvious that it is necessary to first determine where they are, where they go, what the distances are and then to put up good markers, so that anyone can read them, and later show the trails on maps."

Following his set paper Mr. Humiston referred to the relief map that he had brought along as an exhibit, which he wished everybody would inspect. He did not want to be understood as saying that a fire association was justified in building such maps, but he thought that timber owners will have to come to that fact they will want something of the kind from a logging standpoint and that perhaps they would authorize the fire associations to handle the work and share the expense.

President Flewelling thought Mr. Humiston's talk one of the most interesting that ever had been made in the association meetings, and made an illustration of where it would have been very valuable in his own operations. He then introduced Professor I. W. Cook, who emphasized what Mr. Humiston had already said, especially the co-relation of the technical man with the so-called "old timer." The schools throughout the country were teaching their students to realize that the "old timers' " work should be the foundation stone on which to build up other work. All of the aids to fire prevention were necessary, but when fire breaks out and it is cloudy the old time "lumberjack" has to put it out.

Then the discussion fell into lines of speculation concerning "look outs" in high places, and Mr. Sherrard, lookout on Mt. Hood, said to be the highest lookout point in the world, made an interesting little talk.

He said that he could locate fires sixty or seventy miles in clear weather very well, but in cloudy weather the old time patrol had to be depended upon.

This afforded an opportunity for Judge Flewelling to say that it was obvious that the lookout system ended when the lookout could not look.

Mr. Sherrard said that in the service they used primary and secondary lookouts—the secondary lookouts located on points of secondary altitude to the primary, but, of course, when both plans failed they had to fall back upon the patrolman.

Mr. Langille wanted to know of Mr. Sherrard what his experience had been concerning the air currents on the lower levels forcing up columns of smoke through the mist during the times of day when the sun was low.

Mr. Sherrard thought that the fire would have to be very large for that to be depended upon.

At this point Mr. Sherard refered to the fact that the ability of certain lookouts to see fires was born with them, and that it was a great deal a matter of practice and familiarity with the territory.

Mr. Langille here made an interesting talk, suggesting that a combination of all available and known means of "seeing fires and getting to them quickly" was necessary. He thought that fire-fighting reserves should be maintained and might be interrelated so that "a mobilized force can be brought to the scene of the trouble with the least possible loss of time."

At this juncture, when the discussion lagged, President Flewelling remarked that if it was a good thing to have a lookout on a high place, it was a better thing to have a MOVABLE lookout to go above all, and so the airship had been introduced into this discussion. Here the chairman introduced E. M. Gott, of Seattle, and an aviator, J. C. Foley.

W. E. Boeing, president of the Northwest Aero Club, had prepared a paper, but was unable to attend, and the paper was read by Mr. Gott.

We print a short form of Mr. Boeing's paper.

"AEROPLANE PATROL—ITS COST AND FEASIBILITY."
By W. E. Boeing.

Prefacing his paper with an outline of the history of flying and equipment used, Mr. Boeing spoke of the application of the aeroplane to forest patrol as follows:

"We will now take up the question of the feasibility of the aeroplane in connection with forest fire patrol. Under clear weather conditions the origin of smoke is very easily detected, in fact smoke emanating from a chimney or bonfire often serves the pilot in determining the direction of the wind near the surface on which he is going to land, as it is good practice only to land coming into the wind. The presence of a minute amount of smoke is readily discernible from the higher altitudes, as it is one of the most conspicuous objects against the land which presents itself to the aviator when at a considerable altitude.

"A pilot can familiarize himself very readily with the country which he has to patrol. A careful study of maps before making his first flight will give him a very good working idea of the country which he is to cover. After seeing the land from the air he should be thoroughly familiar with it, provided he has sufficiently studied his maps.

"The more conspicuous objects which are used from on high to determine location, are railroad lines, highways, streams and lakes. These are all shown on the maps and are very conspicuous from the air. As he becomes more familiar with his surroundings, building or groups of buildings and clearings, after they have turned brown during the late summer and early fall months, will also serve in determining location. It may be interesitng to add that hills and mountains from the greater altitudes flatten out and look like level country, likewise it is sometimes impossible to distinguish between forests and pastures. The aeroplane used for fire detection or fire spotting would be of considerable value in being able to penetrate by observation distant sections of the country which are sparsely inhabited and difficult of access, and where the chief menace probably comes from campers."

After Mr. Gott had read the paper, J. C. Foley took the platform, and was asked many questions concerning the possibility of making the aeroplane practicable for its proposed use.

The examination and the cross-examination of Mr. Foley was a display of timely and ingenious questions, showing the value of the technical mind in all timber affairs. The dialogue will serve for the basis of a special article on the use of the aeroplane in the service.

Mr. Allen showed that he had gone very deeply into the subject from all points; the possible community use of the aeroplane; the expense to be borne by several fire associations, and that it was not contemplated that a great number of aeroplanes be utilized. That the news value of the use of the aeroplane in times of dire necessity, when all other fire prevention and fire-fighting propositions failed, was worth considering; that some possible arrangement should and could be made with the state militia.

It might not appear from the discussion that the use of the aeroplane would become general at an early date, but this publication prophesies that it will be used at a much EARLIER time than the discussion in the Portland meetings indicated.

Following this discussion, Coert DuBois, of the United States Forest Service, told of various methods of improving fire-fighting in the forest by means of apparatus better adapted to the needs of the work, and spoke briefly of wireless telephony as a valuable aid. From his talk we print the following:

"WIRELESS TELEPHONY AND OTHER NEW WRINKLES."
By Coert DuBois.

"Field managers of forest protection organizations throughout the country have arrived almost simultaneously at the conclusion that the science of forest protection, as evolved by constructive thinking and plans projected on paper, need licking into shape in the field. Theory is ahead of practice; plans are elaborated beyond performance.

"The big stride this year, as regards wrinkles, is the ironing of them out. We are progressing beyond the wet wash stage. There has been progress, this year, real progress; but the tools that got the most valuable results were the saddle, the watch, the note-book, and the hob-nailed boot. Study of the operation and product of the protection machine out in the timber, by the designers of the machine, made for economies in the number of men, in their periods of service, for reduction in the number of fires, in the damage they caused, and most in suppressing them.

"But although big and lasting results have come from the inconspicuous work of systematic field supervision, a few spectacular flashes here and there show that the unique American science of forest protection has many things yet up its sleeve. In the fields of communication, equipment, organization and finance, the bright boys are still at work."

In his vigorous practical way Mr. DuBois outlined the experiments in wireless telephony now being conducted by Dr. H. Barringer Cox in the California forests, referred to similar experiments by Forester R. B. Adams, described improvements in field equipment and in organization and in closing said:

"The supervisor of the Stanislaus forest on being asked if he had anything to contribute along the lines of progressive results replied that he had nothing except that he had handled 60 fires which did $7.50 worth of damage at a total cost for suppression of $26.

"Achievement along this line seems to me to be just the answer, and the way to get it is to get out and see if your men in the timber are doing what the protection plans call for, and if not, why not. In my judgment, it will take three years for the man behind the saddlehorn and the telephone to be perfect in the performance of the plans and duties outlined for him on paper. And it is constructive help on the job, that he needs, not letters dictated from a revolving chair."

Following Mr. DuBois' offering the chairman called for volunteers to discuss the subject, and Mr. Silcox said that in district 1 they had gone somewhat into an investigation of wireless telephony, sending an engineer to the Western Electric Co.'s plant in New York to study the question practically, the experts promising that it could be used in the summer within a radius of one hundred miles, and offering to put in an apparatus for trial. He said that they were going to try it out next summer in the Idaho forest.

Digitized by Google

It was developed that wireless telephony was not now a workable proposition, and that the ordinary telephone would be depended upon until the wireless experts had proved that what they had was real. With some little protest from Mr. Strathern that ended the discussion.

Secretary Cornwall announced that the city library of Portland had invited all visiting lumbermen who had references to look up to take advantage of its rooms.

The association adjourned to meet Wednesday morning at 9:30 o'clock.

Third Session—Western Forestry and Conservation Association Annual

The Wednesday morning session opened with an announcement by the chair that the meeting would be addressed by W. B. Greeley, Assistant Forester of the United States, who had come especially from Washington, D. C., to deliver his address.

Opening his remarks, Mr. Greeley said: "I fear that my role today may appear to be that of the man with a wet blanket. I dislike to appear in that role, but I fear that perhaps at such times as these when we are all prone to the optimistic, and the future appears to be bright, that it may be the very BEST time of ALL for the SOBER CONSIDERATION of some of the underlying features of the lumber business which go much deeper than the current changes in the output of lumber from year to year." We print Mr. Greeley's paper in part.

THE GOVERNMENT AND THE LUMBER INDUSTRY.
By W. B. Greeley.

"During the last two years or more the Forest Service has been trying to find out what it could about the lumber industry. It has sought to get the facts before the public and the lumbermen both to show whether the public forest policy of the United States goes far enough and also with the hope of being of some constructive help to the industry.

"I feel a deal of reluctance in standing before a body of experienced men who have lived with these problems much of their lives, and appearing to hand down commandments like Moses on the Mount. The Forest Service has no delusion that it is divinely commissioned to tell lumbermen how to run their business. But since I have undertaken to discuss the problems of the industry I am sure you will agree that it must be with entire frankness. Whether right or wrong, I must describe the conditions and possibilities exactly as I see them."

In direct, forceful language Mr. Greeley discussed the stumpage situation; the historic features of western timberlands; the waste consequent upon overproduction, the controlling factor of instability in the lumber industry and the causes therefor, the "stumpage load" as the controlling factor in overproduction; the situation from the standpoint of the public; the extension of public forest ownership; and the need of co-operative development in the industry. He outlined the policy of the government in forest timber sales, saying:

"The policy which I have outlined will doubtless result in the gradual increase of national forest sales, but only as the development of the lumber industry and of transportation and other industrial facilities in the western states calls for it. In periods of depression sales will automatically decrease, as in 1914 when purchases fell off 30 percent. Under such a policy government timber will compete with private timber to a greater or less degree; but there will be no dumping of public stumpage upon the market and no sacrificing of its price—rather a normal, reasonable development of business as dictated by the physical availability of the public timber and the actual demand for it.

"Such a policy can not be of serious injury to the lumber industry. Furthermore, it meets other public interests for which the administration of the national forests is responsible. It will provide a gradual increase in the revenues from the forests, which will in time overcome the deficit incurred in their administration and protection, as well as compensation to local communities from whose tax rolls public timberlands have been withheld."

This paper, with that of H. D. Langille, which followed, were easily the features of the association meeting.

Judge Fleweling said that while Mr. Greeley had addressed the association in a personal capacity, that he thought he—Mr. Greeley—had probably forecast the future attitude of the Forest Service in relation to the timber industry. He invited discussion.

E. B. Hazen said in part: "This is the most remarkable and comprehensive analysis of the lumber industry in all its phases from the stump clear through that has ever been uttered, and if every man engaged in the lumber industry would read and digest this analyzation we would be a long way on the road to working out our problems."

Referring to Mr. Greeley's division of the question in the proposition, Mr. Hazen said the operators were having to fight the battles of the last TWO loads mentioned by the speaker; the problem of the FINANCIAL load being the heaviest of all.

All the assembly—and Mr. Hazen especially—seemed impressed with the revelation that the lumber business had about 100 percent more time to live than had been before prognosticated by the government. Usually life is considered sweet, but the reverse seemed to hold true with the timber owners present.

Continuing, Mr. Hazen read a clipping out of a Sunday paper by Herbert Kaufman, which was very appropriate. The opening and closing paragraphs being:

"You're a squatter occupying ground you can't hold. Only ability can protect your position—there is no other valid title to permanence."

"It is your privilege to run your affairs as you please, but at the modern pace you aren't apt to run far. Wake up before the sheriff shows up."

Judge Fleweling thought that if stumpage was a bad thing to carry for the private individual, that it ought to be a bad thing for the government and called on J. J. Donovan to talk.

Six years before Mr. Donovan had nearly precipitated a riot by suggesting that possibly the Forest Service was not divinely appointed and might possibly learn something about lumbering; but now it seemed really that this service had passed its sophomoric years. He complimented such men as W. B. Greeley and Austin Cary, who had dug deep into our problems "with understanding and with sympathy."

He was surprised at the emphasis which Mr. Greeley had laid upon the bond burden. It was encouraging, too, to hear a representative of the government say that the "menace of great quantities of public owned timber would not remain a danger to a legitimate operator"—that the government timber "will be put upon the market only where there is a real and necessary demand for it."

Mr. Donovan said the tax burden in many cases has been in gross amount greater than the entire cost of the land when considered in ten-year periods. He wanted to know who could remedy it.

A. W. Laird felt grateful for Mr. Greeley's address and Mr. Greeley's attitude as therein expressed "representing" as he had "a company that owns a considerable body of timber, which has been capitalized and which is not carrying a bonded debt." He had also been wrought up over the tax problem. There is not a political campaign in Idaho in which there is not agitation concerning what the politicians call light taxes on timber land. He did not know whether it would be possible to put timber holdings into state control, but it might be possible at some time in the future to so enlighten public sentiment that "timber taxation or taxation of timber lands in our states can be handled by a state body rather than by local politicians, which is our bain."

Mr. Laird said that the complaint had been made that the lumber operators did not advertise themselves as a useful industry in the community as they might do. He thought the question of usefulness was obvious. He had gathered a few statistics along those lines and found that in the last ten years Potlatch Lumber Co. had spent $11,000,000, over $2,500,000 for supplies and $8,500,000 in freights, and that when these facts are considered it DOES seem important "that we should get these things to the public in such a way that they will not have a strong enmity against us."

Judge Fleweling said that he was a born optimist, but that he did not exactly agree with everybody, or, in fact, with Mr. Greeley. He said that it seemed nobody had referred to the inroads of substitutes in competition with lumber. He thought the law of averages was going to take care of the carrying of timber investments and he is going to continue to be an optimist. He thought a great safety valve lay in the establishment of a great export trade. But the domestic trade was the real thing that had to be looked after.

George S. Long made a quite remarkable speech on the question of Mr. Greeley's paper which we have printed elsewhere in this paper, along with Mr. Pinchot's address and Messrs. George M. Cornwall and J. J. Donovan on prohibition. Mr. Long's oration was followed by a vote of thanks of the entire association to Mr. Greeley.

Then the tables were cleared for the report of the "Nation-wide Committee" by H. D. Langille, preliminary report of which committee we printed in our issue of October 10.

In this issue of our paper we will only refer a little to the discussion in connection with the paper of Mr. Langille's, as we have reviewed the paper at large in the editorial end of this issue.

REORGANIZATION OF FOREST INDUSTRIAL ASSOCIATIONS.
By H. D. Langille.

After Mr. Langille had read his paper, Judge Fleweling said that he thought the proposition a "nucleus for the beginning of a new era in the manner of conducting the lumber business and the co-operation of all the agencies going to the good of the industry."

During the reading of this paper the audience occupied itself very attentively with perusing printed forms of the charts Mr. Langille used in his explanation.

In opening his address Mr. Langille referred to the past history of the movement and the committee that had worked with him, viz.: E. G. Ames, Seattle, representing the state of Washington; T. J. Humbird, of Sandpoint, Idaho, representing the Inland Empire; E. A. Selfridge, Jr., Willits, Cal., representing California; Captain J. B. White, Kansas City, representing the southern states, and C. A. Weyerhaeuser, of St. Paul, representing the northern states.

Following Mr. Langille's talk the chairman said that the movement was "not an effort to tear down anything but that it was an effort to construct something out of the elements which we already have on hand."

Mr. Humbird made an enthusiastic talk favoring Mr. Langille's proposition. Before offering a resolution affecting the movement Mr. Humbird said these things:

"Referring a moment, if I may, to Mr. Greeley's paper, I want to indorse everything that Mr. Long has said and add further that I would like to see it adopted, if you please, as both a text book and testament, and I would like to see one hundred thousand copies of it printed and put into the hands of the thinking people of the country at large, and ask that they read it, ponder on it and digest it.

"Then I would like to see a sufficient number of copies of the paper just read, printed and put into the hands of timber owners and lumber producers and those interested in the lumber industry, with a request that they devote the necessary time and attention to not only reading, but digesting the plan proposed and giving it serious consideration. To some what has been proposed—because of the large issue affected—may seem Utopian; to me it does not seem that way.

"I am frank to say that it seems not only the proper thing to do but the very logical thing to do, if we are to keep up with progress along the lines made by other industries of not near so great importance.

"Let us get out of our minds the thought that this is impossible. All things are possible, gentlemen. Let us make this possible; let us bring it to pass. Let's lend our influence to making plain to our fellow timbermen and lumbermen the needs of such action."

Then Mr. Humbird offered the following resolution, which was passed unanimously:

"The Western Forestry and Conservation Association in annual conference assembled has listened to the report of the 'Nation-wide Committee on Reorganization.'

"Its message is inspiring, impelling and full of the urge of action.

"It points directly to the greatest need of the lumber industry and of natural conservation.

"It crystallizes the individual thought of the various elements of the industry.

"It opens the way for unity and solidarity in all phases of local and national effort in behalf of our forests and their best use.

"To the end that this splendid movement shall not halt, we recommend that the president of this association shall appoint a committee of five to

Digitized by Google

present the report of the 'Reorganization Committee' to the president and trustees of the National Lumber Manufacturers' Association urging that a campaign be undertaken among all lumber and affiliated associations to the end that their support shall be enlisted and carried to its ultimate fruition."

Secretary Babcock spoke to the question in such form and shape that we desire to quote him verbatim for part of his address:

"I always have a sort of feeling when talking to a group of lumbermen that may attend a meeting of this kind, that it must be similar to what I imagine was the feeling of the ministers that I used to listen to when they were tirading against the people who did not come to church. It seems to me that those who come, as a rule, are the ones who are doing the thinking and the supporting. Mr. Langille has offered a paper which is indeed very convincing in its plan of solution of the many problems that are before us. I wish to say in regard to the West Coast Lumbermen's Association organization that what we need, gentlemen, is not reorganization, but support of the present organization. About a year or so ago we performed the necessary formalities of reorganization to provide for all that is outlined in this plan. We branched out from the form of lumber manufacturers' organization and intended to embrace the timber owners, loggers, and other branches of the industry. We provided such formalities in our by-laws as required in the case of a corporation. We changed the name so that the word 'Manufacturers' should be eliminated, and started out to accomplish all the things that are set forth in this chart. But an association runs up against the very practical problem of meeting its payroll, very much as a lumber manufacturing plant has to meet its payroll, and in meeting its payroll I include performing its functions of promotion. It is not a case of doing all of these things and then hunting for the money to pay for them. It is a case of getting the money and then doing them. Unfortunately, we cannot change human nature. Unfortunately, we have not been vested by a divine visitation so that the individual has been so changed that he will come through with the necessary money. I am an optimist, the same as the chairman. If I were not I would have quit this job long ago and gone to work.

"Those are the men who do not attend these meetings. They are the men who do not read these papers and will not read them.

"Now when it comes to the question of getting necessary money, the Old Guard has been coming through year after year. It has always been the case. Then we approach the other manufacturer or timber owner and he says, 'Do you think we are going to support a timber organization that is built for the benefit of those few men?' when as a matter of fact the few men are putting up the money. We have in the West Coast association attempted these things and we are accomplishing them, insofar as our funds provide. We have started out to try and educate the people so that the people would be sympathetic with views of intelligent legislation. We figure that it is going to take years to accomplish that."

Mr. Babcock followed the above part of his talk with some specific representations concerning his particular association and the way they did business, which was very interesting.

Dr. Frank R. Rutter, who has come out from Washington to represent Dr. E. E. Pratt, was called to the platform to speak to the question the point of which was that the government desired in dealing with the lumber trade to have one body to which it might speak with authority and that "can advise us wisely, that can point out the real needs and the sentiment of the industry." Dr. Rutter thought that the general "proposal to have affiliated organizations was most admirable."

The chair called on A. W. Cooper, who said: "There seems to be too much of a tendency at present for every new phase of activity to be organized as a separate proposition instead of building up the machinery and organizations which we have" and that it "does seem as though we should get busy and overhaul the machinery that we have and see if we can not effectively get the necessary machinery for active co-operation."

Mr. Long thought the thing could be done and he agreed with Mr. Humbird that "you cannot call them Utopian," but that "the great big question usually is that when we put together a finally organized theoretical scheme that so many of us sit back and say, 'Well, let George do it.' What you need always and forever in every organization is the original pep, that the man put into it who is right NEXT to it."

Mr. Long thought further: "This scheme is an idea, but it must have woven in it every element of strength, activity and interest now present in your local organizations." The chairman wanted to know what effect such an organization would have on the marketing organizations in lumber. No one volunteered.

The chairman wanted to know how the patrol associations were to come under the newly proposed roof.

Mr. Chapman thought it would "not defeat the movement in any way if the patrol associations at the beginning were not included in the proposed new organization."

A TELEGRAM FROM R. H. DOWNMAN.

At this juncture George M. Cornwall, secretary, read the following telegram:

"Washington, D. C., Oct. 25, 1916.

"E. T. Allen, Forester,
Western Forestry and Conservation Association.
Portland, Oregon.

"I wish you every success in the meeting which you are holding. I wish to express through you to the conference my heartiest support personally and as president of the National Lumber Manufacturers' Association, of the Langille report on association work. I regret exceedingly my inability to be with you, but I will see you very soon with a committee which shall leave Chicago on November 10 for the Pacific coast country.

"R. H. Downman, President,
National Lumber Manufacturers' Association."

This telegram was received with great applause.

The following committee was appointed in accordance with the Humbird resolution: H. D. Langille, chairman, Oregon; T. J. Humbird, Inland Empire; J. H. Bloedell, Puget Sound timber owners and manufacturers; George S. Long; E. A. Selfridge, Jr. The association adjourned until 2 o'clock.

Fourth Session—Western Forestry and Conservation Association Annual

When the association met in the afternoon M. A. Grainger, chief of the British Columbia Forest Service, delivered an address. In part he said:

WHAT BRITISH COLUMBIA IS DOING TO HELP THE LUMBER BUSINESS.
By M. A. Grainger.

Having graphically described the effect on forestry work in British Columbia of the loss of men by enlistment in the army, Mr. Grainger said:

"I do think there is one thing that can fairly be said about our province. The forest resource is of such obvious importance, forest revenue is to such an extent the backbone of our public finance, and the ups and downs of the lumbering industry are so immediately and so acutely felt by the public treasury and by all our citizens, no matter what their business, that both government and people realize far more effectively than in other countries that the disorganized condition of a basic industry like lumbering is by no means a private business matter to be remedied merely by the men engaged in that industry, but that it is also the public duty of each government concerned to deal with it. Because of this general feeling among our people, it has been possible for our forest service to engage whole-heartedly in such matters as constructive lumber market work. You know our position—with 400 billion feet of timber and an annual growth not one-fifth of which is being utilized; with further waste through an investment in mill capacity that is double the market demand; with good timber wasted in every logging operation because it does not pay to take it out; conditions similar to those with which you contend on this side of the line. Forest conservation with us can only come through full development of the market for our lumber products and through the proper adjustment of production to demand.

"We have begun by attacking the simplest and most straightforward of these two problems because in market extension we could get action without delay and secure immediate cash results.

"Our efforts have been made in three markets: Overseas, in the Canadian prairies, and in eastern Canada. Our publicity work is carried on by the usual methods—exhibits, advertisements, correspondence with buyers, distribution of pamphlets and samples, co-operation with government departments in other parts of the empire, and active, personal work by special representatives in the markets themselves. All this is aimed firstly at every agency engaged in handling lumber or influencing the distribution of lumber; secondly, at the general public, the consumer of lumber. * * * In the European war observation officers are placed up forward in the firing line in order to signal information to the artillery miles in the rear. Our lumber commissioners have a similar duty—it is their business to inform themselves concerning large contracts for construction, building operations, lumber inquiries of all kinds in their districts—and to notify our mills at once. They are not a lumber salesman, they are merely an intelligence officer. But mark one thing, which is this: The value of all this work depends entirely on the enthusiasm put into it, and the thoroughgoing and effective way it is carried out."

President Flewelling thought that Mr. Grainger's paper illustrated that the British Columbia people were working along lines similar to the forest interests in the United States.

The chairman introduced at this point Dr. Frank R. Rutter, who read the paper provided by Dr. E. E. Pratt, chief of division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

We contemplate printing Dr. Pratt's paper in full at a later date but in this issue will only print it in part, as follows:

"AFTER THE WAR" PREDICTED TRADE SITUATION AND HOW TO MEET IT.
By Dr. E. E. Pratt.

Before Dr. Rutter began his address he read a telegram from Dr. E. E. Pratt saying that the oral examination for trade commissioners to represent the lumber industry abroad had been very satisfactory, nineteen applications having been made for the oral examination, but that the board thought final settlement of the matter should be postponed until December, which had been ordered.

Much interest was manifested in Dr. Pratt's address, because of the importance of its subject and because of the value attached to his opinions. The address will be published for the benefit of our readers in a later issue. Here we quote his words on co-operation among lumbermen:

"Finally, let us emphasize again the necessity for co-operation among the lumbermen themselves, and secondly, the necessity for co-operation between the lumbermen and the various government agencies. I am sure that the government is willing to do its part. The Department of Commerce, through the Bureau of Foreign and Domestic Commerce, which I represent, has already shown its interest and its willingness to co-operate with the lumbermen. We have already made extensive investigations of the lumber markets abroad, to which I have already referred to, especially in the Far East and in South America. We are willing to go on with this work, and it is our intention to bear at least one-sixth of the cost of this European investigation. The other government departments have taken an active interest. The work of the Forest Service is too well known and too favorably known to need any comment whatever. The Federal Trade Commission has, as you know, gone into this subject thoroughly and has studied the problems that you lumbermen have brought before it. I think I can confidently say that the administrative departments of the government will do everything in their power to assist the lumber industry. I believe that the agencies that are being formed by the various lumber associations through which to export their products mark the beginning of an active campaign to secure a fair share of the world's markets for lumber. Confidence in yourselves and in your product, a confidence that is entirely deserved, will, with united action, gain you a very large market for perhaps the most important single product of this country."

Dr. Pratt's paper was well received.

J. H. Bloedel at this juncture announced the recently organized company which had been put together for handling lumber to foreign markets. He considered that such action was consistent with the advice from Washington. They had not yet succeeded in getting the 100 percent capacity, but such capacity had agreed to join. He thought more attention, too, should be paid to the domestic market, and said that what he had to say was in the nature "of an appreciation on the part of the lumber industry of the Pacific coast for the efforts

Digitized by Google

the Bureau of Foreig.. and Domestic Commerce is making, not to help us in foreign markets but to encourage co-operation among ourselves, which, the Lord knows, we need."

In the course of his talk Mr. Bloedel complimented Mr. Greeley also and paid his respects likewise to the Federal Trade Commission. Mr. Bloedel was followed at length by Major E. G. Griggs.

We are printing in another part of this issue both Mr. Bloedel's and Mr. Grigg's remarks.

Mr. Laird wanted to know if there would be investigation which pleased it more or was more unique, viz.: the government and an industry working side by side in a common cause. Mr. Griggs wanted to know if the department had contemplated an investigation of the taxation of timber. Mr. Rutter thought not, considering the present appropriation of the bureau.

Mr. Allen informed Major Griggs that the Federal Trade Commission had under consideration a "tax study." Then the association went into a discussion of ways and means of paying for the service of trade commissioners.

industry is within ourselves, and if we have not got the stamina to bring ourselves out with the aid of the government, we will not be entitled to very much sympathy. Some of us in the past have thought that business was shackled, and a great man has recently said that he is going to unshackle it. If we get unshackled business it will then rest with us to make it a success, and then all these problems in the shape of wet blankets will be lack of dollars and cents."

Dr. Rutter wanted the gentlemen present to express themselves on the South American situation.

The "Resolutions" Passed at the Annual Meeting of the Western Forestry and Conservation Association October 25, 1916, at Portland, Oregon

The Forest Industry Conference, being a conference of all Pacific Coast forest agencies, private, state and federal, as well as the annual meeting of the Western Forestry and Conservation Association in which are allied the private co-operative patrol organizations of Montana, Idaho, Washington, Oregon and California, that spend several hundred thousand dollars annually to protect 20 million acres of forest and one-fifth the nation's entire timber supply, hereby adopts the following resolutions:

FOREST SERVICE:

We commend the practical and progressive work of the Forest Service in protecting the National Forests from fire. It has added much to the modern science of forest fire prevention. More liberal expenditure by congress is necessary, however, if it is to guard the public's forest resources properly and commensurately with the protection given contiguous private lands.

WEATHER BUREAU:

The forecasting of weather conditions conducive to fire has proved a public service of tremendous practical value but is still imperfectly organized for lack of men and instruments. The forest and water resources demanding this protection are so vast and so vital that we feel congress should provide at least $10,000 a year exclusively for this work.

WEEKS LAW:

We have found the allotment of funds under the Weeks Law, for the protection of forested western watersheds outside the national forests, to be perhaps the most practical and effective means not only of stimulating state effort but also of cementing private, state and federal protective effort into a harmonious and efficient whole. Its value to the government in these ways is immeasurably beyond its cost. We plead earnestly that it be considered an experiment no longer and that it be made a continual annual appropriation. We pledge our co-operation and support to insure its economical and advantageous expenditure. To this end we also advise an early understanding as to the pro rating of state and federal funds which will better take into account the variation of seasonal requirements and the variation of state systems.

CO-OPERATION IN FIRE WORK:

Nothing has been more conclusively proven by experience than that efficient and economical forest protection requires the closest relation between federal government, state and private systems. We therefore urge that our state legislatures and forest departments continue to develop co-operative machinery, and also support every outside step towards the same end. Appropriations and forest laws should always bear such federal and private co-operation in mind, for the best interest of the state and its citizens demands promoting and utilizing it to the fullest extent. We hold that the best and cheapest protection will always be obtained when the three agencies work together as a board of forest welfare, each spending its due share under a plan in which each has equal voice. We endorse and urge legislation similar to that enacted in Oregon requiring all forest owners to do their share in patrol and removing hazardous conditions.

AEROPLANE PATROL:

Since the value of aeroplanes in forest patrol has already been demonstrated and since there is also much public interest in increasing this arm of military defense on the Pacific coast, we believe the time is ripe for co-operation between forest protective agencies and those engaged in promoting aviation. We believe selected patrol associations can well afford to contribute toward joint experiments to test the value of this work in our territory.

CANADIAN CO-OPERATION:

We are particularly appreciative of the cordial co-operation in all forest protective matters we have received from British Columbia and the Dominion of Canada and desire also to commend in the highest terms the effort of the British Columbia government to place forest industry on a stable basis and to educate the public in the use of wood.

GOVERNMENT AND INDUSTRY:

We regard as epochal in American forest history the present attempt of our government, through the Forest Service, the Federal Trade Commission and the Department of Commerce, to meet our industry with a helping hand and to establish a comprehensive far-seeing public policy for mutual betterment of industry and nation. Impressed with the thoroughness and sincerity of the effort of these government agencies to help us solve our troubles, and realizing that many of these can be solved only after much further study and co-operation between ourselves, government and public, we endorse heartily the suggestion which has been made for some machinery, of the nature of an advisory board, by which the united industry and the government can continue to work together with the greatest harmony of constructive effort.

USE OF FOREST RESOURCES:

We believe that the depression and instability of the lumber industry is largely due to pressure arising from the carrying of its raw material. Division of ownership, as between public and private, does not alter the basic premise that it is all one national resource and should be cut or held to the best national advantage. We therefore emphasize that the forcing upon a glutted market of national forest timber not needed for local consumption and which can most advantageously be carried for the ultimate consumer, in order merely immediately to recompense the federal treasury, would be an economic mistake tending to the waste of the greatest of our national resources and to further unsettlement of price and wage conditions and of general prosperity. We hope that no pressure to this end will be brought upon the Forest Service.

EDUCATION IN WOOD USE:

The average individual knows little of the technicalities connected with the use of wood, although it is one of the commonest commodities. In building the simplest structure, unless he employs professional assistance, he is handicapped by ignorance of grades, qualities, patterns and specifications. We urge that the Forest Service, by means of simple and authentic publications designed in the interest of the ordinary consumer, help to remove this inability to use intelligently one of our commonest resources.

FOREIGN TRADE:

We appreciate and endorse the effort of the Bureau of Foreign and Domestic Commerce to promote export trade in lumber, and trust that the industry on this coast will give it hearty support by helping to maintain the necessary agents and by meeting trade needs as they may arise.

COUNTY CO-OPERATION:

We hold that, since counties have an abiding interest in forest welfare as a major source of revenue and employment, they should be among its most studious promoters. We appeal to them to support the protective laws by rigid enforcement, to seek equality and justice in taxation in order to preserve this source of revenue rather than destroy it, and to study and support the uses of local wood products in county construction to the fullest extent. We also urge county officials to see that roadsides are kept clear of inflammable debris and to enjoin this upon road builders working under county contract.

TO PROMOTE SHIP BUILDING:

Since western ship building directly utilizes our resources and our labor while at the same time increasing the facilities for sending our products to the world's markets, we recommend to manufacturers' associations, governmental agencies and the press that they assist its stimulation by giving wide publicity to the merits of Pacific coast woods for ship construction.

We commend the work being undertaken by the committee on standardization of business methods in forest fire protection and feel that a wide field exists for economy and efficiency in our work through all taking full advantage of problems solved by each agency.

We urge full support of the broader phases of protection work by each agency benefiting, to the end that such work may go forward unhampered for lack of funds and that the cost to individual organizations may be minimized.

The representatives of the industry from Montana, Idaho, Washington and Oregon meeting to discuss questions vital to its very existence, deplore the spirit of individualism and aloofness manifested by the absence from such a conference of any representative of the industry from California. We urge upon the lumbermen and timber owners of that state the absolute necessity of co-operation between themselves, their industrial confreres of the whole Pacific northwest and the agencies of the federal and state government.

anything like good results with government aid without more perfect organization. It seemed to him that we are drifting to something larger and better. He had been interested in what the Department of Commerce was intending to undertake in sending trade commissioners abroad but he thought we should have organizations that are a real entity in order to get the benefit.

Dr. Rutter thought that the department had never approached anything in the way of an in-

It is gratifying to know that J. H. Bloedel said: "So far as the west coast is concerned, I can say to you unqualifiedly, Dr. Rutter, that it will pay its share willingly, and the West Coast Lumbermen's Association and the new exploitation company, I am sure, will see that the money is raised."

Judge Fleweiling said, to sum up the matter, he thought they had gotten back to where they had started and that: "The salvation of the lumber

Mr. Baxter of San Francisco was called on and said the greatest difficulty in export trade was getting ships. He believed, too, of course, that the exporters should be more aggressive.

Dr. Rutter wanted to hear from others and Mr. Laird thought that the trouble chiefly about the export trade was that not enough lumber manufacturers had been in it, which is an example of very bad merchandising; and that while we have thought that we were in the export business we

Digitized by Google

had only been selling cargoes at ships tackle and SOMEBODY ELSE had been in the EXPORT BUSINESS.

Mr. Kirk, Mr. Clark and Mr. MacMillan of Canada all spoke to the question, and at length. Mr. Clark had found the situation exactly as Roger E. Simmons had reported it previously, and especially devoted himself to explaining the dense ignorance of the South Americans on the building question and that the lumber business of the United States had never taken any pains whatsoever to educate them, but on the other hand he had found in every town the United States Steel Co.'s men showing them how to use "their iron." He thought South America needed a great deal of evangelizing.

Then the congress drifted into by-play and slyplay and political passages at arms between Canada and the United States. It was all very lovely and forensic but had very little to do with conservation and forestry, which—without any desire to criticise anybody—is what the purpose of the association is supposed to be.

Mr. Donovan made an eloquent talk in which he said he admired the intelligence and ability with "which our Canadian friends had succeeded in fooling the gentlemen at Washington; that we $2 a thousand higher than it is on the American side of the line."

At this juncture the chairman asked Mr. MacMillan "to go after Mr. Donovan" and he did, SAYING:

"I wish to congratulate Mr. Donovan on his good luck; he has only had to close his office; if he will go to Vancouver he will see we have closed our mills, which is a whole lot more serious. And again, if he will just look up the record of importations in that estimable family journal published here, he will find we imported from Oregon and Washington three and a half million feet of Douglas fir in Vancouver; and I think that shows where we stand. So long as you sell your cargoes at nine dollars and we get twelve, we can't be said to be doing anything to take your business away."

Then the chairman put Mr. MacMillan on the stand to talk about the odd things he had picked up in his recent tour around the world. Mr. MacMillan said several interesting things about creosoting material; that India is now short 10,000,000 railroad sleepers, that India had had several very bad cargoes of sleepers in the rush of getting out some sample cargoes and he thought Douglas fir was in a worse condition than ever before in the Indian trade. If those cargoes had been handled just so long will the foreign demand remain a negligible quantity."

Mr. Griggs said that the creosoting people were just as interested in "developing the right kind of business as the lumber people and the fact that some failures occur on ties alone because of certain specifications the creosoting companies should not be condemned."

Mr. Brown said that in the interests of the exporting company that all export commodities must be standardized and that the government should see that every cargo that goes out is of that type.

As the discussion spread away from what Mr. MacMillan started the chairman called a halt and at this point Secretary Cornwall read the resolutions that had been created to express the ethics and program of the association, which we print elsewhere in this article.

The report of the nominating committee was as follows: For president, A. L. Flewelling; for forester, E. T. Allen; for secretary-treasurer, G. M. Cornwall; for vice-presidents, A. E. Boorman, Montana; A. W. Laird, Idaho; E. G. Ames, Washington; G. B. McLeod, Oregon; R. D. Swales, California. For trustees, C. A. Weil, Montana; T. J. Humbird, Idaho; George S. Long, Washington; H. D. Langille, Oregon; and E. A. Selfridge, Jr., for

George S. Long's Address at Western Forestry and Conservation Banquet Portland, Ore., October 25, 1916

Mr. Toastmaster and Gentlemen: The history of the United States for the past hundred years has been a wonderful history. Nowhere else, probably, and at no time, has there been such a development as has come to this country. Nowhere else, probably, and in no age, have there been a people who have seized their opportunities as they have in the United States. In no other place, at no other time, have the rewards been so great as to those who were favored with living in this country. Prosperity, Happiness, Civilization, Comforts, have walked hand in hand in one continual procession in the annals of our country for more than a hundred years.

Nature has been so prodigal, opportunities so numerous, that we all have shared alike in that wonderful development, and the lumberman has taken his part in that development and has had his full share of that prosperity.

During the past years there has come to the lumber industry a new epoch, an epoch that has brought more or less confusion to those who, in times previous, have trod along paths comparatively smooth, and in ways that led continually to prosperous conditions. We have, so to speak, in our country, walked along in a kind of FREE-AND-EASY way—in ways of absolute certainty that we are going to be winners in these things which man strives for. The lumberman has borne his brunt of the hard work; he has been courageous, he has been prosperous, he has been rewarded.

In thinking of the lumber industry I always typify it in my mind as a lumberman, a brawny, a sturdy, a virile character, that has gone into the woods and taken all of its hardships, that has taken all of its inspirations, that has met the sunshine that streams through the trees, that has faced the storms that tossed him about, that has met the winter with all its hardships and has come out of it all, a brave, valiant, sturdy worker, typical of our country.

Today that form, that valiant, courageous worker, is more or less mangled. He has been bumped by conditions that are hard, bumped by conditions that he did not fully understand, until he has become almost an invalid, until he himself did not know what was the matter with him. He has literally had to be dragged to the table for the diagnosis of what his conditions were, and he doesn't believe them today. We have had the specialists tell us today what the trouble is, and we hardly believe it. That strong, virile strain, that dominant characteristic of courage and work, abides with him so that he does not believe that the ills are as pronounced as they have been told.

I myself don't believe it.

If there is one message more than another which I would carry to the lumbermen tonight it is the message of optimism.

I believe that we are all right. (Applause.) I believe that we will solve our problems; I believe that if we have been crude, if we have been awkward, if we have been strong, possibly, and NOT alert in our thoughts, that there is in the rank and file of the lumber body of the United States that innate, dominant, courageous, virile strength that will yet meet every issue that can possibly be placed before us. (Applause.)

I have a most magnificent conception of our industry. I claim it is the best in our land. I claim that its workers are amongst our foremost men. I believe that the rank and file of our body possess qualities that are sure to win.

You may be a little awkward; you may not be scientific; you may not understand all of the arts of advertising and of achievement and of salesmanship; but the men who have trod the paths that the lumbermen have trod in the past are not weaklings; they are NOT men who are going to fail to rise to the occasion.

I see here faces that have come down from that good old stock of lumbermen who came from the state of Maine! Men, who fought EVERY WAY right down the line, when you had to be courageous, when you had to be economical, when you had to be workers. What are you sons of the state of Maine going to do? Are you going to halt and say, "I cannot do what my forefathers did"?

Tell me, you sons of the old Michigan and Wisconsin lumbermen and Minnesota lumbermen, did not your fathers have trials, have hardships, have colossal difficulties to overcome? Did they not meet them?

Tell me, you men who today stand in the environment of the world's greatest woodlot on mountain peaks, where everything is harmonious, surrounded by the magnificent forests, and this glorious opportunity—what are you going to do about it?

Can you make me believe that the MAN is NOT going to rise to that occasion, that he is NOT going to match that matchless timber with a matchless treatment?

I say you WILL in spite of the tone that prevailed largely in our conferences, which, while it was hopeful, yet it cast somewhat of a cloud over the difficulties that are ahead of us. In what I have to say tonight I want to impress you with the thought that I BELIEVE, with ALL my heart, that we are going to rise to the occasion and meet all of these issues and make lumber the true and magnificent industry which we in our hearts know it to be, and win out all these problems OURSELVES in ways that are going to be fair, in ways that are going to get results.

Gentlemen, some five or six years ago some of us, who thought we saw the coming of this situation, went to the Forestry Department of the government and picked a man who at one time had been bold enough to tell us what he thought of us, and what he said wasn't complimentary! We went to him and said, "We want you to study our conditions; we want you to tell us the truth; we want you to tell the public the truth; we want you never to misrepresent anything; we give you no commission, except the commission of ascertaining what should be done." We had no underhand work to perform. It was in an epoch when the lumbermen were under a cloud, and we needed to get that cloud lifted, and we have been working patiently and carefully and sanely and honorably in the channels of creating a public sentiment that will be ready some day to listen to our story.

We selected for that purpose E. T. Allen, and how well he has performed that work, how unfettered he has been by any kind of instructions, is well known to those who know the history of the Western Forestry and Conservation Association. (Applause.) Through that avenue we have cemented relations of trust with the public, and also with the government; our plea is heard with sympathetic ears; and it is for THESE reasons we have accomplished much and for these reasons I say there is no task so big but that we will meet it and meet it right, and win out in the game of showing to the world that the lumbermen are not great big lumbering PEOPLE who know nothing at all except the crude work of hard knocks, but that we have grey matter enough to meet the situation and meet it fairly and meet it successfully.

could charter a foreign ship just as well as Canada could and should be able to manufacture—excepting for the tax matter—where Canada is a good deal more lenient with her people in the tax on standing timber." He referred to the imports from Canada being only about $24,000,000 or $25,000,000 and said, "If their goods are to come in at that rate we would like to send a little back occasionally, especially as the present price is about

by a merchandising organization, such as the steel company's, for instance, and had been accompanied to India by persons familiar with creosoting and requirements of their railroads, everything might have gone right. Mr. MacMillan urged a closer knowledge of all foreign requirements everywhere, and he said "as long as business is represented to this country through ten or fifteen brokers, who stimulate trade for the volume of it,

California. The report of the committee was adopted, therefore the above named gentlemen were elected.

On motion of Mr. Ames, Dr. Pratt and Dr. Rutter of the Department of Foreign and Domestic Commerce were given a vote of thanks. Judge Flewelling pronounced the benediction of good fellowship and thanks and trusted that all of those present would remain for the Pacific Logging Congress. Adjourned sine die.

Western Forestry and Conservation Association Banquet

The Wesern Forestry and Conservation Association banquet was the real winding up of that congress and was a most enjoyable affair, replete with song and story, the twinkling feet of dancing maids, the eloquence of men and the ring of joyful song.

This banquet was in charge of C. S. Chapman and in the arrangement Mr. Chapman had intimately associated with him Coert DuBois of San Francisco.

The banquet was given by the Oregon lumbermen for the delegates to the Annual Forest Industry Conference of the Forest Protective organizations, composing the Western Forestry and Conservation Association at the Portland Hotel, night of October 25. G. B. McLeod, of San Francisco, was toastmaster. After the coffee had been reached, Mr. McLeod said:

"Members of the Western Forestry & Conservation Association, and friends of the lumber industry of Oregon, I have a great pleasure before me, and a privilege. Before proceeding I think it all right to recall some of the experiences that we have gone through in arriving at a state of affairs where we can gather together such a body of men as this in the movement for forest conservation and all of the elements that go towards betterment of the lumber industry.

Digitized by Google

"I remember in the fall of 1904 how hard we tried in this state to crystallize a movement to get through the legislature in 1905 a bill for protection of the forests. Our friends in Washington were likewise engaged. They were more successful than we were. They were able to have the first forest protection law passed by the legislature of Washington in the legislature of 1905. By great effort I remember we raised something like one hundred and thirty-five dollars in this state to do something along that line. Our efforts proved abortive. We were not able to accomplish anything in that legislature, but in 1907 we also got through our first forest fire law. That law provided that we would have two hundred and fifty dollars a year for two succeeding years for state co-operation along the lines of forest protection. So I think that is a lesson to us all. Sometimes we are discouraged and things look black. When we think that in ten years so much has been accomplished, if we can go on with the increased ratio that we have had from the beginning, the next decade we ought to really arrive at something tangible and worth while. So it is a great pleasure for me tonight on behalf of the lumbermen of Oregon to welcome to the city of Portland and to Oregon the members of the Western Forestry and Conservation Association." (Applause.)

"President Flewelling: Gentlemen, I have been the end man of this minstrel show for the last two days. I have pretty nearly run out of expletives—whatever that is. Today Mr. Long told me that he thought the lumber business had got into the condition of the man who tried to put five gallons of water into a four gallon jug. Now, I have been drinking ice-water here all the evening and I feel just like that four-gallon jug, so I am running over.

"We are destined in this country, in the next few years, to get a vast experience. We have become very provincial in America, and we thought we knew the whole thing and knew more about business and enterprises of all kinds than anybody else in the world, but we will find out we are mere children when we get out into the world's markets and try to capture them.

"Two years ago I had the pleasure of helping to entertain a delegation of heathen Chinamen, who were traveling through this country for pleasure and profit and who were looking into the possibilities of trade with this country. One of the men that I had the pleasure of entertaining for a couple of days was the so-called John D. Rockefeller of China; and if you cut off his pigtail and took off his pajamas he was a real man; (laughter) and in business he would give us all a run for our money.

"We spent two or three days very pleasantly together and he got me to promise to come over there and build a railroad and in the end we gave them a banquet at the New Davenport Hotel, and at this banquet this Chinaman was very entertaining. He told me all sorts of stories about his country and about the genealogy of his race and about the ruined temples and the ruined walls and the departed glory of his country, and at the banquet each one of these Chinamen did a stunt of some sort.

"One or two of them were educated at Yale and Harvard, and they made some good speeches in English, but there was MY Chinaman who was very profound; and always talked to me through an interpreter; and his stunt was to give a recital, a song of the grand opera of China, which was four thousand years old. Well, I can't describe it, but that song, that weird music, has stayed with me all of this time and I have been trying to place it. This occasion brings it all back and it has just occurred to me where I heard it before I heard the CHINAMAN sing it. I heard Scotty McKay sing the same thing at Tacoma." (Laughter.)

Following Judge Flewelling, Toastmaster McLeod introduced the Editor of the LUMBER WORLD REVIEW, saying, "He is a pioneer in lumber journalism and one whom it is a pleasure for us to have with us tonight."

Mr. Johnson compared the non-scientific "rule of thumb" methods of other years with the scientific days that are now upon us, referring incidentally to the old-time lightning-rod agent, through the medium of Will Carleton's poem, "The Lightning-Rod Dispenser," and drawing a contrast with the SCIENTIFIC lightning-rodding of the present.

He told the parable from McGuffey of the "Farmer and the Larks," and said that the lumbermen of the present day were now ready to do things for themselves in connection with the Federal Trade Commission, the Forest Service and the Bureau of Foreign and Domestic Commerce, as did the farmer of old, when, himself, finally concluded to "cut the wheat."

After the singing of many songs George S. Long of Tacoma, as is his annual pleasure and duty, summed up the work of the congress in a ringing speech which we print in full elsewhere in this paper.

Scotty McKay, who had been humorously maligned by Judge Flewelling earlier in the evening, had HIS inning and insisted that the language in which he had spoken at another banquet of this association was not Chinese but Gaelic, the language that ANY Highland Scotchman would know had been "spoken in the Garden of Eden." Following which Mr. McKay sang a German dialect song and the banquet adjourned.

Annual Session of Pacific Logging Congress

The Eighth Annual Session of the Pacific Logging Congress convened at Portland, Ore., at 9:30 a. m. Thursday, October 26, 1916. President W. W. Peed was in the chair and delivered the following address:

ADDRESS OF W. W. PEED, PRESIDENT PACIFIC LOGGING CONGRESS.

"Gentlemen: The Pacific Logging Congress has passed its seventh milestone and we come to the opening of the eighth annual session. For myself I have often wondered just what was the origin of the congress. It may be of interest to you to know that this gathering today is the outgrowth of a conversation, held in Seattle in 1907 or 1908, between our secretary, Mr. Cornwall, and Mr. English. It is doubtful whether or not at that time they realized that from this conversation there would develop an organization which would become such an important factor in the lumber industry as this congress bids fair to become. To these gentlemen is due I think a generous measure of appreciation and thanks of the logging fraternity of the Pacific coast.

"When I say that the Pacific Logging Congress is an important factor in the industry, I believe I do so advisedly. If this organization went out of existence today, the effect of what has been accomplished at the previous meetings would be felt in the industry years hence. You meet here on a common ground and discuss conditions, methods and even go into cost details which have heretofore been held confidential. As a result of these discussions, the logging end of the business is receiving more nearly its just proportion of careful consideration.

THE PUBLIC ATTITUDE TOWARD THE LOGGER.

"Another phase that should not be overlooked is the effect that these meetings have had on the attitude of the public toward the logger. The need of the industry for capable men of the right type and education, and the opportunities for the right kind of a man, are becoming more generally known, with the result that the work is considered as being on a higher plane than heretofore. More young men are considering it as a business or profession on an equal basis with other engineering professions. Our colleges are recognizing this and have added a course of instruction adapted to the needs of the work and it is gratifying to note that the effort is being made to make this course thoroughly practical.

GEORGE M. CORNWALL, PORTLAND, ORE. Founder and Secretary, Pacific Logging Congress.

"Heretofore, California has been represented at the different meetings by one, two or three. Last year you held your session in that state and I am going to tell you that after the session, one of the most common expressions I heard from the lumbermen of that section was: 'I didn't know the Pacific Logging Congress was like that, and I am going next year if I possibly can.'

GREATER EFFICIENCY TO BE ATTAINED.

"This congress was formed, not as an association for dealing with prices, wages or political questions, but solely for the purpose of getting more efficient results in our work. First, by creating sentiment for the development or standardization of another branch of engineering; second, to create a clearing house for the exchange of ideas relating to our work. In the first case we appear to be well along the way toward successful accomplishment. In the second, however, it appears we have not taken the advantage of the opportunities to the extent it is possible. The machinery for the purpose has been provided, but it is not being used. If it was simply a question of coming to these meetings and listening to the addresses as delivered in the convention, and there was no opportunity for discussion of them around our hotel lobbies or on our excursion, how many of you would come? How long would the congress last? These discussions are the important thing, they do not belong to the hotel or on the train, they are part of this congress, I will say belong to it, and should come out in this hall and be a part of the records of this meeting. The gentlemen who have done their part by preparing their papers going to make up this program, will all welcome discussion of their conclusions. They have from necessity been forced to take only one set of conditions, prepare their papers and draw their conclusions accordingly; they cannot cover a dozen different conditions in one paper; they can, however, tell you wherein the methods might be modified to suit your conditions if you will outline these or indicate what you want. Perhaps some idea you advance may be the means of suggesting to them something they have been looking for to round out their plan. Gentlemen, your committees, and those on this program are doing their part, it is now up to you to do yours. Start something. It doesn't make any difference which side of the fence you are on, start it anyhow. Ask questions. Tell why it will or not work. Don't wait to be called. Even though the secre-

Digitized by Google

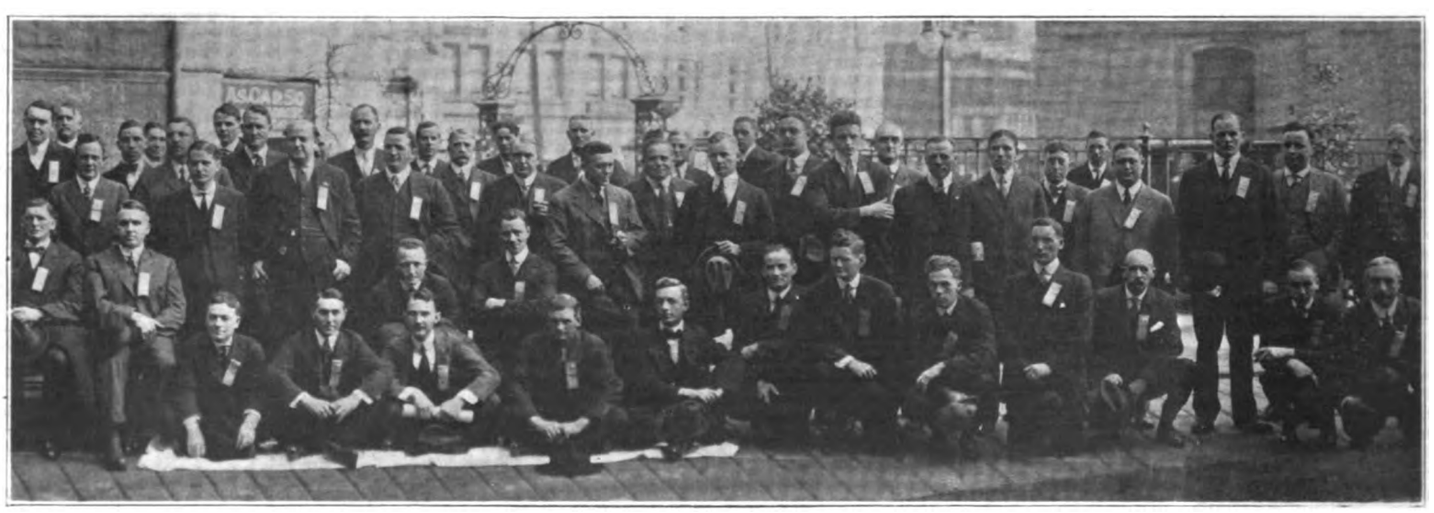
tary didn't put your name on the program, take the initiative and beat him to it by getting it in the record.

"Asking you to bear this request in mind for the next two days, I now take pleasure in announcing that the Eighth Session of the Pacific Logging Congress is formally opened."

Secretary George M. Cornwall then delivered his annual address, which is very enlightening.

"The utilization of the steam shovel for logging purposes has gained considerable headway during the past year. The combination shovel and derrick has found a place in several camps where it has been successfully employed for grading, tracklaying, bridge-building and picking up logs and other uses. A paper on the subject will be presented and doubtless will provoke much discussion.

the efforts of the Pacific Logging Congress, Major Patterson, chief of the Red Cross, was induced to broaden the scope of the work. As a result, Dr. Lipscomb was detailed to cover the Inland Empire, comprising eastern Oregon, Washington, Idaho and Montana, while Dr. M. J. Shields was detailed to cover western Washington district, tributary to Columbia river and western Oregon. The result of the work of these men has been



THE ABOVE THREE PICTURES REPRESENT POSSIBLY TWO-THIRDS OF THE ATTENDANCE AT THE EIGHT ANNUAL MEETING OF THE PACIFIC LOGGING CONGRESS, THE BUSINESS SESSIONS OF WHICH OCCURRED AT THE HOTEL PORTLAND, PORTLAND, OREGON, OCTOBER 26 AND 27, 1916. EASILY THE LARGEST NUMBER OF PEOPLE EVER ASSEMBLED AT A LOGGING CONGRESS AND CERTAINLY A GREAT COMPLIMENT TO THE FOUNDER OF THAT BODY, GEO. M. CORNWALL OF THE "TIMBERMAN."

ANNUAL REPORT OF THE SECRETARY, GEORGE M. CORNWALL.

Secretary Cornwall briefly reviewed the progress of the congress during its eight years of life, and at some length reviewed the year's progress. We quote as follows:

FIRST AID IN THE CAMPS.

"A start was made in 1915 in the state of Washington to interest the National Red Cross in supplying first aid instruction to the men in the logging camps. Dr. Lipscomb and Dr. Davis were assigned for duty in western Washington. Through

indeed gratifying. The loggers take readily to the instruction. An effort will be made to extend the Red Cross first aid work in the camps and mills of the state of California and also through the St. John's Society in British Columbia. There is no more humane mission that can be undertaken in behalf of the woodsman than to teach him how

Digitized by Google

to help himself when accident overtakes him. The Pacific Logging Congress believes there should be the closest affiliation between the National Red Cross and the Industrial Accident Commissions of the Pacific Coast states and British Columbia.

LOGGING ENGINEERING COURSES OF STUDY.

"The present year has witnessed the recognition of the distinct place of the logging engineer in mechanical science. The Oregon Agricultural College, located at Corvallis, Ore., has entered upon its academic year with a full course in logging engineering. It is indeed gratifying to note that the professor was chosen from the ranks of practical logging engineers and is a member of the Pacific Logging Congress.

"At the University of California distinct progress has been made in the course of forestry instruction. The courses of study have been enlarged.

"At the University of Washington the Department of Forestry closed a very active and successful year. The courses have been strengthened. Through the exchange of a tract of timber with the Forest Service, it is proposed to establish a logging camp where practical instruction in logging engineering will be given the students.

"At the University of Montana the Department of Forestry has increased its scope of usefulness.

"At the University of Idaho the courses in lumbering have been broadened.

"It is pleasing to note that the logging industry has been helpful in placing students in the forest during the vacation period, thereby giving them an opportunity to secure actual practice.

GEOLOGIST IN LOGGING OPERATIONS.

"Year by year the logging railroad builder penetrates further back into the timber. The length of these lines is steadily increasing. The building of the Columbia & Nehalem railroad, penetrating the divide between the watershed of the Columbia and Nehalem valleys, a distance of 25 miles of main line, and the practical completion of the Valley & Siletz railroad from the Willamette river to the valley of the Siletz, a distance of 40 miles, are examples of long and expensive roads built primarily for log transportation. On the Columbia & Nehalem line a 1,700-foot tunnel was found necessary. On the Valley & Siletz line many bridges had to be built.

"A study of the geological formations along a line may be the means of preventing serious slides which in many cases are the direct result of cutting the toe of a natural slope. The railroads are employing the services of geologists to study soil formations. It is with a great deal of pleasure that the Pacific Logging Congress is able to present a paper on the value of the geologist in railroad construction by H. N. Lawrie, a well known and very practical geologist. The acceptance of the value of a geologist in logging engineering practice marks a distinct stride in logging engineering. We are making headway.

HIGH LEAD YARDING.

"Perhaps one of the most important advances in logging engineering practice is the adoption of the high lead yarder. At this congress papers will be presented dealing with every phase of this practice involving the handling of the partially suspended log and its loading on the cars. The advantages of the combined yarder and loader mounted on a steel car, over the plan of using two separate engines, have been proven. The growth of this practice has followed along the lines of other similar developments. H. B. Gardner of Orchards, Wash., and Jim McNaughton, superintendent of logging for the Canadian Western Logging Co. of Fraser Mills, B. C., operating on Vancouver Island, were among the earliest pioneers of high lead practice. For a time the idea seemed to slumber, to be revived again with greater enthusiasm than ever. The builders of logging engines have worked out very satisfactorily a combined yarding and loading engine, while the block manufacturers have been energetic in adopting rigging suitable for the work. The logger is nothing if not resourceful and the removing of the top of a tree at an elevation of 150 to 175 feet from the ground, cannot be accomplished without some hazard, when it is remembered that the man who cuts the top must get clear before the top "kicks off." To overcome this danger Harry Eagles, superintendent of logging for the Index-Galena Timber Co., Index, Wash., conceived the idea of placing a string of dynamite cartridges around the tree and setting them off from the ground, thus obviating the necessity for the high climber to remain in his aerial perch while removing the tree top.

ELECTRICITY IN THE WOODS.

"The utilization of electricity as a motive power in the woods has not progressed very rapidly but is again being taken up. An electric installation will be made at the new camps of the Snoqualmie Falls Lumber Co. at Snoqualmie, Wash. The subject has been discussed at previous congresses and will be presented at this session. There is no doubt that with the building of commercial power lines, electricity will yet play a part in the logging business of the west, both for yarding and main line haulage.

LOG FLUMES.

"At the fourth session of the congress, held at Tacoma, the subject of building logging flumes was presented. Since that time the use of flumes for transporting logs in the Inland Empire and in eastern British Columbia has gone forward rapidly. A flume some 30 miles in length will be constructed in Idaho. Flume transportation offers an easy, practicable and economic plan for log transportation under certain conditions of topography and availability of a water supply. The problem of utilizing log flumes for the transportation of large logs has not been undertaken until recently. At the present time a log flume capable of handling cedar logs up to eight feet in diameter is being built in British Columbia. The plan of construction is novel but its practicability is assured.

J. J. DONOVAN, OF BELLINGHAM, WASH.

THE DIESEL TYPE ENGINE.

"The utilization of the internal oil combustion engine both as a prime and auxiliary power is attracting a great deal of attention. The economy of this type of power has already given it a secure place in marine practice. Does the logging field offer an opportunity for the successful utilization of the Diesel type of engine? The congress feels that the subject is one of deep interest and a very able paper will be presented embodying the principles of the Diesel engine. The value of the semi-Diesel type of engine for pumping and other camp uses has been demonstrated and the results obtained will be presented. The utilization of the gasoline engine was discussed at San Francisco. There is a place in the logging industry for the oil driven engine which will eventually be supplied. The use of fuel oil for locomotive and donkey engine service is growing. It reduces the fire hazard and is readily available."

Following Mr. Cornwall's address the following committees were appointed: Nominations, Ed. English, chairman: A. H. Powers, Marshfield; Donald McDonald, Everett; J. M. Dempsey and Joseph Irvine. Resolutions, J. J. Donovan, T. R. Olin, B. S. Painter and W. D. Humiston. Auditing committee, George S. Long, A. W. Laird and W. S. Ballord.

The place of the next meeting was left to the executive committee.

Several announcements were made concerning the Logging Excursion and that the alumni of the Biltmore Forest School would have a gathering at the Oregon grill following the Welfare banquet.

Mr. Goodell made an announcement about the Welfare dinner.

GEORGE H. HIMES PRESENTS A GAVEL.

George H. Himes presented a gavel to the congress in a neat speech, saying that he had commenced logging in this territory as far back as 1857 and knew all about the old time methods. He presented the congress with a very wonderful gavel containing 22 pieces of wood, 18 of them Oregon woods, the others foreign, the range of age of the woods being from 1778 up to recent years. The gavel was presented on behalf of the Oregon Historical Society.

This gavel contained oak from Oregon City; Oregon yew from a tree near Champoeg; black walnut from the oldest tree in Oregon near Eugene; guaicaum from a railroad tie used in the construction of the Panama Canal; minta, a Philippine hardwood; apple, from Hudson Bay Co.'s fort, Vancouver; myrtle, from Coos Bay, Oregon; Douglas fir, taken up at a depth of two feet from the site of the first sawmill built west of the Rocky mountains in American territory, six miles east of the present city of Vancouver, Wash., date of erection, 1827; spruce, from Maine; juniper, from Juniper Flat, Ore.; Oregon grape, the state flower; sage, from Vale, Ore.; crabapple, from Chehalem Valley, Ore.; manzanita, from Rich Gulch, Jackson County, Ore.; pine, from Seaside, Ore.; teak, from the steamer Beaver, wrecked June, 1888; rhododendron, Washington state flower; red cedar, from Wa-chaung mountain, near Milburn, N. J.; camphor wood, from interior of China, a thousand miles north of Canton; oak, from an Indian wagon that crossed the plains in 1843; mahogany, from a rocking chair of Dr. John McLaughlin, Fort Vancouver, Wash., 1845; Royal Ann cherry, from a tree in Milwaukee, Ore., 1847.

Following the presentation of the gavel, Paul E. Freydig read a paper on "Felling and Bucking."

FELLING AND BUCKING.

By Paul E. Freydig.

Mr. Freydig described merit system in obtaining increased efficiency in logging and scaling, and the results of the system as tried out by his own company and several other companies on the Columbia river. He said in part:

"The method of marking and scaling the trees will be taken up in brief: The head bucker assisted by a competent scaler, determines the log lengths, drags the head end of the steel tape, and notches the tree where it is to be bucked, calling the log lengths out to the scaler; the scaler holds the rear end of the tape and scales the logs where they have been marked. In order that the work may be posted by Sunday, the falling and bucking week ends Friday night; beginning Saturday morning each set of fellers starts with No. 1, 2, etc., as each tree is felled, marks the number on the butt of the tree, and to keep his tree apart from the other fellers, marks his initial on the butt as well. The scaler takes down on his pad the feller's number on the tree, but in order to get the tree again for the bucker, and to distinguish one week's work from those of previous weeks, he too places his special mark for that week on the butt of the tree; the bucker places his number on each cut and also on a slip of paper; keeps a record of the trees he bucks, to be delivered to the scaler on Wednesday and Friday nights; the record of each tree, by whom felled, bucked, and amount of scale therein, is now complete and always at hand for future reference. It is the head bucker's duty of course, to see that all cuts are properly made.

"The statement, that the logs cannot be scaled with sufficient accuracy in the woods to warrant a system, is erroneous and misleading; it can be done, and to a greater degree of accuracy than is generally supposed, providing of course, that the proper care and attention are given. The logs are scaled but once. It is essential that the notches are cut through the bark to the sap, thus giving the scaler a correct idea of the thickness of the bark; especially is this necessary in big fir timber; also if the timber is large and the ground steep, making unfavorable conditions for holding the scale-stick properly, a plumb bob should be used for getting the proper distance out on the sides of the log.

"Misleading statements have been made, stating that any system that will offer remunerative incentive for faster work and bigger output will tend to cause less care on the part of the fellers in their natural rush and endeavor to secure ad-

Digitized by Google

ditional bonus money. With this system, from the beginning the aim has always been to first get increased output by decreased breakage; by scaling a few bad breaks for the fellers you can soon convince them that care on their part will net them and the buckers both more money as well as to increase the output for the yarders."

After the reading of Mr. Freydig's paper the secretary read another paper on the same subject by A. H. Powers, which was as follows:

FELLING AND BUCKING.
By A. H. Powers.

"In our experience of the past ten years we are thoroughly convinced that we have had better results by having the work done by the thousand than by the day.

"For the first three years that we cut timber on the coast we did all our work by the day and it became very unsatisfactory in getting men who would do a fair day's work for what we were paying them, as some men were cutting one-half more than the others and it was impossible to check up on them and get the logs cut at a price we could afford to pay.

"We took the average cost of cutting logs for the three years and deducted ten percent for scaling and put a scaler in each camp of three gangs of fellers and five or six buckers and started to number the trees and measure the lengths that the buckers had to cut them, according to the grade and length of the logs required by the mill.

"We have one head scaler who checks up all of the other scalers at our six or seven different camps and who also takes full charge of all scaling and cutting. He scales up, once or twice a week, forty or fifty different trees at each camp and reports his scale and the camp scaler's scale, amounts given each tree, to the main office for comparison.

"All trees are felled by the fallers, which the camp scaler tells them to cut, and faulty trees which he does not wish to cut he marks cull while standing, so as to not have worthless trees felled in the road of our logging.

"In second growth timber we have paid twenty cents per thousand feet for falling and twenty cents per thousand feet for bucking. In fair ground of old growth fir, we have paid eighteen cents for falling and eighteen cents for bucking.

"We scale full scale at the top end of each log, inside the bark. All breaks are scaled out which makes fallers more careful in falling the timber, as neither fallers nor buckers are paid for any breaks."

This paper was followed by another practically along the same lines, which was put in the record but not read. At least it had to do with the bonus system, and was as follows:

BONUS SYSTEM AND EFFECT ON BREAKAGE IN CHOPPING.
By H. L. Henderson.

"During the last few years the movement for efficiency which has characterized all commercial and industrial enterprise, has very naturally spread to all phases of the lumber industry. Labor-saving devices, utilization of by-products, elimination of waste, cost accounting systems, co-operative buying and selling, expert investigations, time and motion studies, all manner of experimental attempts have been made to ascertain the source of economic leakage. In the logging department, efficiency perhaps finds its greatest device to be the bonus system, variously applied to the felling of timber, the sawing of logs, yarding, hauling, milling, even to camp foremen and cook houses.

"All efficiency devices and particularly the bonus system are of course responsible at the bar of experience in the long run, and it shall be my purpose in this article to set forth results of fifteen months of experimental application of the bonus system to the felling of redwood timber in Humboldt county, California, with particular reference to its effect on the vital question of breakage."

Mr. Henderson clearly described the working of the bonus system as applied to his company's logging, giving figures to illustrate. He said in closing:

"Thus by a combination of extra physical exertion with mental energy and skill, the choppers have been enabled to increase their output, and consequently to raise their wages materially. The inefficient have automatically eliminated themselves. If a man does not desire the bonus and is willing to do an average day's work, he may. Thus the men have everything to gain and nothing to lose under the bonus system. I feel certain that the company has profited, getting better falling, done cheaper, with practically no increase in the breakage. So I feel that we are justified in contending that the bonus system as applied to felling of redwoods, benefits both employer and employee, while at the same time neither party is injured."

DISCUSSION OF THE BONUS SYSTEM.

The chairman thought all these papers were worthy of thought and asked for discussion.

R. W. Vinnedge said that it was stated that deduction was made for breakage, caused either by improper falling or bucking, and did not understand how natural defects in the trees, such as stain, could be handled—whether they would be scaled out or whether the bucker would be given credit for that log "whether it was defective or not."

Mr. Powers said that they were to be given full credit in any case.

Mr. Murray wanted to know what comparison had been made between the actual scale "and the scale taken in the works." He thought it would run from 40 to 50 percent.

Mr. Powers said it would run according to the

J. H. BLOEDEL, OF BELLINGHAM, WASH.

soundness of the timber; at times from 30 percent to 40 percent, and at times in very sound timber as low as 8 percent and 10 percent.

Mr. Freydig said: "The object is to have the woods' scale conform with the river scale as nearly as possible." He thought that the woods' scale, car and river scale at the present time checked within 2 percent.

Mr. Vaughn wanted to know how the woods' logs were taken care of when checking up the river scale when scaling woods. Mr. Freydig said there were two ways of checking up the logs, one by checking up the average for a certain period, the "average river" and the "average woods" scale per log. The other method by checking up the total scale.

Mr. Smith wanted to know the difference in percentage of overrun in the Spalding over the Scribner scale.

Mr. Langille said the Spalding scale is merely an extension of the Scribner scale to a large diameter, and that up to a diameter of 44 inches the two scales were the same.

Mr. Smith said that the figures "on our scale" over in Canada seemed to be away out of reason, that 50,000 feet a day could not be figured as an average to a set of "fallers" in British Columbia.

Mr. McGillicuddy said that in the North Bank Co., since the bonus system was established, it was possible, because of the large average per log, and "because the timber was heavy, and it was semi-old growth fir ranging from 100 years old to 450." In the North Bank Co. they had "an experience with this bonus system," and when they finally abandoned the system they found they had paid for some odd million feet more than they really got out into the river, and he believed that "it was several million feet more than was put into the river and sold."

Mr. Danaher wanted to know if "a faller breaks a tree" as a result of improper falling, that breaks his scale, if he got credit for it, and was told that he did not. Mr. Danaher then wanted to know as to the bucker, and was told that the bucker did not get credit for it, either.

Mr. McDonald wanted to know to what extent the faller was penalized, and analyzed his question by asking if the penalty covered "the falling of the whole tree." Mr. Freydig said that if the log was badly split or broken off the regular scale that a "deduction" was made, and if there is a bad break or split it is "scaled off, of course."

It developed in the discussion that the faller and bucker get credit for the quantity of merchantable logs they get out of the tree.

Mr. McGillicuddy said that the Slade people found the "bucking and falling was costing them too much;" that they had too many men in the operation "for the number of trees they were falling and putting down," so they inaugurated a system of contracting, paid 50 cents a thousand to the contractor, letting him hire his own men and be responsible for all breakage, paying him on the "landing scale," which was checked up monthly with the "actual scale," and found very close. He thought the difference in the two scales by that method was 1 percent or less. Mr. McGillicuddy described the actual procedure and program in the woods.

Mr. Painter wanted to know of Mr. McGillicuddy if the price per thousand of the contract included tools, saws, etc. Mr. McGillicuddy said it did, but that the contractor paid the wages of the filer.

The chairman announced that many papers had been offered on the question of "high lead yarding." That four of them would be turned in for publication and one only read, that of F. C. Riley, of the Bloedel-Donovan Lumber Mills, Alger, Wash.

Before chronicling the discussion we will print Mr. Riley's paper, and all the others of the series.

HIGH LEAD YARDING.
By F. C. Riley, Alger, Wash.

Mr. Riley's paper showed him to be thoroughly familiar with his subject, and his description of the high lead system is complete He rounds out his statement as follows:

"This system increases the number of men a little over the old ground yarding and crotch line leading, but the costs are reduced in proportion.

"It does not follow, however, that this system can be adapted to all conditions and circumstances, nor does it cure all the ills that a logger is subjected to. However, where this cannot be used to advantage, some other than the old ground system will have to be used. One thing is certain: On reasonably level ground or up hill it is by far the most satisfactory system to be universally used, especially when used in conjunction with the duplex loader.

"We hear considerable criticism of the high lead with reference to the danger to the men working around it. I can truthfully say that in every case where a man has been injured around our works since using this method of logging, it was either his own carelessness, or was an instance where the injury was unavoidable and would have happened under any circumstances.

"One thing I will say, however, it is no system for make-shift rigging. Use the very best self-oiling blocks and heavy guy wires and have your head rigger examine the rigging every time he goes up the tree. It doesn't take much longer, and may save some man's life."

Herewith is presented a paper by H. B. Gardner, of the Gardner Timber & Land Co., Gardner, Wash., which was not read, but was passed up for printing.

HIGH LEAD YARDING.
H. B. Gardner, Gardner, Wash.

Mr. Gardiner described the local conditions in logging that confronted his company and the determining factors in choosing equipment. Having visited various camps in the west and in the south, he decided upon the treeing skidder he found in use in the south, and which had proved well adopted to medium sized timber and ground not very rough and the hauls short. He described the machine as follows:

"This machine consists of a yarding engine 10x12 cylinders; front drum geared for power and a rear drum geared for speed; the front drum is

Digitized by Google

used as the yarding drum and the rear drum takes care of the haul back line. The drums on this engine are known as wide drums—one drum sets ahead of the other. I prefer the wide drums to the narrow ones, because we find we can get excellent leads. This engine is mounted on a car. The car is swivel trucks and jacks on each corner; directly in front of the engine, and on the same car is mounted a 10x10 loading engine. This loading engine has two drums, side by side drums, and we use the single jack loader. The machine was made by the Lidgerwood Co.

"We prefer the yarding engine and loading engine mounted on swivel truck car to that mounted separately on sleds, because when moving, we merely would jack up the car and turn the trucks and run the car off to one side against the spar tree. This saves putting in a spur, which we would have to do in case we did not have the swivel trucks."

This paper was followed by another that was not read, on "High Lead Yarding," by James O'Hearne, English Lumber Co., Mount Vernon, Wash., as follows:

HIGH LEAD YARDING.
By James O'Hearne, Mount Vernon, Wash.

"High leads, while not known as such, have been in use on the coast in isolated cases for several years, in these instances being used to overcome some natural difficulty, such as putting a bull block on a gin pole or handing it in a tree or get logs up a rock bluff, sometimes being used to prevent excessive wear on rope. Two camps used high leads in practically the same form as they are now, about ten years ago, but it was not until about two years ago that the system began to grow in favor. Now it is the popular method of logging. Some of the advantages claimed for it are: No landings to build; no swamping or sniping; increase in life of lines and increase in output."

Mr. O'Hearne described the high lead in detail, and stated clearly its advantages. His paper is full of interest and information, especially to the logging industry. He said of general results:

"Conditions are so different that it is almost impossible to get at what an average day's work should be. The crew may be doing excellent work in one location getting out fifty thousand per day; while one hundred thousand in another location would be only medium work. Topography of ground, size and soundness of timber, and average per acre are the main factors in determining the output. Medium sized timber standing on the level or where it can be yarded up a slight incline is the ideal condition."

This paper was followed by another on "High Lead Yarding," by C. S. Martin, of the Cherry Valley Timber Co., Stillwater, Wash., which also was referred with "leave to print."

HIGH LEAD YARDING.
By C. S. Martin, Stillwater, Wash.

Mr. Martin's paper comparing high lead and ground yarding was eminently practical. He outlined the general principles of yarding, of safety precautions taken by his company, and gave a comparative statement of costs. He said in part:

"The only real comparison of methods, however, must come back to the question of costs. In that respect I will give you a few figures which will explain our satisfaction with the results we have obtained so far with the high lead system.

"The figures cover the years 1913-14-15-16 and will compare our yarding costs during the three years preceding our adoption of the high lead system with those of the first six months of this vear when using it.

"The ground has been good and has averaged about the same for the four years.

"The average yarding cost for 1913-14-15 was 94 cents per thousand.

"For the first six months of 1916 it has been 82 cents per thousand, a saving of 12 cents per thousand.

For 1913-14-15 our average stand per acre based on actual scale was about 55½ thousand feet.

"This year to July the average on the same basis has been 53 thousand feet per acre.

S. A. Stamm, of the Hamilton Logging Co., at Hamilton, Wash., offered a paper on "High Lead Yarding," which was also ordered printed, but not read.

HIGH LEAD YARDING.
By S. A. Stamm, Hamilton, Wash.

Mr. Stamm recalled the evolution of logging systems and characterized each system in turn. He summarized the advantages of the high lead as follows:

"Saves equipment expense in that we can use the ground yarding equipment with the exception of the purchase of a 36-inch full block.

"Decrease wire rope expense 100 percent; longer life of line account of reduction of amount of the line subject to ground friction.

"Reduces the cost of felling and bucking because the timber does not have to be laid in any particular direction because of the vertical purchase of the spar tree.

"Keeps logs from gouging into the ground and from hanging up on stumps when working within the limits of the spar tree height.

"Saves 60 percent of the landings expense due to yarding both sides of the track from the same spar tree; also on account of longer yarding distance."

DISCUSSION ON HIGH LEAD YARDING.

Mr. Donovan: "Our company, represented by Mr. Riley, has three of these units in use, and the fourth is being built, and while we may not have quite as accurate comparisons as Mr. McDonald has made between the old style and the new, we will have for the next year, and we are confident that this new method is saving us something like 20 percent. We are satisfied, however, when we go to Hoquiam you will find the Polsen logging camp not using the single unit, but with engines down on the ground and loading and yarding entirely separate. I mentioned this to show you that we are not unanimous."

Mr. Murray said that his institution was successfully using the "high lead" with a little different system than any referred to before in the meeting.

Mr. Vinnedge said his company is using the "high lead system" but not the "single unit," for it had considerable difficulty in ridding out spar trees.

Mr. Stewart suggested the use of the core with a small wire center, to avoid the danger of climbers having it broken and falling to the ground from the top of the tree.

There was much talk of very interesting nature, which we must pass over.

Second Session—Pacific Logging Congress

The meeting was called to order at 1:45 by President Peed, and R. M. Fox read a paper as follows:

TOPOGRAPHICAL SURVEYS.
By R. M. Fox.

"The four main items governing timber values, are quantity, quality, logging cost and transportation. These last two are so closely allied that they must be considered together and while they are just as important as the first two, they have been given the least consideration in the past, by either the operator or investor."

Having emphasized the importance of definite knowledge of topographical conditions in an operating unit, and shown by illustration the loss consequent upon lack of such information, Mr. Fox enlarged upon the value of reliable maps. We make abstracts as follows:

"This can all be accomplished by contour maps, for by it we put on paper, in comprehensible form, all the superficial features governing every part of the operation, and construction. Such maps, to be reliable, must be accurate, and they can be made so by the use of proper instruments in the field. By careful study of such maps, the following things can be all worked out and determined, before any actual operations start.

"(a) Properly locate all necessary railroads.

"(b) Determine which are main and which are branch lines, and thus properly construct main lines and avoid expensive constructions on branch lines.

"(c) The amount of timber served by each road, which should naturally govern their construction.

"(d) Enable one to log any part of their tract desirable with the knowledge that the road built to that particular part will be a part of the whole system.

"(e) Approximate cost.

"(f) Pre-determine all grades.

"(g) To know what machinery will do the work at the least expense.

"(h) The kind of railroad equipment necessary.

"(i) Enable the tract to be divided into its natural logging chances.

"(j) To plan the logging operations with the minimum amount of railroad construction and machinery.

"(k) To determine the value of adjacent timber lands by knowing beforehand, the cost and amount of railroad necessary to serve it.

"(l) To pre-determine the possible flow of water in all creeks, after the timber is removed.

"(m) Anticipate in advance, right-of-way necessary, thus making it possible to acquire it before actually needed for construction.

"(n) Plan a complete and practical system of trails and fire lines for fire protection.

"(o) Enable one to plan, work and solve logging problems in the office, in a few hours, which would take days of work in the field and then with no assurance that the best solution has been reached, either in cost of preparation or economy of operation." * * *

"Let me call your attention to two conditions that appear at once on the relief map, which would take more time to see or comprehend on the contour map. One is the steepness of a side of the mountain along the main stream and that the distance across is not very great. It brings to mind at once, the possibility of an aerial logging proposition, reaching a very large area. Then in another place we see a precipice, both of these conditions are on the contour map, the one is indicated by the number of lines and the other by converging of the contour lines.

"The relief map is made in sections, sixteen inches square, representing a square mile. Where they cover large areas, these sections can be filed away and only those representing the locality under consideration used.

"When timber was cheap and close to transportation, one could take a chance on all of these things but as the price advances, and the supply recedes from transportation, the time will come, and I am not sure but that it is already here. when it will take something more than a stock township plat, checked in red pencil, to indicate the location of a timber tract and a carbon copy of the timber estimates by sections on tissue paper, to interest either capital, a buyer or produce an economical and efficient operation.

"Every one of the conditions affecting the operation and transportation, affects the stumpage price and it is not possible to determine the true value of any stand of timber without having full detailed, reliable information covering these items as shown on a contour map."

The chairman remarked, after the close of Mr. Fox's paper, that the loggers had heard "one of the most complete papers on topographic work to which the logging congress had ever listened," and referred to the fact that as late as 1909 at the Seattle meeting that topographic maps were considered an innovation. Mr. Fox offered to answer any questions, and said he would relish a chance to argue the question with anybody that disagreed with him.

The unanimity of the congress in its agreement with Mr. Fox rather indicated that the matter of "topographical surveys" had been completely settled by the loggers of the Pacific coast, and like George M. Cornwall's logging engineer, this feature of logging has at last come to stay.

H. N. Lawrie, who was about to read a paper entitled "The Geologist in Logging Operations," felt very much indebted to Mr. Fox, because he felt that Mr. Fox had cleared some points that he himself was about to elucidate.

Mr. Lawrie then read his paper, as follows:

THE GEOLOGIST IN LOGGING OPERATIONS.
By H. N. Lawrie.

"The geologist, like the logger, has been brought up to doubt and is a human being of much the same species.

Digitized by Google

"The logger has a well defined seventh sense which he uses freely in the woods in estimating conditions and reducing the element of risk. The geologist is born with much the same sense in reading from the conditions of the soil, water and rock as they occur in nature, the pitfalls to be avoided and is enabled from his experience to prescribe the best methods of construction to be used in building and maintaining the grade of a railroad.

"Large bodies of timber are found further away from fixed lines of transportation as time passes. The logger is, therefore, confronted with a rough topography to negotiate in order to tap this timber. This gives rise to engineering problems and those of a geological nature which are difficult for the logger to solve without the aid of a specialist in consultation.

"The geologist should follow the surveyor and should be called upon to submit the following information:

"1. Prepare a classification of all materials to be cut.

"2.Note the presence and location of water courses and determine, if possible, their origin. It is important to know whether the water is confined to the surface or whether it is artesian and flowing through the formation itself.

"3. Determine so far as possible the difficulties to be met in construction.

"4. If surface evidence is not sufficient, prospecting must be done in order to develop facts concerning the formation. The geologist should report the need for such work and give the system of prospecting to be employed at each location.

"5. If there are any tunnels to be driven, faults in the formation should be carefully noted and the direction and extent of the movement along such faults determined.

"6. It usually works out that the information supplied by the geologist can be taken advantage of at this point by either changing the grade or line to avoid any serious obstacles to construction.

"7. It frequently occurs that drainage systems should precede excavation in order to insure stability to the material cut, and to avoid subsequent slides. The need for such drainage systems should be anticipated and laid out by the geologist.

"8. After making such grade changes at the recommendation of the geologist, a final grade and line should be accepted and construction begun.

"9. If anything unusual occurs in the course of construction the geologist should be called upon to re-examine the condition and report means of overcoming the difficulty.

"10. After the cuts are made and ballast is needed for the roadbed, it is well to have the geologist pass upon the various rocks available in order to choose the best one for this use. It frequently occurs that a rock after being freshly cut, proves to be very poor and slacks rapidly with continued exposure to the weather."

Mr. McDonald said that Mr. Lawrie's paper was very timely to him, for he was in the midst of a problem upon which it gave him enlightenment.

At this point the loggers were given a recess for five minutes. When the meeting had again come to order H. L. Shepard read a paper, as follows:

"THE DIESEL ENGINE."
By H. L. Shepard.

Mr. Shepard gave an interesting description of the Diesel engine, the story of its experimental career, and its present industrial application. With reference to its use in logging operations he said, about the possible usefulness of the Diesel in the woods:

"In their present state of development I do not believe they can, or will be used to advantage there, principally on account of excessive weight. A good slow speed heavy duty marine Diesel weighs over 300 pounds per horsepower and a good stationary Diesel in most cases, over 500 pounds per horsepower. It is possible, however, that high-speed, light-weight marine Diesels may soon be developed to a point where they might be used to advantage in the woods, but the performance of this class of engine so far in our submarines does not make this contention seem probable—at least not for some considerable time to come. It seems reasonable, however, to prophesy that at no distant date that the Diesel driven locomotives will be coming out, but it is doubtless a fact that four or five years of test service experimenting will be required before you would be justified in purchasing them."

The chairman before allowing a discussion to be opened of any nature said that another paper had been prepared by Walter L. Stout, which should be allied with the subject of "The Diesel Engine," and Mr. Stout read the following paper:

DISTILLATE DRIVEN PUMPS FOR LOGGING CAMP SERVICE.
By W. L. Stout.

"Our experience with distillate pumps has not covered a length of time sufficient for us to have eliminated all the difficulties in getting an ample supply of water for our camps, but they have eliminated so much of the cost that we consider ourselves well paid for the effort to get away from the old time steam pump, with its failures at critical times, its cost of movement from place to place, its fire hazard, its labor cost, and the amount of good logs used to keep it in fuel. We do not mean to say that these conditions are prevalent generally, but they were very much in evidence in our camp, somewhat aggravated perhaps by the rugged topography of the country. We began using gasoline driven pumps about two years ago. A little over a year ago we installed our first distillate pump, and now have five."

MAJ. E. G. GRIGGS, OF TACOMA, WASH.

Mr. Stout described the system as installed by the Coats-Fordney Logging Co., and stated his conclusions as follows:

"There may be those who handle the water problem in better ways, but from our own experience we are led to the conclusions that the pumping units we have practically eliminated the fire risk, are cheaper to move, are just as dependable, and will operate on a cost sufficiently less than that of a steam pump to pay for themselves in six months."

Before entering into any discussion of the engine question we print herewith J. D. Young's paper, as follows:

"LOCOMOTIVE CRANES IN THE LOGGING CAMP."
By J. D. Young.

"Some years ago the writer purchased a small locomotive crane, weighing about forty tons, with a lifting power of twelve tons, on a twelve-foot radius, equipped with a clamshell bucket, one yard capacity; also with a steam shovel attachment and a three-quarter yard steam shovel bucket to be used in grading roads in the logging camp.

"We have been successful with this machine beyond our expectations, having reduced the cost of excavating from twenty cents per cubic yard, which was our approximate cost with the drag scraper and donkey engine, to about fifteen cents with the locomotive crane."

Mr. Young gave a detailed description of the crane and its adaptation to logging work, and summarized his experiments as follows:

"We have also found the locomotive crane very useful and economical in the handling of steel rails, ties and other heavy material, from barges and cars, to be used in construction work, having taken 240,000 feet of ties out of the water and loaded them onto cars in one day, with a crew of eight men.

"While the locomotive crane has not solved all the problems that confront the logger, yet I consider it an important step in the evolution of the logging business whereby improved machinery is taking the place of hand labor."

Several engaged in the discussion on the Diesel engine, and G. F. McDougal said that all loggers had outgrown the old 9 by 10 yarding engine and the line hose; they had forgotten that a pipe does not necessarily consist of a hole with some iron around it, and that it was a mistake to think that an inch pipe was all right for a logging camp, unless it was a short one. He said that if you undertook to pump 1,500 gallons of water an hour through a pipe a mile long that the gauge pressure would show 1,000 pounds to the square inch, due to friction, or an equivalent to pumping over a hill slightly ver 2,300 feet high, which is out of the question. A 1½-inch pipe would give a pressure of only 115 pounds per square inch. Mr. McDougal said that the expense of running a distillate pump was about $15 a month for an ordinary camp. A steam pump with a man to run it would cost $100 a month.

W. D. Peaslee here read a paper on "Electric vs. Steam Logging," as follows:

"ELECTRIC VS. STEAM LOGGING."
By W. D. Peaslee.

"The final answer to the question as to which logging machine is most suited for a particular duty is made up of two parts. The first and most important is represented by the dollar mark, and is a comparison of all the advantages and disadvantages that can be expressed in terms of money, met with in doing the work with each machine. The second consists of more intangible advantages accruing from the operation of one or the other which cannot be readily expressed in dollars and cents.

"In this paper an endeavor will be made to compare the electric and steam donkeys on as reasonable a basis as possible with especial attention to the question of cost and brief mention of the factors that are not readily evaluated when they bear on the question."

Mr. Peaslee made a close analysis of the cost of logging by steam and by electricity. The facts and figures he presents in this paper are informing and so presented as to be worthy of close study by the logging fraternity. He brought his paper to a close with the following statements:

"In conclusion, then we see that in tangible easily valuated costs and considering all costs, the electric donkey will handle logs at a saving over top notch oil burning steam donkeys of $.1865 for 1,000 feet B. M., and for ordinary service will show a saving of $.4543 per 1,000 feet B. M. These investigations were made for small camps, and larger camps will usually show better results, as the transmission line to supply one donkey will cost as much as one to supply ten, thus reducing this charge.

"Many cases arise, however, wherein electric logging cannot be made to pay a reasonable return on the money invested, and in such cases the only answer is Life's famous advice to young men about to be married—don't.

"The success of an engineering project is always measured in terms of the earnings it secures from the money invested, and it is on this basis that the decision for or against electric logging must be made. As scientific achievement there is no discussion, it can be done and done well, but as an engineering feat each project must stand or fall by itself, on the basis of the earning power of the money invested."

Mr. Laird said they had been using two "electric donkeys" in connection with the Elk plant of the Potlatch Lumber Co., because at the Elk River plant they generated more electricity than they had need for. They carried the electric power into the woods six miles, and were operating the engines with considerable satisfaction. These electric engines were geared up so they would work faster—they are sky line rigs. He said their own difficulties had been from mechanical imperfections, which had been overcome.

It was developed in the discussion that the "electric donkeys" that furnished the power to

Digitized by Google

pull logs in over a stationary wire had not been as successful in their first installation as latterly, and that the modern machines very satisfactorily handled logs over the ground. Mr. Peaslee referred to the fact that he had seen a log 32 feet long and 28 inches in diameter pulled 16 feet into a clay bank before the cable broke—and this with an electric donkey.

At this juncture copies of the proposed laws that would be enacted in California to minimize danger in logging operations were distrbuted, and the members of the congress were urged to read them carefully, as the matter was to come up for an earnest hearing in the next day's session.

After some announcements were made and letters of regret read, the Welfare Dinner was announced for that evening, and the congress adjourned.

Pacific Logging Congress Welfare Dinner

It was a notable audience that greeted the voice of A. W. Laird at the convocation of the Welfare Dinner at 6:15 p. m. on the evening of October 26 in the Hotel Portland. This dinner was to be historical, an event to look back to and pattern after, and the feeling of it was in the atmosphere.

Two very wonderful addresses made at this dinner we have utilized in another department of this paper, on account of their character, and several other addresses delivered at this dinner deserve just such distinction.

Mr. Laird has become an institution in connection with this ceremony and as usual he was toastmaster of the evening. We are glad to quote herewith the substance of his address:

ADDRESS OF A. W. LAIRD AT THE WELFARE DINNER.

"There are few people, whether prosperous or not, who do not believe in man's humanity for man; and there are very few of us who have not experienced, during our periods of activity or inactivity, some of the feelings of self-denial. We have made sacrifices, we have experienced wet and cold, and because we have endured these things we now have a more perfect enjoyment of the larger and better things of life. As we study our work, no matter how hard we find it, no matter how perplexing the problems as we look over the situation with respect to economies in our operation, we find it more necessary to consider the welfare of our men, the welfare physically, mentally and spiritually. We find that it has been wise for us to conduct "Safety First" campaigns. We are engaged also in getting helpful and instructive lectures and discourses before our men in the camps and the mills. The well man in his mind is a more efficient man; the well man in his body is a more efficient man; and we have learned that it pays to take better care of our men.

"We ourselves find that play time is a good thing for us. We enjoy our play times, and we have come to realize that other men that may go into a camp and who are working there set hours for the day come back to the camp without much chance, such as those of us who live in the city, or near it, may occasionally have. These men have no such chance to enjoy the lighter things of life, and therefore we have been providing for them reading rooms or comfortable places for sociability, where they may play games or where they may enjoy music. These lighter forms of activity in a social way are absolutely necessary, because we know that the man who cannot smile but who can be made to smile is a better man; we know that the man who makes a little fun in the camp, who can bring smiles to the faces of his companions, is a better man; and if we ourselves can in any way bring about this we have accomplished something for the betterment of life in that particular camp.

"Now we have not done this altogether with the idea of pecuniary profit, of getting that much more efficiency and value out of our men, so many more dollars back for what we have put into it, but we have done it because we believe in fair play. I think all of us who are enjoying the better things of life in these days of larger life are willing to adopt a policy of fair play, and so far as we can, spread a little of our sunshine, even though we have not much.

"The men, I believe, too, do not care for pure donations. They, in most cases, would prefer to accept a share in the chance to have better things. We have found in our work that men often are willing to contribute in some measure commensurate with their income something to this larger life which we are trying to bring to them.

"These welfare discussions which we have been engaging in the last few years have been bringing more and more of our operations into line along the paths of higher usefulness and with a thought that our men shall be cared for in a way that will make their duties more pleasant to them. We want to give them the perspective, so that as trifling things come up the joys which they shall have in their recreation hours will lead them to see the slightness of most things that some people might call trouble.

"This welfare work has taken on different phases. As I have mentioned, we have done a good deal along the lines of first aid and we have had talking to our men in the camps and at the camps men who have been qualified to speak intelligently and helpfully to our men. I am very glad to say to you tonight that we are fortunate in having Dr. M. J. Shields, who is the field agent of the American Red Cross Society in this Pacific coast district, and he is here tonight with us and is to favor us with a talk on his work, and I am sure we will all enjoy listening to him in this discourse."

Mr. Laird then introduced Dr. M. J. Shields, who prepared two papers for this congress, one entitled "First Aid in Logging and Lumber Industry" and the other "Sanitation and Hygiene for Logging Camps."

The first named paper Dr. Shields discussed at the Welfare Dinner in rather an informer manner.

THORPE BABCOCK, OF SEATTLE, WASH.
Secretary West Coast Lumbermen's Association.

During the sessions of the congress Dr. Shields gave a demonstration of "First Aid" work in the court of the Portland hotel and we have elsewhere in this issue given a pictorial representation of that affair and shall forego the pleasure of printing Dr. Shields' set papers until a later date.

At the Welfare Dinner Dr. Shields paid a great tribute to George M. Cornwall, A. W. Laird and to the many others who had assisted him in his work and was especially appreciative to Dr. Lipscomb of the American Red Cross, who was with the Logging Congress last year in similar work.

Toastmaster Laird said that in addition to the first aid work so ably presented by Dr. Shields, there is the other phase of the welfare work conducted by the Industrial Young Men's Christian Association through their club houses by John A. Goodell, who had prepared some pictures to throw on the screen to illustrate this work. Before seeing the picture part of the entertainment a flashlight picture was taken and Mr. Cornwall read some telegrams of regret.

MR. GOODELL'S ADDRESS AT THE WELFARE DINNER.

In the first place Mr. Goodell described what he expected to do in the way of pictures, referring to the congress as George Cornwall's Logging School and told the story of the supply preacher who described the condition in his parish to the bishop by saying: "Bishop, things are looking up down at Jonesville; we are all looking up; the fact of the matter is we are flat on our backs and we can't look any other way." Mr. Goodell said that naturally the welfare work took on in a sense the color of the lumber business in its attributes and of course had moved slowly during the last year but he was hopeful for the future, as the lumbermen were hopeful. He said a particular thing that the welfare work has accomplished during the last year has been the lessons in thrift that have been taught the loggers.

In the pictures which were then shown were included pictures of various buildings, notably the ones erected by the Merrill & Ring Logging Co. in their operations on the Olympic Peninsula; those at the Booth-Kelly camps; the one at Rose Lake, Idaho; the one at McLeod; the one of the Puget Mill Co. at Gammell; and the equipment of the Cherry Valley Logging Co. at Stillwater, Wash.

Mr. Goodell wished that Mr. McDonald and Mr. Larkin of the Cherry Valley Co. were present to discuss their affairs, their bunk cars with running water and steam heat, etc., and their reading room on wheels. He then called on Mr. Donovan to describe their bunk houses, which he did.

Referring again to the thrift exhibits Mr. Goodell said that the association did a great deal of propaganda work along this line by pictures that would attract the working men, showing the wisdom of thrift and saving and the folly of wasting their substance in riotous living.

After Mr. Goodell's talk, the toastmaster introduced Russell Hawkins, who had not expected to talk.

MR. RUSSELL HAWKINS TALKS ELOQUENTLY.

"Mr. Chairman, Ladies and Gentlemen: There has been some mistake made. I am no talker. In fact, I feel this minute just like Henry Ward Beecher felt once when walking down the streets of Brooklyn. He saw a little lad trying to reach up for the push button or the alarm button on the front door of a house, and he could not quite reach it. Henry Ward Beecher walked up the twelve or fourteen steps, and he said, 'Little man, can't you reach it?' The lad said, 'No, sir.' 'Well,' he said, 'I will push it for you;' and in about two seconds the vestibule door opened and the little fellow said, 'Now, Mr. Beecher, we ought to run like hell.' (Laughter.)

"I never expected I would be called upon to give my meager experiences to this audience, because I have had but little. I have been down on liquor in the few institutions I have been connected with because I felt the institution could make more money by making the other fellow work and develop the ideas that the other chaps showed me were necessary for efficiency and for profit. I have not been a factor in the development of anything in the way of modern camps, because the boys who are with me suggested the ideas that our company perhaps put into effect through the means of their pocket books.

"The only reason that I can explain to you that impelled me to follow up the judgment of the boys who have been associated with me with respect to better conveniences for our men in the camps, perhaps, was gained by myself when, as a lad in the late eighties, I was thrown into an iron ore camp in Cuba, fifty miles east of Santiago. I was hired as a kid to go down there for more money than I had ever thought was in the world, on a year's contract, and I will tell you frankly it was the rottenest camp that the world ever saw or ever will see. I stayed my year out and came home with some of my savings, and I made up my mind then, if I was ever fortunate enough to be a principal or to be associated with any institution that had to house men they would at least be housed cleanly, and we would give those men at least the conveniences and all the luxuries that we could afford to give them, efficiency considered.

"When I came to this Columbia River district nine or ten years ago and it was suggested that we put in a sanitary camp lots of them said: 'Hawkins is a damned fool, he is wasting money on his camp; he is giving them shower baths, he is giving them lockers, he is giving them dry houses for their clothes; he is giving them coffee at three o'clock in the afternoon.'

"I may have been a fool; my boys didn't think so. We had the best camp that was ever on these

Digitized by Google

waters, and it is just as good today as it was then. In the month of April this year this camp, with two hundred and four men, bohunks and all, produced ten million six hundred thousand feet of logs.

"I believe that in order to get good men to work for you, you have got to take an interest in them, and not a patronizing one. Give them value, but make them pay for it. We make them pay for what they get, in work, and I think they are happy. We are happy. And I want to tell you that you can't go too far in giving the boys cleanly surroundings, the comforts, the physical necessities that they require when they get through with a hard day's work; and I hope SOME day to build a camp that will be far ahead of anything that now exists." (Applause.)

Mr. Laird called on C. A. Smith, who said that he had very much the same feeling that Mr. Hawkins had about speech making and felt very much like taking the advice of Mr. Beecher's boy. But it was true he had some experience in the lumber business in the east and very little on the coast and that most of the loggers present had forgotten as much as he had ever known.

A letter was read by Mr. Cornwall, the secretary, from C. E. Crownover, Department of the Interior, United States Reclamation Service, Meadow Creek, complimenting the work of the Young Men's Christian Association in welfare work.

Mr. Goodell introduced Rev. Dr. Thomas Whittles of Duluth and asked him to recite what was being done under the direction of the Presbyterian church for the men in the camps, not only for Minnesota but the west. Dr. Whittles wondered how he was going to handle such a subject in ten minutes and felt himself much in the same position as the Swede boy who had stepped out on a floating log and was warned to jump and who had replied, "How can I yump, when I got no place to stood."

He said it was a little difficult to show grand totals of results for where the propagandist climbed up one step he ofttimes slipped back a step or two and put himself in position of Colonel Roosevelt's banana man whom the Colonel had asked concerning the character of his business, and who said in reply, "What I make on the peanut I los'a on the damn banan." He had the feeling some times that that was the camp situation.

He thought the whole matter centered around permanently improving the men and to no one feature of that kind of work could be attributed all the success. The men needed to be taught a realization of their individual responsibility for their fellowman, and that would mean more logs.

Mr. Bert Mitchell, of Meadow Creek, made an interesting talk, going into the details of his work fully. He, too, dwelt upon the religious side of the question, citing many examples. He, too, had been working for his men on the question of thrift and had accomplished much.

In the thrift campaign during the year he had handled $15,000 of the men's pay checks and $10,000 of that stayed in the bank for a longer or shorter period, and about $4,000 of that money, or a little less, is still in the bank.

Following this gentleman's talk, J. J. Donovan was introduced and he in turn was followed by George M. Cornwall, the full text of their remarkable speeches being printed on another page.

Mr. Laird related the effect of the prohibition question in Idaho. He said that it was not quite so easy to get the men into the camps now but they were better men and that is what the lumbermen wanted. He had talked to one of his foremen on the subject quite recently, who had expressed himself concerning prohibition in Idaho by saying that if the thing was to be done over again "fully 75 percent of the old booze fighters would vote for Idaho to go dry tomorrow." Here the Welfare Dinner ended.

Third Session of the Pacific Logging Congress

The congress was called to order by President Peed at 9:30 A. M., and the president remarked that when the congress had adjourned the evening before it was discussing the question of electricity in the woods and that there was left on that part of the program yet to be given a paper on that subject by Allen R. Ransom, an electrical engineer of Portland.

Resolutions:

The Eighth Pacific Logging Congress desires to emphasize the educational and fraternal features of this organization and notes with pleasure the increasing interest and earnest co-operation of its members.

We urge the extension of Workmen's Compensation to all districts covered by the association and reiterate our approval and encouragement of such legislation, including first aid, and based on some contribution by the employees, the employer and the state.

The investigations being made by the various forest schools and universities, into strength, life, uses and care of woods, is most commendable, and we express to the men, young and old, who are doing this work, our appreciation.

While our members are engaged in the work of transforming the forests into forms useful to man, we are doing so with full regard for the future and with every endeavor to avoid economic loss. We commend all engaged in developing new methods of cutting, handling and manufacturing, which reduces waste.

We are pleased to note the increased efficiency and co-operation of the various fire-fighting organizations, private, state and national, and the small loss during the past year.

We respectfully call to the attention of the state and national governments, great areas of cut-over lands, now waste, which should either be sold for use as farms and pasture, or re-forested.

Great progress has been made during the past year in the improvements of camps by making them brighter, more sanitary and more convenient. Even greater progress has been made in the improvement of the spiritual and social advantages afforded our employes.

While the good work along these lines should be continued and broadened in scope, we feel that the next upward step should be taken by furnishing certain educational facilities and advantages in our camps.

Education has always been worth more than it cost and the man who feels the need of greater knowledge, particularly along the line of his work, should be able to get at least the rudiments of an education in the camp evenings.

There isn't a man in our employ who would not welcome and profit by occasional short, simple talks on such subjects as elementary physics, camp sanitation, first aid to the injured, the physical properties of wood, forest mensuration, economics and mechanical drawings.

Since an enlightened employee is a better employee, we believe that some provision may well be made in our camps by a certain reasonable amount of educational work.

We express our thanks to the various railroads: the Northern Pacific, Great Northern, Spokane, Portland & Seattle, the Spokane Inland, Southern Pacific, the Oregon-Washington Railroad & Navigation Co., Chicago, Milwaukee & St. Paul and the Northwestern Pacific for reduced rates and courtesies extended.

The attitude of the daily press of Portland in giving prominence to the proceedings of the Congress is appreciated, as is that of the trade press toward past gatherings.

We thank the management and employees of the Portland Hotel for facilities granted and good service rendered.

We express our high appreciation of the lavish hospitality of the Columbia River Loggers' Association, the Grays Harbor Loggers' Association and the Polson Logging Co., also Geo. K. Wentworth, Jr., for automobiles furnished.

The success of the present Congress is evidence of the ability and hard work of our officers, whom we thank.

Since our last convention, God has called home four valued members. Their faces we shall see no more in this life, but their memory will be with us to the end.

To the families and friends of John R. Toole, James E. Gowen, Edmund L. Gaudette and James Ward Dempsey we convey our heartfelt sympathy.

J. J. DONOVAN,
F. R. OLIN,
D. S. PAINTER,
W. D. HUMISTON,
H. R. MacMILLAN.

Mr. Ransom read his paper, excerpts from which we print below.

"ELECTRICITY IN THE WOODS."
By Allen R. Ransom.

Mr. Ransom's paper was highly practical, and dealt with the problem of getting the electric power to the point of service. We quote a few paragraphs:

"Owing to the changing locations of logging camps it is generally impracticable to build a power generating station of either the steam or water driven type for this service. Consequently the source of energy is generally a logging company's sawmill; a transmission line of a large power company; or from a transmission line from the mill along the logging road to the point where it can be taken off at a lower voltage for the camp.

"As to the distribution of power in camp, this offers little difficulty. The voltage is not greater than 440 and is not dangerous. The donkey motors are generally supplied direct from the main transformers by a 3-conductor flexible armored cable which can be as long as 1,000 feet if necessary and allowing that radius of action from the transformer station. The low voltage wires for the camp can be carried also in a 3-conductor cable and distributed at the camp for lights and other purposes. Small motors can be used for operating forge blowers, compressors, drill presses and similar tools. At the present time the electric cooking range has not become a general utility article for rough service, but it is not to be eliminated as a possibility for camp use where cheap power is available. The hot water bayonet type heater is a success and the air heaters are becoming more generally used.

"All of these devices tend to reduce labor, and add to the general mobility of a camp. In cold, disagreeable weather there is a great comfort to be able to have light, power and heat instantaneously."

Mr. Peaslee was reminded by Mr. Ransom's paper of a statement in his own paper read the day before that the movement of an electric donkey for a distance of three miles had been figured at $600. That point had been brought out very clearly in Mr. Ransom's paper in that it takes account of the salvage value of the copper wire, insulators and the labor for taking down and restringing the wire.

Mr. Cornwall made some announcements.

At this juncture the question which was to produce the greatest amount of discussion precipitated at the congress made its entry, viz: "Tentative Logging and Sawmill Safety Orders Prepared For the Safety Department of the Industrial Accident Commission of the State of California," which was the title of a thirty-seven page document that had been distributed the night before by President Peed with injunctions to the loggers to read and digest it in order that they might be familiar with the proposition when the address should be given as scheduled for Friday morning by James C. Bennett, safety engineer, California Industry Accident Commission of San Francisco.

In introducing the subject Chairman Peed, who is very familiar with all the movement, said that he believed Mr. Bennett's idea in coming to this congress was to get a broader viewpoint of this

Digitized by Google

question than the lumbermen of California could give him.

He then called on Mr. Bennett. Mr. Bennett read a technical review of the question which we print in full.

PROPOSED SAFETY ORDERS FOR EMPLOYEES.

By James C. Bennett.

"Since a considerable number of you gentlemen come from elsewhere than California, a brief resume of the work that has been done by the safety department of the Industrial Accident Commission of California may prove a desirable introduction to the discussion which it is hoped will be held on the proposed logging and sawmill safety orders.

"Throughout all the work of the safety department the basic requirement has been the establishment of reasonable orders. This, of course, has meant that there must be no arbitrary rulings made by the commission or its representatives and furthermore, that we should be unwarranted in merely borrowing from one industry some particular standard that might conceivably be applied to another.

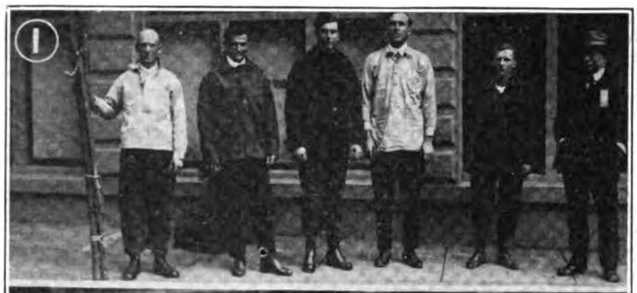
"During the past three logging seasons, two engineers of the commission have spent practically the entire time in the woods, on the logging railroads and in the sawmills of California. As a result of the first two seasons' investigations, a number of points had presented themselves upon which it seemed evident that there should be some effort made, either to standardize practice or to establish some regulation looking to the reduction of the hazard to the individual workman.

LOGGING AND SAWMILL SAFETY ORDERS.

"Upon going over the work of those two seasons, we were impressed by the difficulty of securing definite expression from the various operators upon the points that from our standpoint had shown the need of consideration. This was a very natural attitude since the general plan of this work was a somewhat new departure, particularly on the Pacific coast, and may have been variously looked upon as either something of an intangible nature or something that possibly was so far in the future as to be of no direct and individual interest. As a result, therefore, of this observation and of the studies that had been made, the safety department put into printed form a set of recommendations for logging and sawmill safety orders. These recommendations were distributed as thoroughly over the state as our knowledge of lumber companies would permit and following their distribution, the season just closing has been spent in visiting practically every sawmill and woods camp in the state of California for the express purpose of finding the individual conditions as they would be affected by the recommendations that were sent out. Following this present season's work the original recommendations have been modified and distributed in pamphlet form at this meeting.

PUBLIC HEARINGS IMPORTANT.

"If I may digress for a moment, I will explain briefly the method of procedure that has been followed in all cases for the establishment of safety orders in California. Our compensation, insurance and safety act expressly provides that all orders of the commission must be reasonable. Benefiting by the experience of the corresponding commissions in Wisconsin and Pennsylvania, each set of orders that has been issued by the California commission has been originally worked out by a committee made up of representatives of employers and employees of the industries which would be directly affected by the proposed orders. This committee has spent such time as has been required to cover the particular field for which it was appointed and the results of deliberations have been printed and distributed thoroughly over the state. Accompanying the recommendations of the committee was a notice to the effect that public hearing would be held on a given date. In most cases public hearings have been held both in San Francisco and Los Angeles. At the public hearing the entire recommendation of the committee has been open to discussion before the Industrial Accident Commission sitting as a body. If points of vital importance develop at the hearing, such questions may be referred back to the committee for revision and, if it be the sense of the meeting at the public hearing, a second hearing may be held, though, as a broad statement, there have been no calls for subsequent hearings on any given set of orders. It is the intention to



No. 1. Dr. M. J. Shields of the American Red Cross and his crew of men who performed the demonstration.

No. 2. Proper method of preparing a broken limb and show preparation for stretcher.

No. 3. Treating a scalp wound and preparing splint for injured arm, using moss and a shingle.

No. 4. Showing method of treatment for severe face burn from explosion of coal oil or gasoline stove. Head entirely covered with cloth with holes cut for the eyes.

No. 5. Showing the treatment of an injured eye.

No. 6. This picture shows one of the methods of preparation in the rescue of a man from fire.

No. 7. Illustrating "One Man" assistance in rescuing injured unconscious man.

Digitized by Google

follow this same procedure in establishing orders relative to the lumber industry. Owing, however, to the widely scattered nature of the lumber industry and the limited time at the disposal of the majority of those engaged in lumbering, it seemed advisable to reduce as far as possible the number of points and questions which would require consideration by the committee. Hence the plan of sending out the recommendations of the safety department prior to the meeting of the committee. The committee has been appointed and is to meet in San Francisco November 22. It is anticipated that a free discussion at this time of the entire subject covered by the proposed orders will prove of great value to this committee in its preparation of the forthcoming orders and it is also hoped that, at least in an unofficial way, steps may be taken whereby such orders as may be worked out in California or in the other coast states may show at least a high degree of uniformity as compared with those of the neighboring coast states. Such a uniformity will undoubtedly tend to a lessened demand upon the operators, to a greater familiarity of employes with such requirements as may be established and to a much better and fuller understanding and co-operation between the respective departments of the states, the companies and their employes.

HELPFUL CO-OPERATION OF THE INDUSTRY.

"I may say in passing that the spirit and degree of co-operation throughout the lumber industry, which has been found by the representatives of California's Safety Department has been extremely gratifying and I take this opportunity to express, on behalf of the commission, our full appreciation of the great assistance that has been rendered in our efforts toward a full and correct understanding of true working conditions.

"The fact that the proposed orders have little or nothing to say that would indicate any responsibility on the part of employes must not be interpreted as any failure on our part to recognize that there is such a responsibility. Contrarily, we not only recognize that there is a responsibility on the part of the employes, but we consider that the nature of the work, especially in the woods, carries with it a responsibility upon the employe which, referred to the number of accidents, is even greater than the responsibility of the operator.

NEED FOR EDUCATIONAL WORK.

"Last winter it was hoped that a considerable amount of work might be done during this present season along the lines of education among employes tending to point out the individual's responsibility, but when the season's work was undertaken, it very soon proved that the amount of work involved in going over the proposed orders in the thorough way that was required would absolutely preclude the spending of any appreciable amount of time in this educational work.

"We have collected a considerable supply of photographs, many of which have been made into lantern slides for the express purpose of presenting the various individual responsibilities to the workmen, both in the woods and in the sawmills. We have considered that the matter of establishing safety standards has demanded prior consideration to that of the education of the individual, for two principal reasons: The one being that our law requires that places of employment shall be made reasonably safe. The second and, if anything, the more far-reaching reason, is that the employer naturally stands to a considerable extent in the position of a leader and a larger responsibility rests upon him to set the example of a recognition of the responsibility of each individual for the doing of his share toward the prevention of accidents.

"Incidentally we have been called upon in a few instances to deliver an illustrated talk or lecture before the employes at plants where it was almost self-evident that such a talk could have but slight effect because of the failure of the employer to show a genuine interest and determination to carry on an aggressive campaign looking toward the reduction of accidents. Almost invariably, where such a lack of interest prevails at headquarters, the effort of the outsider to arouse interest among the employes will be very largely neutralized, and I have in one or two instances felt personally that, if anything, such a presentation of the subject tended to increase either indifference or criticism on the part of the employes rather than to encourage co-operation on their part.

"We consider that the only real hope to realize a substantial decrease in the number of industrial accidents rests upon a general recognition of a three-cornered responsibility, which rests, probably about equally, upon employer, employee, and state.

FLEXIBILITY OF SAFETY ORDERS.

"While it is true that such orders as are issued by the California Industrial Accident Commission have in a broad sense the standing of law, inasmuch as the act requires places of employment to be safe for employes, they have the very marked characteristic of an elasticity or flexibility which no law can possibly have. With this fact before us it has been possible, therefore, to contemplate the establishment of orders covering certain features, particularly with reference to existing conditions, which would be manifestly unreasonable and impracticable if their enactment were to carry with it the compulsion of a literal compliance therewith. Our disposition is to seek to correct future conditions and practices, while prepared to make a broad interpretation with reference to such existing conditions as would manifestly prove an unreasonable burden on the lumber industry. To illustrate by a case in point, the question of clearance, both side and overhead, along logging railroads is one that would work a very extensive hardship on several lumber companies in California should they be required to comply literally with the proposed orders in the matter of their existing railroads. Yet it has been the exception where we have encountered any marked opposition to the plan of regulating the clearance of future roads. The same thing has applied to the question of a proper and adequate equipment of rolling stock, and, as you will notice, upon reference to the pamphlet, we have recommended that existing equipment remain practically unaffected by the proposed orders. This will enable operators to gradually wear out such equipment as they already have and coincidently to gradually replace with equipment of the higher standard that is proposed.

"Hence, as I have already indicated, it is hoped that we may have a pretty full discussion, based upon the pamphlets that are in your hands. I will not consume more time in this manner, but will ask that the meeting now be thrown open for a general discussion."

After the reading of Mr. Bennett's paper President Peed said that as he and Mr. Bennett had friendly fights every day without getting mad he was quite sure the congress could fight with him pleasantly and as a matter of fact that was what Mr. Bennett had come up for. Mr. Bennett acknowledged the situation and the tilt began.

For more than two hours the loggers listened to the arguments in FAVOR of and AGAINST the proposed logging and safety orders for the state of California. The discussion was led by Mr. Bennett.

Opinion was far from being in favor of the more stringent regulations and to test the sentiment of those present President Peed called for votes as to the reasonableness of several proposed orders. Each time the vote was overwhelmingly insistent that the regulations were not reasonable as viewed by the loggers themselves.

Despite the objections voiced to SPECIFIC regulations it was quite evident that the congress approved heartily of the safety movement as a WHOLE and was willing to co-operate with their employes and the state in preventing accidents. For instance, as to the question of the requirement of a log chain on logging trucks, President Peed at one time in the discussion said: "Gentlemen, I want to get an expression out of those who will not talk. I am going to ask all of you who think that the log chain is required on logging trucks in the states of Oregon, and Washington and California, outside of where the load is decked up straight, as we do in sugar pine, please stand up. This applies to both trucks and logging cars."

Practically the entire audience stood up.

In order that the uninitiated may understand what was meant by this vote we quote from the proposed rules concerning log chains under Order 508, Section D, which reads: "All cars used for transportation of logs must be equipped with one log chain which must be permanently attached to the body of the car. When the equipment does not include chocks two chains of similar length will be required. The chains must be of sufficient length to securely bind not less than two tiers of logs to the cars."

The rules provided that "all locomotives must be equipped with appliances for operating and controlling the train brake system without requiring train men to manipulate the common hand-brakes while the train is in motion, or if not so equipped the load hauled must be limited to such tonnage as can be safely handled on all grades over which the train is hauled by the brakes that are available without requiring train men to pass over or along side of loaded cars of logs while the train is in motion."

Just how it could reasonably be expected that log trains under that rule could be equipped with anything but air brakes it is impossible to conceive without requiring a brakeman for each brake.

A vote was taken and 53 of those present voted that the rule was not reasonable. Seven of those present voted that it WAS reasonable.

On page 14, paragraph F, of these proposed rules was the flat statement that: "Each engine while in main line service must be accompanied by a caboose." And in another place the rules state: "The caboose must be attached to the end of the train opposite the engine and must not be on the head or leading end of loaded train except for short distances, such as may be necessary in traversing switchback sections, or in switching operations during the making up of trains." It was claimed that the presence of the caboose to be equipped with air brake was for the purpose of applying brakes from the caboose and also to create a safe means for hand-braking.

Mr. McDonald suggested that the commission might well make a rule that so-called casuals, non-employes, etc., should not be carried on log trains that was not equipped with a caboose. He thought that all loggers would welcome such a rule. A vote on the caboose question showed that the assembly was unanimously against it.

The LUMBER WORLD REVIEW is just that—a review—and NOT a rival of a technical circulating library on railway engineering and can print no more of this discussion.

It is evident though that the movement which started over a year ago in California to put through very drastic laws which will ultimately affect logging operations very seriously and very unjustly in all sections of the country has gained dangerous proportions and that we were at that time right in calling attention to these proposed rules and attempts at CREATION of rules of this sort. The congress adjourned until 2 o'clock p. m.

Fourth Session of the Pacific Logging Congress

The fourth and last business session of the Pacific Logging Congress convened promptly at 2 o'clock.

The first thing on the program was a paper by D. S. Painter, of the McLeod River Lumber Co., on "Co-Operation of Employer and Employee," of which we print a short abstract, contemplating using the article at a later date in full as it contains many valuable suggestions which may be applied anywhere.

"CO-OPERATION OF EMPLOYER AND EMPLOYE."
By D. S. Painter.

"The United States during the years of 1914 and 1915 went through a period of industrial depression, the cause of which is immaterial to the point in question, but the fact remains that in the re-establishment and maintenance of business prosperity, co-operation between employer and employe, and the resulting efficiency in production and distribution must be considered an important, if not the most important factor.

"Years ago, when practically everything was done by hand, labor was plentiful—there was little or no competition—the employer had no personal interest in the welfare of the employes—paid them almost nothing, and the output per man was in proportion to his pay. The education of the masses has changed all this. They are today a higher type of man than they were then, and being such demand more consideration.

"In this day of keen competition and modern improvements in all kinds of machinery, the operator must get all he can from the labor he employs. The question is: 'How to get the best results, and how his labor must be handled to get these results. The answer is, 'Welfare work.' Within the meaning of these two words, wonders can be accomplished."

With the words quoted above Mr. Painter introduced a paper of such general interest that we will present it in full in an early issue.

For lack of time the paper was not discussed.

Digitized by Google

The congress next listened to a paper by W. D. Starbird, as follows:

"AVAILABILITY OF LOG FLUMES FOR TRANSPORTING LARGE LOGS."
By W. D. Starbird.

"The advantages offered by the use of flumes in the transportation of logs are becoming better known and more appreciated by loggers all over the country as they have greater opportunities to familiarize themselves with their operation and observe the satisfactory results that are invariably being obtained with them."

Mr. Starbird described the flume as adapted to log transportation, giving figures of cost of construction, operation and results. He summarized his findings as follows:

"There are several features regarding the availability, advantages and economy of flumes in the transportation of logs, that stand out prominently.

"First. Their feasibility, wherever there is a water supply and descending grades.

"Second. The small amount of water actually necessary to their operation.

"Third. Their adaptability to almost any conditions.

"Fourth. Their extraordinary capacity, even when the available water supply is extremely limited.

"Fifth. The low cost of maintenance and operation, and, in conclusion, the cost of constructing a flume when built to handle small timber, is much less than that of a railroad, and when built to handle timber of the largest size will not exceed and seldom equals that of a railroad, constructed under similar conditions. The cost of steel and railroad equipment is high and getting higher, while the only cost of the lumber in a flume will be that of logging and sawing, plus the stumpage value of the timber used.

"The cost of transporting logs by flume is much less than by railroad. To operate a railroad requires experienced expert labor, frequently hard to secure, and not always dependable. In the operation of a flume no skilled labor is required, and, in fact, very little of any kind, all of which would seem worthy of careful consideration, when choosing a means of log transportation."

The chairman thanked Mr. Starbird for his presentation of the subject, said his paper was worthy of serious consideration but there was no time in which to discuss it as the program had to be shortened.

The next paper on the program was by J. P. Van Orsdel, professor of Logging Engineering at the Oregon Agricultural College, Corvallis, Oregon. Mr. Van Orsdel could not be given time to read the paper but made a short talk in which he besought all loggers to co-operate with the college.

We print herewith a short form of Mr. Van Orsdel's paper.

"TEACHING LOGGING ENGINEERING."
By J. P. Van Orsdel.

"I am trying to do my little part to dignify, standardize and help bring recognition to our profession and give the logging engineers of the present and those who are to be, the place they are entitled to among the other engineering professions.

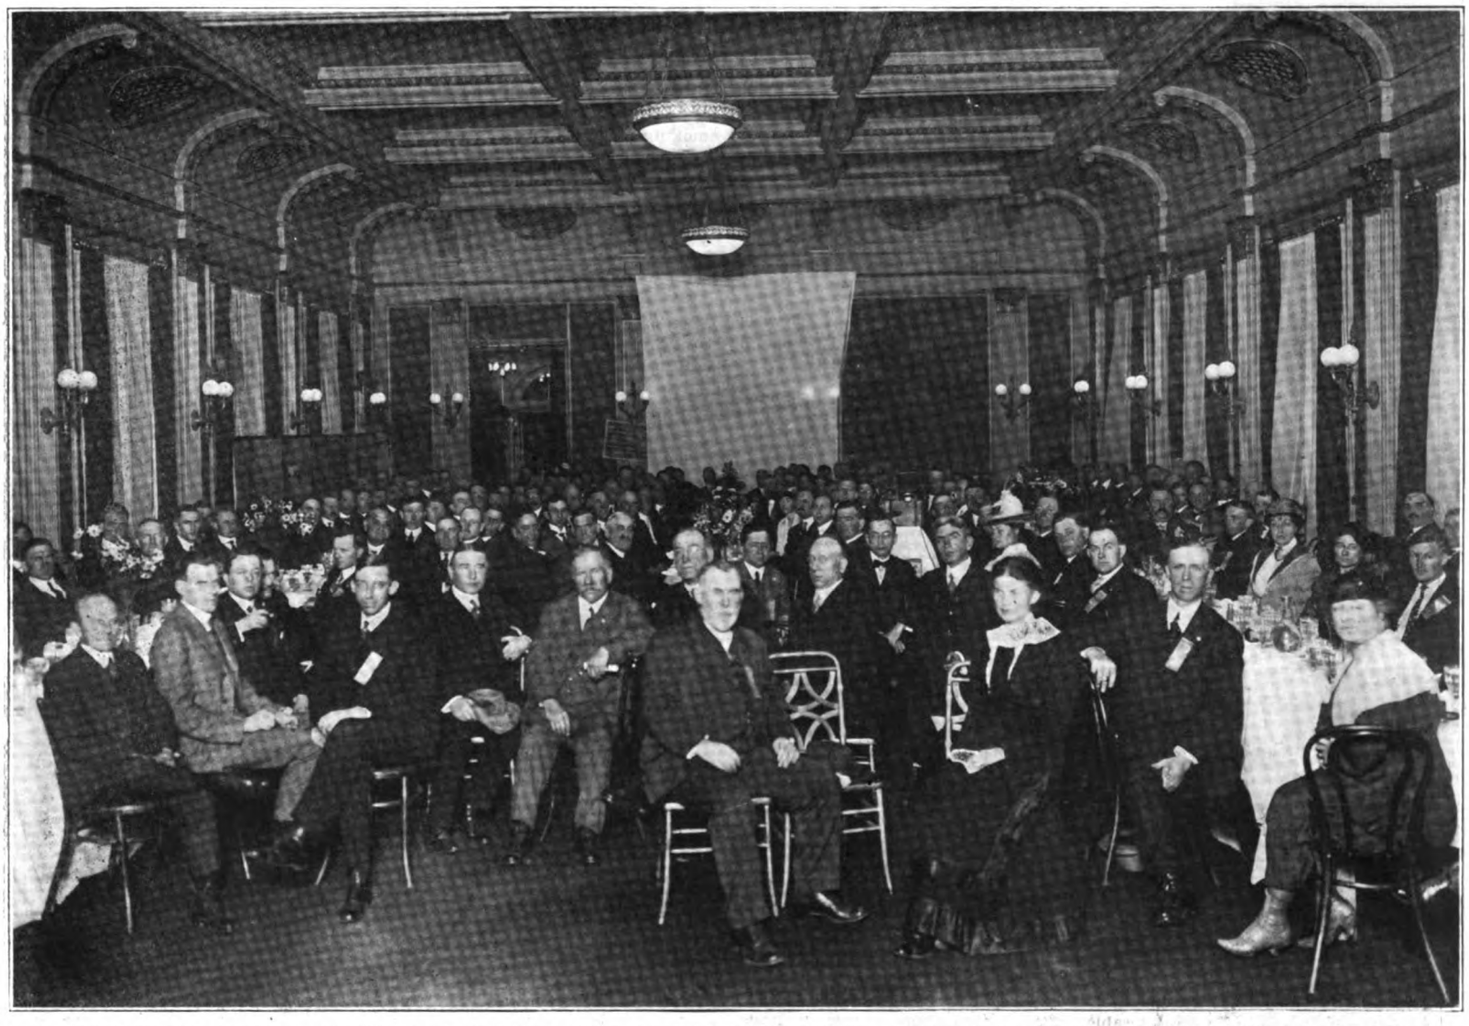
"As the late R. L. McCormick, of the Weyerhaeuser Timber Co., in discussing the subject of the creation of the profession of logging engineering, as a distinct branch of science, aptly remarked: 'You are attempting to make logging a profession instead of a job.' This terse statement and our answer would be that this is exactly what we are trying to do; we are trying to make ourselves and our men occupants of positions instead of jobs.

"Ex-President Donovan, a few sessions ago, made the statement that in our enthusiasm to produce a course for the education of logging engineers, we should not lose sight of the fact that one of the prime values of a college education is to turn out well balanced citizens, as well as logging engineers; men whose education was broad enough to take up the diversified problems which a man must handle in a lumbering operation and still with sufficient technical training to handle these matters properly with these particular objects in view. We are trying to build a school of logging engineering at the Oregon Agricultural College which will be second to none in this country, and will mean as much to the lumbering and logging industry of this country as the Massachusetts Institute of Technology does to the other industrial arts and sciences of this country."

Having outlined the course of study and stated its twofold purpose Mr. Van Orsdel said:

"Our effort in planning this course has been at all times to keep it well balanced, and not lose sight of any essential in following up another, and I think if you will make a careful study of the above course you will find it as well balanced as we claim it is.

"Every profession has to have a beginning. The need creates the man. That is the situation in our business, and we are trying to meet the need by creating the men."



A FLASHLIGHT PICTURE OF THE WELFARE DINNER HELD IN CONNECTION WITH THE PACIFIC LOGGING CONGRESS AT THE HOTEL PORTLAND, PORTLAND, OREGON, NIGHT OF OCTOBER 26, PRESIDED OVER BY A. W. LAIRD, OF THE POTLATCH LUMBER COMPANY.

Secretary Cornwall announced an automobile trip at the courtesy of the lumbermen of Portland, to be taken immediately after adjournment. He then read the report of the resolutions committee, which is printed elsewhere in this report.

REPORT OF THE NOMINATING COMMITTEE.

The report of the nominating committee was as follows: For president, W. W. Peed, Hammond Lumber Co., Eureka, California; vice-president, T. J. Humbird, Humbird Lumber Co., Sandpoint, Idaho; secretary-treasurer, George M. Cornwall, editor The Timberman, Portland, Oregon; for executive committee, representing British Columbia, J. M. Dempsey, British Columbia Loggers' Association, Vancouver; California, Donald McDonald, the Pacific Lumber Co., Scotia; for Idaho, H. M. Strathern, Post Falls Lumber & Manufacturing Co., Post Falls; for Montana, W. R. Ballord, Sum-

Digitized by Google

mers Lumber Co., Summers; Oregon, A. H. Powers, Smith-Powers Logging Co., Marshfield; for Washington, George A. Johnson, Browns Bay Logging Co., Seattle.

On motion the report of the committee was adopted and the officers declared elected.

Chairman Peed announced that immediately after adjournment the "First Aid" demonstration would be shown in the court in front of the hotel. We print elsewhere in this report photographs illustrating the demonstration. The congress adjourned.

The Excursion of the Pacific Logging Congress to Hoquiam

EVERYBODY who had attended the Pacific Logging Congress but T. P. O'Connor journeyed to the Hoquiam in the Grays Harbor country on the night of Friday, October 27.

The steel and wooden car train, brilliantly lighted and properly equipped with a great blaze of red and white lights on the tail end of the observation car which spelled "Pacific Logging Congress Excursion to Grays Harbor" had been ready in the train sheds at eight o'clock.

The train was to move at 10:30 p. m.

It was in the early morning of the day before that Noel Alymer Dew of the Timberman started in with ringing voice and loud acclaim and at times soft and sibilant speech to find "T. P. O'Connor."

self in this story it is not because we wish it so, but because it cannot be helped. Before we go any further we want it understood that there is no endeavor on OUR part to put T. P. O'Connor "next to reading matter" nor to even prove that the man exists. The reader will rather like it when he gets used to it.

THE JOURNEY TO HOQUIAM.

Just before the train began to move the rear brakeman rushed up to the entrance gate just closing and took Noel Alymer Dew by the arm and indicated that he must get aboard, but Mr. Dew was not sure, he gave the cry once MORE:

"Has anybody seen T. P. O'Connor?"

It was a train of sleeping cars, but it was really a perambulating reception parlor that was dragged through the night from Portland to Hoquaim offering many of the excursionists the first opportunity they had really had to shake hands and get personally acquainted and of which opportunity much was made, all the smoking rooms and the observation car being filled in every seat until late in the night.

About two o'clock everybody prayed for a fair day

hungry man wants who has no conventions and has a sensible idea of endurance fortifications through the medium of his stomach.

The "Grayport," too, did a quite remarkable feat in feeding 250 people in an hour and a quarter.

After breakfast 40 or 50 of the citizens of Hoquiam who own and operate automobiles presented themselves at the Grayport hotel entrance where Mr. Dew was still inquiring:

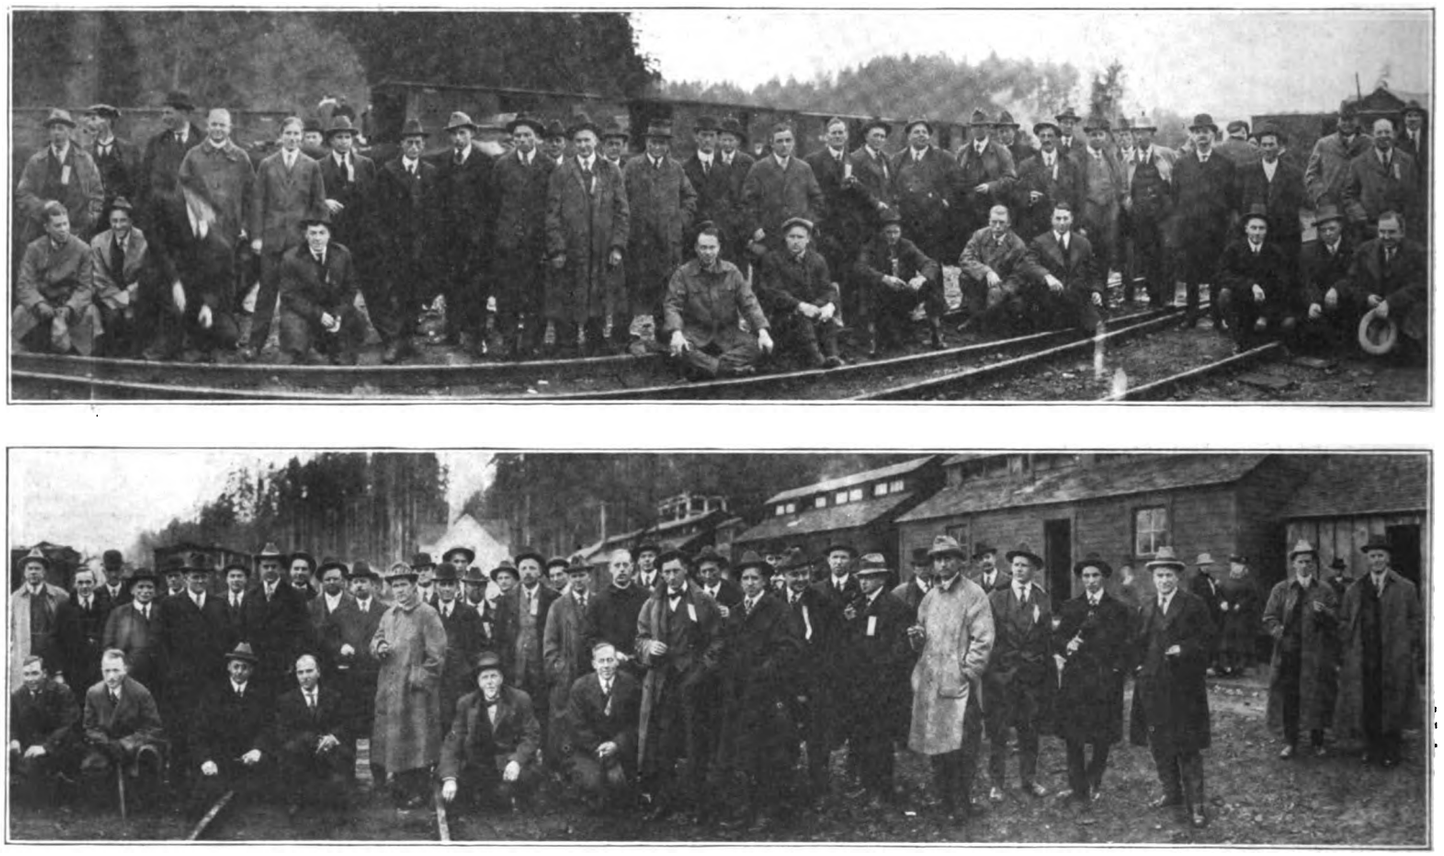
"I have a certificate for T. P. O'Connor."

The visitors took their places in the automobiles, circled about Hoquiam and stopped at the Blagen mill for about a half hour until the visitors succeeded in scrambling over the plant to their satisfaction.

This mill has the distinction of having cut in the last year more lumber with less equipment and fewer men than any mill on the Pacific coast, in fact than any other mill ever cut in the same space of time.

The equipment is an Allis-Chalmers 11-foot band, assisted by a 38-inch edger and fabulous stories are told of this mill turning out 500,000 to 600,000 feet of lumber per day.

We'll have put this statement between the column rules for the purpose of having somebody try



THE ABOVE TWO PICTURES REPRESENT THE RIGHT HAND SIDE OF A PANORAMA MADE OF THE PARTICIPANTS IN THE "LOGGING CONGRESS EXCURSION" TO THE CAMPS OF THE POLSEN LOGGING COMPANY IN THE GRAYS HARBOR COUNTRY FOLLOWING THE SERIOUS SESSIONS OF THE CONGRESS IN PORTLAND—TAKEN IN THE FIRST RAIN OF THE SEASON.

It was Dr. Dew's 161st task—of which the other 160 were too onerous and too diversified to mention—to find this particular T. P. O'Connor and hand him a receipt for his railroad ticket or SOMETHING of the sort.

And if Noel Alymer Dew pursues all his quests as earnestly as he did his search for O'Connor he is certain then sometime if he wishes to take the burden on himself Noel Alymer Dew will own a chain of newspapers in prominent spots the entire world around.

This writer's attention was not called to the pursuit of O'Connor until the trail was at least twenty-four hours old, after that it got to be a very fascinating thought as it happened again and again throughout the hurrah of the day and the quiet of the night.

If the cry for T. P. O'Connor seems to obtrude it-

and the skies were lowering and automobiles flung forward through the damp from the Grayport Hotel to the train and from the train to the Grayport Hotel, "Alec" and "Bob" Polsen both being conspicuous in this transportation scheme.

Standing part of the time at the entrance of the hotel—which certainly never did feed a more happy crowd of people at any other time in its existence than upon Saturday morning, October 28th—was always and ever Noel Alymer Dew making remarks about O'Connor.

"By any chance have you seen T. P. O'Connor?"

THE BREAKFAST AT HOQUIAM.

It was one of those smaller town American plan hotel breakfasts with all you could eat and everything that could be offered, ham and eggs and coffee and more of all of it and everything else that a

to shoot it full of holes. It does not seem to be within the realm of probability.

And this reminds the writer of the first time Herbert A. Camp of Hattiesburg, Mississippi, made a tour to the Pacific coast. He had never seen the big trees or the endless prairies or the snowcapped mountains or the people of the west.

Somebody got on at a sheep town in Montana and asked a friend whether it was $2,000,000 or $8,000,000, or just how many million dollars it was that he had received for a certain piece of property, and another person told of a mine that he had sold for $26,000,000 and then farther along somebody had bought 2,000,000,000 feet of standing timber and paid cash for it; and so the impression etched itself into the brain of the Georgia story-teller of Hattiesburg until he heard nothing else but millions.

He had never seen the small oysters of the coast

Digitized by Google

or heard of them until he overheard some joker in the "Poodle Dog" in San Francisco order lunch, remarking to the waiter, "Fetch me first, 600 oysters." Whereupon Mr. Camp turned to his friend and remarked: "My God, Bill, did you hear that man's lunch order? This country is too big for me. They EAT just like they spend their money!"

We did not get a chance to really see this remarkable mill, but have no doubt about the veracity of our informant. Anyway the statement will bring the facts!

The much automobiled and delightfully chaperoned 200 excursionists finally careened and rolled out of the town and were delivered to a long board walk running down the Hoquiam river for a quarter of a mile to a landing place where a tug boat met the various groups and carried the party across, assisted by the Messrs. Polsen, the party being ultimately loaded upon a comfortably arranged train of flat cars and box cars and then conveyed to the logging operations of the Polsen Logging Co.

The party was conveyed first to a typical logging camp of the Polsen Logging Co., where they were served a logger's dinner that was a marvel even to all.

There, too, they took a straw vote for president, which resulted: Hughes, 164; Wilson, 36; Hanley, 1; Benson, 1.

Among the visitors to this Pacific Logging Congress a much sought for individual who became the friend of all the pilgrims was Mr. J. Ph. Pfeiffer, who represents Nederlandsch-Indische Houtaankap Maatschappy of The Hague, Holland, and of Semarang, Java. The company name in plain English—is the Holland-India Lumber Co. Mr. Pfeiffer has been gathering information in this country concerning methods of lumber manufacture and gathering data for the purchase of machinery for the large operations of his company.

The excursion to the woods was without set program.

After the luncheon the party again entrained and went farther into the logging operations discovering all the mysteries of sky line skidding and every other operation known to logging as it is done on the Pacific coast.

While the official photograph was being made a most excellent opportunity was developed and just to the liking of Noel Alymer Dew, who in the quiet just before the machinery of the panoramic camera began to swing the box about, stood up on a flat car and slit the atmosphere with a query:

"Can any man here tell me of the whereabouts of T. P. O'Connor?"

The Polsen Logging Co., let us tell you in just this visity-way, has as president Alex Polsen and as vice-president Robert Polsen, two most modest men and two most gracious hosts, who were so busy looking after their guests that no newspaper man present got any real history of the operation.

The Polsen Logging Co. dates back at least as far as 1896, now consists of nine camps, has at least 75 miles of logging railroad, employs 750 to 900 men and cuts and hauls in from 650,000 to 1,000,000 feet of logs per day, all with the varied and numerous equipment of sky line skidders, donkey engines, nine or ten locomotives and every other accoutrement great and small that is necessary to use.

Late in the afternoon a 400-year-old fir tree was felled for the information and interest of the excursionists by a crew consisting of Messrs. King, Hendrickson and Mays, the work being done in 8¾ minutes with an E. C. Atkins & Co. 4-tooth felling saw.

Of course the tree had been prepared for the final felling before—that is sawed out and chipped in on one side to the center.

The prayers of the excursionists availed nothing for from the time the train started back to Polsen's landing in the afternoon the rain fell upon the just and the unjust alike.

The homeward trip was enlivened with chorus singing from plaintive folklore to atrocious modern rag.

In the heavy dusk the party went back again over the ferry and down the long wet wharf to the waiting automobiles where again fifty or sixty citizens of Hoquiam patiently awaited their guests under the dripping side curtains of their machines.

At the end of the walk, with his raincoat held close with one hand while the other grasped an electric torch stood Noel Alymer Dew making query of the wet and happy crowd as it filed by in review:

"Really, now, has anyone seen T. P. O'Connor?"

THE BANQUET AT THE HOTEL GRAYPORT.

If the breakfast in the morning had been a surprise the dinner in the evening increased the astonishment four fold.

Two hundred and fifty loggers, lumbermen, citizens, etc., crowded into the dining room of the Hotel Grayport and—wedged down tighter than calks in a boat—were served from the free ends of the long tables.

The crowd had been wet and tired and happy, no other aid to vivacity and interest was present except the occasion and what it meant.

No program had been provided.

The band which had been playing outside still stayed outside and PLAYED. It was heard vaguely through the smoke like a first wisp of music comes to you as you wait on the sidewalk for a circus procession; and the outside music got no NEARER than just that FAINT ring of HORN and CRASH of CYMBALS.

It was a willing, expectant happy party simply waiting for some one to rise up and command it, which Donald McDonald, of the Pacific Lumber Company did do by simply taking charge.

Mr. McDonald introduced thirty-six people who talked.

He introduced each person with a neat speech and then when the person had resumed his seat he reviewed the speech so the evening produced seventy-two speeches from Toastmaster McDonald and thirty-six speeches from the audience. And now and then—when for instance there was a lull in the merriment, a voice—now very familiar and welcome—stirred up the large welkin and made it ring with a query:

"Tell me, please, have any of you seen T. P. O'Connor?"

The dinner had as waiters seven or eight young women. Each one of these young women was christened some name in history, Cleopatra, Queen of Sheba, etc., etc., and in turn and out of turn

THE ABOVE TWO PICTURES REPRESENT THE LEFT HAND SIDE OF A PANORAMA MADE OF THE PARTICIPANTS IN THE "LOGGING CONGRESS EXCURSION" TO THE CAMPS OF THE POLSON LOGGING COMPANY IN THE GRAYS HARBOR COUNTRY FOLLOWING THE SERIOUS SESSIONS OF THE CONGRESS IN PORTLAND, AND WERE TAKEN IN THE FIRST RAIN OF THE SEASON.

presented with silver money in goblets and bowls or whatever other receptacle was handy, each presentation accompanied by a speech.

During the evening there were called upon, responded to Mr. McDonald's blandishments and had the courage not to resent his hazing the following named people: George M. Cornwall, C. R. Johnson, A. H. Powers, C. A. Smith, Alex Polsen, Robert Polsen, J. J. Donovan, Skookum Clark, Ph. Pheiffer of The Hague, H. R. MacMillan, A. P. Sprague, B. A. Johnson, Harry Claire, H. M. Strathern, Mr. Lamb of Hoquiam and enough more people whose names did not get into the notebook to make up the thirty-six mentioned above.

And all this occurred in the dry state of Washington at the end of a very damp and rainy day.

When the excursion train arrived in Portland the next morning there stood at the gate, radiant, hopeful, quite certain of success, Mr. Noel Alymer Dew, who made personal inquiry of each of the party as they passed out into the work-a-day world—an inquiry the REFRAIN of which was always—

"Have you seen anything of T. P. O'Connor?"

THE FIRST AID DEMONSTRATION.

Following the adjournment of the congress on Friday afternoon, the first aid team of the Cathlamet Timber Co., Cathlamet, Wash., staged an exhibition of their work in the court of the Portland hotel. The demonstration included preliminary treatment for fractured limbs, cuts about the head, methods of rescue from fire, artificial respiration, the construction of a serviceable stretcher from materials at hand in the woods, and the proper method of carrying the injured. The team brought with them moss and bark for splints such as would be readily available at any point in the woods, while a pair of saplings and two rough split stakes with two ordinary shirts were fashioned into a very practical stretcher.

The members of the team were: A. B. Martin, captain; M. M. Sarich; E. M. Buol; H. H. Thorpe, and Paul Freydig. The team was drilled by Dr. M. J. Shields, field agent of the American Red Cross, who has been doing commendable work in the logging camps of the Willamette valley and the Columbia river district. Dr. Shields arranged the program to show the treatment of the most common injuries received in the woods and to illustrate what can be done to relieve the patient until proper treatent can be given. The demonstration was warmly received and greatly appreciated by the large number who witnessed it.

AUTOMOBILE TRIP.

Immediately following the first aid demonstration, waiting automobiles conveyed the delegates

FROM LEFT TO RIGHT: B. A. JOHNSON, LUMBER WORLD REVIEW; W. E. BOUSCHOR, WILLAMETTE IRON AND STEEL WORKS, SEATTLE, WASH.; H. E. LELAND, LELAND EQUIPMENT CO., SAN FRANCISCO, AND A. L. FLEWELLING, SPOKANE.

of the congress for a spin over the world famous Columbia River Highway. Although the start was made rather late in the afternoon they were taken as far as Crown Point where they were afforded a matchless panorama of the Columbia river 725 feet below them. The party returned in time for the banquet given in their honor by the Columbia River Loggers' Association. The automobile trip was arranged by Geo. K. Wentworth, jr., who took personal charge of the party.

BANQUET TO THE LOGGING CONGRESS.

The complimentary dinner at the courtesy of the Columbia river loggers and lumbermen which took place in the Portland hotel on the night of Friday, October 27, at 6:15 o'clock, was an informal affair that was very enjoyable indeed. It was under the auspices of W. W. Peed, who for the second time was enjoying the honeymoon of his official duties as president of the Pacific Logging Congress and who for the occasion was assisted by many of the officers and executives of the congress and by the leading loggers.

It was really a dinner and a musical without formal program and all of the speeches that were made were apologies for not having speeches to make.

There was some singing and some dancing and several instrumental members, the most alluring of which were a piano and 'cello duet and the singing of Kanaka and other songs by two very talented people who danced also in connection with their singing.

The whole program only lasted about an hour and a half, when not less than 200 of the loggers and their friends, their wives and their sweethearts repaired to the special train for Hoquiam.

WEST COAST SAFETY ENGINEERS ASSOCIATION ORGANIZED.

Immediately following the Logging Congress, at Hoquiam, Wash., representatives of the Industrial Accident Commission of Oregon and California, and the Industrial Insurance Commission of Washington, and the Labor Bureau of Oregon and Washington, met at Aberdeen, Wash., October 29, and formed the West Coast Safety Engineers' Association.

The new association is the outgrowth of the recognition of the need of uniformity in requirements of the several states, which have to do with the reduction of industrial accidents, and has for its leading object, the encouragement of co-operation and exchange of ideas between the representatives of the states, and between the employers of those who are interested, and widely concerned in reducing the present long list of industrial accidents.

The association has the personal assurance of the co-operation and active assistance of the commissioners of each of the states, in any efforts that may give promise of closer workings between the states and employers and workmen.

The factory inspection, education of the workmen along lines of accident prevention, the development and study of various types of safeguards, and their application are some of the lines along which the activities of the association will be directed.

Probably one of the first matters to be taken up will be an effort to bring together the loggers of Oregon and Washington, with a view of developing better conditions of equipment, and methods of logging operations, patterned probably after the work that is being done by the safety department of the state of California.

The officers of the new association are: president, C. H. Gram, Portland, Ore.; vice-president, J. C. Bennett, San Francisco, Cal.; secretary-treasurer, C. M. Shrader, Seattle, Wash.

The meeting also passed the following resolution: "Resolved, that the members of the West Coast Safety Engineers' Association, extend to the Pacific Logging Congress, their appreciation of the courtesy and hospitality rendered them during the eighth annual meeting just closed.

Annual Session Appalachian Logging Congress

The fall meeting of the Appalachian Logging Congress, which was held at the Board of Commerce building, Knoxville, Tenn., on October 18 and 19, was really the second annual meeting of that organization. There were nearly one hundred of the mountain lumbermen of the Appalachian range, comprising loggers and manufacturers from western North Carolina, southwestern Virginia, western West Virginia, eastern Kentucky and eastern Tennessee present. These are the men who display great efficiency in logging methods under the handicap of high altitudes and steep grades, but who manufacture generally as good grades of lumber as are found in the mid-southern country.

At the opening of the session Wednesday morning, J. Allen Smith, president of the Knoxville Board of Commerce, extended a greeting to the lumbermen on behalf of "the Gateway of the Appalachians," as Knoxville has been called. Mr. Smith, owing to a previous engagement, had to leave the room at the conclusion of his welcoming address, and, therefore, was not favored with the eloquent words of response delivered by Charles H. Mackintosh, of the Clyde Iron Works, Duluth, Minn., and president of the mail advertising department of the Associated Advertising Clubs of the World. Owing to that fact, President Townsend designated Lewis Doster, of E. C. Atkins & Co., Indianapolis, Ind., to represent the president of the Board of Commerce, for the purpose of absorbing the appreciation due that gentleman for his address of welcome. Mr. Doster discharged his responsibility with becoming dignity, but remarked: "No wonder Smith went away."

PRESIDENT TOWNSEND'S ANNUAL ADDRESS.

William B. Townsend, of Knoxville, president of the Little River Lumber Co., of Townsend, Tenn., prefaced his annual address with a compliment to the city of Knoxville, and its availability as a meeting place for the association. He called attention to the interesting program which had been arranged for the meeting. He said that the subjects discussed would relate to the most difficult proposition in connection with the production of lumber from timber to be found anywhere on the western hemisphere, and perhaps in the world. He urged that each member be a self-appointed committee of one to secure new members, as he regarded it as absolutely essential that the membership be so enlarged as to include practically all of the logging interests of the southern Appalachians.

He also called attention to the important subject of costs, to which many of the members pay too scant attention. "Unless we know the cost of delivering our logs, we can no more hope for our business to be successful than a merchant who does not know the difference between the purchase and the sale price of his goods. Organization and efficiency are just as important today in logging as in either the manufacturing or selling ends of the business.

"Don't let us lose sight of the fact that we are not a trade organization in the commonly accepted sense of that term. We have nothing to sell, nor do we attempt to regulate prices or restrict anything in business, but we believe in big things, big trade, big wages, big pay envelopes, and plenty of work."

LUMBER ASSOCIATION WORK.

By R. S. Kellogg, of Chicago.

The text of the address of R. S. Kellogg, of Chicago, secretary of the National Lumber Manufacturers' Association, was "Co-operation Is the Source of Progress; Competition Is Not the Life of Trade." He said that whether the lumbermen like it or not, the day is at hand when they must keep closely in touch with congress and the various departments of the government at Washington. "If we wait in each case until something injurious to our business has occurred, we will have little or no chance to rectify mistakes. If we co-operate fully and freely with the Washington officials at all times it is much less likely that detrimental measures and policies will be adopted without our having an opportunity to give them consideration." He spoke of the recent reclassification hearing as having been the first time in the history of the United States that the lumbermen had been invited to participate, through the National Lumber Manufacturers' Association, in projects for their welfare. He referred to the work of the Federal Trade Commission and the investigation of the lumber industry made by the Forest Service. He said that the latter will publish nine large volumes, containing the results of its investigation. There was no doubt that the Forest Service will recognize completely the beneficial work of the manufacturers' association.

Mr. Kellogg referred in a commendatory way to

Digitized by Google

the credit department of the association, and said that the October edition of the "Blue Book," just published, contained 50,000 references. He also referred to the growth of the Inter-Insurance Exchange, since it was organized, February 15, 1915.

Secretary Kellogg spoke of the trade extension department, which will mean ultimately the greatest things for lumbermen. The slogan adopted, "Use Wood Where Wood Is Best," had proved very popular.

CO-OPERATION IN OBTAINING EQUITABLE RATES.

By George L. Forester, of Asheville, N. C.

George L. Forester, secretary of the Western Carolina Lumber & Timber Association, Asheville, N. C., read a valuable paper upon the subject, "What Co-operative Association Work May Accomplish in Obtaining Equitable Freight Tariffs." Mr. Forester referred to an article in the LUMBER WORLD REVIEW of October 10, written by H. D. Langille, of Portland, Ore., and quoted liberally from that article, and recommended that those who had not read it secure a copy of the paper. He said that Mr. Langille's statements were of the kind that may be transmuted into gold.

As far as freight rates are concerned, Mr. Forester said that the subject was the most uninteresting topic for exploitation and the most unscientific in our business structure. He wished to give particular emphasis to the statement that the association which he represented does not now, never has, and never will "fight the railroads," as long as he is connected with it. He regarded such action as unprofitable, undesirable, unbusinesslike, and, as David Harum might have expressed it, "Gets you nowhere."

What co-operative work may accomplish may be best illustrated by what has been accomplished, and in this respect the Western Carolina Lumber & Timber Association has an enviable record.

In 1913 the Southern railway published advanced rates on lumber from western North Carolina, which would have meant an increase in charges upon the lumbermen of that territory of approximately $180,000 a year. The advances were from ½ cent to 5½ cents a hundred, or an average of $1 a thousand feet, which, carried back to the stump, would mean $3 to $5 an acre. Had these advances taken effect they would have been followed by the Louisville & Nashville and the Carolina, Clinchfield & Ohio lines. The proposed advances meant heavy losses, and for some members possibly bankruptcy on outstanding contracts. This proposed advance brought the Western Carolina Lumber & Timber Association into existence. The association secured the suspension and later the cancellation of the proposed rates through the Interstate Commerce Commission. The net saving was approximately $180,000 a year. The cost of the proceedings was $3,500, so that it looked like a good investment. The association did not ask for a reduction in the rate, but merely protested against the advance.

Mr. Forester referred in a complimentary way to Robert H. Downman, president of the National Lumber Manufacturers' Association, for his work on behalf of the lumber interests of the country.

As to the benefits of association work, Mr. Forester gave a concrete case, in which the present rate on lumber from Knoxville, Tenn., to High Point, N. C., distance 305 miles, is 13 cents. The rate from Murphy, N. C., to High Point, N. C., distance 299 miles, is 9 cents. Efforts have been made to have this inequality removed. The Western Carolina Lumber & Timber Association is now working for a universal scale to cover the entire territory. A scale has been filed, and is now being used by the Seaboard Air Line and the Atlantic Coast Line, and a similar scale for the Southern railway is now being prepared for the deliberations of the commission, which is knowns as "I and S Docket No. 809." This docket proposes a change of lumber rates which have been obtained since 1881, or a period of thirty-five years. The rating on lumber in carloads was changed first April 1, to sixth class, which meant an increase of over 100 percent in most cases. "On cars for which I have handled the expense bills, the advance was from 15 to 39 cents a hundred, and in other cases from 14 to 37 cents a hundred. As a result of the action taken by the Western Carolina Lumber & Timber Association the advances are now suspended."

LUNCHEON BY THE LIDGERWOOD.

At the noon recess the members of the association were conveyed to the Hotel Atkin, where they were served luncheon, with the compliments of the Lidgerwood Manufacturing Co., of New York, represented by J. H. Dickinson, manager, and E. F. Swan, Appalachian representative.

LOWER FREIGHTS ON LOW GRADE WOODS.

By S. F. Chapman, of Asheville, N. C.

S. F. Chapman, of Asheville, N. C., delivered a most interesting address at the Wednesday afternoon session, on the subject, "The Possibility of Securing Lower Freight Rates on Low Grade Oaks and Hemlock," and gave many substantial reasons why freights on these items should be lower. He said that he had been fighting the lumber game for thirty-four years. "I didn't have a cent when I started, and I have been holding my own pretty well." Mr. Chapman gave some very good illustrations in the way of stories of his position on freight matters. He said that there were millions of tons of freight along the lines of the Southern railway that the road could not move because it could not make a freight rate. He had personally gone to Washington and talked to the leading

W. B. TOWNSEND, OF TOWNSEND, TENN.
President Appalachian Logging Congress.

traffic men of the Southern railway, with the result that three division freight agents had come down into his country to look over the situation. The freight officials had reported favorably to their head men on the proposition to make a satisfactory low rate on these low grade woods, but the higher officials had turned them down.

Mr. Chapman spoke of the extinction of the enormous herds of buffalo on the western plains as having been an everlasting disgrace to the American people, but the tremendous loss of timber going on is a much greater disgrace. In Mr. Chapman's opinion, there ought to be some way found to take care of chestnut oak and hemlock. He believed that chestnut oak would make an excellent street planking, but rates were so high as to prohibit its general use. As for hemlock, an increased price for it could not be expected, but the logging expense might be reduced to a point where a profit could be made in its manufacture. Under present conditions, Mr. Chapman expressed the conviction that there was not a dollar of profit today in the manufacture of chestnut oak and hemlock. He said that for high grade woods the Southern railway charges as much as it does for low grade woods. For instance, in that territory the cherry and walnut trees are all gone, but the rates apply just the same. He thought that, in its own interest, the railroad should make a rate on low grade woods, as it should be to their interest to move stuff that otherwise would be lost to everybody forever. He believed that if all the various organizations interested were to co-operate in a federation, and then ask the Southern railway officials to go on the ground and investigate the proposition, and with everybody actively behind it, there might be some impression made. He suggested that the Appalachian Logging Congress and the Western Carolina Lumber & Timber Association unite in going after this proposition; that they interview the highest officials of the railroad, and being bound to get attention from the officials, they might induce them to take it up. If the Southern railway people fail to take action, then this joint committee might go before the various tribunals created for settling such differences.

There was some discussion among the members as to the manufacture of by-products from low grade woods. G. B. Kittle, of the Lima Locomotive Works, Lima, Ohio, suggested a valuable addition to a lumber operation in a plant for the manufacture of acids. He said that the Mitchell Bros. Co. at its plant at Jennings, Mich., had installed a plant for the manufacture of charcoal; then it had added a charcoal pig iron plant. Now charcoal is a by-product, as the company is making more money out of the manufacture of acids, acetate of lime, etc.

Mr. Chapman stated that many concerns in this territory were making strenuous efforts to put in some kind of a plant that would utilize their low grade material. However, he said that would not affect the question which they are up against now, which is to get their low grade material into the eastern markets.

Watson Ford said that what the organization needed would be an influential committee, who would go to the railroad heads and present the matter to them, and he believed that such a committee would get results.

Secretary Henry Grinnell said that he did not believe that one-half of the merchantable timber estimated on the lands in his territory is to be found there. In his opinion, the hemlock is overripe, and is not suitable for lumber, being all very shaky. He believed hemlock to be the poorest stuff grown in this territory. And Mr. Chapman expressed his belief that the only market for hemlock is for pulpwood.

C. H. Mackintosh suggested that the resolutions committee be instructed to prepare a specific resolution on this question. Watson Ford made the motion, and it was unanimously carried.

NARROW GAUGE VERSUS STANDARD GAUGE FOR MOUNTAIN LOGGING.

Papers Read by W. T. Latham and J. P. Murphy.

A most interesting and practical discussion resulted from two papers read at the Thursday afternoon session, one by W. T. Latham, of Asheville, N. C., on the subject of "The Narrow Gauge Railroad for Mountain Loggings," and the other by J. P. Murphy, superintendent of the Little River Lumber Co., Townsend, Tenn., on "The Standard Gauge Railroad for Mountain Logging."

Mr. Latham recited the advantages of constructing a narrow gauge railroad for logging purposes, as being laid at a greatly lowered cost, as compared with the standard gauge in grading, track equipment and other items. He said there was less expense in grading, as the narrow gauge road did not require so much care, and was much easier to construct.

Mr. Latham's contentions were disputed by J. P. Murphy, who said that in the Great Smoky Mountain district the main water courses are steep, crooked, broken frequently by numerous short ravines and rocky bluffs, and with steep and rough mountain sides. In his opinion, the method to be applied to the individual operation depends largely on local conditions. The main question to be considered consists of acreage of timber supply, distance for the logs to be hauled; the capacity desired, and the capital available for development. He thought it would be unwise for the small operator, with limited capital, small timber supply, to go to the expense of purchasing heavier logging railroad or equipment than is justified. The reverse is true with the large operator. A carefully and exhaustive survey of the properties to be developed should be made before the mill is located having in view the shortest haul and the elimination of handling the loads against the grades.

Mr. Murphy spoke of the great difficulty that had been encountered by his company in getting the right sort of locomotive and it had made a special design of a Mallet compound locomotive, which was worked out by the Baldwin Locomotive Works. This is the heaviest locomotive the company has in service, and is giving excellent satisfaction.

"With the use of standard gauge logging railroad, standard equipment can be used throughout. This permits of larger, heavier and more evenly balanced load on cars, resulting in much less liability of derailment, with consequent damage to equipment, track and troublesome delays. Heavier

Digitized by Google

trains may be handled with one engine and crew, requiring less locomotive mileage, and consequently less expense for fuel, oil, repairs, labor, etc., to accomplish a certain amount of work. Another advantage is that repairs for standard equipment can be more easily and readily purchased in the open market. This is not true, however, with special equipment required for tram cars or a narrow gauge railroad, which in the majority of cases must be purchased direct from the manufacturer or builder. Another great advantage of the standard gauge logging railroad over the tram roads, narrow gauge railroad or other methods is the elimination of expense of transferring all inbound and outbound shipments. With the use of standard gauge railroads all carload shipments can be handled directly through to the headquarters commissary, camps in the woods, or other places where it is needed along the line, in the original foreign cars in which the shipments were made, while the operator using any other method for logging than standard gauge railroad is compelled to transfer everything to his own equipment.

During the resultant discussion Mr. Latham asked Mr. Murphy how much it cost to grade a standard gauge railroad through his country, and the latter replied that he could not give the figures, because conditions vary so greatly. Mr. Chapman expressed the idea that the desirability of building a narrow or standard gauge road depended entirely upon the amount of tonnage to be moved.

President Townsend made inquiry as to why a standard gauge road should cost five times as much to grade as a narrow gauge road. Mr. Chapman stated that this was because the standard road bed took so much more filling, but after all, the question depends on the amount of tonnage to be moved.

Mr. Latham said he was very much interested in this question, as he was about to build a road of some kind, extending from thirty to forty miles, and which had about 300,000,000 feet of timber to move.

J. H. Dickinson, of the Lidgerwood Manufacturing Co., said that the question was largely to be determined by the method used in logging. If there were only a short haul he could see where a narrow gauge road might be used to advantage, but he thought that if there were a long haul and a large amount of tonnage that it would be more proper to use a standard gauge.

G. B. Kittle, of the Lima Locomotive Works, said that the price of a 30-ton geared narrow gauge locomotive and of a 30-ton geared standard gauge locomotive was about the same. However, about ninety out of every 100 built by his company for logging are standard gauge.

John Raine, of the Meadow River Lumber Co., Rainelle, W. Va., said that he knew of a company in his territory which operated a large mileage of narrow gauge road, and was building another narrow gauge line. He said that he knew of a mill that operated five band saws, and said if it built another road it would build standard gauge. He did not think there was any difference in the cost of the equipment to do the same work.

D. C. Manges, of the Babcock Lumber Co., Tellicoe Plains, Tenn., said that, in his opinion, if the proposition did not justify a standard gauge road it would not justify the construction of a narrow gauge.

Mr. Chapman said that the character of the shale rock in West Virginia was vastly different from the granite which the lumbermen run up against in this territory, and which made the cost of building logging roads very much greater.

Second Session of the Appalachian Logging Congress

The opening session of the Appalachian Logging Congress on Thursday was rather late, owing to the lateness of the hour at which the banquet had adjourned the previous evening. However, by 11 o'clock a goodly number had assembled and listened to the report of Secretary Henry Grinnell, of Asheville, N. C.

SECRETARY GRINNELL'S ANNUAL REPORT.

Secretary Grinnell stated that since the last report thirteen new members had been added, making the total membership 41. He recommended that the congress establish an employment bureau, as he had been asked by loggers to find work for them, and had been asked by employers to find men, and in one instance a northern lumber company addressed him to find a man capable of managing a large manufacturing operation. He believed that such a bureau would be of benefit, not only to the employes, but to employers as well.

"We have gone ahead a long way since the spring meeting, and a readier co-operation has been noticeable. The logger's time and thoughts are naturally, and very properly, taken up with the eternal fight to get his logs to the mill at a cost that will permit a small profit on the manufactured product, but a few words to a neighboring operator, or a letter to friend now and then, would tend to increase the membership faster than a year's correspondence by your secretary.

"The proceedings of the spring meeting have lately been sent to the members and to others interested in the work of the congress. It is perhaps to be regretted that they were not published sooner, but, on the other hand, it is quite possible that distribution shortly before a meeting may tend to increase interest in the congress.

"Your secretary would be grateful for criticism of the pamphlet, and for suggestions for future publications. It should be borne in mind that unlike the secretaries of the Pacific Logging Congress and the Southern Logging Association, he is not an editor and publisher, but merely a hill billy wood hick, unversed in the art of putting words together in any way but the simplest way."

The financial report of the secretary showed a balance on hand last year of $117.65; receipts $130, making a total of $247.65; expenses, $211.17; balance on hand, $36.48.

A resolution was presented expressing the thanks of the congress to Lewis Doster and his associates among the supply men for the splendid entertainment given members of the congress.

COMMITTEES APPOINTED.

President Townsend appointed the following committees:

On nominations: J. C. Arbogast, Malcolm Miller, E. R. Fredericks.

On resolutions: R. C. Staebner, D. G. Manges, R. D. Tonkin.

AMENDMENT TO CONSTITUTION.

W. T. Latham offered an amendment to the constitution regarding membership eligibility, to the effect that lumber manufacturing corporations, supply men, machinery men and newspaper men

HENRY GRINNELL, OF ASHEVILLE, N. C.
Secretary Appalachian Logging Congress.

may become associate members of the congress, having all the privileges of regular members, except voting, and that they shall be charged dues of $5 a year, payable in advance. This was unanimously adopted.

OFFICERS ELECTED.

Chairman Arbogast, of the nominating committee, reported the following list of officers to serve the ensuing year:

President—W. B. Townsend, Little River Lumber Co., Townsend, Tenn.

Vice-President—John Raine, Meadow River Lumber Co., Rainelle, W. Va.

Secretary and treasurer—Henry Grinnell, Grinnell & Holt, Asheville, N. C.

On motion the report of the nominating committee was adopted, and the above officers were declared unanimously elected.

Secretary Grinnell thanked the members for his re-election. He told of the many difficulties that were encountered in connection with his office, and asked the material co-operation of all the members.

S. F. Chapman stated that in his opinion the officers must be given the undivided support of the members.

President Townsend stated that he had accepted the honor of a re-election only under the condition that he be given the necessary support, and asked if it would be forthcoming. He was answered by cries of "Yes; yes."

REPORT OF RESOLUTIONS COMMITTEE.

R. C. Staebner, chairman of the resolutions committee, reported that thanks of the congress be extended to the following for courtesies: Knoxville Board of Commerce, Commercial Club of Knoxville, "Appalachian Trade Journal," Little River Lumber Co., of Townsend, Tenn.; Elkmont Contracting & Supply Co., of Elkmont, Tenn.; Southern Railway Co. for special car, and Hotel Atkin, Knoxville, Tenn.

Sympathy was expressed with the efforts of S. F. Chapman to secure lower freight rates on hemlock and low grade oak.

Thanks were extended to E. C. Atkins & Co., Indianapolis, Ind.; the Clyde Iron Works, Duluth, Minn.; the Lidgerwood Manufacturing Co., New York, and other supply houses represented at the meeting.

Thanks were also extended to the daily press of Knoxville for extended reports given of the various sessions.

On motion of Mr. Chapman it was voted that the secretary be authorized to employ an assistant, and that an assessment be voted to defray the additional expense.

AN OFFICIAL NEWSPAPER.

J. R. Williams, editor of the "Appalachian Trade Journal," of Knoxville, made a statement of what he would be willing to do for the congress if his journal were made the official organ, and his proposition having met with favor it was moved and seconded that the Appalachian Trade Journal be so designated, and the motion was unanimously adopted.

S. F. Chapman offered a motion that the president appoint a committee to consult with the Western Carolina Lumber & Timber Association and with the officers of the Southern railway relative to a joint conference on lower rates on low grade lumber, and the motion was adopted.

LUNCHEON TENDERED BY COMMERCIAL BODIES.

A most enjoyable luncheon, tendered to the Appalachian Lumber Congress jointly by the Knoxville Board of Commerce and the Commercial Club, was given at the Hotel Atkin at 12:30 o'clock Thursday, October 19. J. Allen Smith, president of the Board of Commerce, presided as toastmaster, sitting at the right of President W. B. Townsend. When the coffee and cigars were reached he called upon Sam E. Hill, of the city commission, chairman of the finance committee and vice-mayor, as the first speaker. Mr. Hill, as spokesman for the city of Knoxville, tendered to the visitors in becoming fashion the freedom of the city, and gave a most interesting talk.

T. Asbury Wright, vice-president of the Board of Commerce of Knoxville, welcomed the visitors on behalf of that body.

W. M. Bonham, of C. M. McClung & Co., representing the Commercial Club, also extended a cordial welcome to the members of the congress.

These addresses of welcome to the city were responded to by Lucius E. Fuller, of the LUMBER WORLD REVIEW, Chicago, who was requested by President Townsend to say a few words of appreciation on behalf of the members.

Malcolm Miller, of the Lenox Saw Mill Co., Elizabethton, Tenn., also made a very appropriate and fitting speech.

Digitized by Google

The star of the occasion, however, was Rev. George R. Stuart, of the Methodist Episcopal Church, South. Rev. Stuart told some excruciatingly funny stories, and as he had been heralded by some of his admirers as one of the greatest orators in the south, his address fully justified that expression.

After luncheon the visitors were taken in automobiles to the Knoxville Country Club, which is located on the high banks of the French Broad river, about six miles from town, and one of the most beautiful spots imaginable.

Third Session of the Appalachian Logging Congress

The closing session of the congress opened late Thursday afternoon, because of the automobile trip. First, on the program was a paper by W. W. Ashe, of Washington, D. C., who came to represent his principal, H. S. Graves, forester of the United States Forest Service. Excerpts from Mr. Ashe's paper follow:

THE GOVERNMENT POLICY RESPECTING THE EASTERN NATIONAL FORESTS.

By W. W. Ashe, of the Forest Service, Washington, D. C.

Mr. Ashe made a full and complete statement of the attitude of the Forest Service and of the government toward the lumbermen and the conservation policy. He said that there were two relations of the forest purchasing policy of the government in which the loggers may have a special interest. One is as to whether the loggers are leaving the lands they are exploiting in the best condition to fetch a good price, in case they should be considered for purchase by the government; and the other is the requirements of the government in selling the timber from the lands from which it is acquiring.

Mr. Ashe cited the provisions of the Weeks law, which makes provision for acquiring land for the protection of the head waters of navigable streams, and which properties eventually become national forests.

Cut over lands, he said, have little value, from the point of view of the government, as it may require more than a century to reforest some of these lands. Their purchase will, it is believed, have a steadying influence on the lumber market. Sales will be made only when there is a demand for the timber. Thus far the actual amount of timber sold has been comparatively small. The first requirement of the government in the management of its hardwood forests is absolute protection against fire, and this applies to old as well as young timber.

Recently provision has been made to allow the forest lands to be occupied for summer homes, hotels, stores, or other structures needed for recreation or public convenience for periods not to exceed thirty years, and no person to be allowed to use more than five acres. There will be no restrictions on either hunting or fishing other than those imposed by the game laws of the states in which the forests are located. The Pisgah National Forest, in western North Carolina, has been created a game preserve; hunting is prohibited at present, and fishing will be allowed only under permit. The establishment of the national park has resulted in the withdrawal of a considerable portion of the taxable assets of certain communities. To compensate for this 25 percent of the gross income from the national forest acreage in each county is turned over to the respective counties, and this money is to be used for roads and public schools.

In states which have adopted rules for the protection of timber lands from fire the co-operation and financial assistance of the government is also available. A group of owners of timber lands may organize an association to secure this protection, and operators should avail themselves of this opportunity where it is open to them. In states where it is not yet open to them they might well seek by concerted action such legislation as will enable them to secure it.

WOULD COMPARATIVE LOGGING COSTS BENEFIT MEMBERS OF THE CONGRESS.

By R. C. Staebner, of the Little River Lumber Co., Townsend, Tenn.

R. C. Staebner, forest engineer, of the Little River Lumber Co., stated that the logging cost is usually the largest item to lumber manufacturers. A record of the logging cost is necessary, to enable the manager and owners of any plant to know if their work is being done as cheaply as possible. Such records form a basis for comparing present with previous work.

Mr. Staebner said that while probably all members of the congress keep a record of their logging costs few knew exactly what it does cost, nor why it cost that particular figure, because the correct determination of this requires more than a careful account of labor and supply bills. The logging of any particular tract of timber is a long time operation, and in order to determine correct annual or monthly or any other periodic cost, many other facts must be known.

The speaker said that the proper distribution of correct labor and material cost is a very complicated problem. On nearly every job more than one product is handled, such as logs, tan bark, pulp wood, acid wood, ties, etc. The question is whether the cost of the roads over which the logs, the tan bark, and the pulp wood are skidded should be charged entirely to the logs. After the cost sheet is compiled much cannot be learned from it, unless familiar with all the conditions under which the work is done. The cost of logging depends on a great many varying factors, such as topography, soil, rocks, species, size and distribution of timber, character of undergrowth, weather conditions, character and efficiency of labor and supervision, efficiency of equipment, of machinery, and so on.

Mr. Staebner referred to the cost sheets gotten up by a neighboring association, but in his opinion, the problem was too large to be handled as it is being handled now. The solution lies in breaking up the subject in smaller parts and tackling these one at a time. The comparative methods that will yield the most profitable results is the one that will answer the questions. In order to arrive at this subject more intelligently he advocated the assignment of a day at a meeting of the members to some particular phase of logging work. For instance, a discussion and comparison of overhead steam skidding costs, with records kept somewhat as follows:

1. A careful description of each set, with a topographic map and statement of the character, size and density of the timber and the undergrowth.
2. The machine used, with specifications as to boiler, engine, number and size of drums; the arrangement, the cost of the machines, the size and kind of lines used and the cost of rigging the machine.
3. Crew and wage scale. Character and efficiency of the labor.
4. Method of rigging spar crews, type and size of blocks used, methods of putting out the lines and costs of this work.
5. Method of working while skidding, distribution of crews, average and maximum amounts skidded for each set, with labor cost of same.
6. Method of moving from one set to another, distance moved, time consumed and costs.
7. The amount and cost of coal, oil, waste, etc., used on each set.
8. Lost time due to weather conditions, break downs, etc.
9. Total amount skidded and total amount of labor and supplies.

At the end of such a discussion as this, he said, we would have a set of truly comparative figures, and by going into every phase of logging work in this manner, the association could gradually compile a set of intelligible working data, which could be used to determine the best method of doing any piece of work under any stated set of conditions.

ELECTRICAL LOGGING DEVICES.

By D. G. Manges, of the Babcock Lumber Co., Tellico Plains, Tenn.

D. G. Manges, superintendent of the Babcock Lumber Co., Tellico Plains, Tenn., introduced his paper with a quotation from Shakespeare: "If to do were as easy to know what were good to do, churches had been chapels and poor men's cottages princes' palaces." Mr. Manges stated that we were living in an electrical age, an age when the wheels of industry are progressing by leaps and bounds. Every day sees the equipment of some industry emerging in a new cloak. The logging industry, he thought, was not getting its share of electricity, which is the only source of power that can be economically distributed over a logging territory. The loggers are not keeping pace with the other great industries of the world "and," he asked, "is it not a fact that the lumbermen are being outstripped by their own industrial competitors?" Mr. Manges believed that the lumbermen must do more work with power driven machines. "For instance, the sickle, the knitting needle, the old hand loom, the needle and thread, the coal pick and the cross cut saw, were all rocked in the same cradle. The sickle has developed into a reaper, the knitting needle into a great factory filled with humming spindles, the needle and thread into a sewing machine, the coal pick into a coal cutter, and the old cross cut saw has remained a hopeless case all these years.

'The cross cut saw is not the only tool for which we should bow our heads 'n shame. Several weeks ago we were moving earth for a railroad bridge and found a kit of stone tools that were used by some prehistoric race; among them there was a stone ax. This ax was similar to the one we use today, with the exception of being stone and having the handle attached to the outside. Is it possible that we must cling to that old stone model forever? Should we not make some great effort to get an electrically driven tool to replace, at least, a part of its uses?"

Mr. Manges said that the lumberman's slogan should be "scientific logging," and he should put forth every effort to get men to conduct it along scientific lines.

Mr. Manges dreamed a dream and said that if Rip Van Winkle were to wake up ten years from now he believed that coming down from the tops of the Great Smoky Mountains he would find a newly made railroad, on which would be placed a car containing an engine and motor. From this car he would find a small insulated wire, which he would trace back a half mile into the dense forest and would find that it terminated at a giant oak. On either side there would be a man having in his hands a small motor weighing about 40 pounds. Each of the men would pick up a small spindle about an inch in diameter and about three feet long. They would attach these to their motors and place the steel against the tree. There would be a humming sound for a few moments, then a mighty crash; then the giant oak would lay prostrate. He would hear another quivering sound near by, and would discover a man having in his hands a machine similar to a riveting machine, driven by compressed air, and having a tool attached resembling the bit of an ax. This, he would place against the branches of the tree, severing them as rapidly as he touched them.

Malcolm Miller stated that the lumber trade papers might devote space to logging costs, and in this way the members could know definitely about them several months before their meetings.

George N. DeLaney thought that these uniform cost sheets, when prepared, should be distributed only to members, and should not be given to outsiders. Others participated in this discussion, and then there was a bringing up of the previous contention regarding narrow gauge and standard gauge road, which was participated in by H. B. Curtin, of Clarksburg, W. Va.; J. D. Wyrick, of the Colonial Lumber Co. Bearden and others.

A WEALTH OF MOVING PICTURES.

There were many moving pictures shown by the Clyde Iron Works, of Duluth, Minn., and by the Southern Pine Association. The pictures shown by the Clyde Iron Works displayed their big skidders in logging operations in the Black Mountain district, while those of the Southern Pine Association gave numerous views of the plant and operations of the Longville Lumber Co., at Longville, La., one of the properties of the Long-Bell Lumber Co., of Kansas City.

Fourth Session of the Appalachian Logging Congress

The handsome banquet hall of the Hotel Atkin was filled on Wednesday evening with lumbermen, members of the Knoxville commercial bodies, and members of the logging congress, who had gathered at the annual banquet. The festivities were accentuated by charming vocal music, rendered

Digitized by Google

by the hotel entertainers. One of the principal addresses of the evening was delivered by G. B. Kittle, of the Lima Locomotive Works, Lima, Ohio. Mr. Kittle had recently made a trip to the Orient, and had observed logging as well as log transporation methods in the countries through which he passed on his way east, and upon his return. He told particularly about logging methods in Japan, and gave in a breezy and interesting fashion some of his experiences in that charming country.

An address was also made by J. R. Williams, of the "Appalachian Trade Journal," Knoxville, which was punctuated by many apt sayings and scintillating stories.

THE LOGGING MANAGER.

By John Raine, Meadow River Lumber Co. Rainelle, W. Va.

The speech of the evening was that of John Raine, the new vice-president of the Appalachian Logging Congress, who treated of the "Logging Manager." Mr. Raine is one of the foremost lumbermen of West Virginia, and has charge of one of the largest manufacturing operations in that section, and his address was listened to with deferential attention. He said that in the minds of some, the lumbermen are simply despoilers of the bounties of nature. The recent criticisms of the Forest Service, he said, should startle us into taking account of ourselves, and seeing, if indeed, we have been wasteful, unscientific and inefficient in the management of our business.

Mr. Raine said that the lumberman had a double responsibility, one to society, that he does not despoil the beauty and utility of the forests, which in a sense are a heritage of all the people, and the other to himself and his allied interests, that he transform the mature products of the forest into the varied articles of man's need at a reasonable profit.

"In the hardwood belt, with which we are familiar, stumpage, plus the cost of delivering logs into the mill pond, constitutes probably two-thirds of the cost of lumber production. The general high efficiency of the modern sawmill plant and the fairly uniform scale of wages paid, do not permit a wide variation in the cost of manufacture of rough lumber. The completion of highly organized buying and selling agencies makes the sales manager's position a comparative sinecure. These two factors constitute, so to speak, dead level costs, so we must look to the logging end of the business for reform in extravagant cost of production and for the elimination of waste. Here is where big money is used in carrying on the business, and here is where the big leaks occur. For every industrial success or failure, some one man is primarily responsible. In the lumber game that man is the logging manager, and it is the purpose of this paper to hint at the place that he should have 'in the sun.' If then, this man is primarily responsible for the success of an operation, how shall we distinguish him?"

Mr. Raine outlined the qualities which predominate in the typical and ideal logging manager; what he must know, how he must be educated, the ability to judge men and conditions, and all of the requisite characteristics of the individual. He must also be a mechanical engineer, acquainted with forestry, a practical railroad man, and, in short, must know each and every feature of the operation from the tree to the mill.

"Conscious of the value of stumpage, our ideal manager is constantly working on the problem of eliminating waste and conserving all of the economically valuable work. This means that he insist on securing all the valuable timber and bringing to the mill only such parts of the whole tree as are commercially profitable. For the residue he is seeking avenues of disposition in other directions, and here he calls to his aid the chemist and the government. There are no doubt commercial possibilities in all wood waste and the government could render no better service than to aid the lumberman in finding uses and a market for such waste. These latent values, some day, the magic wand of the chemist under government aid will make real."

Other qualities of the ideal manager as set forth by Mr. Raine are the knowledge of the methods of combating forest fires, having in view the motto of the forester "Burnt timber pays no wages" and "A tree will make a million matches; a match may waste a million trees."

S. F. Chapman and Henry Grinnell, both of Asheville, N. C., were also called upon and responded in a felicitous way.

TRIP INTO THE HEART OF THE GREAT SMOKIES.

One of the most enjoyable trips that could be taken by any crowd of interested lumbermen was that on Friday, October 20, to the logging operations of the Little River Lumber Co. in the heart of the Great Smoky Mountains, a trip which involves about 75 miles of travel one way and return, about one-half of which was with a geared locomotive. The party embarked at Knoxville in a special car of the Southern Railway at 7:30 a. m. Elkmont was reached about noon and shortly afterwards luncheon was served in the baggage car with the compliments of the Clyde Iron Works. From Elkmont the ascent was from an 8 to a 12 percent grade, and the heights that were reached, an elevation of 4,300 feet, were productive of thrills upon frequent occasions.

The party saw the Clyde Iron Works skidders in active operation at several points, also those of the American Hoist & Derrick Co. W. B. Townsend was at all times describing the various points of interest as they were passed. He showed the once beautiful spot where the late H. H. Gibson had made his summer home for several summers, but said that when the loggers invaded the high place upon which his shack was located Mr. Gibson felt as if his home had been destroyed. However, the spot is still a beautiful one, as it overlooks the valleys for many miles. The party returned to Knoxville about 7 o'clock in the evening thoroughly tired out, but well satisfied with having seen some of the magnificent timber of the Little River Lumber Co. and the up-to-date methods used in its handling.

A TRIP INTO THE TELLICO PLAINS DISTRICT.

On Saturday, October 21, a party of lumbermen and machinery men accepted an invitation of the Babcock Lumber Co. to visit its big plant at Tellico Plains, Tenn., and to observe the logging operations in the mountains twenty-five miles back. There were only eight in the party, but the trip was fully as interesting as that of the preceding day. The party was hauled from Tellico Plains with one of the up-to-date logging engines operated by the Babcock Lumber Co. and saw many interesting sights en route to the scene of the logging operations. The Tellico river, a stream having its source far up in the mountains, was crossed and re-crossed repeatedly by the logging railroad. A height of only 3,000 feet was attained on this trip, but the wildness of the scenery was equal to that in the Elkmont district, while in some cases the thrills were even more perceptible. At one point one of the mammoth skidders of the Lidgerwood Manufacturing Co. was observed at the very summit of a high mountain, and farther on was found a Lidgerwood machine that was snaking logs from a deep valley to a point on the hillside road, whence they could be loaded for the mill. In one trip of the skidder seven logs were brought from the depths and safely deposited on the log pile.

The party was composed of H. B. Curtin, of the Pardee & Curtin Lumber Co., Clarksburg, W. Va.; John Raine, of the Meadow River Lumber Co., Rainelle, W. Va.; D. G. Manges, superintendent of the Babcock Lumber Co., Tellico Plains, Tenn.; L. E. Fuller, LUMBER WORLD REVIEW, Chicago; J. H. Dickinson, manager of the Lidgerwood Manufacturing Co., and E. D. Swan, the company's representative in the Appalachian district.

Annual Session Southern Logging Association

The sixth annual meeting of the Southern Logging Association reflected the steady growth of a flourishing organization. From its inception the association has been adhering closely to the purpose for which it was organized, that of being a real help to its members. In consequence its growth has been unrestricted and the interest in its sessions has been without abatement. The sixth annual meeting was attended by not less than 125 men interested in various features of logging operations, and this figure practically doubled that of the attendance of last year.

There were nearly one hundred present at the opening session Wednesday morning, October 25, at the Hotel Grunewald, New Orleans, La., when President Oscar Marsan, of the Opdenweyer-Alcus Cypress Co., Ltd., of Akers, La., called the meeting to order. He said:

PRESIDENT MARSAN'S ANNUAL ADDRESS.

Another year has passed since the last meeting of this organization, and I want to say that I feel very much gratified to see practically all the old members present who were here five years ago, when this organization was first launched; and I feel further gratified to see a number of new faces present. This indicates that a keen interest is being taken in the work which this organization is doing, which consists of a comparison of notes on the cost of logging by various methods now in use, together with any improvements that may have been brought to our notice during the past year; all of which brings us nearer to the goal to which we all should aspire; and which in two words means efficiency and economy in logging. For the benefit of the new faces present I want to say that this organization is composed of three different classes of loggers, namely, pine, cypress and hardwood; and each class will be given ample time during this meeting to discuss thoroughly all subjects pertaining to the several methods of logging now in use; and we will appreciate any suggestions that may be offered that will be for the mutual benefit of all those present.

SECRETARY BOYD'S ANNUAL REPORT.

Secretary James Boyd, manager of the "New Orleans Lumber Trade Journal," New Orleans, read his annual report. He spoke of the practical value to the members of the association in attending its meetings from year to year. Owing to the mere announcement of this meeting, Secretary Boyd said a large number of lumber companies have announced their intention of joining, more, in fact, than in any other year. A prominent lumber operator in Florida stated to the secretary that the association has been the means of reducing logging costs throughout the south and should have the co-operation of every lumber concern.

Secretary Boyd said that the success of the association is due to the unselfishness of the members in giving the benefit of their experience to help their fellow members. He called attention to the program for this meeting, a part of which, he said, had been due to suggestions from the members. In conclusion he requested everybody to feel free to ask questions or tell their experiences where they differed from those stated by others.

THE FEEDING OF MEN IN LOGGING CAMPS.

By R. B. Austin, of the Fernwood Lumber Co., Knoxo, Miss.

The address of Dr. R. B. Austin, camp physician of the Fernwood Lumber Co., Knoxo, Miss., was read by Secretary Boyd, as the physician was unable to be present. Dr. Austin said that the need of food is for supplying energy to man for carrying on the functions of the body, furnish material for the building and repairing of tissues and to provide suitable chemical and physical conditions for the numerous processes that take place in the body. Among food to be eaten should be included those substances that yield energy and also those that serve other important purposes in normal circumstances. A supply of energy is the first necessity in the diet, hence, without it all functions must stop. Practically all the supply comes from the proteids, carbohydrates and fat. The value of these substances in the production of energy is not equal and is not dependent merely on their bulk or weight, their relative digestibility or other factors, but upon the amount of energy that they yield when they undergo combustion. A man doing heavy work should have from 3,000 to 4,000 calories a day.

Basing his estimates of the needed substances in the food upon the above hypothesis, Dr. Austin presented a detailed menu for each meal of each day of the week, so arranged as to produce the needed energy for a man doing heavy work in the woods. Of course, this was merely a tentative bill of fare from a scientific standpoint and possibly would not be accepted with very good grace by the average woodsman, unless he were educated up to its efficiency.

A discussion ensued on Dr. Austin's paper during which various members gave their experience. President Marsan said that he charged all supplies up to the kitchen and paid the camp cook 50 cents

Digitized by Google

a day for each man. Salaries paid seemed to average around $75 a month for the cook, $35 for the helper and if there were other helpers about $25 for the second helper and $20 for the third. It was stated that beef was very much cheaper than bacon and it was just as well liked by the workmen. It was also recommended to supply plenty of good soup and oatmeal.

Mr. Marsan said that he made it the first object to feed his men properly, to keep the camps clean; to keep the men warm, so that when they come in at night with their clothes wet and usually chilly they would find everything snug and cozy.

V. C. Langley, of Laurel, Miss., did not understand how anybody could afford to pay present prices of supplies and charge only 50 cents a day for board. He said that while his company charged only 50 cents a day, the actual cost was 60 cents a day and he fed from 130 to 140 men.

Another member stated that he operated two camps and had two boarding trains and that the company's loss on its boarding account averaged $200 a month. He paid the head cook $60 and the helper $30 and charged each man 60 cents a day for board.

Another operator said that he charged his white laborers 70 cents a day for board and the negro laborers 50 cents. He said that the negroes liked beans, cabbage, corn bread, molasses, biscuit and such things. He did not compel them to board at the camp or boarding car, but let them go anywhere they wanted to go for their food. He said that as far as the white laborers were concerned he could not make anything in charging them 70 cents a day for board.

Mr. McGregor stated that he charged his men $4 a week for board. The cook was paid about $75 a month and the men carried their dinners with them into the woods.

S. J. Hinton, of the Finkbine Lumber Co., Wiggins, Miss., said that his company ran a boarding house and charged the men 50 cents a day for board, and he figured he was losing from 8 to 10 cents a day per man.

OSCAR MARSAN, OF AKERS, LA.
President Southern Logging Association.

Another lumberman stated that his company charged 20 cents for each meal actually eaten. It paid the head cook $75 and the helper $40 a month.

Another operator said that he employed 80 men and operated a boarding car. Two-thirds of his employees were negroes. He paid the boarding car chef 50 cents a day for each man, but the boarding account was certainly running behind.

Mr. Wilder, of the Richardson Lumber Co., Richardson, Miss., said that he paid the head cook $18 a week and a helper $5 a week and he found it very hard to get by at charging 60 cents a day for board.

PERTINENT QUESTIONS.

S. M. Adams, of the Kirby Lumber Co., Houston, Texas, sent up a number of questions to the secretary on which he wished enlightenment. He asked what was the best method of raising sinkers. This was replied to by a Florida operator who said that he had a crew of men working on sinkers, raising them with pike poles, but he also stated that sinkers could be prevented by leaving the tops on the trees for a while and then after a while cut them off and put the logs in the pond. then they will not sink.

Mr. Adams also asked "What is the best method for the operation and construction of an overhead rehaul line for the purpose of hauling logs from the rollway to the log hauler?"

Mr. Landry explained his method of constructing such a line and illustrated it by a diagram on the blackboard.

Another question asked by Mr. Adams was as to the best method of paying employes for raising sinkers, whether by the day or by the piece.

Mr. Hinton said that his company contracted for raising its pine sinkers. There were four men employed and they raised the sinkers with the use of pike poles and the operation cost $12 a day.

Another question asked was "What is the best method of clearing log ponds?" Mr. Landry, of the Lyon Cypress Co., said that he used a dredge boat and cleaned his log pond once a year. He has three men on the dredge and employs two extra men, and the process takes from fifteen to eighteen days. He said that the pond was about twelve feet deep.

Second Session of the Southern Logging Association

At the opening of our afternoon session, R. Lee Bass proposed an amendment to the constitution, which would admit as eligible to membership individual loggers and superintendents, whether the company by whom they are employed are members or not. The motion of Mr. Bass was seconded by Mr. Weldon and was unanimously adopted.

ADVANTAGES OF EXTENDING MAIN LINE LOGGING ROAD INTO TIMBER IN ADVANCE OF OPERATIONS.

By S. M. Adams, of the Kirby Lumber Co., Houston, Texas.

Mr. Adams spoke of the wonderful progress that has been made in the construction and operation of logging roads during the last thirty years. Instead of trams, there are now railroads. Formerly the lumbermen used pole roads, with animals for motive power. The method of construction was to select suitable poles of uniform size, peel them and lay them end to end. Usually they were laid with the butt ends all in one direction and with the tops lap-jointed to the butt of the next one. After being laid the poles were hewed on the inner face to reduce wheel flange friction, the joints being hewed so that the car wheels could pass over them easily. Mr. Adams described the pole road as being satisfactory for some purposes and on some of them geared locomotives could be operated. However, he said pole roads were practical to operate only on level ground.

Next came the tram road with sawed wooden rails, in size 4x5 to 6x6 and preferably of hardwood. Often these rails were made of 3x6, one being spiked on top of another, the object being to remove and renew the top rail when it had become worn. Such trams used either animals or locomotives for motive power according to the distance and size of operations. Mills of 70,000 feet daily capacity have been logged over such trams, but it did not take long to learn that the cost of renewals, added to the loss caused by frequent derailment, for a period of a year, would almost meet the first cost of steel rails.

Mr. Adams said that the plan of the Kirby Lumber Co. is figured for each operation to cover the requirements for several years. The timber estimates being arrived at, a survey of different routes into the woods is made and estimates of the cost of each is calculated. The engineer then chooses what he considers the best and most practical line, and forwards maps, profiles, and estimates covering the cost of the line to the assistant general manager, first securing the approval of the superintendent of trams and logging. If approved by the general manager, the auditor is advised of the amount of money necessary to construct the line, and charges the amount to his expense account, which account carries all the approved main line construction charges. Upon the completion of the job, the total cost is balanced against the original amount charged to the job.

As to the cost of trestles, Mr. Adams said that some which he has recently constructed cost $10 a foot. Mr. Langley said that his company has built them for $4 a foot. Some curiosity being aroused by this discrepancy it was found that the Wausau Southern Lumber Co. at Laurel, which built trestles at $4 a foot used a pile driver. Mr. Langley stated that he could build about 100 feet a day, while Mr. Adams stated that his company could build about 28 feet a day.

A COMPARISON OF LOGGING COSTS.

Secretary Jas. Boyd called on the members for cost sheets on logging. Some of the costs presented were as high as $5.21 for a given month in 1916, as compared with $4.08 for the corresponding month of 1915, while one concern reported a cost of $6.09 for August, 1916. A large Alabama concern gave as its log cost on pond delivery for several months as follows: February, $3.1777; March $2.3638; April $2.3517; May $2.7405; June $2.4727; August $2.5670; September $2.6002. A Mississippi concern gave its average logging cost for September, 1916, as $2.888 and for the year to date $2.575. A large concern in Alabama cut in August, 1916, 5,026,000 feet board measure at a total average cost of $3.201 for the month, and an average of $3.67 for the corresponding month of 1915. A Mississippi concern stated that its logging cost in 1915 was $2.85 for the year. Another Mississippi concern stated that its logging cost was $2.78 for the year 1915. A large Texas concern stated that its average logging cost for nine months to October 1, 1916, was $2.56.

A sample of the cost sheets presented applies to a Mississippi operation and gives both the logging costs and the manufacturing costs, as follows:

Cost Sheet—Town and Woods Subdivided.

TOWN.	Month Per 1,000	Year Per 1,000
Saw Mill and Pond	.584	.563
Engineer and Filer.	.127	.125
Repairs	.220	.152
Oil	.023	.022
Little Mill	.597	.388

Supervision	.125	.12
Extraordinary	.000	.00
Total	2.068	2.57

Third Session of the Southern Logging Association

Thursday had been designated by the logging association as "Progress of Invention Day" and the papers and discussion were confined exclusively to mechanical devices used in logging and equipment.

There were three addresses on the subject of "Recent Improvements in Cross Cut Saws," a subject, which, according to one of the speakers at a recent similar meeting of loggers, could not easily be treated for the reason that there "had been no improvements," he said. However, the gentlemen who represented the leading saw manufacturers of the country found much to say on the subject of improvements.

RECENT IMPROVEMENTS IN CROSS CUT SAWS.

By H. J. Benham, of E. C. Atkins & Co., Indianapolis, Ind.

H. T. Benham, advertising manager of E. C. Atkins & Co., Inc., Indianapolis, Ind., presented the first paper. Mr. Benham said that the developments of the saw had quickly kept pace with modern civilization. The growth has been so gradual as to have been scarcely perceptible. "When we look back upon the log cabins of our forefathers and their simple needs and compare those conditions with the skyscrapers and palatial homes of today, we realize the high tension under which you makers of things from wood have had to live. So, when I say that saws have kept pace

Digitized by Google

with those conditions, I mean that the modern saw is as far advanced as is the ten or forty odd story building compared with the log cabins of our forefathers. The old style peg tooth saw was able to cut the logs for the old style mill, but the saw of today, must keep pace with the high speed, high tensioned, strenuous appliances in metals of the modern world."

Mr. Benham mentioned the saws of flint and bone used by the cave man; the saws of hardened bronze used by the ancient Egyptians; the crude iron saws used in early civilization; the common peg tooth saw of our forefathers and the modern saw of today as being merely the mark of the advancement of enlightened civilization. Illustrative of this subject, Mr. Benham presented samples of various types of cross cut saws in use in Russia, Spain, Australia, France, Germany, Sweden, Japan, Portugal and on the Pacific coast of the United States.

He said that the quality of the saws made in the United States is so high that there are no saws whatever imported into this country. There are few saw manufacturers who have the facilities for making a type of saw that will satisfy the modern logger. He said further that the saw manufacturers owe a great deal to the logging superintendents for valuable suggestions in manufacturing their products. He gave credit to several saw manufacturers for the quality of the saws they make and then devoted his attention to the product of his own company.

The steel used by E. C. Atkins & Co., the trade name of which is "Silver Steel," is made after the company's exclusive formula. This steel is bought subject to a rigid examination in the Atkins laboratory and if not up to the standard is returned. Every plate is carefully tested and the heat treatment prescribed is based upon this analysis, and the practical results derived in cutting different kinds of woods.

Mr. Benham stated that "Silver Steel is as fine as razor steel." A man is forced to buy from six to a dozen razors before he finds one that holds its edge satisfactorily, and he asked "What is your percentage of return on our saws on account of non-edge holding qualities? How long will your highly prized pocket knife hold its edge even in the light cutting you do with it? Compare this with a saw which will stand up for hours running at high speed, cutting all kinds of hard timber, often including pine knots, tenpenny nails, with an occasional hinge or minie ball."

"These saws must not only be sufficiently hard to stand up under these conditions, but must be sufficiently tough to file readily, to swage properly, to take a sufficient set or to come in contact with hard frozen timber and other obstructions without a likelihood of losing its cutting edge or breaking off at the point. Gentlemen, a steel that will stand up under these conditions must of necessity be of exceeding fine quality."

Mr. Benham exhibited a cross cut saw which had been in constant use in cutting hard pine without resharpening for twenty-two hours. Another saw which he displayed had been run eighteen hours in hard frozen oak, and Mr. Benham stated he believed these saws represented the highest development of the modern cross cut saw.

RECENT IMPROVEMENTS IN CROSS CUT SAWS.

By John C. McCausian, of Henry Disston & Sons, Inc., Philadelphia, Pa.

Mr. McCausian reviewed the saw industry from its earliest inception. He said that the cross cut saw dates back to prehistoric times, but that most of the improvements that have been made in it for several hundred years had been since 1853, when a patent was issued for the double tooth saw and this patent was reissued in 1863. Between 1866 and 1868 patents were issued on what is known as the single hook tooth and the double hook tooth. Saws made with the single hook tooth had rakers on one half of the saw inclined to one end and on the other half toward the other end. The raker on the single hook pattern was at first straight on the front and seems to have played the part of a cleaner rather than a planer tooth. As late as 1878, the real function of the raker was not fully understood and it was generally used as a scraping tooth to keep the cut free from dust. The Champion tooth was patented in 1866 and the Lumberman tooth, a two-section model, in 1869. The Great American tooth with sections, containing three pieces and no rakers, was introduced in 1870. This tooth proved very popular and saws containing it are still made in large quantities.

JAMES BOYD, OF NEW ORLEANS, LA.
Secretary Southern Logging Association.

The cross cut saw, in its original form, was flat, that is of the same thickness from end to end and from front to back. Their use has increased to such an extent that a faster cutting and easier running saw was demanded. This was met by the grinding of blades two gauges thinner on the back. The next improvement in grinding produced saws which were of the same gauge or thickness throughout the cutting edge and five gauges thinner throughout all parts of the back.

Mr. McCausian told about the raker tooth and its function. He said it was really a scoring tooth which scored or cut the fibres of the wood, leaving a core which is planed out by the raker. In cutting hardwood the scoring teeth do not sink to the same depth as in soft wood and therefore the bevel on the scoring or cutting teeth should be less acute. If the rakers are too long an examination of the dust will show what is known as "whiskers" on the saw dust. This indicates that the raker is at work below the ability of the cutting teeth to score the fibres.

Summing up the recent improvements in crosscut saws Mr. McCausian said there is a finer quality of steel, a tougher and more uniform temper, a better method of grinding for clearance, teeth better adapted for cutting all kinds of wood, and a broader knowledge of the use of the raker.

Supplementing his address Mr McCausian showed a series of moving pictures of the Disston saw works in Philadelphia, in which were distinctly shown all of the operations connected with the manufacture of saws.

RECENT IMPROVEMENTS IN CROSS CUT SAWS.

By E. B. Saunders, of the Simonds Manufacturing Co., Fitchburg, Mass. and Chicago, Ill.

Mr. Saunders gave a very clear exposition of the origin and growth of the cross cut saw industry, substantially as follows:

"While the name 'crosscut' is applied in a general way to any saw which cuts across the fibres of the wood, it more specifically describes the two-handle saws used for felling trees and reducing the logs to convenient lengths. Originally this saw was an extension of the hand saw, a larger and heavier type to correspond with the early pit saw. As two men, working up and down in the pit, split the logs into boards, so two men working back and forth could reduce the logs to lengths. The pit saw was supplanted by the up and down saw operated by water power, then by the circular and band saw driven at high speed by steam. The crosscut started upon a career entirely its own. No power saw has been able to take its place. In the woods it has proven itself superior to the ax as a feller of trees, doing cleaner, quicker work with less waste.

"Moreover the crosscut has social qualities that belong to no other tool. Two men are required to operate it, companions in the solitude of the forest. They must work together in perfect rhythm, brains, arms and bodies displaying perfect team work. The Frenchman described the crosscut as that "go to you, come to me saw."

"Simonds crosscuts may be grouped under three patterns: (1) Eastern and southern, (2) Pacific Coast, (3) Australian.

"Simonds recommends the rolling bevel, with the bead preserved on the point, as that best adapted for strong, fast, smooth sawing Simonds recommends that teeth be fitted as follows:

"For hard woods, as maple, birch, beech, oak, raker teeth should be one-sixty-fourth inch shorter than cutting teeth, set one-fourth thickness of blade.

"For soft woods, as hemlock, pine, spruce, raker teeth should be one-fortieth inch shorter than cutting teeth, set one-third thickness of blade.

"To produce these results Simonds has just perfected a remarkable saw tool. This tool has nine parts, completely standardized, so that each can be replaced by sending its number. The tool has three uses, (1) to joint the cutting teeth, (2) to joint the raker teeth, (3) to gauge exactly both cutting and raker teeth.

"All the screws are thumbscrews, so that no screw-driver is necessary. The screw controlling the file is strong enough to give the curve desired. The Simonds files used with this tool are admirably fitted to their work."

At the conclusion Mr. Saunders gave views of the Simonds plants at Chicago and Fitchburg, Mass.

Following his address, through the courtesy of one of the film corporations, the delegates were treated to several reels of a great moving picture play entitled "The Girl of the Lumber Lands," in which the woodsman's life among the tall trees of the Pacific coast was vividly set forth.

Fourth Session of the Southern Logging Association

The moving picture dissipation to which the lumbermen were treated encroached upon the noon hour to such an extent that it was nearly 3 o'clock before the afternoon session was declared in order. The first paper was that of J. H. Dickinson, manager of the logging machinery department of the Lidgerwood Manufacturing Co., of New York, on the subject of "Recent Inventions and Improvements in Skidding and Loading Machinery," which is printed in full in this issue.

Mr. Dickinson was on his way to New Orleans when he was called back to the main office on some important business, and hence his paper was read by Secretary Boyd.

RECENT INVENTIONS AND IMPROVEMENTS IN SKIDDING AND LOADING MACHINERY.

By J. R. McGiffert, of the Clyde Iron Works, Duluth, Minn.

Mr. McGiffert's paper was read by Charles H. Mackintosh, advertising manager of the Clyde Iron Works, and was in brief as follows:

Mr. McGiffert spoke of the necessity of meeting modern problems with modern methods, and if a man cannot meet this up-to-date competition he will be driven out of business. He spoke of the difficulties of standardizing methods: for instance, in the lumber business, a difference in the work of one woods' crew and another is that they will be working in different camps and under different conditions. There may be a heavy growth of timber in one place and an exceedingly scanty growth in another. Here there may be swamps, hills, or heavy underbrush, while there the land may be level, high, dry and free from obstruction. With the help of modern machinery the lumberman has learned that while he cannot adapt conditions to his logging equipment, he can adapt his logging equipment to his particular conditions. Formerly all lumbermen logged much in the same manner;

Digitized by Google

now there is a machine for every logging operation and the efficient logger is such because he has found his machine and applied it.

Mr. McGiffert gave a history of the development of logging apparatus from the time of the invention of the first overhead cableway skidders by Horace Butters, of Ludington, Mich, to the present. Modern logging machines were made possible by the logging railroads. Their working speed makes it necessary to move them frequently. The demand for greater efficiency between the log deck and the mill led to a demand for equal efficiency in loading and skidding methods. This demand attracted the attention of hoisting machinery manufacturers and some began to apply their mechanical resources to a solution of the problem of quicker and cheaper logging. Clyde logging machines are known and used wherever there are forests to be logged, and, Mr. McGiffert stated, it is no exaggeration to say that there are as many logging machines of this make in use today as there are of other makes combined. The Clyde company manufactures ten distinct types of machines and more than fifty variations of these ten originals. The company claims to have a machine for every logging operation.

Mr. McGiffert said that the efficient log loader had to be designed to operate on the same track as the cars it was loading. This problem was solved in three ways. The first and most generally adopted method is to place the loading mechanism on a deck raised above the track by means of curved standards or legs, which rest upon the ties outside of the rails. To enable this machine to move from one log deck to another, it is equipped with swinging wheel frames and tracks driven from the loader's own engine by sprockets and chains. These swinging wheel frames, with their propelling chains, are drawn out and up under the loading deck when the machine is at rest, leaving a clear track for empties. When it is desired to move to the next log deck these frames are lowered until the wheels engage the track. They are long enough so that when they are drawn to a vertical position the side standards are raised until the shoes are high enough to clear the tops of the rails. This is the principle of the McGiffert log loader.

Mr. McGiffert described a new machine designed by the Clyde engineers and called the "Clyde Cableway Skidder," and states that among its advantages its first cost is only three-quarters of that of any other machine of similar working capacity; the construction is of metal, eliminating fire risks and reducing danger of breakage; the crew required is only six men, half of the number needed on other types; only one main or overhead cable is required, this cable being self contained on a steam driven drum and is self propelling.

RECENT IMPROVEMENTS IN WIRE ROPE FOR LOGGING PURPOSES.

By Walter C. Kretz, of the Jno. A. Roebling's Sons Co., New York.

Dr. Walter C. Kretz, Ph. D., M. E., and prominent as an engineer with the John A. Roebling's Sons Co., of New York, read a very instructive paper on the subject, "Recent Improvements in Wire Rope for Logging Purposes." He said that wire rope cost is an important item in logging operations, and the problem of determining the grade and construction which will result in maximum economy is a difficult one to solve.

Logging service, he said, is unlike many other classes of service to which wire rope is put, in that the conditions of use are subject to much more severe variations. On the mine hoist, the rope lifts a load which is fairly constant at a speed practically uniform, but a skidding rope may pull over level ground free from obstruction or it may pull up a hill and through country where the trip is liable to be hung up. The men in the woods can allow the rope to be burned or damaged by pulling around trees or rocks or to be kinked or jammed. The number of tons of ore hoisted from a mine gives a fair basis for the comparison of the qualities of rope, but the number of log skidders that are loaded, without additional information as to details, gives only a very uncertain foundation on which to form a decision. A single rope which gives unusually excellent results—or unusually bad results, for that matter—will be remembered longer and more clearly than many which average up well.

Dr. Kretz stated that improvement in wire rope service could be attained only by co-operation between the manufacturer and the user. The manufacturer must make a rope from wire which his experience and his laboratory tests show him to have certain definite qualities developed to the highest possible degree, and he must make them on machinery which will lay them up in such a manner as to make the most of the good qualities of the wire. The user should do all in his power to make an intelligent study of the results possible, for it is from information so gained that the manufacturer learns what to do and what to avoid. He should be willing to keep a full record of the service rendered by every rope; and he should preserve, if possible, discarded rope, the service of which was either very good or very bad, because an examination of these frequently uncovers valuable information.

Dr. Kretz went into the history of the manufacture of metal wires from its earliest stage. The art of wire drawing was introduced into England in 1565 during the reign of Queen Elizabeth. The first drawn wire was made in the United States at Spencer, Mass., in 1812. Wire rope was not introduced into America until 1840, when John A. Roebling made a few lengths by hand with the assistance of neighbors for use in hauling boats on the Pennsylvania canal. Mr. Roebling started a plant at Saxonburg, Pa., which was transferred in 1848 to Trenton, N. J., where it has been located ever since.

Dr. Kretz went into details regarding the manufacture of the steel from which the wire is drawn and also regarding the characteristics and ingredients of steel, as well as the actual process of drawing wire, all of which was deeply interesting.

Of particular interest to the loggers were Dr. Kretz's suggestions in taking care of wire rope, especially in not letting it be drawn around stumps or rocks or have any constant friction, all of which would contribute to weakening or destroying the rope.

RECENT IMPROVEMENTS IN WIRE ROPE FOR LOGGING PURPOSES.

By John K. Broderick, of the Broderick & Bascom Rope Co., St. Louis, Mo.

John K. Broderick, sales manager of the Broderick & Bascom Rope Co., of St. Louis, Mo., contributed the second paper to the symposium on wire rope for logging purposes. Mr. Broderick said that to many the selection of wire rope is merely a matter of diameter and length. Very little consideration being given to the type of construction, the grade of steel, or the work expected of the cable. He said that less than fifty years ago wire rope came into general use and if the supply was suddenly cut off now it would paralyze our daily activities. All construction work would be at a standstill. People would not be able to reach their skyscraper offices comfortably in the mornings. Coal mines and ore mines would lack the means of bringing their products to the surface. The transportation of commodities over the seas and to a great extent on land is dependent on the use of wire rope.

In the lumber industry, during this period, the logging of timber has passed from the ox cart through mule transportation to wire rope, and the wonderful advances in the development of the lumber business have been hand in hand with the developments of wire rope.

Mr. Broderick said that no matter how carefully the wire ropes are built, they are not used under the supervision of the manufacturers, nor are they used on the sort of machinery the manufacturers of wire rope would construct. "In other words, very few machines of any type, no matter whether used in the logging industry, mining, or elsewhere, are constructed with the view toward giving the wire rope a chance or even half a chance. We are constantly put to the question of recommending or supplying cable to meet conditions, and it is rather this practical side, together with the necessity of intelligent co-operation on the part of the consumer, that I address myself."

In his opinion and that of others, it is a settled question that a six strand rope of nineteen wires to the strand is the most ideal construction of wire rope for all purposes. Whenever any departure is made from this construction, it is usually at the sacrifice of some desirable qualities.

The speaker enumerated the usual causes of complaint on the part of consumers as follows:

1—Mishandling the rope before it is ever put to work.

2—Defects in equipment over which the rope has to work.

3—Unintelligent, or abusive handling by the operator.

4—Accidents, which are of three kinds. (a) known and reported, (b) unrecognized, (c) concealed.

5—That class of complaints due to ignorance or lack of knowledge of what the rope ought to do; to which is closely allied—

6—The ordering of wrong construction grade of steel or size of cable.

7—Improper care of rope (inspection, lubrication, rest).

Mr. Broderick said: "Wire rope is essential to the efficient and economical handling of logs. It is a faithful, long suffering service; but, in the name of common sense, GIVE IT A CHANCE."

RECENT IMPROVEMENTS IN ROD LOCOMOTIVES FOR LOGGING PURPOSES.

By C. H. Peterson, of the Baldwin Locomotive Works, Philadelphia, Pa.

C. H. Peterson, southwestern representative of the Baldwin Locomotive Works, making his headquarters at St. Louis, Mo., contributed a most instructive and carefully prepared address on the subject "Recent Improvements in Rod Locomotives for Logging Purposes," which he illustrated with a large number of designs of logging locomotives constructed by his company and in use on logging roads.

Mr. Peterson said that there was an advantage in using locomotives that are specially fitted for the service required, and this is receiving more attention on logging roads and many special designs have been constructed during the past few years for logging service. He said that locomotives for logging railways must be designed to withstand the most severe operating conditions, and that the structural details, springs and spring rigging must be sufficiently heavy to overcome strains and shocks due to rough tracks, and yet should be simple in construction, so that they can be maintained with limited shop facilities.

In a typical locomotive with three pairs of driving wheels, for example, the front truck is equalized with the first pair of wheels through a beam placed on the center line of the engine and fulcrumed under the cylinder saddle, and the rear truck is equalized with the second and third pairs of wheels through two beams, one on each side of the locomotive. The front of the locomotive is, therefore, supported on the central beam and the rear on the two side beams. Thus each wheel finds a bearing and carries its proportion of the load, even when passing over very uneven tracks, while the weight is distributed over a comparatively long wheel base and the locomotive can be safely run in either direction, entering sharp curves and switches when backing up without danger of derailment.

Mr. Peterson devoted lengthy consideration to the Walschaerts valve motion, a style of gear which, though introduced into Europe many years ago, has been used in America only about ten years. The Walschaerts valve motion is placed entirely outside of the wheels and is driven from two points, the main crank pin and the cross head. The advantages of the Walschaerts gear lie in its accessibility and in the fact that practically all parts of the motion work can be placed on the same vertical plane, so that the valve movements are subject to a minimum amount of distortion.

Mr. Peterson also paid particular attention to the superheater, which is a device now applied to practically all large locomotives. He said that a locomotive using super-heated steam will show an economy in coal consumption of practically 25 per cent as compared with a saturated steam locomotive in the same class of service.

Fifth Session of the Southern Logging Association

There were some questions relative to the operations of locomotives read by the secretary. One question was in regard to the amount of load that could be hauled by an 80-ton locomotive on a 9 percent grade. W. E. Matthews, of the Climax Manufacturing Co., an expert locomotive man, stated that a 50-ton locomotive on a 9 percent grade should haul 61 tons of freight at a speed of seven miles an hour.

Digitized by Google

Another question asked was in regard to surfacing a logging grade as to how many rail lengths of surfacing is considered a day's work for a man. Various operators expressed the idea that about two and one-half rail lengths could be properly regarded as a day's work, although some said one and a half, some two, and some three rail lengths.

RECENT IMPROVEMENTS IN WIRE ROPE FOR LOGGING PURPOSES.

By C. R. Deam, of the A. Leschen & Sons Rope Co., St. Louis, Mo.

C. R. Deam, sales manager of the A. Leschen & Sons Rope Co., St. Louis, Mo., stated that he was not engaged in the manufacture of wire rope, but was interested in forming the connecting link between those who used the rope and the plant which makes it. His business may be properly termed a service department.

Mr. Deam said that his company had never yet encountered any wire rope working conditions so severe or exacting that it did not devise and produce a rope to meet them capably. During the past several months of congested transportation conditions, he acknowledged that it had been hard to give the service due to the customers. During the last year there has been more emphasis on the indispensable need of wire rope in lumber manufacture than ever before. When there is danger of a skidder being shut down or a crew of men made idle and the mills slowed down for want of logs, lumbermen recognize how important wire rope is to their industry.

Mr. Deam stated that the toughest kind of work that a wire rope could be assigned to was in the woods, and his company considered that it is the hardest work a wire rope can be called upon to do.

To show the nature of wire rope Mr. Deam gave this illustration. "Primarily, iron is a hard, inflexible substance. When tempered into steel it is still harder, but little more flexible, having weight carrying and age resisting qualities only. The architects of a steel frame structure calculate that to be within the limits of safety the weight placed upon the structure must come well inside the point where the steel will spring. In other words, it must be rigid to be safe. Now, contrast with this the task of the builders of an efficient wire rope. Their product must readily bend under the first strain; they must take this same basic material and process it by tedious and intricate drawing and tempering to where it can bend continually while in service—bend rapidly over small drums and sheaves. It must be so constructed that it will take these bends while under tremendous strain, strains that are variable and limited only by the power of your steam. They must make it wear resisting in every feature, so that it will endure the hard grind around stumps, over stones, against itself on the drum; elastic, so that it will recover from the stretch that the sudden loads give it." Mr. Deam said that this slender steel line must work day in and day out until it has done that work long enough to bring its cost per thousand feet handled down to a very few cents.

Mr. Deam recited the various ways in which ropes can be damaged or broken, one of the most prolific causes being kinking the rope and another being overstrain. The presence of brittle wires in a failing rope is usually due to overstrain. There were no brittle wires in the rope when it left the factory, because highly efficient tests had been made. When the wire is overstrained the material becomes hard and its properties of elasticity and toughness are reduced. Mr. Deam also called attention to the use of small sheaves which, he said, are destructive to rope life. He also called attention to sheaves that had become worn and corrugated by the action of the rope and when a new rope is put in the sheave these worn places become virtually knife edges and have a constant cutting action.

At the conclusion of Mr. Deam's paper there was a general discussion as to the durability of wire rope and the amount of work that could be derived from it. President Marsan said that in case of accident the loggers should not blame the rope. He knew of one rope which had pulled out 14,000,000 feet of logs and of another that had logged 18,000,000 feet and of still another 14,800,000 feet.

THE QUESTION BOX AGAIN.

There was a question asked as to the policy of cutting red gum by the pine men. It was found that several of the manufacturers were not cutting their gum at this time, but were holding it until better values were offered.

A question as to the distance at which various concerns haul their logs developed the fact that various operators were hauling from 2,500 feet to 3,700 feet.

A question was asked as to the height of the stumps that were left in the woods, it having been recommended at the last meeting that the stumps be left about 7 inches high. One member said that he was averaging 12-inch stumps, another 15-inch stumps, another 10-inch stumps, another 5 to 12-inch stumps, with an average of 8-inch, another either 12 inches or 18 inches high, another 12 to 14 inches, and an Arkansas man said that he was leaving 14-inch stumps. One man, leaving 24-inch stumps, said he could not get "those flat heads to do anything else." They were supposed to cut 18-inch stumps, but, owing to the difficulty of obtaining men, he let them cut anything they liked, he said, and if they cut a 3-foot stump he would never see it.

Prof. Ernest C. Pegg, of the forestry department of the University of Missouri, Columbia, Mo., made a few remarks as to the statements that he had heard during the meeting. He thought that when statements were made by members as to their operations, they should also give an outline of the conditions surrounding them, which would, of course, greatly enlighten all interested.

Sixth Session of the Southern Logging Association

At the afternoon session on Friday there was considerable discussion along several topics, but the first discussion was on a paper read by Dr. C. L. Vines, camp physician of the Crossett Lumber Co., Crossett, Ark.

RESULTS OF TWO YEARS OF FIRST AID AND SANITATION IN LOGGING OPERATIONS.

By Dr. C. L. Vines, of the Crossett Lumber Co., Crossett, Ark.

Mr. Vines said in part that the adoption of routine sanitary and preventive measures has given such brilliant results in the two camps of the Crossett Lumber Co. that, as the title of this paper states, a description of the work done and the results, obtained in a short time should prove a matter of interest for those in charge of logging under similar conditions in the south. The two camps of the Crossett Lumber Co. are located in the lowlands of southern Arkansas and northern Louisiana, an average distance of eight and 20 miles south of Crossett; and here are maintained the woods crews and their families. The nearer camp was established four years ago, and is located on somewhat rolling ground in a clearing in pine woods; drainage is excellent, through two natural stream lines. The lower camp was built one year ago and is situated on flat prairie land adjoining the woods. Drainage of the camp site here has been effected through the digging of ditches which connect into a common drain along the main line of the railroad by which surface waters are carried well away from the camp. Each camp accommodates about 115 families, or about a total of 900 in both, of whom some 230 constitute the woods crews. All houses are electrically lighted, the current being generated in each camp by steam power from which the street lights of the camps are also supplied. The water supply of both camps is derived from driven wells, 112 feet in depth at Tolers and 90 at Duncans, the water being pumped into overhead pressure tanks, from which it is piped to all houses. The water at both camps has been bacteriologically and chemically examined and has been found to be of an excellent quality. The water discharged from the houses is collected in small ditches and quickly carried off; there is no standing water or natural collections of water about either camp.

Since the institution of the above described measures, the results obtained have been excellent, particularly with reference to the prevention of fly and mosquito breeding with accompanying decrease in the sick rate due to summer diarrhoea and malaria. A gratifying decrease of about 75 percent has occurred in the malarial rate.

As used in practice in the woods, the application of first aid methods is thus always performed by some qualified individual on whose presence of mind and ability dependence can be put. The foreman in charge acts as captain of the first aid emergency team and has access at all times to the first aid appliances. These consist of first aid boxes measuring about 11 inches in length, five in width and four in depth, and contain sterile dressings, tincture of iodine, liquid petroleum, safety pins and stimulants; stretchers are carried on all trains, and in cases of serious accident, patients are transferred without delay to the general hospital at Crossett.

ON THE LOCATION OF CAMPS.

The question as to advantages of housing men in mill towns or in the woods was taken up. One of the loggers stated that they had tried both the portable and the permanent camps and had moved them at times from twelve to eighteen miles. This system, however, had been found very unsatisfactory, and his company was now making an effort to install permanent camps.

A Mississippi operator asked the question as to why those who were using teams for skidding did not use steam skidders instead. One of the loggers replied that he had short logs and used a Barnhart loader, but had never used anything but teams and it would take some time to change methods and crews and get them used to the skidders. They don't cut anything below 12 inches and hardly need the skidders, as they expect to go back later and get the small stuff.

Another logger said that they had the teams and drivers and that many of their men never saw a skidder, so that it would be necessary to get an entire new crew of men.

The report of the committee on nominations was presented by the chairman, J. E. Weldon, the other members of the committee being L. Wilcozen, S. J. Hinton, J. A. Burns, W. O. Gilchrist and C. O. Pyle.

ELECTION OF OFFICERS.

The following were on motion declared duly elected to serve the ensuing year by rising vote:

President—Oscar Marsan, Opdenweyer-Alcus Cypress Co., Akers, La.

First vice-president—V. C. Langley, Wausau-Southern Lumber Co., Laurel, Miss.

Second vice-president—T. B. McCormick, general manager Carrier Lumber & Manufacturing Co., Sardis, Miss.

Secretary-treasurer—James Boyd, editor Lumber Trade Journal, New Orleans, La.

State vice-presidents—Alabama, J. W. LeMaistre, Jackson Lumber Co., Lockhart; Arkansas, G. C. Pyle, Union Sawmill Co., Huttig; Florida, W. M. Fisher, Carpenter-O'Brien Co., Carbur; Louisiana, C. B. Lindsey, Gulf Lumber Co., Fullerton; Mississippi, J. R. Carr, Eastman, Gardiner & Co., Laurel; Oklahoma, J. M. Campbell, Choctaw Lumber Co., Broken Bow; Tennessee, E. W. Tschudy, Tschudy Lumber Co., Memphis; Texas, A. L. Black, Palmetto Lumber Co., Oakhurst.

The committee also recommended that the secretary be paid $250 for his services during the fiscal year ending October, 1916, and a like sum for services during the current fiscal year.

President Marsan in fitting words expressed his appreciation of his re-election as president of the association. He was gratified with the result of the meeting and said that the attendance was fully double of what it was last year.

V. C. Langley, first vice-president-elect, said that he had not been able to do much for the association the past year, but that he would do his best the coming year.

Secretary James Boyd suggested that in view of the great difference in logging costs, as reported by different members, that some of the low cost people go out and visit the men who were struggling to reduce their costs and show them where they could be benefited.

THE COMMITTEE ON RESOLUTIONS.

The committee on resolutions offered the following, which was adopted:

Resolved: That a vote of thanks of this association be hereby given to the speakers who addressed our several sessions for the practical and instructive talks they made on the subjects assigned to them, which added so much to the interest and value of our meeting; to the management of the Hotel Grunewald for the courtesy of the use of the convention hall and other favors; to J. E. Pearce, for the presentation of the film, "The Lass of the Lumber Lands"; to the Clyde Iron Works for the badges.

The report was signed by the committee, R. Lee Bass, chairman, J. E. Weldon and E. F. Jennings. Adjourned.

TRADE COMMISSION ASKS INFORMATION

Enlightenment Desired on Effects of Car Shortage with Regard to Production, Stocks and Prices—Replies of Southern Pine Association Members to be Collated—Charles S. Keith Replies for Central Coal & Coke Co.

In his search for enlightenment on various problems of the lumber industry, Will H. Parry, of the Federal Trade Commission, recently sent out to prominent lumbermen and association officials over the country, it is presumed, a letter asking their opinion upon certain points relative to production, car shortage and movement of lumber. The reply sent in by President Charles S. Keith, of Kansas City, Mo., on behalf of the Central Coal & Coke Co. to the committee on the Federal Trade Commission of the Southern Pine Association is no doubt indicative, or at least representative, of the replies which the Federal Trade Commission will receive or has received from others to whom they have appealed for information. The committee of the Southern Pine Association, however, intends to make a composite of the replies received from subscribers to the association and as each reply is received copies are being sent to other subscribers, so that all may have the benefit of the consensus of opinion thus made available.

President Keith urges that immediate and careful consideration be given to the replies, as it is desirable that the commission be made to realize the appreciation of the industry and its desire to be of material and constructive aid to American business.

The letter of Will H. Parry, of the Federal Trade Commission, follows:

FEDERAL TRADE COMMISSION.

Washington, Oct. 24, 1916.

Dear Sir: The recent reports of lumber production that have come to the commission indicate a considerable accumulation of mill yard stock, because of the shortage of shipping facilities. The depression in the lumber industry has been frequently ascribed to a chronic tendency toward overproduction resulting in almost constant pressure of overstocked mills to unload at whatever price the market will bear. I should like to have your opinion of the way in which and the extent to which the present car shortage has disturbed the adjustment of production to shipment of lumber. I am concerned in the evidence of the accumulation of abnormal mill stocks. Should it and can it be discouraged?

Perhaps the following questions, which are merely suggestive of the matter I have in mind, will facilitate your reply.

What immediate effect upon prices is traceable to the shortage of transportation facilities? What effect upon the production of lumber?

How do the mill stocks compare with those of one year ago? Mill prices?

Are the retail yard stocks being so depleted that the retail demand, when the car shortage disappears, will be sufficient to absorb *at steady prices* the abnormal accumulation of mill stocks?

Will the late season and the uncertainties of transportation tend to delay prospective building? If so what effect will this postponement have upon the anticipated movement of mill stocks of lumber?

To what extent will the delay caused by the general shortage of shipping facilities, in the receipt of other materials used with lumber in general construction, affect the consumption of lumber?

Does the car shortage have the more pronounced effect upon the market for hardwood or for softwood lumber?

Has the lumber industry, as other industries have done adapted production to the facilities for shipping? If not, is its failure to do so as a result of lack of information as to the market conditions? Or of faulty organization within the industry? Or of conditions affecting only certain individual mills?

If it is true that production is not complete until the commodity has reached the consumer, there is in general the same reason for adjusting the output of lumber to the facilities for transporting it to the markets as there is for adjusting the supply of logs to the mill to the sawing capacity of the mill itself. Is the lumberman accustomed to think of production in this light?

I shall much appreciate any suggestion you may give to the commission of a definite remedy for the ill-adjusted production at present characteristic of the lumber industry.

Yours sincerely,

WILL H. PARRY,
Commissioner.

Mr. Chas. S. Keith,
Kansas City, Mo.

REPLY OF THE CENTRAL COAL & COKE CO.

Following is the letter of reply, sent by the Central Coal & Coke Co. to the Federal Trade Commission committee of the Southern Pine Association:

Kansas City, Mo., October 27, 1916.

Federal Trade Commission Committee, Southern Pine Association, Kansas City, Mo.

Gentlemen: Referring to letter of Commissioner Will H. Parry of October 24, and in answer thereto, beg to state that there can be no question as to the soundness of the policy of manufacturing no more lumber than the market will assimilate nor for which transportation facilities can be secured in which to ship same. The manufacture of any natural resource in excess of market requirements or shipping facilities should be discharged as far as it can be done lawfully.

Replying to the various questions suggested by Mr. Parry in the order in which they occur in his letter:

"What immediate effect upon prices is traceable to the shortage of transportation facilities? What effect upon the production of lumber?"

The price of lumber has advanced at least $1 to $1.50 per thousand since the car shortage became acute.

As to the effect upon the production of lumber: Individually, our instructions to our operating department are that they shall not manufacture any more lumber than they ship each week, as we are not desirous of putting any more lumber into pile or of increasing our stocks, which are already heavier than they were a year ago.

"How do the mill stocks compare with those of one year ago? Mill prices?"

A year ago on the first of this month, this company had 42,975,495 feet of lumber in stock, and on the first of October this year we had 52,238,666 feet of lumber in stock, showing an accumulation for the year of 9,263,171 feet.

In comparison of mill prices as received from all sales, would state that our average price for September a year ago was $12.95, while for September of this year it was $14.28 per thousand feet.

"Are the retail yard stocks being so depleted that the retail demand, when the car shortage disappears, will be sufficient to absorb AT STEADY PRICES the abnormal accumulation of mill stocks?"

The answer to this question is merely a matter of opinion. Our observation is that the manufacturer is making no effort to sell lumber because of his already heavy order files and the impossibility of securing cars in sufficient quantities to give reasonable shipments. The retailer, on the other hand, is not doing any speculative buying or duplicating his orders in order to get material, but is only buying what he actually needs and on which he is promised immediate shipment. Information from some sources shows that the retailers' stocks are higher than they were a year ago and other sections show that stocks are badly depleted, due to the present car conditions.

My personal opinion is that with a continuation of present shipping conditions (which apparently will continue for some time to come) retailers' stocks will be depleted, and manufacturers will accumulate stocks during this period, so that when the car supply develops in greater quantity the retailer will hold off buying longer than the manufacturer can hold off selling, with the natural result of a materially declining market, this, of course, provided the manufacturer does not regulate his production to his shipping facilities.

"Will the late season and the uncertainties of transportation tend to delay prospective building? If so what effect will this postponement have upon the anticipated movement of mill stocks of lumber?"

Generally speaking, contracts are awarded and prospective building begins sufficiently early in the season to permit the construction to be placed under roof before bad weather materializes. Delay in receipt of materials delaying construction to such a point that it will be impossible to get the construction under roof will naturally cause building, and the period of consumption to be delayed to such a time when conditions are more favorable.

"To what extent will the delay caused by the general shortage of shipping facilities, in the receipt of other materials used with lumber in general construction, affect the consumption of lumber?"

In answer to this question: We know that such delays in receipt of other materials do retard the consumption of lumber, but to what extent it is impossible to measure. To illustrate: We know that during the past year the difficulty of securing iron and steel and the abnormally high prices thereof have materially curtailed the construction of railroad cars in the United States, and that possibly 300 percent to 400 percent more cars would have been built this year than were built had it not been for this reason. A notable incident of this kind was the withdrawal of specifications by the Pennsylvania Railroad Co. for cars for these reasons. This situation goes all along the line of consumption, and the consumption of lumber and construction work is materially affected by inability to receive other materials which enter with lumber into general construction.

"Does the car shortage have the more pronounced effect upon the market for hardwood or for softwood lumber?"

I would assume that the effect upon both would be equal, the degree of the effect being varied by the comparative production of both branches of the industry.

"Has the lumber industry, as other industries have done, adapted production to the facilities for shipping? If not, is its failure to do so a result of lack of information as to the market conditions? Or of faulty organization within the lumber industry? Or of conditions affecting only certain individual mills?"

Answering this question by sections,—

(a) "Has the lumber industry, as other industries have done, adapted production to the facilities for shipping?"

The lumber industry as such has not adapted its production to its facilities for shipping, which is evidenced by the weekly barometer reports of the different branches of the industry.

(b) "If not, is its failure to do so a result of lack of information as to the market conditions?"

No; its failure is not due to lack of information, because information is in the hands of the industry every week as to what the situation actually is. It is not due to lack of information, but is due to other causes.

(c) "Or of faulty organization within the lumber industry?"

I do not think it is a question of faulty organization within the industry so much as it is a lack of ability on the part of those engaged in the industry to do individually and without agreement that which they cannot do by agreement due to uncertainty and doubt of the law. If that doubt were removed, I believe the industry could and would act. They do not act individually because they do not know what their neighbors will do or what effect, if they do and their neighbors do not, it might have on their local operations, fearing that they might be bearing more than their just proportion of the burden while their competitors who were operating on better time would be able to sell their product to better advantage.

(d) "Or of conditions affecting only certain individual mills?"

There is no condition affecting any individual mill, except in the case of storm timber, which would be a justifiable excuse for any mill not doing its share to help the industry.

"If it is true that production is not complete until the commodity has reached the consumer, there is in general the same reason for adjusting the output of lumber to the facilities for transporting it to the markets as there is for adjusting the supply of logs to the mill to the sawing capacity of the mill itself. Is the lumberman accustomed to think of production in this light?"

In my judgment, the situation is better expressed here than I have ever seen it expressed before. The illustration is typical of what actually should happen. No one will cut more logs than his mill can manufacture, and why should anyone cut more lumber than the market will take care of or for which he can secure transportation facilities to ship same to the market.

I should say that the lumberman is not accustomed to thinking in this light and his business

Digitized by Google

will never be prosperous until such time as he does accustom himself to thinking of his production in this way.

Now, in answer to the last paragraph of Mr. Parry's letter, wherein he suggests that he would appreciate any suggestions that we may be able to give to the commission of a definite remedy for the ill-adjusted production at present characteristic of the lumber industry, would state that a very practical and efficient remedy would be a modification of our trust laws so that individual members of the industry might agree and contract with each other to produce only as much lumber as could be shipped or which the market would assimilate, under and through the supervision of the Federal Trade Commission in order that this privilege might not be abused. In the absence of such remedial legislation, the only other alternative remedy is that the Sherman law as it stands should be interpreted in the light of the rule of reason to permit those industries that are engaged in developing natural resources to make such agreements as would be necessary to overcome the economic weakness above outlined, this to be under the supervision and observation of the Federal Trade Commission.

Very truly yours,
CENTRAL COAL & COKE COMPANY,
By Chas. S. Keith, President.

LAW FOR FURNISHING CARS.

(Houston Chamber of Commerce Bulletin.)

The present car shortage has caused a revival of the use of articles No. 6678 to No. 6682, inclusive, of the Texas Civil Statutes wherein provision is made for a penalty when carriers do not furnish cars after written demand is made.

According to one prominent railroad man of the city, the statute is one of great value during the present car shortage, because both the shipper and carrier are protected. The statute provides that when shippers make application in writing to any superintendent, agent, or others persons in charge of transportation or any railway company, receiver or trustee operating a line of railway at the point the cars are desired upon which to ship any freight, it shall be the duty of such railway company, etc., to supply the number of cars so required at the point indicated in the application, within a reasonable time thereafter, not to exceed six days from the receipt of such application. If the application be for 10 cars or less, the same shall be furnished in three days, and if the application be for 50 cars or more the railway company may have 10 full days in which to supply the cars. The application must state the number of cars desired, the place at which they are desired and the time they are desired. When cars are applied for, under the provisions of these statutes, if they are not furnished, the railway company so failing to furnish them shall forfeit to the party or parties so applying for them the sum of $25 per day for each car failed to be furnished, to be recovered in any court of competent jurisdiction and all actual damages that applicant may sustain.

The applicant shall, at the time of applying for such car or cars, deposit with the agent of the railway company one-fourth of the amount of the freight charges for the use of such cars, unless the railway company shall agree to deliver such cars without such deposit. The applicant is required to fully load the cars within 48 hours after such car or cars have been delivered and placed and, upon failure to do so, he shall forfeit and pay to the company the sum of $25 for each car not used.

Provision is also made that where the applicant does not use the car so ordered by him he shall forfeit to the railway company, in addition to the $25 per day penalty, the actual damages that such company may sustain by the failure of the applicant to use the cars. When cars are so supplied and loaded, it shall be the duty of the railway company to deliver the freight to the consignee within a reasonable time and the party or parties to whom the freight is consigned shall unload the cars within 48 hours after delivery and notice or forfeit to the railway company the sum of $25 per day for each day so left unloaded.

LUMBER AT THE NATIONAL COMPLETE BUILDING EXPOSITION.

New York, Nov. 8.—Lumber will take a prominent part in the National Complete Building Exposition, which will be held in the Grand Central Palace, March 5-11, of next year. Already some of the most desirable exhibition space has been taken by the leaders of associated lumber enterprises, and the lumber division will doubtless become one of the features of the show once the lumber interests generally come to a full appreciation of the possibilities of the exposition.

In the first American Complete Building Show, held in Cleveland, Ohio, last February, some of the most striking exhibits were put on by the lumber manufacturers and dealers, and it is significant that those who exhibited there have this early made their reservations in the New York show. Their declarations are unanimous that the show was distinctly beneficial and profitable.

Southern pine will be exhibited by the Southern Pine Association of New Orleans, the Arkansas Soft Pine Bureau of Little Rock, and the North Carolina Pine Association of Norfolk, Va. The Gum Lumber Manufacturers' Association of Memphis, will have an elaborate exhibit of that wood in interior finishing.

CINCINNATI WAGON MANUFACTURERS TO MERGE.

At a recent meeting of over twenty prominent wagon manufacturers of Cincinnati, initial steps were taken toward a merger of twenty or more factories into one great corporation. The plan contemplated is to organize a company with a capitalization of $500,000 to engage in the manufacture of wagons and motor trucks for all purposes. It is planned to build one central plant and also to operate branch plants in various parts of the city. Many of the plants now in operation will be utilized as branch factories while a number of the smaller concerns will be abandoned entirely.

NEW EAST COAST CYPRESS COMPANY.

The Pine Plume Lumber Co., at Savannah, Ga., is an old and well-known institution in the yellow pine trade. It has recently made contracts with six large cypress lumber plants on the east coast

WILLIAM PETRIE, OF SAVANNAH, GA.

to sell their entire product of 135,000,000 feet of cypress lumber annually. These companies are the Savannah River Lumber Co., having mills at Savannah, Ga., Brunswick, Ga., and Gilman, S. C.; the Big Salkehatchie Cypress Co., with operations at Varnville, S. C.; the Black River Lumber Co., Gable, S. C., and the Hebard Cypress Co., Waycross, Ga. William Petrie, until November 1 assistant secretary of the Southern Cypress Manufacturers Association at Jacksonville, Fla., will be in charge of the inspection, grading and shipping at all of these plants. He made a splendid record in his office as assistant secretary at Jacksonville and carries with him into his new work the good wishes of the members of the cypress association.

MR. BENHAM ENTERS ANOTHER FIELD.

H. T. Benham, for a dozen years past advertising manager of E. C. Atkins & Co., Inc., Indianapolis, Ind., recently tendered his resignation and severed his connection with that company November 1, in order to enter another field of endeavor. Mr. Benham is succeeded by T. A. Carroll, who has been in charge of the trade service department of E. C. Atkins Co. for a number of years. Mr. Carroll has worked in close harmony with the advertising department through this period and has had an opportunity to learn much regarding the advertising department and its details and therefore will be qualified to handle the relations of the company with its customers and newspaper friends in a creditable way.

E. C. Atkins & Co. express their regret at the severance of relations existing for so many years with H. T. Benham, but as that gentleman had a business opportunity which he believed promised greater returns in the future, they wish him godspeed in his new field.

CO-OPERATION FOR THE EXPORT TRADE.

A recent editorial in the New York Times expressed the sentiment that the passage of the Webb bill would be unnecessary, as present laws would permit lumbermen entering into a co-operative organization, as had been proposed, for the promotion of export trade. For fear that the ideas entertained by the New York Times may imperil the Webb bill and because its position does not represent that of the southern pine manufacturers or of other lumbermen, Charles S. Keith, president of the Southern Pine Association, on October 26 forwarded to the New York Times a telegram setting forth the association's position in the matter of co-operation on export business and the Webb bill. The telegram was as follows:

To the Editor,
New York Times,
New York, N. Y.

Our attention has been directed to a recent editorial appearing in your journal commenting on our proposed plan to combine in the lumber industry for the purpose of extending foreign markets.

We note you infer that it is unnecessary to pass the Webb bill authorizing such combinations, because counsel have advised that such combinations are not illegal. It is true that some of our counsel have advised that such a combination is not illegal when such combination is formed for the purpose of extending our foreign trade, and only to be used for that purpose. It is also true that other counsel have advised their clients, members of our organization, that such combination is illegal; and consequently, in view of the doubt which exists, it will be impossible for us to form such a combination unless the Webb bill is enacted into law.

The Federal Trade Commission has not expressed itself officially or otherwise to us, but we assume from the fact that they have recommended the passage of the Webb bill that they themselves are doubtful and desire the doubt removed. It is extremely essential, in order that we may increase the exportation of lumber, that we should handle same in a co-operative way, as none of the units of production in the industry are sufficiently strong in themselves to develop their foreign markets on account of the great financial risk, lack of sufficient production to satisfactorily fulfill their obligations and carry their overhead expense.

Only a very small proportion of their product will comply with foreign specifications. Our organization has recently completed a six months' study abroad of the probable market conditions following the war and from the reports which we have received, we are determined, providing that the doubt which exists as to the legality of such a combination is removed, to organize to enter into the foreign trade in a broad way, and to that end we are now proparing to take advantage of the situation when the Webb bill shall have been enacted, which, according to the unanimous conclusion of all our counsel, will remove any question of doubt.

In the absence of the passage of said act, we feel it will be impossible for us to proceed any further with our plans.

SOUTHERN PINE ASSOCIATION,
By C. S. Keith, President.

ORGANIZATION OF LUMBER SALESMEN.

It will be remembered that at the School of Salesmanship, held at St. Louis, Mo., in June, steps were taken to create territorial organizations of traveling salesmen, to work in conjunction with the committee on sales and distribution of the Southern Pine Association. This matter was discussed by the board of directors of the association, acting with the committee on sales and distribution, at New Orleans, October 17, and it was decided that steps looking toward the organization of the salesmen in separate territories be deferred until the report of the Federal Trade Commission is made public. It is felt that the report may contain valuable suggestions which may be found advantageous in the proposed work.

A report of the proceedings of the School of Salesmanship is in press, and is expected to be mailed out in a few days.

General News of Associations and Clubs

AMERICAN OAK MANUFACTURERS' ASSOCIATION.

Memphis, Tenn., Nov. 3.—Plans are rapidly taking shape for the perfection of the organization of the American Oak Manufacturers' Association, Friday, Nov. 10, is the date set for the meeting at which this work is to be done and there have been enough responses to the invitations sent out by the backers of this movement to insure a very large and very representative attendance. Invitations have been sent to 1,250 oak manufacturers in every part of the United States and Canada and this gives some idea of the big territory to be covered.

Application for a charter for this organization has already been made by lumbermen in this part of the country who are behind the launching of the new association and this instrument has already been issued by the Tennessee authorities. The incorporators are: W. A. Ransom, S. M. Nickey, R. L. Jurden, James F. McSweyn, J. E. Stark and Ralph May. No capital stock is shown and it is set forth that the association is for the purpose of exploiting oak forest products and promoting social intercourse among its members.

While very little has been said along this line, it may be stated that the American Oak Manufacturers' Association will be modeled along the lines of the Gum Lumber Manufacturers' Association. No effort whatever will be made to control prices, but the association will secure reports from its members regarding the amount of lumber on hand from time to time and it will likewise secure reports of actual sales made by its members, compiling and distributing this information for the benefit of all identified therewith. It is believed, too, that there will be a number of big problems to be solved in connection with the handling of foreign business after peace comes. The association will also conduct a vigorous and efficient publicity campaign with a view to creating new uses for oak in the United States, thus enlarging outlets in this country.

Among the gentlemen who have signed the call for the meeting already scheduled are: Gayoso Lumber Co., Penrod, Jurden & McGowen, the Green River Lumber Co., the Memphis Band Mill Co., May Bros., the Memphis Veneer & Lumber Co., Nickey Bros., Inc., and James E. Stark & Co., Inc., all of Memphis; the Paepcke-Leicht Lumber Co. of Chicago, the Lamb-Fish Lumber Co. of Charleston, Miss., Mowbray & Robinson of Cincinnati, W. P. Brown & Sons Lumber Co. of Louisville, the Carrier Lumber & Manufacturing Co. of Sardis, Miss., Jonh B. Ransom & Co. of Nashville, and the Himmelberger-Harrison Lumber Co. of Cape Girardeau, Mo.

JOINT CONGRESSIONAL COMMITTEE TO HOLD HEARINGS AT AN EARLY DATE.

Washington, D. C., Nov. 8.—Hearings are to be commenced here on November 20 on interstate and foreign commerce and the necessity of further legislation, by the joint congressional committee which was appointed toward the close of the past session of congress.

The committee, of which Senator Francis G. Newlands, of Nevada, is chairman, has announced that they desire to give ample opportunity to all interested in or having any relation to the subject matter of the proposed inquiry to express their views. The committee is urging, however, that anyone wishing to appear before it give due notice so that the hearings can proceed in as orderly sequence as possible.

It is the purpose of the committee to hear regarding government regulation and government ownership the opinions of economists and publicists of eminence, representatives of the Interstate Commerce Commission, the National Association of State Railroad Commissioners, state railroad and public utility commissions, representatives of the railroad executives and labor organizations, representatives of farming organizations, shippers, and bankers, representatives of chambers of commerce, and other important business and industrial organizations.

CONVENTION DATES.

November 11—Southern California Retail Lumber Dealers' Association, Los Angeles, Cal. Annual meeting.

November 15—Southern Sash, Door & Millwork Manufacturers' Association, Piedmont Hotel, Atlanta, Ga. Quarterly meeting.

November 17-18—Advisory Councillors of the Chamber of Commerce of the United States of America, Washington, D. C. Special meeting.

November 23—North Carolina Pine Association, Norfolk, Va. Monthly meeting.

December 11—New York Lumber Trade Association, Waldorf-Astoria Hotel, New York City. Annual meeting.

January 16-18—Northwestern Lumbermen's Association, Court House, Minneapolis, Minn. Annual meeting.

January 18-19—American Forestry Association, Willard Hotel, Washington, D. C. Annual meeting.

January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.

Janauary 23-24-25—Mountain States Lumber Dealers' Association, Brown Palace Hotel, Denver, Colo. Annual meeting.

January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

January 25-25—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

January 30-31—Hardwood Manufacturers Association of the United States, Hotel Sinton, Cincinnati, Ohio. Annual meeting.

January 31-February 1-2—Chamber of Commerce of the United States of America, New Willard Hotel, Washington, D. C. Annual meeting.

February 7-8—Retail Lumber Dealers' Association of Pennsylvania, Fort Pitt Hotel, Pittsburgh, Pa. Annual meeting.

February 7-8-9—Nebraska Lumber Dealers' Association, Hotel Rome, Omaha, Neb. Annual meeting.

February 11-12—National Builders' Supply Association, Hotel Sherman, Chicago. Annual meeting.

February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.

February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.

February 20-22—Wisconsin Retail Lumber Dealers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

The subjects to be considered are stated in general terms in the joint resolution and cover: "The subject of the government control and regulation of interstate and foreign transportation;" "the efficiency of the existing system in protecting the rights of shippers and carriers and in promoting the public interest;" "and all proposed changes in the organization of the Interstate Commerce Commission and the act to regulate commerce," etc.

FORESTERS EMPLOY PERMANENT SECRETARY.

The New York State Forestry Association has recently employed a permanent secretary in the person of Victor A. Beede, who was formerly assistant state forester of New Hampshire. Mr. Beede will make his headquarters at the Chamber of Commerce, Syracuse, N. Y. In employing a man who will give his entire time to the development of the forestry association and in promoting legislation for the handling of forest lands and production of shade trees, the executive committee of the association believes that the scope and influence of the organization will be greatly increased.

DISTINGUISHED LUMBERMEN VISIT THE PACIFIC COAST.

Seattle, Wash., Nov. 8.—On November 17 a party of lumber manufacturers from the east will arrive in Seattle, and a meeting of the manufacturers, loggers and timber owners has been called to confer with these gentlemen on some of the important problems of the day. The party consists of distinguished lumbermen, led by President R. H. Downman, of the National Lumber Manufacturers' Association. Others of the party are President Charles S. Keith, of the Southern Pine Association; R. B. Goodman, of Marinette, Wis.; A. R. Turnbull, of Norfolk, Va., probably accompanied by C. I. Millard, of Norfolk, and J. W. Blodgett, of Grand Rapids, Mich., and other well known lumbermen.

The lumbermen are glad of an opportunity to confer with Mr. Downman, who has spent much time in forwarding the interests of the lumbermen, especially with reference to the income tax law, and Mr. Keith also has some important and interesting things in connection with markets to discuss with local manufacturers. One subject of special interest for discussion is in connection with the Federal Trade Commission investigation, the proposed sending of men to Europe in behalf of American lumber, the progress of the Webb bill, present and anticipated activities of the National association and other matters of this kind.

Mr. Downman and his party will be the guests of Oregon lumbermen at Portland, November 21, and will spend some time thereafter on the Pacific coast.

ANNOUNCEMENT OF NEBRASKA MEETING.

Lincoln, Neb., Oct. 26.—At a meeting of the board of directors of the Nebraska Lumber Dealers' Association, held here last week, it was decided to hold the next annual convention in Omaha, February 7, 8 and 9, 1917, with headquarters at the Hotel Rome. Secretary Hall reports that a splendid meeting is anticipated, and that preparations for it are already under way.

EXTENSIVE ADVERTISING TO BOOM THE SOUTH.

New Orleans, La., Nov. 4.—A five-year intensive campaign of publicity and general advertising for the settlement and development of the south has been undertaken by the James William Bryan Co., a large publishing and developing institution of New York, with offices also in Philadelphia, Baltimore and Washington. The business men of Mobile met in that city on November 2, among them many bankers and lumbermen, and guaranteed that Mobile county would contribute $125,000 as its share in the proposed campaign, the total amount necessary being estimated at $250,000. Hattiesburg, Miss., business men agreed to contribute $25,000 for that district; Lucedale, Miss., citizens promised $10,000 and Pascagoula, Miss., $5,000. A number of those who have come into the advertising propaganda have been owners of cut over lands and they are contributing to this publicity fund upon the basis of 2 cents an acre a year for five years.

It is proposed that a conference of representatives of each community interested in the proposition be held at Gulfport, Miss., around the middle of November and at this time, it is proposed, the Gulf Coast Publicity League will be organized, and a board of trustees elected to receive and handle the funds which are expected to be raised. John A. Fox, a well known engineer, formerly with the Mississippi Levee Association, and prominently identified with the National Rivers and Harbors Congress, will be associated with the Bryan concern in the general work; also M. B. Trezevant, recently general manager of the New Orleans Association of Commerce.

CYPRESS MEN MEET AT JACKSONVILLE

Semi-Annual Session of Gulf and East Coast Manufacturers Held in the Gateway City—Trade-Marking and Grade-Marking Chief Topics of Discussion—Trip to Old St. Augustine Follows Business Sessions

The Southern Cypress Manufacturers' Association held its semi-annual fall meeting last week at Jacksonville, Fla., for the second time since the cypress manufacturers of the east coast became a constituent part of the organization. A delegation of twenty-six cypress men came over from New Orleans in a special Pullman car. The party was in charge of E. C. Runte, of New Orleans, district passenger agent of the Louisville & Nashville road. Mr. Runte looked after the welfare of the party to the utmost satisfaction of its members, both coming to and going from the meeting. The party included President Frederick Wilbert, Secretary George E. Watson, Traffic Manager E. W. McKay, Advertising Manager John Bemer Crosby, the latter of Chicago, and Dr. Hermann von Schrenk of St. Louis, the association's technical expert. Another prominent member of the party who contributed materially to the gaiety of the occasion was Gus Drews, of the Brownell-Drews Lumber Co., Ltd., of Morgan City, La.

THE MORNING SESSION.

The meeting was called to order Wednesday, November 1, in the rooms of the Traffic Club on the eleventh floor of the Hotel Mason, Jacksonville, by President Frederick Wilbert, of Plaquemine, La. The call of the roll showed a representation of twenty-three out of the thirty-six members of the association, and of those present sixteen were from the Louisiana district.

PRESIDENT WILBERT'S SEMI-ANNUAL ADDRESS.

In his semi-annual address President Wilbert stated that this was the second time that the cypress manufacturers had met on the east coast since it had established eastern headquarters at Jacksonville, although the manufacturers of Louisiana had made at various times six journeys to that city to consult with their eastern friends.

Regarding the new grading rules President Wilbert said that the meeting a year ago was of particular importance to the cypress men in having taken what many considered to be rather radical action on the question of grading rules. There may have been a feeling of hesitation and some may have thought that the cypress manufacturers were progressing a little too rapidly, but he now believed that practically all agreed that the action then taken was carefully considered and was wise. In some cases, he thought, the cypress association was leading other associations and this was because they had made so few mistakes.

President Wilbert regretted that a number of cypress manufacturers had not affiliated with the association, especially because they are to a certain extent participating in the benefits, while not lending any aid in paying the bills. He said there was an increasing tendency to tighten up on association work, so that it will eventually confine its benefits to members only, which he believed to be only fair. He urged the members to give careful consideration to everything on the program and to be as nearly unanimous in their decisions as possible.

TREASURER SWARTZ' REPORT.

E. G. Swartz, in his report as treasurer, showed receipts during the year of $74,077.62 and disbursements of $72,943.08, leaving a balance on hand of $1,134.54. The report was ordered spread on the minutes.

COMMITTEE ON INSURANCE.

C. S. Williams, chairman of the insurance committee, submitted the report of J. H. McLeod, manager of the new insurance department. The reported stated that as this was a new feature of the association work it had been necessary to build it up on methods of procedure as the inspection of mill plants progressed. Thus far it had not been possible to make more than one visit to plants of the Louisiana members and all but five have been visited. It was regarded as advisable to learn in the first visit to these plants the conditions prevailing and to give advice on any glaring inconsistencies which might be observed and leave the details for a later visit, at which time also the question of rates could be more intelligently considered. After the conclusion of this meeting the same kind of preliminary investigation will be undertaken at the plants of the eastern members of the association and by the time of the next annual meeting in May some thoroughly comprehensive reports can be presented.

Regarding conditions at the various plants, suggestions for improvements were made at four plants and in these cases it was found that the annual saving in premiums would be greater than the cost of the improvements. At nine plants forms were found which were not as liberal as they should have been and suggestions were offered which have resulted in the changing of the forms at a number of these plants and changes will be brought about in the others. At two plants the forms were found in such shape that the only way of handling them practically was to completely rewrite the forms, which was done. At one plant there was a $10,000 policy issued by Lloyds of London, which contained a warranty to the effect that the insurance will be null and void unless there is also a policy on the plant issued by a certain other insurance company. No policy issued by this company could be found, it having been cancelled on account of reduction in the stock of lumber on hand and the manager being unfamiliar with the clause in the Lloyd's policy. At seven of the plants the policies were not concurrent and in most of these cases a loss would have resulted in serious difficulty in getting an adjustment. At four plants an actual reduction in rates resulted and Manager McLeod stated that he believed that the department can be of great service to members in this respect later. At four plants were found overcharges in rates and returns of premiums have been secured in these cases amounting to $34.51, $114.95, $96.35 and about $30. At three plants the department suggested a change in the insurance from stock companies to inter-insurance companies for commissaries and floating equipment for the reason that the inter-insurance rates were lower.

Manager McLeod recommended that some action be taken in the way of preparing standard forms. There are a number of clauses in some of the policies that all did not know about and by examining a large number of policies these advantageous clauses can be learned and the members will be entitled to the benefit.

Mr. Williams stated that the losses of the cypress manufacturers in ten years had not exceeded $30,000, leaving out of the calculation the loss of the two Lutcher & Moore plants, which amounted to $300,000. Up to this time, however, the manufacturers had paid out for insurance in the ten years upward of $500,000.

R. H. Downman said that he recently consulted with a representative of the Liverpool & London & Globe Insurance Co., who said that the cypress men were doing a splendid work and he would support the movement in every way. Mr. Downman called attention to the fact that the companies referred to by Mr. Williams are not mutual companies, but are organized for an interchange of insurance among manufacturers and are operated without profit. Mr. Downman referred to the operations of the National Lumber Manufacturers' Inter-Insurance Exchange, which was under his supervision and said that it was hoped to have at least $10,000,000 at risk at the end of the second fiscal year, which would be in February, 1917.

COMMITTEE ON TRADE-MARKING.

John F. Wigginton, chairman of the committee on trade-marking, submitted the report of his committee. The report will be given in full in these columns at a later date.

When Mr. Williams asked some questions regarding the progress that had been made in establishing the trade-marking, Secretary Watson said that out of fairness to the retail lumber dealers the advertising of the association trade-mark had not been vigorously pushed and would not be until the dealers had had ample opportunity to stock up with trade-marked lumber. In Mr. Watson's opinion he thought the association would have to give about a year's notice before trade-marking is put in force generally.

Dr. Hermann von Schrenk spoke of the attitude of the architects and of the signal engineers regarding the trade-marking question. He said that the American Railway Signal Association had adopted specifications on signal posts, poles and other equipment used in signal work, that it be of black or red cypress grown within 200 miles of tide water. This assured the elimination of the yellow or rapid growth highland cypress. He thought that the only absolute guarantee the railroad men could have that they are receiving genuine black or red tidewater cypress would be to buy trade-marked lumber.

Chairman Wigginton of the trade-mark committee stated that the committee would like to be instructed as to the conclusion of a contract with J. G. McDonough, of Eau Claire, Wis., the owner of the trade-marking device.

R. H. Downman said that the Forest Service, the Federal Trade Commission and the Bureau of Foreign and Domestic Commerce were all watching the progress of the cypress trade-marking movement very carefully.

J. Ray Arnold, of the Edge-Dowling Lumber Co., Groveland, Fla., expressed his opinion that lumber should be branded according to grade, and Secretary Watson expressed himself as believing that this would eventually take place, but he thought such an effort would cause a good deal of trouble now.

It was finally moved that the trade-mark committee be authorized to enter into a contract with J. G. McDonough for the use of his trade-marking device and afterward turn it over to the association when the incorporation shall have been completed. This motion was adopted, there being only one vote against it.

ON UNIFORM GRADE MARKS.

H. B. Hewes offered the following:

"In furtherance of the trade-marking idea and in order that the mills of the Southern Cypress Manufacturers' Association may enjoy the full benefits that may accrue from the use of same, it now becomes necessary to also adopt uniform grade marks for their lumber. This will insure to the purchaser the integrity of the grade as well as the quality of the lumber and will effectively prevent the mixing or substitution of grades that has been a source of some complaint in the past.

"I, therefore, move that it is the sense of this meeting that all mills of this association should and are hereby requested to adopt uniform grade marks for their cypress lumber; and the president is hereby authorized to appoint a committee of three to recommend the grade marks and to adopt and put same into effect just as soon as possible."

The discussion on the Hewes resolution was participated in by L. W. Gilbert, J. C. Remick and H. W. Taylor, and it was adopted without division.

THE AFTERNOON SESSION.

The members re-assembled at 2 o'clock to listen to the report of the committee on grades and specifications, L. W. Gilbert, chairman. Mr. Gilbert prefaced his report with a letter from the editor of an eastern lumber trade paper, regarding the new grading rules. The trade paper editor said that he understood that the association had lately changed all of its grades so as to necessitate a complete revision of the grading rules. Mr. Gilbert stated that a letter of this kind would have been appropriate five or six months ago, but it was rather surprising that some of the people in the trade had not yet heard of the adoption of the new rules.

PROGRESS OF THE NEW GRADING RULES.

Chairman Gilbert said that a great many of the mills have adopted the new grading rules entirely. Some, however, are still using both systems of inspection and there are probably not over a half dozen of the cypress mills which have not adopted the new rules in any way. Altogether he considered the results of the new rules very satisfactory. He said that the changes were radical, but the committee's investigations had demonstrated that a great majority of the dealers are taking to the new rules kindly. Regarding reports on re-inspection, he said that while he did not recall the exact number, he knew that re-inspections that were asked for under the old grading rules during the last six months were fully double the re-inspections on shipments made under the new rules and in the same period a great deal more lumber had been shipped under the new rules than under the old. Dealers, especially those who have given the new rules a fair trial, are pleased with the change

Digitized by Google

and are perfectly willing to pay the advanced prices. Some of the dealers have not taken hold because they have been prejudiced, partly by misrepresentation, assuming that any change made is for the interest of the manufacturer and not of the dealer. Further difficulty has been encountered in the fact that some of the representatives of the manufacturers have deliberately misinformed their customers about the new rules, telling them that the only reason for adopting the new grades was to advance prices. A number of representatives of the mills have been allowed to sell both grades and in so doing they made the argument against the new rules more effective by stating: "Yes, I can give you lumber on the new grades if you want it, but you will have to pay more money for it." However, the committee feels very much gratified with the progress made.

With reference to the conference held with representatives of the retail lumber dealers in New Orleans a year ago, Chairman Gilbert said that the retailers seemed delighted with the proposition, but he thought that perhaps the members of the committee at New Orleans were more enthusiastic on the matter than the retail members in general. He said that the use of a common trade-mark by any number of manufacturers in this country is at least unique, but in Mr. Gilbert's opinion there are enough members in the cypress association who will stake their integrity on the proposition. He said: "I entreat those of the members who have not come out squarely for the new grades to do so now. Let us get the sheep together and let the goats take care of themselves." He said that the National Association of Washing Machine Manufacturers had recently appointed a committee to arrange a meeting with the cypress manufacturers' association relative to an agreement on standardizing specifications of material used for washing machines. Mr. Gilbert reported that this conference probably will be held some time in December.

COMMITTEE ON RAILROADS AND TRANSPORTATION.

R. H. Downman reported for this committee, stating that there was nothing of particular moment to report, except the reclassification hearing on I. C. C. 8131, which was held at Chicago during the two weeks commencing July 10 last. In Mr. Downman's opinion the decision of the Interstate Commerce Commission will be in favor of the lumbermen and possibly it will be handed down between now and December 1.

COMMITTEE ON LEGISLATION.

Mr. Downman, as the chairman also of the committee on legislation, made a verbal report of what had been done by himself and Frank G. Wisner, of Laurel, Miss., at Washington during the hot days of summer. Mr. Downman devoted seven and a half weeks of his time in the effort to modify the revenue bill from the way in which it had been originally framed. He said that the principal feature of the bill was the attempt of the revenue department to insert a very drastic provision relative to the income tax. About thirty lumbermen met last summer at the Congress hotel in Chicago and considered the provision and put it up to the National association to handle as best it could. Mr. Downman and Mr. Wisner proceeded to Washington and proposed various amendments to the bill to the ways and means committee, and succeeded in getting every one of their amendments into the bill, which was finally passed by the senate September 8. He stated that Commissioner Luther F. Speer, of the internal revenue department, had stated very plainly that it was intended to include these drastic provisions in the new revenue bill. The work of the committee in securing amendments to the bill before its passage undoubtedly saved the lumbermen of the country many thousands of dollars in unjust taxation.

C. S. Williams moved that Mr. Downman and his associates on the committee be given a unanimous vote of thanks by the Southern Cypress Manufacturers' Association for their splendid work. This was done by a rising vote.

COMMITTEE ON TERMS OF SALE.

Another committee of which Mr. Downman was the head was that on terms of sale, on which he made a verbal report. He said that nothing had been accomplished in a final way. He spoke of the work of Edward Hines on this matter. Mr. Hines had discovered that a man who took sixty days' time on a bill and then discounted it was making the seller pay at the rate of 44 percent a year for money. Mr. Downman said that nobody can buy steel or flour or bacon on the terms on which they can buy lumber and it seemed to him that the lumbermen ought to do something regarding restriction of terms of sale. He said that one of Mr. Hines' companies, the Virginia & Rainy Lake Co., had reported that its supplies cost 62 percent and its labor 28 percent more than last year. In Mr. Downman's opinion the committee on terms of sale should become more active.

Regarding the form of price list H. B. Hewes, chairman, stated that there was no formal report to make, but an early revision of the present form is likely to be submitted to the association at its next meeting.

COMMITTEE ON ADVERTISING.

The advertising committee, E. G. Swartz, chairman, did not present a formal report. Mr. Swartz said that he advised that the association keep everlastingly at it on the present basis of advertising as long as such splendid reults were derived.

Secretary Waton said that the results obtained from the exhibits authorized at the last annual meeting for display at numerous building material exhibits, fairs, etc., had been very flattering. The exhibits were displayed at twenty-two different places, and the interest they had created was shown by numerous expressions of appreciation received from dealers throughout the country.

Secretary Watson said that he had received a letter from Secretary F. D. Torrence, of the Ohio Association of Retail Lumber Dealers, in which it was stated that the interest in the cypress advertising service was growing.

Mr. Downman spoke of having observed personally some of the results of cypress advertising. For instance, at the Raleigh hotel in Washington he noticed that they were putting in a new store front and it was made of cypress. He asked how much the contractor paid for the cypress and was told that it was $100 a thousand feet. In another case a man was putting in some library shelves for which he used 230 feet of cypress at a cost of $37.50, or at the rate of over $150 a thousand.

John Bemer Crosby, of Chicago, talked interestingly on the cypress advertising campaign and the outlook. He said that the high prices of cypress at retail were the natural results of advertising; that the dealer would have to buy the lumber without much regard to its price. He facetiously said that he looked forward to the time when rotary cut "peck" would be sold for lace curtains.

There was considerable discussion on advertising, participated in by H. W. Taylor, J. F. Wigginton and others. It was decided that H. B. Hewes be appointed an additional member of the trade-mark committee to aid in formulating and handling the grade marking of lumber.

As chairman of the committee on utilization of cut over cypress swamp lands, Mr. Hewes said that he had noticed that one company during the last two years had pastured from 200 to 1,000 head of cattle. This can be done without draining the cut over lands, but the lands could be drained under the reclamation law. He said that a very interesting report on this proposition would be made at a later meeting.

INCORPORATING THE CYPRESS ASSOCIATION.

J. F. Wigginton, under the heading of general business, read the opinion of the association's attorney on forming a cypress corporation. He said that the association could become incorporated without capitalizing, should it so desire. One of the main reasons for incorporating, Mr. Wigginton said, was for the purpose of making a contract with J. G. McDonough for the use of his patent device for imprinting the association trade-mark upon lumber.

It was moved and seconded that a committee of six be appointed by the president to confer with the association attorney with the view of drawing up a charter for the organization in accordance with the laws of Louisiana. The committee was also instructed to prepare the constitution and by-laws for the government of the association under the incorporation.

The motion was carried unanimously and President Wilbert appointed the following as members: J. F. Wigginton, L. W. Gilbert, E. G. Swartz, H. W. Taylor, C. S. Williams, Secretary George E. Watson and President Wilbert, ex-officio.

FIRE PROOFING WOODEN SHINGLES.

Dr. Hermann von Schrenk spoke of the recent action of the insurance companies and the altruists on the growing agitation regarding fire hazards where wood construction and shingles are used. He stated that the insurance people are especially opposed to the wooden shingle, which, they say, becomes a fire brand when driven by wind in cases of great conflagration and is the cause of ignition of other roofs. He told of an interesting experiment made in his laboratory in refutation of the false charges made against wooden shingles. He exhibited two samples, one of which was covered with a new kind of paint called "abastine," which had been gotten up in connection with the National Paint Manufacturers' Association. He said that the shingle covered with abastine had been subjected to a temperature of 850 degrees for a period of five minutes and had not been charred in the least degree. The other shingle, which was covered with ordinary paint and subjected to the same temperature for one and a half minutes was nearly destroyed. He told especially of the fire resisting qualities of wood as illustrated by a fire which recently took place at Madison, Ill., where he found that the temperature on the outside of a wooden building, forty-five feet from the fire, had been 186 degrees, while the temperature on the inside of the building was only 86 degrees. He said that he was conducting experiments along this line and hoped to present some interesting conclusions. However, he said that all the investigations that he was making were hampered by lack of funds.

L. W. Gilbert moved that a committee of three be appointed by the president to solicit contributions to the trade extension department of the National Lumber Manufacturers' Association. This was carried and the president appointed as such committee L. W. Gilbert, J. C. Remick and H. W. Taylor.

D. O. Anderson, of the Anderson Lumber Corporation, Marion, S. C., and A. T. Gerrans, a former prominent member of the Southern Cypress Manufacturers' Association, now with the John L Roper Lumber Co. at New Berne, N. C., were introduced to the members as being representatives of the North Carolina Pine Association. Both of the gentlemen expressed their thanks and Mr. Anderson stated that he manufactured some cypress and if he were eligible to join the association he would be glad to do so; whereupon his name was immediately proposed for membership, it transpiring that he manufactured considerable cypress in connection with pine. Another application for membership was presented by J. Ray Arnold, of the Edge-Dowling Lumber Co., of Groveland, Fla., and both of these concerns were elected to membership.

Some remarks regarding the splendid work being done by the National Lumber Manufacturers' Association were made by John Bemer Crosby, in which the work of that association was highly lauded, after which the convention adjourned.

A TOUR OF INSPECTION.

Prior to the meeting a committee of the more prominent cypress manufacturers made a week's tour of inspection among the cypress operations of the east coast. The party comprised Robt. H. Downman, of New Orleans; J. W. Oakford, Scranton, Pa.; D. L. Hebard, Philadelphia, Pa.; H. B. Hewes, Jeanerette, La.; J. F. Wigginton, Bowie, La.; E. C. Glenn, Varnville, S. C.; C. P. Gable, Gable, S. C.; and L. W. Gilbert, Donner, La. J. S. Holloway, president of the Pine Plume Lumber Co., of Savannah, Ga., and D. L. Whetstone, vice president of the same concern, were also members of the party.

THE NEW EAST COAST SECRETARY.

William H. Green, who was installed in his office of assistant secretary of the Southern Cypress Manufacturers' Association, with headquarters at Jacksonville, Fla., put in his first day of active service at the semi-annual meeting of that association held at Jacksonville, November 1. Mr. Green succeeded William Petrie, who has accepted a position with the Pine Plume Lumber Co., the new selling agency of the east coast cypress manufacturers, which has located its headquarters at Savannah, Ga.

Mr. Green started in the white pine business at Buffalo, N. Y., in 1893, where he was connected with the H. M. Tyler Lumber Co. Later he removed to Tonawanda, N. Y., with the same concern and remained there until 1907. He went to Florida in that year and was at various times in charge of three cypress operations, that of the Everglade Cypress Co. at Loughman, Fla., in 1907, and 1908; with the Hunter Co., of Jacksonville in 1909 and with the Hebard Cypress Co., of Waycross, Ga., until 1911 Recently he has been connected with the McNair Lumber Co., of Jacksonville, a concern handling large stocks of pine and cypress at wholesale. Mr. Green has been a resident of Jacksonville for about six years and is thoroughly well posted on the east coast situation. He is married and has two children, both sons.

MICHIGAN MANUFACTURERS' MEETING

Discuss Grading Rules and Values, Terms of Sale and Wage Question

Detroit, Mich., Oct. 25.—The fall meeting of the Michigan Hardwood Manufacturers' Association, which convened at the Hotel Statler today, was well attended. Much important business was transacted and so many questions came before the meeting that two sessions were held instead of one, as is customary. President Hull called the meeting to order and congratulated the members on the good attendance and interest in the business of the day.

THE SECRETARY'S REPORT.

Secretary Knox read his report reviewing the general market conditions and reported the hardwood situation improved and the general business outlook as exceptionally bright. In comparing business of today with that of a year ago he called attention to the increased demand for construction materials and especially for railroad supplies, and to the fact that building construction throughout rural districts is increasing and that money is plentiful at reasonable rates. He stated that he found improvements going on through the small towns and the rural districts of Michigan and reported a gratifying increase in retail demand.

Secretary Knox called attention to the increased activities of the association, which demand the appropriation of additional funds. After giving details of the requirements, he suggested that a change be made in the constitution permitting an assessment on hardwoods not to exceed 4 cents a thousand feet on actual shipments. He concluded his report by calling attention to the car shortage situation which is keeping down shipments, the question of uniform terms of sale, proposed advances in lumber rates and to the need of funds for controlling the forest fires, and he closed the report with an expression of appreciation for the work of President R. H. Downman, of the National Lumber Manufacturers' Association in behalf of lumbermen, especially in connection with the income tax legislation, and requested a vote of the association as to whether the association should join in the lumber exhibit at the National Complete Building Exposition to be held in the Grand Central Palace, New York City, March 5 to 11, 1917.

ASSESSMENTS TO BE MADE ON ALL SHIPMENTS.

There was an animated discussion upon the matter of raising more revenue and as to whether the assessments should revenue and as to whether the upon cut, and it was decided by the association to name the year's assessment at 2 cents a thousand feet, covering both hemlock and hardwood shipments, there having been up to the present time no regular assessment on hemlock. The assessment of 2 cents a thousand feet on all shipments it is believed will provide ample funds to carry on the work proposed for the coming year.

The association instructed Secretary Knox to write President Downman, expressing appreciation of the Michigan association for his work in their behalf and after Secretary R. S. Kellogg had spoken explaining the character and purpose of the Complete Building Exhibit to be held in New York, the association voted to co-operate in the exhibit.

Chairman Herman Lunden, of the committee on fire protection, presented a brief report recommending the continuance of this work and Chief Fire Warden Morford made a detailed report of the work of his department. His report showed the efficiency of the patrol work and gave statistics of the fire loss.

UNIFORM TERMS OF SALES AND WAGES.

The question of uniform terms of sale was brought up by a letter from President Downman of the National Lumber Manufacturers' Association and led to an earnest discussion. President Hull appointed a committee consisting of O. L. Larson, of Manistee; F. L. Michelson, of Michelson; E. G. Carey, of Harbor Springs, and J. B. Deutsch, of Big Bay, to report on the matter of terms of sale, this report to be sent in to the National association for comparison with similar reports from other associations affiliated with the National.

The members of the association engaged in an animated discussion over the question of wages for men employed in the woods, the subject being introduced by the reading of a letter from a Wisconsin manufacturer suggesting that manufacturers should have a general understanding as to wages paid to men employed in woods operation. The consensus of opinion of the Michigan manufacturers was that no definite understanding would be practicable, as it is necessary to pay higher wages in some sections than in others, notably in the northern peninsula, and it was decided that the association would take no part in any joint action.

MARKET CONDITIONS.

The report of market conditions made by C. R. Abbott, of Cadillac, chairman of the committee, showed satisfactory conditions. He presented detailed sheets covering the increases and decreases with the water and rail shipments separated. The report showed that all No. 2 common and better stock with the exception of ash decreased 17,835,000 feet, as compared with stocks of a year ago. The ash increase was 31,000 feet, leaving a net decrease of 17,804,000 feet. The report showed that rail stocks have not been as fortunate as ash, beech, soft elm and maple, showing increases amounting to 4,798,000 feet, and reductions of basswood, birch and rock elm amounting to 2,650,000 feet or a net increase in the rail stocks of 2,148,000 feet. The report indicated that the market is healthy and that the sales for the last year had been in excess of production, but it is estimated that the hardwood production of 1916 will exceed that of 1915 by 10 percent. "With stocks reduced and steadily being reduced," the report further said, "and in view of the present labor conditions, which indicate considerably higher cost of production, and with the reduced output for the coming winter, we believe the prices, while materially advanced, truly represent the present market value of our product."

Mr. Abbott further stated that better prices must be obtained if the business is continued on a profitable basis.

That part of the market report which dealt with hemlock indicated a strong situation and called attention to the fact that in view of the strong demand hemlock prices were too low, and to the fact that the car shortage situation would force many buyers in the country to turn from yellow pine to hemlock.

NEEDS OF AUTOMOBILE MANUFACTURERS.

The requirements in hardwoods of automobile manufacturers were described by S. M. Stamats, the assistant purchasing agent of the Willys-Overland Co., Toledo, Ohio, who declared that the automobile manufacturers used 50,000,000 feet of hardwoods annually and are among the best consumers of hardwood lumber. He said the automobile manufacturers would gladly buy the new grade of selects relative to maple if the reverse side of the board contained nothing lower than No. 1 common and warned the manufacturers that automobile makers could not use maple under the proposed grade of selects, if the reverse side of the board grades as low as No. 2 common and so they would necessarily seek a substitute.

AFTERNOON SESSION.

At the afternoon session the association took up the report of the grading rules committee. After a thorough discussion certain amendments were made and the report of the committee passed. The discussion dealt chiefly with the proposed grade of selects and as to whether the reverse faces of maple and beech could be below the grade of No. 1 common, or whether they could contain a small percentage of No. 2, with special reference to the demands of the automobile industry. The report of the committee was amended to conform to the desires of the consumer and the committee was instructed to co-operate with the members of the Northern Hemlock & Hardwood Manufacturers' Association if that association decided to make their grades of select include in birch a percentage of No. 2 common on the reverse side.

The report of the grading rules committee was formulated in the joint conference in Chicago on September 15 and amended later, and was presented by Chairman W. L. Saunders, of Cadillac. The report was as follows:

REPORT OF GRADING RULES COMMITTEE.

"Hard Maple and Beech—Firsts and seconds, no change. Selects (new rule): Grade to be made from best face of the piece. Selects must be 4 inches and wider, 8 feet and over long. Pieces 4 inches wide shall have one clear face; pieces 5 inches wide, 8 to 11 feet long, shall have one clear face; pieces 5 inches wide, 12 feet and longer admit one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face shall not be below the grade of No. 1 common.

No. 1 Common—(changes). Six feet and over long. Not over 30 percent shorter than 10 feet. Pieces 3 and 4 inches wides, etc. (No further change.)

No. 2 Common—No change.

No. 3 Common—No change.

Under Special Inspection.

Hard Maple and Beech—Nos. 1 and 2 common (flooring stock): Shall be graded from the best face, 3 inches and wider, 4 feet and longer. Heart rule does not apply. Percentages of clear face cuttings to be the same as for Nos. 1 and 2 common regular grades; back face of cuttings must be sound.

Standard Inspection.

Ash, Birch and Sycamore—Firsts (no changes). Seconds (change): Seconds must be 6 inches and over wide.

Selects (new rule): Grade to be made from best face of pieces. Selects must be 4 inches and wider, 6 feet and over long. Pieces 4 inches wide shall have one clear face; pieces 5 inches wide, 8 to 11 feet long shall have one clear face. Pieces 5 inches wide, 12 feet and longer admit one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face shall not be below the grade of No. 2 common.

No. 1 Common—Changes: six feet and over long.

No. 2 Common—No changes.

No. 3 Common—Changes: No. 3 common must be 3 inches and over wide, 4 feet and over long, and must contain at least 33⅓ percent of sound cuttings. Minimum width of cuttings 1½ inches, and no cutting considered which contains less than 48 square inches.

Under Special Inspection.

Birch—Nos. 1 and 2 common (flooring stock) shall be graded from the best face, 3 inches and wider, 4 feet and longer; heart rule does not apply. Percentages of clear face cuttings to be the same as for Nos. 1 and 2 common regular grades; back of cuttings must be sound.

Standard Inspection.

Basswood, Soft Elm, Soft Maple and Buckeye—Firsts: No changes. Seconds (change): Seconds must be 5 inches and over wide.

Selects (new rule): Grade to be made from best face of piece. Selects must be 4 inches and wider, 6 feet and over long. Pieces 4 inches wide shall have one clear face. Pieces 5 inches wide, 8 to 11 feet long shall have one clear face. Pieces 5 inches wide, 12 feet and longer, admit one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face shall not be below the grade of No. 2 common.

No. 1 Common—Change: Six feet and long.

No. 2 Common—No changes.

No. 3 Common—No changes.

COMMITTEE TO ATTEND MILWAUKEE MEETING.

Secretary R. S. Kellogg, of the National Lumber Manufacturers' Association, and President J. T. Phillips, of the Northern Hemlock & Hardwood Manufacturers' Association, addressed the association during the afternoon session. Mr. Kellogg reported on the various activities of the National association, and Mr. Phillips told of the activities of his association, especially of the recent organization of the sales managers' association, and invited the members of the Michigan meeting to attend the meeting of the Northern Hemlock and Hardwood Manufacturers' Association, which is to be held in Milwaukee, October 27, when the matter of proposed changes in the grading rules will be considered. The committee on grading rules was given authority to attend the meeting and to act with the committee of the Northern Hemlock and Hardwood Manufacturers' Association relative to the changes in grading rules.

HEMLOCK AND HARDWOOD MEN MEET

In Fall Meeting at Milwaukee Consider Changes in Grades—Uniform Terms of Sale—Better Merchandising and Trade-Marking Lumber

Milwaukee, Wis., Oct. 27.—There was a full attendance today at the annual fall meeting of the Northern Hemlock & Hardwood Manufacturers' Association held in this city at the Pfister Hotel. There were several important subjects up for discussion and several important papers read, but the interest centered around the discussion of the report of the committee on grading rules. This committee was appointed at the time of meeting of the National Hardwood Lumber Association last June when the northern manufacturers were unable to secure the changes in the grading rules they deemed necessary, and have been working to evolve grading rules that will meet the requirements of the northern manufacturers and at the same time be acceptable to the National Hardwood Lumber Association. To this end it has been working jointly with the committee of the Michigan Hardwood Manufacturers' Association, the two committees agreeing substantially on the grades to be adopted.

President J. T. Phillips called the meeting to order at 10 o'clock. All preliminaries were set aside and the question of grades immediately taken up. Chairman G. H. Chapman, of the Bureau of Grades, made the report. In doing so he outlined his own position stating that he believed in the wholesaler and in his place in the lumber industry, but expressed the opinion that if grades were properly divided $5 a thousand might be added to the present price of lumber. He said that he believed the rules as proposed are much better than those in present use and a step in the right direction, but he did not think that they were radical enough; that the chief objection against too radical changes would be the difficulty in putting them through with the National association, but that he did not think too much attention should be paid to this phase of the question. He expressed the hope that if the changes are made in the National hardwood grading rules during the coming year that the question of grades should be allowed to rest for several years in order that they might be thoroughly tried out.

CONSUMER EXPRESSES AN OPINION.

S. M. Stamats, purchasing agent of the Willys-Overland Automobile Co., was invited to state his views on the proposed grading rules and what effect they would have on the automobile industry. In substance he said the automobile manufacturers are willing to pay for grades as they want them; that this was not a question of price, but so far as his company is concerned it can not use material of the select grade that grades only No. 2 common on the reverse side. He said that he represents a buying power of 50,000,000 feet annually of maple and birch and that he is willing to co-operate with the manufacturers in every way possible to bring about the best results.

A. L. Osborn, of Oshkosh, expressed gratification that Mr. Stamats was present to state the requirements of the automobile manufacturers who are large consumers of northern hardwoods. He said that in his opinion the manufacturers should make the grades that the automobile makers demand, but should furnish other grades to meet the demands of the interior finish people and the furniture manufacturers.

C. A. Goodman, of Marinette, offered a motion that the association accept the rules as reported by the Bureau of Grades with certain additions.

Edward Hines, of Chicago, made a motion that on the final acceptance by the Michigan association of the grading rules offered by the Bureau of Grades that these rules stand without further change. A discussion followed, during which W. L. Saunders, of Cadillac, Mich., chairman of the Michigan association's bureau of grades, explained why his association had made certain changes in the rules and thought it wise for the two associations to get together on such rules as will be acceptable to the National association. And M. J. Fox, of Iron Mountain, Mich., expressed the opinion that the manufacturers ought to go slow in taking a definite stand on changes in the grading rules.

A vote was called for on the amendment offered by Edward Hines, and the amendment was lost.

A. L. Osborn, of Oshkosh, then offered an amendment to the Goodman motion that the matter of amending the rules be referred back to the Bureau of Grades for joint action with the Michigan manufacturers who shall report at the annual meeting of the association. After some discussion Mr. Osborn's amendment was adopted.

A vote was then called for on the original motion made by C. A. Goodman, which also was carried.

CHANGES IN GRADES.

As a result the following changes in the hardwood rules were adopted and referred back to the Bureau of Grades to secure an agreement with the Michigan association and then to report to the annual meeting of the Northern Hemlock & Hardwood Manufacturers' Association to be held in January, 1917:

Standard Inspection.

Hard Maple and Beech—Firsts and seconds, no change.

Selects (new rule): Grade to be made from best face of the piece. Selects must be 4 inches and wider, 8 feet and over long. 4, 5 and 6-inch strips shall have both edges free of standard defects; pieces over 6 inches wide shall have one edge free of standard defects. Pieces 4 inches wide shall have one clear face; pieces 5 inches wide, 8 to 11 feet long, shall have one clear face; pieces 5 inches wide, 12 feet and longer, admit one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face of pieces 5/4 and thinner will admit sound defects and shall be at least 85 percent of the grade No. 1 common and the remainder shall grade not below No. 2 common. The reverse face of 6/4 and thicker shall admit of sound defects, but shall not grade below No. 1 common.

No. 1 Common—(Changes.) Six feet and over long; not over 30 percent shorter than 10 feet. Pieces 3 and 4 inches wide, etc. (no further change).

No. 2 Common—No changes.

No. 3 Common—No changes.

Hard Maple and Beech—Nos. 1 and 2 common (flooring stock) shall be graded from the best face; 3 inches and wider, 4 feet and longer. Heart rule does not apply. Percentages of clear face cuttings to be the same as for Nos. 1 and 2 common regular grades; back face of cuttings must be sound.

Ash, Birch and Sycamore—Firsts, no changes; seconds, no changes.

Select (new rule): Grade to be made from best face of piece. Selects must be 4 inches and wider, 6 feet and over long. 4, 5 and 6-inch strips shall have both edges free of standard defects; pieces over 6 inches wide shall have one edge free of standard defects. Pieces 4 inches wide shall have one clear face; pieces 5 inches wide, 8 to 11 feet long, shall have one clear face. Pieces 5 inches wide, 12 feet and longer, admit one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face of pieces 5/4 and thinner will admit sound defects and shall be at least 85 percent of the grade No. 1 common and the remainder shall grade not below No. 2 common. The reverse face of 6/4 and thicker shall admit of sound defects, but shall not grade below No. 1 common.

No. 1 Common—(Changes.) Six feet and over long.

No. 2 Common—No changes.

No. 3 Common—No changes.

Birch—Nos. 1 and 2 common (flooring stock) shall be graded from the best face; 3 inches and wider, 4 feet and longer; heart rule does not apply. Percentages of clear face cuttings to be the same as Nos. 1 and 2 common regular grades; back of cuttings must be sound.

Standard Inspection.

Basswood, Soft Elm, Soft Maple and Buckeye—Firsts, no changes; seconds, no changes. Seconds must be 6 inches and over wide.

Selects (new rule): Grade to be made from best face of piece. Selects must be 4 inches and wider; 6 feet and over long. 4, 5 and 6-inch strips shall have both edges free of standard defects; pieces over 6 inches wide shall have one edge free of standard defects. Pieces 4 inches wide shall have one clear face; pieces 5 inches wide, 8 to 11 feet long, shall have one clear face. Pieces 5 inches wide, 12 feet and longer, admit of one standard defect or its equivalent. Pieces 6 inches and over wide shall grade not poorer than seconds on one face. The reverse face of 5/4 and thinner will admit of sound defects and shall be at least 85 percent of the grade No. 1 common and the remainder shall grade not below No. 2 common. The reverse face of 6/4 and thicker shall admit of sound defects, but shall not grade below No. 1 common.

No. 1 Common—(Changes.) Six feet and longer.

No. 2 Common—No changes.

No. 3 Common—No changes.

THE ADOPTION OF UNIFORM TERMS OF SALE.

Edward Hines, of Chicago, addressed the meeting on the subject of terms of sale in which he called attention to the lack of uniformity as to terms and credits among manufacturers and wholesalers of lumber and to the resulting lack of stability in the lumber business. He said that manufacturers as a rule are lax in enforcing their credit terms and in permitting customers to take advantage of cash discount after the time limit has expired, thus causing a loss. He expressed the opinion that trade acceptances which are now coming into use offer lumber manufacturers an opportunity to put their business dealings with their home customers on a better basis. He urged the importance of the adoption of uniform terms of sale and suggested that a committee be appointed by the association to confer with other associations and try to secure through the National Lumber Manufacturers' Association. A motion to this effect was adopted.

CO-OPERATION OF THE TIMBER OWNER.

The publicity and promotion work now being carried on by various lumber manufacturers' associations and especially the hemlock and birch campaigns, conducted by the Northern Hemlock & Hardwood Manufacturers' Association, was discussed in an interesting manner by R. B. Goodman, of Goodman. After calling attention to the necessity for closer co-operation in this work, he directed attention to the fact that the promotion and advertising work of the National association was supported wholly on the basis of production and that the owners of stumpage, who are not manufacturers of lumber, were left entirely out of this thing. The timber owners have been passed over in all assessments because of the difficulties attendant upon the situation, because of large tracts of timber being owned by the government, by railroads and by several large estates. He referred to the proposed organization on the Pacific coast of a Forest Products Federation, which contemplates a federation of associations of lumber manufacturers, timber owners and protective associations now existing and which would unify and augment their work to the end of equalizing the expense in the work and in order that no interest in the industry should be left unorganized or unrepresented.

Following Mr. Goodman's address the convention adjourned for lunch and resumed its work at 2 o'clock in the afternoon and was opened by Secretary Swan reading a paper prepared by M. P. McCullough, of Scofield, Wis., chairman of the bureau of promotion.

BRANDING LUMBER.

Under the title of "Branding Lumber," Mr. McCullough's paper described the branding machine that was recently invented and patented by J. G. McDonough, of Eau Claire, Wis. He told of the success that has followed the adoption of this machine by the Southern Cypress Manufacturers' Association and the installation of an experimental machine of the McDonough make at Laurel, Miss., by the Southern Pine Association, which is also installing another machine at Lake Charles, La., and stated that the Western Pine Manufacturers' Association is now installing the McDonough machine. In closing Mr. McCullough suggested that another committee be appointed to examine into the matter of branding and report at the annual meeting in January, at which meeting special arrangements would have to be made looking to the securing and installation of a trial machine. It was voted that the chairman appoint such a committee.

AN APPEAL FOR THE NATIONAL.

In an address on market conditions Secretary R. S. Kellogg, of the National Lumber Manufacturers' Association, outlined market conditions throughout the country. He stated that while general business has never been more active and building records have been exceptionally high; bank clearings have set a new record; the export business is tremendous; the railroads reporting satisfactory earnings, and farmers receiving high prices for all crops, the prices received for lumber are far from satisfactory. He stated that there have been some improvements during recent months and he believed that the outlook for the trade was bright and for hardwoods particularly. He closed with an appeal for increased funds for the National to carry on the lumber promotional work in order that it may successfully compete with the substitutes.

INCREASED COST OF LOGGING AND MANUFACTURING.

E. A. Hamar, of Chassel, Mich., delivered an interesting paper on the increased cost of logging and manufacturing. He said that the lumber industry is entering upon a period of high cost of production which will necessitate its receiving high prices for lumber. He called attention to a recognized fact that manufacturers of lumber do not accurately know the cost of production and therefore are unable to regulate the selling price. He reviewed the history of the industry from the day when lumber was rafted down the Wisconsin, Chippewa and other rivers and sold on the market at the buyer's price, and pointed out that the manufacturers of lumber are still prone to permit conditions to regulate the industry. He said the whole trouble with lumber manufacturers is that they do their figuring afterward instead of before. His address commanded close attention.

A NEW PLAN FOR BETTER MERCHANDISING.

Secretary Swan addressed the meeting on the subject, "A New Plan For Better Merchandising," in which he announced the plans of the association to hold the Northern Lumbermen's Salesmanship Congress at Merrill, Wis., December 8, 9 and 10. He said that while the complete program had not been arranged that he could insure its being interesting and important. He said that the conference would be a family affair, to which only the manufacturers and their sales representatives of Wisconsin and Michigan whose problems are similar will be invited and that the plan is to discuss very frankly market disadvantages and advantages in order to bring out constructive criticism, the point of view of each and their ideas concerning the matter under discussion.

Mr. Swan will also at this conference outline the relative advantages and disadvantages of northern woods as compared to woods in competing sections, and the sales managers and salesmen will outline their sales methods. The advertising campaign, sales promotion, market conditions and questions of distribution will be considered.

Secretary Swan then read a letter from W. H. Parry, of the Federal Trade Commission, stating that information had come to the commission of an accumulation of yard stock because of the car shortage and asking for certain information in answer to definite questions. A motion was adopted that Secretary Swan and E. A. Hamar consider the questions and formulate a reply to Commissioner Parry.

President Phillips then announced the appointment of committees and an announcement was made that the annual meeting of the association will be held January 25 and 26 at the Pfister hotel in Milwaukee.

The report of the treasurer was read showing a substantial balance.

TRANSPORTATION AND MARKETS.

A. L. Osborn, chairman of the Bureau of Transportation and Legislation, read his report, which was satisfactory to the members, and Secretary Swan told of the hemlock advertising campaign.

Market conditions were reported by Alfred Klaas, who stated that hemlock stocks were low and badly broken with a good demand at better prices and the report for hardwoods was made by J. F. Halpin, who reported an attractive demand and conditions justifying an advance in present prices. After a discussion of costs and log input the meeting adjourned.

North Carolina Pine Manufacturers Meet

Charleston, S. C., Oct. 26.—The monthly meeting of the North Carolina Pine Manufacturers' Association was held here today at the Charleston Hotel. There were about fifty members in attendance, some of whom were in the city yesterday attending a conference of inspectors from the mills of the membership. This conference was held at the plant of the North State Lumber Co. and the Tuxbury Lumber Co. Twenty-five inspectors were present and they spent a busy day in grading the fifty boards provided for their inspection. These meetings of inspectors are resulting in much good work for the association.

THE BUSINESS SESSION.

The meeting opened this morning at 10:30 with President A. R. Turnbull in the chair. About fifty members were in attendance and business of an important character was transacted. Indeed, so many subjects were up for consideration that the customary discussion of market conditions was necessarily omitted. After opening the meeting, President Turnbull introduced E. C. Harrell, secretary of the Georgia-Florida Saw Mill Association, who briefly addressed the meeting. Then Secretary Roper read the minutes of the last meeting, which were approved. The membership committee presented the application of the Dargan Wagner Lumber Co., of Pamlico, N. C., which was unanimously elected to membership.

Chairman A. T. Gerrans, of the special committee appointed to confer with the committee representing the Pennsylvania Lumbermen's Association, reported that a joint committee met September 28, to consider means of establishing uniform grades and ways of settling claims. The Pennsylvania committee requested that the North Carolina Pine Association furnish inspectors to adjust complaints for their members on lumber purchased not only from the association mills, but from other mills also. This, Mr. Gerrans reported, the committee recommended should not be done. The association, after discussing the report, unanimously endorsed it.

DISCUSS ODD LENGTHS AND SALES REPORTS.

President Turnbull gave a report of the inspectors' conference held yesterday and showed the results of the grading. After discussing the report the association voted that these conferences should be held at least every three months, and the secretary was instructed to write to the members of the association requesting that they send in any questions or suggestions they desire for the consideration of the inspection committee, and at the suggestion of A. T. Gerrans the secretary was instructed to send to all members copies of inspection reports made by the official inspectors.

Secretary Roper read the results of a referendum vote sent out to members on the subject of shipping North Carolina pine in odd lengths, rough and dressed. After a lengthy discussion of the report the association instructed the president to appoint a committee of three to take up the matter with associations of manufacturers and retailers with a view to determining what can be accomplished. The committee appointed consists of J. L. Camp, D. O. Anderson and R. A. Parsley.

There was next discussed the advisability of continuing the daily sales report which the secretary has been issuing for the last month, or returning to the old weekly reports. The meeting voted to continue the daily reports.

INCREASE VOTED FOR ADVERTISING.

Another important matter brought up for discussion was the advertising appropriation for 1917. Chairman D. O. Anderson, of the advertising committee, read his report recommending that the appropriation be advanced from five to six cents a thousand in order that the advertising plans might be extended. After a discussion, in which a number of those present engaged, the meeting voted to spend the six-cents appropriation during 1917, for which plans are not yet matured.

President Turnbull read a telegram from President R. H. Downman, of the National Lumber Manufacturers' Association regarding the meeting to be held at Louisville, Ky., with Commissioner McChord, of the Interstate Commerce Commission on car shortage. It was stated that the railroads request heavier loading of cars, yet, when the loads exceed the maximum weight by more than 4,000 pounds, double freight rates are charged, and the opinion was expressed that if the carriers want heavier loading, this order should be rescinded. The meeting voted that the decision be left to President Turnbull as to whether or not a committee be appointed to attend the Louisville meeting.

DISCUSSION OF THE LABOR SITUATION.

There was an animated discussion of the labor situation, most of the mills in this section having suffered because of the activities of northern labor agents, and attention was called to the proposed protective association of sawyers and filers; measures were considered looking toward the passage of more stringent laws governing the activities of labor agents, but no definite action was taken by the meeting.

Several other questions came up for discussion and decision by the membership. It was left to the discretion of the president and secretary as to whether the association should take space in the National Complete Building Show to be held in March at the Grand Central Palace, New York. And it was decided that the association publish a statement of North Carolina pine similar to that published by the Southern Pine Association, after sufficient support shall have been pledged.

Membership in the Atlantic Deep Waterways Association was continued and a regular committee will be sent to that association, this committee to be appointed later by the president. A committee on national defense composed of A. T. Gerrans, L. A. Baker, D. O. Anderson and Guy I. Buell was appointed in accordance with the request of the Chamber of Commerce of the United States. The association unanimously endorsed the resolution of the Railway Business Association, favoring the investigation authorized by the Chamber of Commerce of the United States on the defects of the system of railway regulation. Then President Turnbull appointed D. O. Anderson, A. T. Gerrans and W. B. Roper a committee to attend the meeting of the Southern Cypress Manufacturers' Association to be held November 1 at Jacksonville, Fla.

While the members of the association did not report all conditions in their districts as satisfactory, little complaint was heard and confidence in future business was expressed.

THE LUNCHEON AND ENTERTAINMENT.

At the luncheon, which followed the business meeting, the members were welcomed by A. G. Snell, secretary of the Charleston Chamber of Commerce, and were addressed by R. G. Rhett, president of the local Chamber of Commerce, and also of the Chamber of Commerce of the United States. Mr. Rhett spoke on the value of co-operation. He is a brilliant speaker and the members thoroughly enjoyed his talk, which was responded to by J. M. Gibbs, of Norfolk, who sustained his high reputation as a speaker.

LUMBERMEN'S CLUB OF MEMPHIS HOLD INTERESTING MEETING.

Memphis, Tenn., Nov. 6.—The regular meeting of the Lumbermen's Club of Memphis, held at Hotel Gayoso Saturday, October 28, was given over largely to discussing traffic and association matters. John W. McClure, president of the Southern Hardwood Traffic Association, gave a full account of his trip to Washington and of his appearance before one of the members of the Interstate Commerce Commission, during the course of which he presented the resolutions adopted at the conference of southern hardwood interests, held here October 20, and during which it was arranged that Commissioner McChord would hold a hearing at Louisville, Saturday, November 4, in connection with the very serious shortage of cars as affecting the southern hardwood lumber industry.

Col. John M. Woods, president of the National Hardwood Lumber Association, thought that the current year promised to be one of the most successful in the history of the association, and said that he considered himself fortunate in having been able to secure the services of some of the most able lumbermen in Memphis on important committees. He believed that the inspection rules committee would have an important report to submit at the next meeting, and that some of the other committees would likewise be heard from in no uncertain manner.

The Latest News of the Lumber World

COMMISSIONER WILL H. PARRY AND GOVERNMENT OFFICIALS VISIT LOUISIANA LUMBER CENTERS.

New Orleans, La., Nov. 4.—Will H. Parry, Federal Trade Commission, with a party of government officials, returned north today after half a week spent in making a thorough inspection of the lumber industry of this section. Mr. Parry went from here direct to Louisville, Ky., where he will take part in the car shortage hearing now in progress in that city.

Mr. Parry arrived in New Orleans last Tuesday morning from Memphis. He was accompanied by Dr. Wilson Compton, economist of the federal trade commission; Alex H. Axholm, commercial agent of the bureau of commerce, and Walter Parker, chief of the bureau of commerce. These gentlemen had traversed the timber sections of the northwest, the Pacific coast and the northern states, and came down here to get some first-hand information as to conditions in the yellow pine belt.

Accompanied by some of the leading lumbermen of the south, the federal investigators spent Tuesday and Wednesday in Bogalusa, La. As is well known, the Great Southern mills are the largest in the world. Utilization of the mill's waste has been made a special study by the company's officials, and its development was a source of surprise to the visitors.

From Bogalusa the party went on a special train to Lake Charles and other points in southeast Louisiana. At Lake Charles they were met by nearly half a hundred Texas lumbermen, and a banquet and general conference was held. Mr. Parry asked numerous questions concerning mill operations, costs, etc., and thoroughly familiarized himself with the industry.

Speaking of the results of his visit, Mr. Parry said no opposition would be offered to co-operative organizations of pine lumber manufacturers by the Federal Trade Commission. Such organizations, according to the commissioner, will be allowed the widest possible latitude in their efforts to overcome wasteful methods of operation and "cut-throat" competition.

"The commission will encourage co-operative effort," continued Mr. Parry, "but just how far such co-operation may be carried without governmental interference I am not in a position to say. Possibly within the next few months the commission will issue a report, defining in general terms the character of organizations the lumbermen may be permitted to maintain, and how they may exchange information regarding conditions in the industry."

INCREASE IN DEMURRAGE CHARGES.

New Orleans, La., Nov. 4.—Telegraphic advices from Memphis announce that increases in demurrage charges from the present rate of $1 a car a day to $2 for the first day after the expiration of the forty-eight hours allowed for unloading without demurrage penalties, $3 for the second day, $4 for the third day, and $5 for the fourth and each succeeding day the car is detained, are provided in a tariff issued by the General Managers' Association, copies of which have been received there. The new scale becomes effective December 1, and is intended to apply to all railroads in the United States. Free time for export shipments remains at ten days.

The new rates were adopted as an emergency measure to expedite the movement of rolling stock and relieve the present car shortage.

WILL HELP RELIEVE CAR SHORTAGE.

It is reported that orders for freight cars to the total number of 5,605 were placed last week, while inquiries which were expected to be placed the current week, called for 13,038 more cars. Among the orders placed were the following:

The Baltimore & Ohio railroad has ordered 2,000 box cars from the Mount Vernon Car Manufacturing Co., of Mt. Vernon, Ind.

The Erie railroad has placed orders for 1,000 box cars with the Standard Steel Car Co. and for 1,200 box and 500 flat cars with the Barney & Smith Manufacturing Co.

The Chicago, Burlington & Quincy railroad has ordered 500 general service cars from the Pressed Steel Car Co.

Among the inquiries at hand is one from the French government asking for 100 flat cars, 100 gondolas, from 100 to 150 phosphate cars, from 3,000 to 5,000 steel underframes and from 3,000 to 5,000 coal cars.

The Illinois Central railroad has sent out an inquiry for 2,000 gondola, 600 general service and 400 ballast cars.

The Missouri, Kansas & Texas railroad has sent out inquiries for 1,000 stock cars.

The Great Northern railroad has inquiries out for 1,000 refrigerator cars.

The Chicago, Burlington & Quincy railroad has sent out inquiries for 1,500 box cars.

The Carnegie Steel Co. is asking for bids on 119 hopper and 156 gondola cars. The Frick Coal Co. is asking for bids on 1,424 mine cars. There are a considerable number of inquiries out for passenger and baggage cars from the New York Central Lines, the Norfolk & Western, the Erie and the Wabash roads.

LOOK TO YOUR POST AND POLE TRADE!

On Wednesday, Nov. 1, a man appeared at the office of the LUMBER WORLD REVIEW seeking information as to the number of fence posts annually used in the United States, and failing therein, sought advice as to ways, means and methods of arriving at a rough estimate.

The circumstance and the individual particularly attracted one of the LUMBER WORLD REVIEW people, who left the office with the gentleman for the purpose of ascertaining if possible what there was in the wind.

It develops as follows: The inquirer was a special investigator for one of the large steel companies that has been furnishing enormous quantities of war material, much of which is from carbon steel sheets. The requirements have been such as to necessitate shearing a substantial strip from the sides, with the result that a tremendous quantity of these shearings has accumulated.

The steel company has been investigating and experimenting with them to discover some method of conversion more profitable than sending them to scrap, and have hit on the idea of making a T-shaped fence post of them that can readily and inexpensively be driven into the ground. The posts are punched for wire holding purposes; experimental fences have been put up and pronounced satisfactory and money saving, and the gentleman who called was out to develop market information by sections.

According to his statement, in such territory as Iowa for instance, these posts would be sold and delivered in carload lots for from 10 to 15 cents less each than the price of wood posts.

On the whole, with every farmer in the country having wood preservation impressed upon him through all sorts of channels from government bulletins, state and county fair demonstrations, down, it looks as if our post and pole people have something to look into and keep track of in this situation—the steel people seem to have the ground rather thoroughly prepared for them.

ORANGE TO CELEBRATE LANDING OF THE SCHOONER CITY OF ORANGE.

Orange, Tex., Nov. 1.—The citizens of Orange will turn out in force to celebrate the launching of the schooner City of Orange, which takes place November 15. An interesting program has been prepared by a committee, and in the evening there will be a banquet at which many prominent citizens and visitors will be present.

The schooner City of Orange is the first of a fleet of vessels, building at Orange, Texas, on the Sabine river, and is the largest vessel ever built on the Gulf of Mexico or its tributaries. Her dimensions are: Length over all, 247 feet; beam over all, 43 feet; depth of hold, 21 feet 6 inches; draft, loaded, 23 feet 6 inches. She will register approximately 1,500 net tons, and have a cargo capacity of approximately 3,000 tons. She will be a five-masted top sail rigged schooner. She is built of long leaf yellow pine manufactured at Orange.

BRIDGE BUILDERS VISIT BOGALUSA.

Bogalusa, La., Oct. 25.—Two hundred and sixty-seven members of the American Railway Bridge and Builders' Association visited Bogalusa last Friday as guests of the New Orleans Great Northern railroad and the Great Southern Lumber Co. They were escorted by the mayor and a number of citizens through the largest sawmill in the world, and witnessed it producing at the rate of 1,000,000 feet a day of fine Bogalusa brand southern pine structural timbers.

The visitors were escorted through the large mercantile establishments, the hospital and the Young Men's Christian Association building. They were also shown the site of the new $1,000,000 paper plant of the Bogalusa Paper Co., where more than 100 men are at work putting in concrete foundations. The members of the party were given luncheon at the Pine Tree Inn.

Following the luncheon the visitors were shown logging operations of the company at Marston. They visited the plant of the Louisiana Fibre Board Co. and saw the fine quality of paper being manufactured from sawmill waste.

DESTRUCTION OF WHITE PINE BY THE BLISTER RUST.

Washington, D. C., Nov. 6.—Declaring that white pines valued at $261,000,000 are threatened with destruction by the white pine blister rust, the American Forestry Association, of this city, to-day sent a warning broadcast throughout the United States and Canada urging that every precaution be taken to prevent the spread of the disease, which has already found a secure foothold in New England and other eastern states, and in Canada.

The disease is already progressing in Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Wisconsin, Minnesota and in the provinces of Ontario and Quebec in Canada.

New York and Wisconsin have established rigid quarantine, and various state agricultural boards have urged that no infected white pines, or currant and gooseberry bushes, be shipped; that infected bushes and infected pines be destroyed, and in some cases that there shall be no shipment from state to state of white pine seedlings, gooseberry or currant bushes, whether they are known to be infected or not. There is no known cure for the disease. It kills the white pines infected and it spreads steadily. The spores or seeds of the disease are blown from diseased pines to currant and gooseberry bushes. They germinate on the leaves of these bushes. These leaves then produce millions of spores or seeds of the disease which are carried by the wind from the bushes to the pines and trees which are infected, become diseased and die.

BLOXONEND FLOORING PROVES REMARKABLY SUCCESSFUL.

Kansas City, Mo., Oct. 14.—Bloxonend flooring is a new type of flooring that solves the problem of combining the remarkable wearing qualities of wood blocks with the rapidity, simplicity and economy with which ordinary tongue and groove flooring can be laid. In other words, Bloxenend is a wood block flooring that carries its own base, any carpenter can lay it directly on the joists or over old or unsatisfactory floors of any material. One of its chief merits is this economy and simplicity in laying.

Bloxonend flooring was developed after years of experiment and is the invention of C. J. Carter, president of the C. J. Carter Lumber Co., of this city The blocks have a surface size of 1½"x3½" and are "welded" into solid sections by dove-tailed joints to base boards. These sections are approximately eight feet long and they are grooved so that they can be joined easily with close fitting splines. The splines are furnished with the flooring.

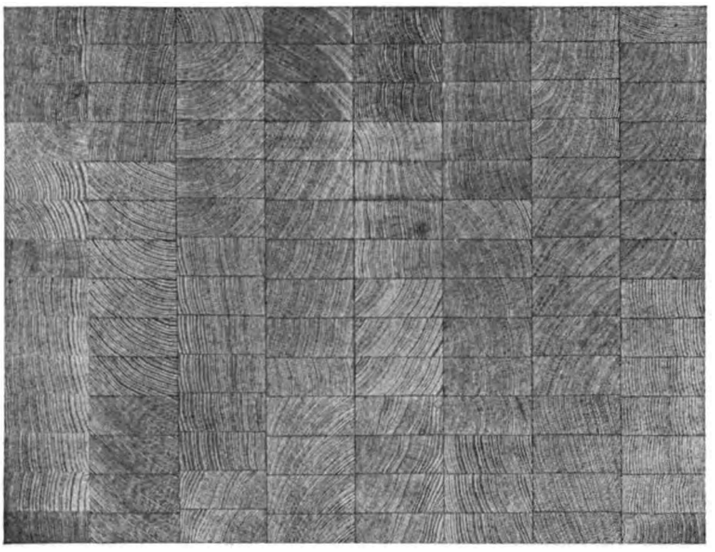
The name—Bloxonend—is descriptive, the blocks are actually on end so that the floor is attractive, durable, smooth, safe, resilient, quiet, sanitary,—and will not warp or sliver. Selected southern yellow pine is used in making this flooring and the tough fibre ends of this proverbially long-lasting, long-wearing wood are presented to wear. Standard sections are built in several combinations. The "two-one" section having two-inch blocks on a one-inch base. Special sizes can be made to order and it can also be obtained in laminated flooring up to 16 feet, with blocks on top edge, thus doing away with the necessity of laying a hardwood floor on top.

About two years ago Bloxonend flooring was laid in front of the elevators in the Emery, Bird, Thayer Dry Goods Co.'s store in Kansas City, Mo. Although this space has to withstand as much, if not more, wear than any other place in the store, Bloxonend has given remarkable service there and has proved to be an attractive floor of very great durability. Bloxonend is easy on the feet of workers and pedestrians and will minimize the loss from breakage when articles fall accidentally. It is especially suited for use in factories, warehouses, store buildings, school houses, school yards, station platforms, freight houses, bridges and docks.

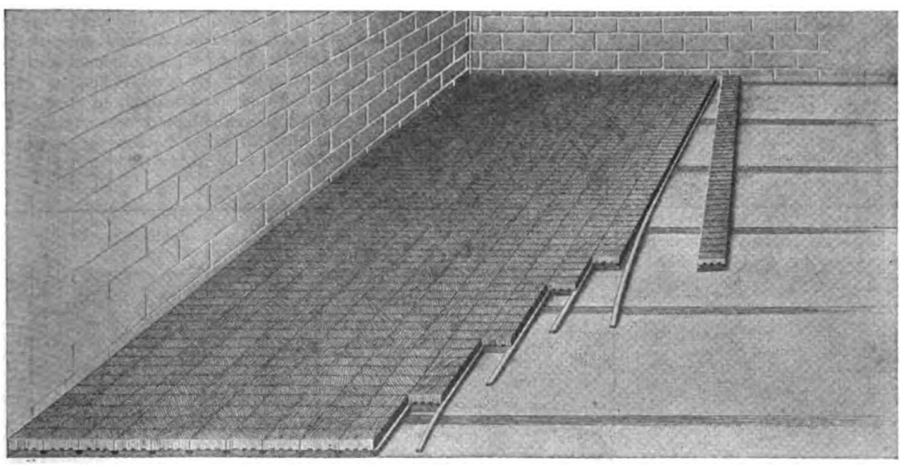
NOVEMBER CROP REPORT.

The government crop report for November 1 was issued November 8, and proved a disappointment to business men, as it showed a reduction in the corn crop of 74,000,000 bushels as compared with the crop estimates of October 1, is 412,000 bushels less than the crop last year and nearly 100,000,000 bushels short of the 5-year average. Most of the reduction in the crop outturn was caused by the dry weather in the states of Indiana, which lost 8,000,000 bushels; Iowa, which also lost 8,000,000 bushels; Missouri, 13,000,000 bushels; Nebraska, 15,000,000 bushels and Illinois, 20,000,000 bushels, as compared with October 1.

The report shows that the potato crop is 71,000,000 bushels short of the 5-year average, being only 288,964,000 bushels. This great reduction in the corn crop as compared with last year, added to a falling off of 404,000,000 bushels in the wheat crop, 311,000,000 bushels in the oats crop, 54,000,000 bushels in the barley crop and 7,300,000 bushels in the rye crop, will conspire to make continued high prices on all these products a practical certainty.



SHOWING WHAT A COMPACT, SMOOTH FLOOR SURFACE CAN BE OBTAINED WITH BLOXONEND FLOORING. BLOXONEND HAS EXTREME WEARING QUALITIES, AS THE TOUGH FIBRE ENDS OF SOUTHERN YELLOW PINE ARE EXPOSED TO WEAR.



BLOXONEND FLOORING, SHOWING HOW IT IS LAID. CAN BE LAID DIRECTLY ON JOISTS OR OVER OLD FLOORS OF ANY MATERIAL. IT IS LAID LIKE ORDINARY FLOORING.

OBITUARY

WM. H. SCHNUTE.

Evansville, Ind., Nov. 8.—William H. Schrute, aged 57 years, secretary and treasurer of Schnute, Holtman & Co., planing mill owners and retail lumber dealers, died Friday morning, November 3, at his home at 1605 Lincoln avenue, here, after a short illness. He was one of the best known lumber dealers in this section, and had many friends, who will regret to learn of his untimely death. The funeral services were held Sunday, November 5, and were largely attended. Mr. Schnute is survived by his wife, Mrs. Fredericka Schnute, one son, William, jr., and one daughter, Sarah. He also leaves one sister, Mrs. C. H. Becker, of Steward, Neb., and two brothers, John, of Fall City, Neb., and August, of Evansville.

DAVID R. SWIFT.

New Orleans, La., Nov. 4.—David Robert Swift, aged 58, widely known as a lumberman, real estate operator and capitalist, died November 2 at St. Patrick's Sanitarium, Lake Charles, La. His funeral was held yesterday afternoon from the residence of his half brother, J. A. Trotti, at Lake Charles.

Mr. Swift was a native of Newton county, Texas. At the age of 18 years he entered a sawmill office at Orange, Texas, and six months later embarked in the logging business. At the time of his death Mr. Swift was the owner of nearly 20,000 acres of hardwood and second-growth pine timber lands in Calcasieu, Beauregard and Vernon parishes. He was identified with Lake Charles banking and other business.

JESSE DAYTON CRARY.

Jesse Dayton Crary, founder, publisher and managing director of the "New York Lumber Trade Journal," and one of the founders of the New York Lumber Trade Association thirty years ago, and its secretary, died November 1, 1916, at his residence in Brooklyn, N. Y., of a complication of diseases. It was a long illness, beginning in March, 1914, and he had attended to business only intermittently since that time. For several months he had been confined to his bed at his home, 410 Grand avenue, Brooklyn. He is survived by his wife, Mrs. Mary D. Crary, and two sons, Paul Stuart Crary and Jesse Dayton Crary, who are young men just recently entered into business in New York.

Mr. Crary was a man of signal ability, and left the impress of his personality upon the local lumber trade, with which he was closely and almost lifelong associated, and also through the trade newspaper, which he had founded and which was devoted to the interests of the lumber industry.

Jesse Dayton Crary was born in Mystic, Conn., January 27, 1853, and was the son of Captain George B. and Catherine Latham Crary. He was educated in the public schools of Mystic, Conn., Mystic Valley Institute, and attended Hall's School, Ellington, Conn., and Schofield's Commercial College, Providence, R. I. He married in New York City on November 24, 1885, Mary Dent Stith.

It was in 1886, ten years after his first coming to New York, that Mr. Crary, together with Tucker David, founded the "New York Lumber Trade Journal," later acquiring the interest of Mr. David, and, together with Mrs. Crary, for about twenty-five years had owned the corporation which conducts the "Journal."

It was in 1886 also, in the month of October, that Mr. Crary took an active interest in founding the New York Lumber Trade Association, and he was one of the fifteen original incorporators. For many years he had been the secretary of the association, and at the time of his death was the only one of the original incorporators in active business, and one of two living. Mr. Crary was also secretary of the Association of Dealers in Masons' Building Materials. He was a director and chairman of the Membership Committee of the Apollo Club of Brooklyn; member of the Emanuel Baptist Church, Brooklyn; member and trustee of Montauk Lodge F. & A. M., No. 286; member of the Hamilton Club, Brooklyn; member of the Mystic Club and Mystic Country Club, beside the Mystic Hook & Ladder Company No. 1, Mystic, Conn., and the New England Society.

Funeral services were held at his late residence, 410 Grand avenue, on Friday evening, November 3, at 8 o'clock. Interment at Mystic, Conn., at the convenience of the family.

COLEMAN FEED ROLLER WIDELY ADOPTED

Great Merits of the Device Have Given It Remarkably Wide Distribution in One Year

The startling sunburst on our cover shows graphically what can be done in a short time by consistent advertising of a product with merit.

About one year ago the Coleman Feed Roller Co., of Vredenburgh, Ala., put upon the market a new type of feed roller which is used chiefly upon edging machines, but to a considerable extent also on bolters and lath mills. The device is an invention of Thomas A. Coleman, inventor of the Coleman conveyor cleat, which is in almost universal use, as well as other practical sawmill devices.

Mr. Coleman seems to have a rare genius for the creation of mechanical devices, which are not only ingenious, but thoroughly sound and practical to the backbone.

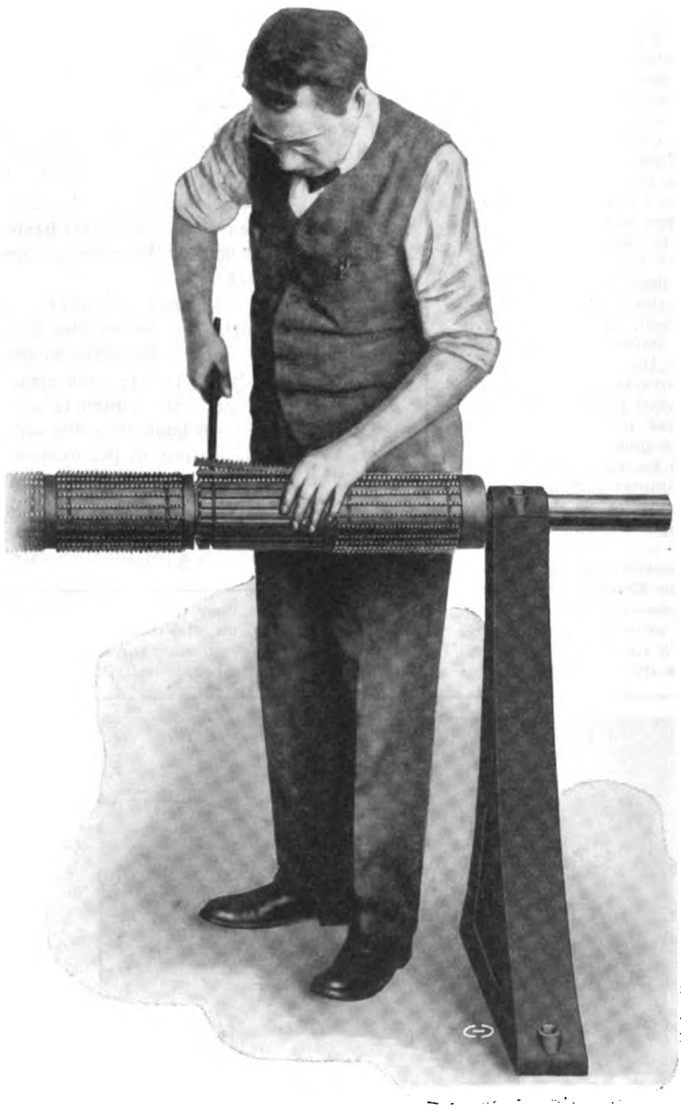
Of course, one of the most important factors in the sawmill is the Edger Feed Roller. Practically every piece of lumber in the average mill goes through the edger, and inefficient rollers which slip and feed crooked are the cause of a very considerable loss in mills which use them, though not all mills are as keenly aware of it as they should be.

The form of feed roller first used consisted of a heavy steel or iron cylinder fluted lengthwise, and this primitive, clumsy device is still used by many sawmills which should have outgrown it long ago. It is not only inefficient when new, on account of the fact that the surface presented to the lumber is always circular (see Figure 3), but it soon wears down at one or more points under use, and consequently is of a variable diameter, which inevitably runs crooked lines and makes bad lumber.

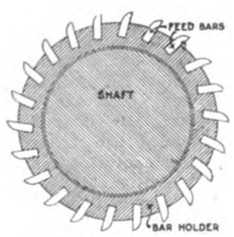
In order to resharpen the edger has to be taken apart and the heavy rollers transported to a machine shop, where they are turned to a uniform diameter and refluted.

This process is so troublesome and expensive that it can only be performed when the mill is shut down, therefore, many mills are running with hopelessly inefficient rollers a large part of the time.

The Coleman Feed Roller, on the other hand, is designed so that the highy efficient feeding members, or field bars, are presented to the lumber at a forward angle, which makes a very positive feed, as shown in Figure 2. The feed bars which come in contact with the lumber are made of hardened steel, and consequently do not wear readily. The most important feature, however, is that when they do wear, the worn feed bars, and the worn ones only, may be easily removed and replaced by new ones without disturbing the edger. The process is so easy that most mills find it possible to sharpen the edger rollers whenever needed during noon hour.



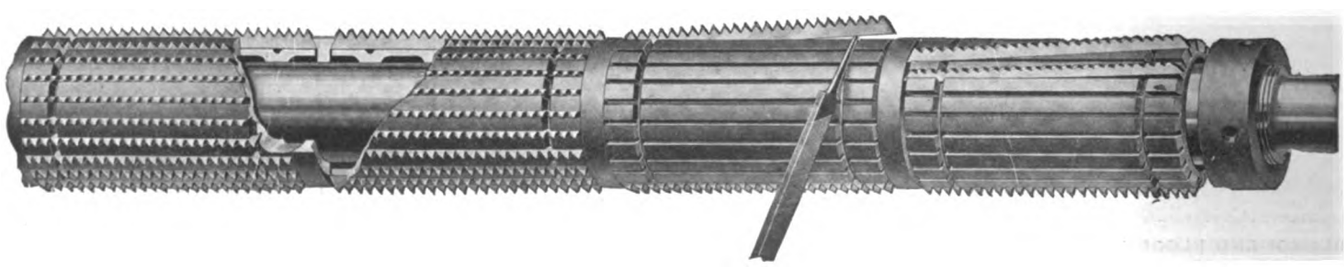
MANNER OF REMOVING AND REPLACING FEED BARS. THE COLEMAN ROLLER IS THE INVENTION OF MR. THOMAS A. COLEMAN, INVENTOR OF THE COLEMAN CONVEYOR CLEAT, NOW IN USE IN MOST OF THE BEST MILLS OF THE UNITED STATES AND CANADA.



SECTION COLEMAN ROLLER, SHOWING PITCHED FEED BARS.

SECTION ORDINARY FLUTED ROLLER, SHOWING ROUNDED SURFACES.

As a result of this the edger rollers can easily be kept always sharp, the edger man is much more efficient, as well as a whole lot happier, and the enthusiasm of the mill men who are using the Coleman Feed Roller consequently knows no bounds. Both the manufacturer and E. C. Atkins & Co., general agents, offer the roller on thirty days free trial, so that it is very simple for any lumber manufacturer to make his own test of the device. For our part we feel confident that the Coleman Feed Roller is destined, in the course of the next year or so, to displace completely, among progressive mills, all other devices at present used for its purpose.



DETAIL VIEW OF THE COLEMAN FEED ROLLER.

Federal Trade Commission Hears Hardwood Men

Memphis, Tenn., Nov. 4.—The hearing before members of the Federal Trade Commission and other representatives of the government at the Hotel Gayoso, Memphis, October 30, to investigate hardwood conditions is regarded by lumber interests here as the most important step that has been taken in recent years. Those who participated are confident that it set in motion machinery which must work for the good of the hardwood trade throughout the country. The disposition shown by the Federal Trade Commission to aid the lumbermen has been accepted as a most favorable augury for the future.

There were about forty lumbermen present representing practically every association of any importance connected with the hardwood industry and allied lines.

The government representatives were W. H. Parry and Dr. Wilson Compton, of the Federal Trade Commission; Henry S. Graves, head of the Forest Service; Dr. W. Parker, chief of the Bureau of Research, and A. H. Oxholm, commercial agent of the Bureau of Foreign and Domestic Commerce. Commissioner Parry, who presided, ruled that the papers should be presented and that discussion should follow each one.

James E. Stark, representing the National Hardwood Lumber Association, was the first lumberman to testify. He told the commissioners very frankly that lack of interpretation of the Sherman law was one of the great stumbling blocks in the way of organized effort on the part of lumber interests to cut down expense as well as in other directions. He pointed out that the lumbermen were law-abiding and did not wish to run afoul of the federal authorities. In his opinion the situation would be vastly improved if there could be free discussion of the cost of manufacture, methods of marketing and other phases of the handling of lumber from the time it is cut in the woods until it is sold.

Mr. Stark discussed the shortage of cars in its bearing on prices and suggested that there seemed to be no change imminent unless the car shortage extended over a considerable period. He told the commission that prices on hardwood lumber are entirely too low to offer anything like a fair return on the investment, and also that they are failing to keep pace with the advance in the value of stumpage in the cost of manufacture and distribution of lumber. He pointed out that in many instances stumpage had gone up 200 to 300 percent, while a number of items of hardwood lumber were selling lower than 1906 and 1907. Mr. Stark also dealt with the competition which is being met by American hardwoods with Japanese oak.

George D. Burgess, representing the National Lumber Exporters' Association, said that the Japanese are not only gaining rapidly in the American field, but that they have captured the most desirable foreign trade by lowering their prices on oak. He declared that he would not be surprised to find after the war had closed that American exporters had lost at least one-third of their foreign trade.

George C. Ehemann, representing the Lumbermen's Club of Memphis, gave a brief outline of the hardwood lumber industry and showed how it had developed into one of the most important in the whole country and particularly in the south. He emphasized the fact that, by co-operation among the lumbermen, the hardwood business is passing from disorganized individual effort to concerted action on questions involving the interests of all and said that it was to this end that the lumbermen would welcome any aid the government could give in the solution of various problems confronting them.

One of the most interesting papers read was that on taxation, prepared by S. M. Nickey, president of the Lumbermen's Club of Memphis. He showed that the states are encouraging gross waste rather than conservation of the forests by assessing exorbitant taxes against standing timber and presented figures showing that taxes on timber lands owned by his companies in Mississippi have increased from 300 to 500 percent during the past six years, despite the fact that the value thereof has increased comparatively little. He said that the Arkansas holdings of his companies had shown an increase in assessment of 900 percent. Continuing Mr. Nickey said:

"We believe that sentiment should be created against increasing taxation on standing timber. We believe that the ideal way is the Canadian way—taxes on timber of whatever kind or wherever located are due and payable when the timber is cut and made use of."

Elliott Lang, of the National Lumber Exporters' Association, corroborated Mr. Nickey's figures on the increased taxes in Mississippi, and said that on top of these increased taxes on property the owners of timber lands in Mississippi were required to pay a levee tax.

F. S. Chariot, representing cooperage industries and speaking for the slack cooperage trade, emphasized the disastrous effect upon the cooperage industry resulting from unrestrained competition.

Walker Wellford, president of the tight cooperage interests, presented the situation from their standpoint.

Mack Morris, of the Harlan-Morris Manufacturing Co., Jackson, Tenn., said that if the government could give such supervision of the cooperage industries as to enable coopers to realize 6 percent on their investment they would be very happy.

H. B. Weiss, president of the Gum Lumber Manufacturers' Association, reviewed briefly the history of that organization and showed how it had succeeded in bringing gum up from an undesirable and unprofitable wood to one of the finest cabinet materials in the world, and illustrated the importance of what they had accomplished by emphasizing the fact that fully 50 percent of the hardwood stumpage in the south is gum. Mr. Weiss showed how the association was seriously handicapped in doing its work and in securing members because of the fear that its activities would come in conflict with the provisions of the Sherman law. He declared, however, that inasmuch as it had done everything above board and with no effort whatever at concealment, there had been no interference with the association on the part of the government and that fears along this line were no longer entertained.

He said:

"In the interest of public welfare and conservation of the forests, it seems to me that it would be a really great and beneficial work for our government, through your commission, to investigate the necessity of legislation to control the production of our natural resources—overproduction means waste and depression."

John W. McClure, president of the Southern Hardwood Traffic Association, emphasized transportation as one of the most important single factors in the handling of lumber and forest products. He said that the average cost of transportation is 40 percent of the cost of lumber delivered to the consumer. In regard to freight rates he said:

"The freight rate is the measure of distance from the market. Any advance in the rate removes the manufacturer from that market, and any reduction tends to bring the market nearer. Reduction of rates is beautiful from an academic standpoint, but we have been so far unable to convince railroad traffic men that lower rates would enable us to market more of our product and thereby conserve our forests."

One of the most able witnesses for the lumbermen was W. B. Burke, vice-president of the Lamb-Fish Lumber Co., and representing the Southern Hardwood Traffic Association. He filed a bound volume of exhibits in which he gave the commission the benefit of the extensive study and investigation made by his company to ascertain the cost of production, percentage of marketable lumber sawn from logs and much more information along specific lines. A large number of the exhibits filed with the commission were those presented by Mr. Burke in the Harmony conference at Memphis in April, 1915, and in the hearings before the Interstate Commerce Commission in cases I. & S. 520 and I. & S. 745.

Edward L. Davis, representing the Louisville Hardwood Club, discussed the instability of lumber prices, gave his reasons why they were unstable, and showed what the government could do towards bringing about greater stability.

S. B. Anderson, president of the Anderson-Tully Co., Memphis, paid his respects to substitutes. He thought that any substitute which prevented the use of the lower products of the log is not in the interest of the lumber business and was likewise not in the interest of the general public.

Dr. Parker told the lumbermen that the Bureau of Foreign and Domestic Commerce is encouraging the lumber industry to take advantage of the situation that will come with the ending of the war in Europe.

Max Sondheimer, representing the National Lumber Exporters' Association, told Dr. Parker that the exportation of southern hardwoods at the moment is practically negligible because bottoms are so scarce, ocean rates are prohibitive, and there is an embargo, imposed by the allies, on all woods excepting ash and oak. Mr. Sondheimer said that foreigners were in real distress for want of lumber, but that it could not be sent across the ocean because the rate is now $2 a hundred pounds as compared with a normal charge of 21 cents from New Orleans to Liverpool.

Dr. Parker asked Mr. Sondheimer if members of the National Lumber Exporters' Association compete with one another for foreign business and Mr. Sondheimer replied: "Competition is so strong that if we meet each other in Europe we do not speak." Mr. Sondheimer further assured the government representatives that what the exporters want is to get an American merchant marine that will make the handling of lumber shipments to Europe possible.

Commissioner Parry asked what had been done toward the establishment of selling agencies for export business and would efforts in this direction be quickened if the Webb bill were enacted. He was assured that the representatives of the lumber industry would be pleased with the enactment of the measure and that beneficial results would quickly follow.

Interstate Commerce Hearing at Louisville

Louisville, Ky., Nov. 4.—While lumber was scarcely mentioned on the first day of the southern car shortage hearing of the Interstate Commerce Commission, starting here today, and presided over by Commissioner C. C. McChord, a good deal of interesting information was brought out in connection with conditions among the carriers at this time. The opening session was largely given over to coal interests, and the examining of a number of the leading carriers.

The federal court room was crowded at the opening of the hearing with lumber men, traffic men, representatives of the carriers, attorneys, and shippers of various kinds, the coal and lumber interests predominating. The lumber and coal interests were represented by J. Van Norman, of Louisville, who was instrumental to a large extent in obtaining the hearing.

During the examination of the carriers some interesting revelations were made showing that during the past few months the carriers have been paying little if any attention to the regulations of the American Car Service Association, and that some of the roads are holding cars of competing lines indefinitely, and making absolutely no attempt to return the cars to the rightful owners. It was shown that some of the northern roads are short several thousand cars, held by shippers at seaboard terminals, and have made reprisal on cars belonging to southern roads, or any road for that matter, in an effort to hold enough rolling stock to move their freights, which have been abnormally heavy for several months, October having broken all previous records for cars loaded, according to testimony of one carrier.

In the course of the investigation it was found that the carriers had decided conclusively that a change would have to be made in connection with the present car service regulations, and rights in connection with car ownership. High demurrage charges in order to stop the practice of using cars for storage purposes were advocated, and it was further advocated by the carriers that the demurrage and car service matters be placed in the hands of the Interstate Commerce Commission for regulation. Mr. Park, of the I. C., stated that notices had just been sent out, effective December 1, raising demurrage charges on all cars in an effort to guarantee their being loaded and unloaded promptly. Under the new regulations the usual forty-eight hours for loading or unloading is to be allowed, and after that time a demurrage charge of $2 for the first day; $3 for the second day, $4 for the third day, and $5 for the fourth

Digitized by Google

and each succeeding day. Mr. Park stated that in this way the company figured upon breaking up the practice of using its cars for storage warehouses.

According to testimony offered at the hearing it would appear that the high demurrage charge, and a high service charge are about the only things which would relieve the situation. Railroads in the south and middle west have their cars tied up in the east, and all roads which have cars so tied up are endeavoring to hold other carriers' cars in an effort to control sufficient rolling stock to accommodate their own shippers, and in addition are using foreign cars extensively for freights going off their own lines. With a high demurrage charge the consignees using cars which are tied up at Seaboard points would be compelled to release such cars, thereby relieving the situation.

The Louisville & Nashville railroad had prepared printed answers and tables for the occasion, and C. B. Phelps was on the stand the latter part of Friday and all day Saturday. W. H. Northcutt, attorney for the Louisville & Nashville, examined Mr. Phelps, bringing out a startling condition of affairs throughout the country. Tables, showing the locations of cars held by the principal roads of the country, showed that the big eastern carriers have far over the number of cars they actually own, while practically none of the southern roads have equipment with which to supply their own system needs.

The condition of affairs was shown to be so bad that Commissioner McChord on Friday wired the Interstate Commerce Commission relative to the matter, and at noon on Saturday received a wire ordering a general and formal probe of the conditions existing, and stating that it would start on Wednesday, November 8. It was decided to take such testimony as had been presented as formal, if no objections were raised. The carriers of the country have been notified from Washington to be represented in Louisville on Wednesday. In addition to the seventeen questions already prepared, a number of additional questions have been framed to further results of the investigation, which will probably last at least a week, and then be continued at other points.

The information which has been brought out has shown conclusively that something has to be done, and done quickly, in order to prevent the traffic of the country from being seriously handicapped. Roads represented on Friday and Saturday, unable to testify, were requested to file their answers with the commission.

In place of a general southern hearing the matter has developed into a general hearing of the roads of the country, and from the outlook a long drawn out investigation will be made, which will eventually result in the Interstate Commerce Commission's regulating the entire matter of car distribution, service, trackage, demurrage and interchange rules.

According to one carrier, rules are of no consequence in emergencies unless there is a policeman to force their observance, and the commission, it is generally thought, will be forced to take over the entire enforcement of regulations.

TO VISIT WESTERN LUMBERMEN.

Robert H. Downman of New Orleans, La., president of the National Lumber Manufacturers' Association, arrived in Chicago last Tuesday and remained over until to-day (Friday), when, in company with R. B. Goodman, of Goodman, Wis., he is intending to leave for a trip to the Inland Empire and Pacific coast country. Although eight or nine prominent members of the National Lumber Manufacturers' Association had been expected to make up the party, several found at the last moment that they were unable to go. However, A. R. Turnbull of Bowden, N. C., president of the North Carolina Pine Association, and Charles S. Keith of Kansas City, Mo., president of the Southern Pine Association, will join Messrs. Downman and Goodman en route. The purpose of the trip, Mr. Downman says, is to forward the interests of the National Lumber Manufacturers' Association and general association activity. The committee will meet at Spokane a committee of west coast lumbermen, consisting of H. D. Langille, of Portland, Ore., chairman; J. H. Bloedel of Bellingham, Wash.; George S. Long of Everett, Wash.; T. J. Humbird of Sandpoint, Ida., and E. A. Selfridge, jr., of Willits, Cal. These gentlemen will accompany Mr. Downman and his associates from Spokane to Tacoma, Seattle, Portland and San Francisco. The eastern committee will reach Spokane Sunday, November 12, and on the following day will hold a conference with the officers and members of the Western Pine Manufacturers' Association, with whom important trade matters will be discussed.

Kirby-Bonner Lumber Co. Organized

Houston, Tex., Oct. 26.—President John H. Kirby, of the Kirby Lumber Co., announces that on and after November 1 its sales will be exclusively handled by the Kirby-Bonner Lumber Co.

JOHN H. KIRBY, OF HOUSTON, TEX.

The offices of the new company are: John H. Kirby, president; B. F. Bonner, vice-president and general manager; C. P. Myer, assistant general manager; J. T. McCarty, treasurer; George R. Christie, general auditor; W. T. Hancock, traffic manager; Harry T. Kendall, general sales agent; W. E. Farnan, assistant general sales agent.

B. F. BONNER, OF HOUSTON, TEX.

Mr. Bonner says of the new company:

"Following the lead of other large industries, and to meet the growing demands of new markets, the Kirby Lumber Co. has decided to place the distribution and sale of its product in the hands of a separate corporation. The new company will be known as the Kirby-Bonner Lumber Co., and has a paid-up capital of $1,000,000. The Kirby-Bonner Lumber Co. will be exclusive sales agent for the Kirby Lumber Co. and the other mills formerly handled by the sales department of the Kirby Lumber Co. This will give the sales company an annual output of 500,000,000 feet, or more than 25,000 cars of lumber a year.

"Marketing necessities have forced the manufacturer to go far afield, and the former simple problems of distribution have been displaced by more difficult ones, brought about by increased production of lumber. It is believed that this new situation can be better studied and handled by a company devoted strictly to selling.

"During the last few years the sales department of the Kirby Lumber Co. has been spreading out over the domestic and foreign markets. It now maintains branch offices in New York, Chicago, St. Louis, Kansas City, Oklahoma City, Indianapolis, New Orleans, Mobile, Galveston, Hattiesburg and Havana, Cuba, and has sales representatives in various parts of the West Indies, South America, Central America and Mexico.

HARRY T. KENDALL, OF HOUSTON, TEX.

"The plans of the old company respecting the European markets held up by the war in the summer of 1914 will be carried forward by the sales company. In addition to branch offices and foreign representatives, a large corps of traveling salesmen work out of the branch offices or report direct to the Houston office. The entire sales organization of the Kirby Lumber Co. will be taken over by the Kirby-Bonner Lumber Co. and an aggressive sales campaign for yellow pine will be carried on, not only in the territories now covered, but new territories will be opened up at once."

BIG YELLOW PINE EXPORT COMPANY.

New Orleans, La., Nov. 7.—Of greatest importance to the lumber industry was the recent formation here of the Yellow Pine Export Lumber Co., organized for the purpose of extending the American lumber markets in Europe and South America.

The company will have a large capital and will include the largest yellow pine mills in the south, assuring its undoubted success. Through the co-operation of all of the mills of the company, a lumber order of any size will be handled by the mills as a collective group with little trouble. The loss of any one mill will have no effect whatsoever upon the balance of the mills in completing an order.

It is the intention of the new company to send special agents to Europe and South America following the declaration of peace abroad to obtain new business for its mills. Assurance is given that orders will be filled with full counts and straight grades and prompt delivery will be made.

J. S. LANDON BECOMES GENERAL MANAGER OF THE MEDFORD LUMBER CO.

J. S. Landon, who has been with the Hatten Lumber Co., of New London, Wis., for some months, and was the sales manager of the Barker-Stewart Lumber Co., Wausau, Wis., was in Chicago last week on his way to Detroit, Lansing and other points. Mr. Landon has resigned his position with the Hatten Lumber Co. to become general manager of the Medford Lumber Co. at Medford, Wis.

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

THE LUMBER MARKET AS REPORTED TO THE FEDERAL TRADE COMMISSION.

Washington, D. C., Nov. 6.—"The expansion of business in general and the increase in retail trade continues unabated; while the current tendency seems to be toward even greater activity and higher prices, rather than toward any slackening of demand," according to the monthly bulletin of the Federal Reserve Board just made public here a few days ago. The bulletin makes a number of references to lumber and general building activities, which will no doubt be of special interest to our readers. From almost each district the car shortage is given particular note and special mention is made of the hardship that it is working. From the third district, with headquarters at Philadelphia, comes the following:

"The movement of lumber is about normal, but prices show an upward trend owing to lack of adequate transportation facilities, which renders it difficult to maintain stocks in some grades. The building industry is in fair condition, although the difficulty in obtaining labor and the high prices of materials still occasion delay in the starting of many new projects." From Atlanta, the headquarters of district No. 6, comes the following:

"Yellow pine has strengthened materially as to price within the past 30 days. Demand has been active, reaching at least normal proportions as to volume for the season, and this fact, coupled with the slow shipments, due to the car shortage, is no doubt responsible for the advance in value. Production is evidently considerably below normal, and in view of the fact that the volume of shipments is so seriously restricted by car shortage we doubt if there will be any tendency to increase the output in the next 90 days. The average price, however, is even now at least $1 per thousand below normal. The percentage of increase in cost is more than the percentage of advance in price, notwithstanding the fact of large advances in price in almost every other kind of building material." From Kansas City, of district No. 10, comes the following about lumber:

"Lumber prices are much firmer than they were 30 or 60 days ago, having advanced from $1 to $2 per thousand. It is the supposition that this is largely due to the car shortage and not entirely to the large volume of business. Retailers report the continuance of a very satisfactory business, one important company, operating a number of retail yards throughout the district, advising that as compared with a year ago the volume of business is probably 25 percent larger. They have shown an increase over 1915 for every month this year except two, and express surprise, owing to the fact that in some localities, where the yards are located, crop conditions have been unfavorable. Collections are said to be coming in much more freely than they did last year." District No. 11, Dallas, Texas, headquarters says:

"The retail lumber business is satisfactory and demand is good, with the mills operating five days a week. Car shortage is having a serious effect on the trade and one large manufacturer advises that the shortage is the worst with which he ever contended. He further states that they are unable to ship more than 60 percent of their normal output, while the demand remains equal to a normal production. The firm in question reports that they have had to withdraw entirely from the market temporarily and, unless there is considerable improvement in the car supply, they will cease to accept orders indefinitely. The shipments are being made on sales previously contracted for and, in order to take care of the situation as best can be done, the production is being regulated to conform to such demand as can be reasonably met, with a fair supply on hand, yet with a view to prevent an accumulation of stock to be forced on the market when the car situation is improved." San Francisco, for district 12, on the Pacific coast, says:

"Lack of transportation continues to hamper the lumber industry. Even for interior shipments there is an acute shortage of cars."

EXAMINATION FOR LUMBER TRADE COMMISSIONERS ANNOUNCED.

Washington, D. C., Nov. 4.—The Civil Service Commission has just sent out an announcement of the Lumber Trade Commissioners examination to be held on November 22. In part the commission says:

"At the request of the Department of Commerce the United States Civil Service Commission announces an examination for the position of trade commissioner to investigate lumber production in Europe and European lumber markets, for men only, on November 22. This examination will be held at a number of the larger cities in each state, and applicants will be examined at the most convenient examination point. This position is not in the competitive classified service, but is embraced under Schedule B of the Civil Service Rules. Positions under this schedule are filled by noncompetitive examinations and may be filled without regard to the relative standing of eligibles in the examination. Upon completion of the rating, the papers of all those who pass the examination will be turned over to the secretary of commerce."

Persons who failed in the oral examination held here on October 23 and 24 will not be admitted to this examination. The commission has the following to say relative to the duties of the commissioners:

"The duties of the position of trade commissioner will be similar to those of commercial agents and special agents of the Department of Commerce in foreign countries. They will consist of investigations of foreign markets and foreign production as bearing on the opportunities for American producers and manufacturers—the demand and competition which will be met in European countries. Results of the investigation will be embodied in reports. It is desired that persons appointed to this position shall be good investigators, able to prepare straightforward, readable reports, and equipped with a good knowledge of American lumber and its merchandising."

Experience in connection with the lumber business will be considered of more importance than scientific training in forestry. Practical experience in the manufacture and sale of lumber is especially desired.

The examination will include practical questions covering the three fundamental subjects of the investigation: (a) timber production, (b) manufacture of forest products, and (c) marketing of forest products; education and experience is taken into account; language; and a thesis.

It is hoped that the examination papers will be corrected so that an oral examination may be held during the week of December 9, and that appointments will be made directly following.

It is more than probable that Chicago, or some other centrally located city, will be selected for the holding of the oral examinations instead of holding them in Washington, as the former one.

AXEL AXHOLM APPOINTED LUMBER EXPERT COUNSELOR.

Washington, D. C., Nov. 2.—Axel Oxholm, of San Francisco, has been appointed a consulting lumber expert by the Bureau of Foreign and Domestic Commerce. It is understood that Mr. Oxholm has had wide experience in foreign as well as American lumber markets and that he is thoroughly familiar with many foreign languages.

INTERSTATE COMMERCE COMMISSION HEARINGS

The following lumber arguments and hearings are scheduled on the docket of the commission between now and the date of our next issue:

On November 11, an argument, at Washington, D. C., before the commission in case No. 8967 of the G. H. Evans Lumber Co., et al. vs. the Central of Georgia Railway Co., et al.

On November 13, at Chattanooga, Tenn., before Examiner Fleming, in case No. 8726 of the Cleveland Lumber & Manufacturing Co. vs. the Southern Railway Co.

On November 18, at Montgomery, Ala., before Examiner Bell, in case No. 8969 of the Southern Pine Lumber Co. vs. the Atlantic Coast Line, et al.

On November 21, at Boston, Mass., before Examiner La Roe, in case No. 9031 of the Atlantic Lumber Co. vs. the Toledo & Ohio Central, et al.

On November 21, at Montgomery, Ala., before Examiner Bell in I. & S. Docket No. 913, taking up rates on forest products from Falco, Ariz., and in case No. 9146 of the McGowin Fashee Lumber Co. vs. the Florida, Alabama & Gulf, et al.

On November 22, at Boston, Mass., before Examiner La Roe in I. & S. Docket No. 895, concerning New England lumber rates, No. 2.

On November 23, at New Orleans, La., before Examiner Bell in I. & S. Docket No. 832, concerning lumber rates from Louisiana stations.

On November 24, at Chicago, Ill., before Examiner Worthington, in case No. 8817 of the Peshtigo Lumber Co. vs. the Wisconsin North Western, et al.

INTERSTATE COMMERCE COMMISSION OPINIONS

Following are a few of the interesting lumber opinions that have been handed down since our last issue:

In the case of the Carrier Lumber & Manufacturing Co., of Sardis, Miss., against the Illinois Central, et al., the commissioners had the following to say:

"Defendants' rates on lumber in carloads from Sardis, Miss., to Spokane and Walla Walla, Wash., and Pendleton, Ore., and points taking the same rates, not found unreasonable. Complainant not shown to have been damaged by the discrimination alleged. Complaint dismissed."

In this case reparation was asked on various shipments made from Sardis during the period from June 6, 1913, to November 6, 1914, it being claimed that the rates charged were unreasonable.

The commissioners have also handed down their opinion in case No. 7951 of the Advance Lumber Co., of Birmingham, Ala., against the Seaboard Air Line Railway, et al. In part they say:

"Rate of 9 cents per 100 pounds charged for the transportation of a carload of lumber from Wellington, Ala., to Chattanooga, Tenn., found unreasonable to the extent that it exceeded 8 cents, and reparation awarded."

The commission has also announced its opinion in the case of the J. V. Stimson Hardwood Co., et al., of Memphis, Tenn., against the Chicago, Rock Island & Pacific, as follows:

"Rate charged by defendant for the transportation of hardwood logs in carloads from Proctor, Edmondson and Hulbert, Ark., to Memphis, Tenn., found to have been unreasonable. Reparation awarded."

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until February 22 the operation of item 35-D, supplement No. 17 to Agent Frank Andersons I. C. C. tariff No. 15. The suspended item names increased proportional rates on lumber and articles taking the same rates, carloads, from Helena, Ark., to Thebes, Ill.

The commissioners have suspended until April 29 the operation of certain items appearing in the I. C. C. tariff No. 1003 of R. H. Countiss, agent. The suspended items provide for increased rates on poles exceeding 40 feet in length, in carloads, from points in Montana and Idaho and from points in north Pacific coast territory to destinations in Minnesota, Illinois, Iowa and other states.

Personal News Notes

P. A. Gordon, the energetic Michigan lumberman, making his headquarters at Detroit, was in Chicago a few days this week. He reported a ready sale for hardwood flooring, of which he is at this time making an exclusive specialty.

J. Burton Webster, secretary of the Arkansas Lumber Dealers' Association and a well known attorney of Little Rock, Ark., has formed a partnership with S. Laurie White for the practice of law in Little Rock. The firm name is Webster & White. Mr. Webster is well and favorably known to many lumbermen, who wish the new firm great success.

E. A. Engler, of the E. A. Engler Lumber Co., McCormick building, this city, had one or two unlucky days this week. On Tuesday morning last he learned of the destruction by fire of the company's office at Beaudette, Minn., together with one of the boarding houses, causing a total loss, though covered by insurance. Tuesday afternoon while taking an automobile ride he came into collision with another machine and sustained the loss of the end of one of his fingers, which made a very painful injury. However, he is well satisfied that nothing worse occurred than the incidents mentioned above.

J. E. Kelly, for some time past in charge of the railway material department of the Stillwell Lumber Co., of this city, has lately gone into business on his own account. In company with L. L. Major and W. J. Sowers, of the Major-Sowers Saw Mill Co., Epley, Miss., he has incorporated the Kelly, Major & Sowers Co., with a capital stock of $25,000 and with general offices in this city. The Major-Sowers Saw Mill Co. is one of the well equipped yellow pine manufacturing institutions of southern Mississippi and has long marketed a part of its product in Chicago territory. Its interests lately, however, have seemed to demand a somewhat closer relationship, and the company decided to establish a more efficient organization for the northern trade. Mr. Kelly has had a great deal of experience in the buying and selling of yellow pine railway stock, as well as in all forms of car material. For some years he was with the Pullman Co., and in that capacity formed a large and enviable acquaintance among mill men. The company is occupying offices at room 747 Peoples Gas building and is already doing as good a business as the somewhat restricted car supply will permit.

DEATH OF MARCUS MARCELLUS DARR.

M. M. Darr, of Buffalo, N. Y., passed away suddenly Saturday evening, November 4, while on a visit to St. Louis, Mo. While Mr. Darr has been an invalid for several years, his death caused a severe shock to his friends in Chicago, among whom he was visiting a week before his demise.

Mr. Darr was born on a farm near West Newton, Westmoreland county, Pa., August 12, 1841. He entered the Union army as a scout in the valley of the Shenandoah. He rose to be chief of scouts on the staff of General Reynolds and was with that officer when the latter was killed at Gettysburg. One of his exploits was the killing of the guerrilla leader, Mobley, who used to raid the valley. He once shot at the better-known guerrilla, General Mosby, but the bullet went through his hat. General Mosby and Mr. Darr met after the war and laughed over the incident.

In 1863, during one of the encounters while he was in the saddle, he was seriously wounded, but within thirty days he was at his post again.

Mr. Darr's lumber career started with a Detroit wholesale lumber concern. A few years later he went to Hannibal, Mo., associating himself with S. T. McKnight & Co., and when Mr. McKnight became president of the Northwestern Lumber Co., Mr. Darr identified himself with that concern.

In 1879 he was a partner in Street, Chatfield & Darr at Chicago and in the latter part of 1880 he moved to St. Paul to become vice-president and treasurer of the C. N. Nelson Lumber Co.

In 1886 the Eastern Lumber Co. of Tonawanda, N. Y., was organized, Mr. Darr becoming treasurer, and the other officers being: Jacob Beidler, president; B. F. Ferguson, vice-president, and Francis Beidler, secretary. After being identified with this company for twenty years, he retired from active business on June 1, 1906.

Mr. Darr has maintained his residence at Buffalo, N. Y., for the past thirty years. He was a liberal contributor to charities, an active member of the First Presbyterian church, and devoted much time and money to the welfare of the Presbyterian Hospital. He is survived by his wife, Mrs. Ella S. Darr, formerly of Springfield, Mass. Burial occurred at Quincy, Ill., on Tuesday, November 7. The Rev. A. V. V. Raymond, D. D., of the First Presbyterian church, Buffalo, conducted the funeral services.

NEW MAN FOR THE PACIFIC COAST.

C. A. STEWART.

HIS is a portrait of the new Pacific coast manager of Clark Bros. Co., of Olean, N. Y. quite recently appointed. C. A. Stewart, sometimes of Portland, Ore., now of Seattle, Wash. — a portrait that was made of Mr. Stewart in the camp of the Polsen Logging Co. on Saturday afternoon, October 27, 1916, at a point about twenty miles from Hoquiam, Wash. This picture of Mr. Stewart was made at the end of a perfect day of excursion enjoyment when he was in attendance as a guest of the Pacific Logging Congress during the recent excursion of that important association, described elsewhere and voluminously in this issue of the LUMBER WORLD REVIEW on pages 60 to 85.

Mr. Stewart has until recently been a member of Stewart Bros. Co., with headquarters in Portland, Ore., at 35 First street, a company known all along the Pacific coast for its very superior "logging blocks." Mr. Stewart sold his interest in the above mentioned company July 1, at that time contemplating affiliation with Clark Bros. Co.

Mr. Stewart is the originator of a "logging block," which he has made very popular during the past five years, from California to Alaska. Logging blocks having different uses under different circumstances, their capacities and purposes require special designing, this special designing having been Mr. Stewart's particular business.

The subject of this brief notice is a native of Ontario, Canada, and came to the United States in his twentieth year, taking up his residence first in St. Paul, Minn., in 1895. In 1898 he became attached to the signal service in the United States army, and was stationed in Manila for fourteen months. After that experience he worked as a stenographer and operator with various railroads, until he joined the forces of the Hammond Lumber Co. in the logging and purchasing department, where he remained for a period of five years.

In 1908 he was appointed manager for S. D. Hickson & Son at Portland, Ore., and after that was sales manager of the Columbia Engineering Works, manufacturing the "Skookum" logging block. In 1911 he severed his connection with the above named concern to form Stewart Bros. Co.

In assuming his duties with Clark Bros. Co. Mr. Stewart will have charge of all the territory west of the Rocky mountains, for this institution and will handle all of its products, which are chiefly sawmill machinery, logging blocks and logging equipment. After the first of the year Mr. Stewart will establish a branch in Portland, Ore., for Clark Bros. Co.

Business Changes, Incorporations and Fires

New Concerns

Pueblo, Colo.—The Pueblo Lumber Co.; $10,000 capital. W. J. Prout.

Lake Charles, La.—The P. E. Hammons Co.; $25,000 capital. P. E. Hammons, president; T. E. McNamara, vice-president and general manager; Clyde Oldham, secretary and treasurer.

Chicago, Ill.—The Rocona Cooperage Co.; $15,000 capital. L. C. Hollingshead, L. B. Hollingshead and F. Grismore.

El Paso, Tex.—The Gaston Lumber Co.; $35,000 capital. W. H. Gaston, Thomas M. Jones and A. R. Grambling.

Macon, Ga.—The Southern Lumber & Timber Co.; $3,000 capital. Horace A. Wright, W. A. Roush and Bert F. Delk.

Celeste, Tex.—The Celeste Lumber Co.; $10,000 capital. L. H. Hoard, president; A. J. Fraley, secretary-treasurer; W. H. Dunn, manager.

Huntington, W. Va.—The Huntington Hardwood Co.; $100,000 caital. C. T. Thurmond, president; A. B. Neighborgall, vice-president; A. K. Kessler, treasurer; W. W. Smith, secretary.

Houston, Tex.—The Kirby-Bonner Lumber Co.; $1,000,000 capital. John H. Kirby, B. F. Bonner and Frank Andrews, all of Houston.

Seattle, Wash.—The Yerrek Logging Co.; $40,000 capital. A. S. Kerry, Frank R. Van Tuyl and John H. Powell.

Alsea, Ore.—The W. E. Earnest Lumber Co.; $10,000 capital. W. E. Lottie and others.

Absher, Mont.—The Gunnary-Collins Lumber Co.; $50,000 capital. Benjamin L. Gunnary and Fred F. Murray of Absher, and R. R. Collins of Lavina.

New York, N. Y.—The Surinam Trading Co.; $100,000 capital. Commission merchants, agents, etc., in lumber, wood, paper pulp. G. R. Foody, L. J. Ingevine and W. H. Thomas.

Bristol, Va.—The White Oak Veneer & Lumber Co.; $50,000 capital. H. L. Spencer, president; F. A. Jackson, secretary.

L'Anse, Mich.—The Superior Timber Co.; $15,000 capital.

Biltmore, N. C.—The Swannanoa Lumber & Flume Co.; $25,000 capital. I. E. L. Gaston, D. H. Gaston and W. C. Pryor.

Eldorado, Okla.—The Walker Coal & Lumber Co.; $5,000 capital. S. E. Walker, U. G. Wighsonger and J. E. Bordermon.

Oklahoma City, Okla.—The Grant-Sprague Lumber Co.; $25,000 capital. J. W. Sprague, C. A. Dodge and L. B. Grant.

Guin, Ala.—The Guin Cooperage Co.; $12,000 capital. Wiley Basket, of Fayette, president; J. J. Pope, of Guin, vice-president, and R. R. Wright, secretary and treasurer.

Chicago, Ill.—The Chicago & Riverside Lumber Co. has increased its capital from $10,000 to $300,000.

Groom, Tex.—The A. C. Morgan Lumber Co.; $10,000 capital. J. J. Petty, J. J. Hill and Mrs. Mary Elizabeth Morgan.

Newark, N. J.—The S. Beyer & Co., to deal in lumber and conduct construction firm; $5,000 capital. Abraham Yam, Simon Beyer, K. Werksman.

Timmins, Ont.—The Hendun Lumber Co.; $40,000 capital. Frederick A. Day, Wesley A. Gordon and Edna M. Reilly.

Aberdeen, Wash.—The Hyat Logging Co.; $200,000 capital. J. E. Uridil.

Radford, Va.—The Enterprise Manufacturing Co., to manufacture veneers; $50,000 capital.

Waco, Tex.—The Waco Cooperage Co.; $1,650 capital. J. C. Gwyn, J. Wernert and Abe Gross.

Bend, Ore.—The Gardiner Wilkinson Lumber Co.; $5,000 capital

Alexandria, La.—The A. J. Higgins Lumber & Export Co.; $15,000 capital. W. M. Cady, president; J. G. McNary, vice-president; A. J. Higgins, secretary and treasurer, and J. C. Blackman.

Harlan, Ky.—The Hubbard Lumber Co.; $10,000 capital. J. A. Creech, Emma Creech and W. P. Hubbard.

New Mills

Velie, Ark.—The Moline Lumber Co. is building a new 25,000 foot mill here to cut its low grade logs.

Green Cove Springs, Fla.—Dowling-Shands Lumber Co. will rebuild mill reported burned at $150,000 loss.

Kona, Ky.—The Valley Creek Lumber Co. will install mills on timber tract on Millstone Creek.

Kola, Miss.—The Kola Lumber Co. will rebuild kilns, planing mill and dry shed reported burned.

Colon, N. C.—John L. Thomas will establish sawmill with daily capacity of 8,000 feet.

Guin, Ala.—The Basil E. Kenney Lumber Co., of Frankfort, Ky., will build plant here with daily capacity of 75,000 feet.

Plaquemine, La.—The C. F. Liebke Hardwood Mill & Lumber Co., of St. Louis, Mo., purchased cypress mill and equipment on Bayou Plaquemine; contemplates improvements to include practically entire new mill to cut hardwoods.

Magnolia, Miss.—C. A. Sanders will rebuild sawmill and planing mill lately burned.

Kingsport, Tenn.—The White Oak Veneer & Lumber Co. will establish plant to manufacture flitches, sawed quarter oak veneers, etc.

Sutherlin, Ore.—The Roach Timber Co. will build a sawmill which will have capacity of 15,000 feet per day.

Marion, Ala.—W. L. Hall, of Tuscaloosa, and associates have erected a stave mill near here.

Monroe, Wash.—A. H. Buck, of the Monroe Mill Co. is erecting a new shingle mill on the Suislaw river. The mill will be modern and have a capacity of 200,000 shingles a day.

Bay Minette, Ala.—Shollar & Crockett will install a veneer plant in connection with hamper factory.

Hope, Ark—Talbot Field, of the Hope Lumber Co., will reconstruct mill, add circular saw equipment and later install band saw.

Minden, La.—W. A. Turner will rebuild sawmill and cotton gin lately burned at a loss of $16,000.

Bend, Ore.—The Gardiner-Wilkinson Co. will erect a one-band sawmill near here to be modern in every detail.

Kingsport, Tenn.—The White Oak Veneer & Lumber Co. will establish an electric driven plant to manufacture oak veneers, flitches, etc.

Business Changes

Safford, Ariz.—Geo. P. Jacobson has sold out to J. D. Halstead Lumber Co., of Phoenix.

Saybrook, Ill.—L. J. Easterbrook & Co. have sold out to Krum & Krum Lumber Co., of Elliott.

Webster City, Ia.—Young & Clifton Co. has sold out to C. H. Clifton & Son.

Stithton, Ky.—The Stithton Supply Co. has sold out to G. A. Scheible.

Riverside, Wash.—The Riverside Lumber Co. has sold out to the Columbia Valley Lumber Co., of Seattle.

Coleman, Tex.—The J. P. Dodson Lumber Co. has sold out to the South Texas Lumber Co., of Houston.

New Albany, Ind.—The Roberts & Connor Co. changed name to Roberts Veneer Co.

Nodaway, Ia.—W. D. Jarman has sold out to the Green Bay Lumber Co. of Des Moines.

Holcomb, Kans.—R. J. Carpenter has sold out to the Lindas Lumber Co. of Larned.

St. Louis, Mo.—The Griffith Walsh Tie & Lumber Co. changed name to Walsh Tie & Lumber Co.

Asheville, N. C.—The Biltmore Lumber Co. of Newark, N. J., has opened an office here.

Fairfax and Winner, S. D.—The Superior Lumber & Coal Co. has sold out to Jas. A. Smith Lumber Co., of Osage, Ia.

Seattle, Wash.—The L. R. Fifer Lumber Co. now the Western Lumber Sales Co.

Milwaukee, Wis.—The Maxson Lumber Co. has increased its capital to $65,000.

Emeryville, Cal.—The Emeryville Planing Mill Co. now Emeryville Lumber & Mill Co.

Baton Rouge, La.—The Capital Lumber Co. has sold out to the Delta Lumber Co., of New Orleans.

Cedar Rapids, Nebr.—The Yost & Asmus Lumber Co. sold out to F. P. Schmidt Lumber Co.

Lebanon, Mo.—S. A. Austin has sold out to the Sheets Lumber Co., of Beaver City.

Coal Grove, O.—The Yellow Poplar Lumber Co. will increase its capital from $125,000 to $225,000.

Holbrook, Ariz.—The Carbon City Lumber Co. has been succeeded by the Cooley Lumber Co.

Hartford, Conn.—The Hooker-Baird Lumber Co. is out of business here.

Boston, Mass.—The George W. Gale Lumber Co. has sold its stock of lumber to the Blacker & Shepard Co.

Chesaning, Mich.—F. G. Swartzmiller has been succeeded by Swartzmiller & Stuart.

Custer, Mich.—Briggs & Booth have been succeeded by E. M. Briggs & Son.

Detroit, Mich.—John Beyster & Sons have been succeeded by John Beyster & Sons Co., Inc.

Hudsonville, Mich.—B. & T. Hughes have been succeeded by Earl Peasley.

Lapeer, Mich.—The Wilcox Lumber Co. has sold its yard and business to F. R. Cutting.

Poplarville, Miss.—J. E. Williams has been succeeded by the Wells Lumber Co.

Fillmore, Mo.—C. H. Spicer & Son are closing out their lumber business here.

Kansas City, Mo.—The Kansas City Column & Panel Co. has increased its capital stock to $65,000.

Mineola, N. Y.—George B. McCord has been succeeded by McCord Lumber Co.

New York, N. Y.—The Coastwise Lumber & Supply Co. has moved from 11 Broadway to 17 Battery Place.

Asheville, N. C.—The Boner-Mills Lumber Co. has increased its capital to $15,000.

Pittsburgh, Pa.—The Johnston-Davies Lumber Co. has dissolved partnership and P. H. Johnson continues under same name.

Coleman, Tex.—The J. P. Dodson Lumber Co. has been succeeded by the South Texas Lumber Co., of Houston.

Fires

Dallas, Tex.—Coleman Planing Mill burned; loss $5,000.

Thornton, Ark.—Warehouse of the Stout Lumber Co. burned; loss, $18,000.

Hoquiam, Wash.—Hoquiam Sash & Door Co.'s plant damaged by fire to extent of several hundred dollars.

DeFuniak Springs, Fla.—Sawmill and much lumber at the plant of the W. B. Harbeson Lumber Co. burned; loss approximately $100,000, covered by insurance.

Shreveport, La.—Mill of the Krause & Managan Lumber Co., damaged by fire to extent of $2,000.

San Francisco, Cal.—The modern sawmill of the Swayne Lumber Co. destroyed by fire together with a quantity of lumber estimated at from 3,000,000 to 4,000,000 feet; loss about $150,000, covered by insurance.

Evansville, Ind.—Fire in the lumber yard of Maley & Wertz caused loss of $30,000, mostly covered by insurance.

Duluth, Minn.—The sawmill of the Mullery-McDonald Lumber Co. burned; loss, $80,000.

Digitized by Google

The News Miscellany of the Lumber World

Southwestern News

Kansas City, Mo., Nov. 7.—There has been much to encourage lumbermen in the recent local news here. Real estate and building projects are on a larger scale than in many months. The Harding creamery interests of Omaha have decided to establish a branch here that will produce 3,000,000 pounds of butter annually. This announcement, following immediately after the announcement that the Maxwell Motor Car Co. has decided to locate a big assembling plant here, and that the Sinclair Oil Co. plans a big refinery here shows the rapidly growing importance of this city. The Maxwell plant will have a capacity of 20,000 cars annually. The Sinclair oil refinery will represent an investment of $1,000,000.

KANSAS CITY, MO.

Real estate sales are showing weekly gains. Bank clearings also are improving steadily. Among recent announcements of residence sales are the purchase of additional land near his home site in the Rock Hill district by Henry N. Taylor, vice-president of the Central Coal & Coke Co. and the purchase of a Mission Hills site by J. B. Rust, president of the J. B. Rust Sash & Door Co.

* * *

Malvern, Ark., Nov. 8.—The latest development of the yellow pine situation in this region is the withdrawal of two large producers from the market. The Arkansas Land & Lumber Co. and the Wisconsin & Arkansas Lumber Co. have issued instructions to salesmen and representatives to the effect that no new business is to be solicited and that old customers will be looked after with all possible despatch dependent upon the car supply. The Rock Island railroad has prohibited the use of flat cars for lumber loading, which puts a new crimp in the lumberman's output.

MALVERN, ARK.

A new mill will be built at Velie, on the Camden branch of the Rock Island by the Moline Lumber Co. of Malvern for the purpose of sawing low grade logs which cannot be freighted to the Malvern plant at reasonable cost. The mill will cut about twenty-five thousand feet daily of hardwoods, will be under the management of the larger organization, and the lumber which will be carried on a yard at the side will be handled through the Malvern sales office by the present sales manager, W. W. Beatty. Larger accommodations for workmen are now under construction, while the commissary also will be enlarged and both woods and mill crews will be taken care of in the mill town. With a wealth of fine timber the company is assured of a long run. The Malvern plant will continue to handle the better grades of logs and within sixty days the new mill is expected to take up its burden of working up the lowers.

* * *

Little Rock, Ark., Nov. 4.—Fire that started from a hot box on a planer at noon on October 28 destroyed the big planing mill of the Stout Lumber Co. at Thornton, Ark., causing a loss of approximately $100,000. The loss was protected by insurance.

LITTLE ROCK, ARK.

This same company suffered a loss on Friday, October 20, when fire of unknown origin destroyed its warehouse, causing a loss of about $5,000.00.

A new warehouse is now being erected, and it has been announced by company officials that the planing mill will be rebuilt at once. The mill had just shut down for the day when the fire was discovered on the 28th. Shavings were ignited by the flames from the hot box and the fire spread so rapidly that it was impossible to save the planing mill. Employes fought hard against the fire, giving particular attention to keeping the flames from spreading to the other buildings at the plant.

Joel Taylor, the owner of a saw mill at Rector which was destroyed by fire caused from the sparks from a locomotive, was on October 27 given a judgment in the Clay County Circuit Court against the Cotton Belt and Iron Mountain railroads for $8,250.

Middle States News

Buffalo, N. Y., Nov. 8.—There is promise at last of the wood block pavement on Chapin parkway, over which so much difficulty was had when it was first laid, becoming a final success. The pavement was very imperfect at first, on account of something that went wrong with the foundation. The sand cushion over the concrete base proved defective. The users of it appear to be most pleased with it. There remains only one more test, and that is durability. If that is satisfactory quite likely Buffalo will see considerable of this sort of pavement laid in the near future.

BUFFALO, N. Y.

Taylor & Crate will move their downtown office to their new yard on Elmwood avenue as soon as the latter is completed. This will mean that practically all the yard offices downtown will be gone, whereas they were fairly numerous a few years ago. During the past year or two Hurd Bros., the A. G. Hauenstein Lumber Co. and the McNeil Lumber Co. all gave up their downtown offices to be at their yards.

The Atlantic Lumber Co. will soon have a new lumber storage shed, to replace the one which was burned recently with a large quantity of valuable hardwood lumber. The company leases the yard at 1055 Seneca street from J. N. Scatcherd, who formerly had a hardwood business there.

* * *

North Tonawanda, N. Y., Nov. 8.—The lumber receipts at the Tonawandas during October were 27,643,100 feet, as compared with 33,805,900 feet in the same month last year, a decline of 18 percent. Besides the lumber, 1,857,050 pieces of lath and 2,652 tons of pulp wood were unloaded. The Tonawandas will not have as much stock on hand as expected this winter, owing to the scarcity of vessels, and it is predicted that white pine prices will be higher. The demand has been good and shipments over the canal have been the largest in years this season, all available boats being pressed into service.

NORTH TONAWANDA, N. Y.

South Atlantic News

Pensacola, Fla., Nov. 6.—Pensacola is becoming a ship owning port, for besides the several small vessels that are owned here and two engaged in the lumber trade, the Lutz Shipping Co. has entered the business on an extensive scale and has produced seven vessels, all of them schooners, but of large carrying capacity. These vessels it is understood are to be placed in the gulf lumber trade. The Lutz Shipping Co. was formed several months ago; E. Lutz well known in the shipping circles, is at the head of the company and is also the principal stockholder. Other stockholders are John A. Merrit and R. H. Turner.

PENSACOLA, FLA.

The Alabama & Florida Tie Co., a new corporation, of Pensacola, has made application to the governor for letters patent. The company will be ready for business of manufacturing, selling and exporting sawn and hewn cross ties as soon as the charter is granted.

* * *

Jacksonville, Fla., Nov. 4.—According to the report of the customs collector for September, 240,000 feet of mahogany logs, valued at $10,607, and 220,000 feet of cedar logs were shipped from Florida during that month. Exports were heavy, the total amount being $3,212,449, a gain of $1,500,634 over the same month in 1915, and a gain over August of this year of $442,316. Imports were valued at $729,373.

JACKSONVILLE, FLA.

The tug Admiral is in port and will carry to Port Sagua la Grande, a cargo of yellow pine lumber from the Carpenter & O'Brien Lumber Co. at East Port, Fla., to Reed & Moore, of Sagua. At present the Dewey does not bring a return cargo from Cuba, but it is hoped that in a short time mahogany and lignum vita will be imported through this port.

Thousand upon thousand acres of cut-over timber land in the extreme western part of this state are being converted into great cattle ranges, and when present plans are carried out that section will be the largest and richest cattle producer of the United States.

Gulf Coast News

Hattiesburg, Miss., Nov. 6.—The Kola Lumber Co. at Kola, which lost its kilns and planing mill by fire last week is making preparations to rebuild them at once.

HATTIESBURG, MISS.

L. G. Sears of the Arkomiss Lumber Co. of Cleveland, Ohio, and a stockholder of the Tallahatta Lumber Co. at Montrose, Mississippi, has leased the Montrose mill and is operating it under the name of the Montrose Saw-Mill Co. R. M. Wood, secretary and treasurer, who has been manager at Montrose, is now located with the Tallahatta Lumber Co. at Hallsell, Ala.

The J. J. Newman Lumber Co., which has been operating its planing mill at Sumrall on day and night shift, has cut the night run off on account of the car shortage.

The Bond Lumber Co. at Bond, Miss., which is one of the Dantzler mills, is having fifteen log cars repaired and equipped for main line work and will use them in getting its export timber from the mill to Gulfport.

The K. C. Lumber Co. at Lucedale, which closed its saw-mill some time ago, is running the planing mill and cleaning up all of its rough stock and in a short time the entire plant will be closed down for good, as the timber supply at that point is exhausted."

* * *

Beaumont, Tex., Nov. 6.—W. A. Priddie of the Beaumont Lumber Co., who has been some time at Battle Creek, Michigan, and who visited New York, Boston, Pittsburgh and other points recently, has returned to Beaumont. He declares the prospects for the lumber trade to be the best in years.

BEAUMONT, TEX.

That the shippers of Beaumont, by co-operating with the railroads, can materially relieve the present car shortage situation, which is now a very serious problem, is the opinion of Traffic Manager Bland of the chamber of commerce. Mr. Bland Saturday issued a letter to local shippers, asking them to co-operate by unloading all cars as promptly as possible. Also he asks them to report any instance where a car was not moved promptly after being unloaded.

With the arrival yesterday morning of W. A. Stark, president of the W. A. Stark Lumber Co., of Memphis, plans began to take definite shape for the establishment in Beaumont of a big hardwood lumber manufacturing plant. Mr. Stark comes, it is understood, to close a deal for a site. The British admiralty will furnish a number of vessels for the shipment of a part of 30,000,000 feet of southern yellow pitch pine for Europe, a large amount of which will go to the British government, according to an announcement today by the Standard Export Lumber Co. here. This company stated it had booked the orders for the lumber and that it would be exported from Gulfport, Miss., and Beaumont, Tex., by January 1.

Northern States News

MINNEAPOLIS, MINN.

Minneapolis, Minn., Nov. 8.—Fire destroyed $250,000 worth of poles, posts and ties in the big yards of the Valentine-Clark Co., Como and Buford avenues, St. Paul., Nov. 6. The fire started in an old barn, and, fanned by a high wind, spread to the 10-acre yards of the company, where great destruction was wrought. It was a hard fire to fight and the flames were not under control for twenty-four hours.

The state timber sale conducted Oct. 30, by State Auditor J. A. O. Preus disposed of approximately 16,000,000 feet, mostly pine, and netted the state $100,000. The record price of $16 a thousand feet for pine was paid by Larson Brothers of Winthrop, Minn. The Trout Lumber Co., Duluth, was the biggest bidder for pine, and also bought a quantity of cedar at $3 per thousand. The T. M. Partridge Lumber Co., Minneapolis, was successful bidder for a section of cedar in the northern part of the state, adjoining its holdings there.

More than 100 retail lumbermen of the Twin Cities had a meeting last week in the St. Paul Athletic club. E. M. McMahon of the St. Paul Association of Commerce spoke on the necessity and benefits of co-operation between the dealers of the two cities.

Preparations are being made by Minnesota lumber manufacturers for big logging operations this winter. Despite the scarcity of laborers, the Crookston Lumber Co. is fitting out camps that will require 700 men.

Inland Empire News

COEUR D' ALENE, IDA.

Coeur d' Alene, Ida., Nov. 4.—Territory in northern Idaho bearing 100,000,000 feet of white pine timber is tapped by a 10-mile flume just completed by the O'Neil - Irving Co., into which water was turned last week. The flume will deliver the logs down Mica creek into the St. Joe river, in Idaho, whence they will be towed down the St. Joe to Coeur d'Alene lake and up the Coeur d'Alene river to the Rose Lake Co's mill at Rose Lake, Idaho. The flume is triangular, with 50-inch sides and 70 inches across the top. It will have a carrying capacity of two million feet of logs in a 10-hour day when used to capacity. It has an average drop of 3 percent. The logging operations will begin immediately.

The logging road which is being built for the Cascade Lumber Co. in the Teanaway district of eastern Washington will be ready for operation within two weeks, and A. Guthrie & Co., of St. Paul, who built the road and have the contract for logging the holdings of the company in that section, will begin delivering logs for the mill. The company owns four townships of timber in the Teanaway basin, and the contract for logging it will extend over the next 15 years.

The Bonners Ferry Lumber Co.'s mill has been closed for the season. R. H. McCoy the manager, stated that the work of logging will begin at once for next season's cut. The company has already let several contracts for logs and will continue the camp that has been running during the summer.

* * *

SPOKANE, WASH.

Spokane, Wash., Nov. 4.—"More money is passing through Spokane banks, more business is being done, more new accounts are being opened than ever before," states Thomas H. Brewer, president of the Fidelity National bank. "With the large amounts accumulating, it seems to me inevitable that real estate and building will be helped. With no interruption or exception to the rule, Spokane bank clearings week after week continue to show heavy gains. Last week they were $7,778,637. In the corresponding week last year they were $4,919,718, a gain of 58 percent. Total transactions of Spokane banks last week were $16,982,974 and one year ago they were $13,241,025."

A number of big lumber manufacturers and logging jobbers held a conference recently at the Davenport hotel in Spokane. The manufacturers assembled in the morning, and in the afternoon they were joined by the jobbers. The time of the meeting was taken up in a discussion of a standardization of the logging camps of the region, the main plan being to adopt schemes of sanitation and furnish better sleeping quarters to the employees. Those present practically agreed that in order to get a better class of help in the woods, they must get together in all the camps of the region and provide better accommodations, and it is probable that the result of the meeting will be extensive changes in the conduct of the camps in the near future.

* * *

ST. MARIES, IDA.

St. Maries, Ida., Nov. 4.—A timber sale of between 10,000,000 and 12,000,000 feet that brought the highest price ever paid to the state of Idaho for standing timber, according to C. A. Fisher, state land agent, was held at St. Maries last week. Bidding for the timber, 80 percent of which is yellow pine, was very spirited, said Mr. Fisher, five companies contesting. The Export Lumber Co. of Harrison was successful, paying $2.75 per thousand feet for the live yellow pine, $1.75 per thousand feet for the dead yellow pine, $1.65 a thousand feet for the live larch and fir and $1.15 a thousand for the dead larch and fir. The timber is to be paid for on a log scaling basis, the first time the state of Idaho has sold timber that way.

Sawmills at St. Maries will cut 100,000,000 feet of lumber this season, according to J. G. Fralick, vice president of the Lumbermen's State bank of St. Maries. "There is a good demand for lumber and the mills are behind in their orders," said Mr. Fralick. "They have been running night and day all season."

Ohio Valley News

LOUISVILLE, KY.

Louisville, Ky., Nov. 8.—While building operations slumped somewhat during the summer months there has been a general revival in building, both locally and out through the state during the past two months, and there is a good demand for yard stock of nearly every kind. Poplar siding, shingles, lath, pine and mill work are all in fair demand, and the yard men are well satisfied with orders, the only complaint being in the slowness with which they are obtaining cars for deliveries.

The Mowbray & Robinson Co., a large lumber corporation of Cincinnati, Ohio, is preparing shortly to start some big development work on its timber holdings in eastern Kentucky districts, the company holding large timber boundaries in Perry, Knott, Leslie and Clay counties.

The American Cabinet Manufacturing Co., of Chicago, is establishing a branch plant at New Albany, Ind., and according to J. J. Quinn, the company may move its entire business to that point.

In addition to other contracts the branch plant will be busy for some time in filling a large order for talking machine cabinets, placed by the Edison company.

* * *

CINCINNATI, OHIO.

Cincinnati, Ohio. Nov. 7.—Building operations in Cincinnati during October were about the same as last year, although receipts from permits issued by the building commissioner show considerably higher, owing to the new schedule of rates now in force. In October, 1915, 1,357 permits were issued at an estimated cost of $865,574, compared with 1,344 permits in October, 1916, the estimated cost of which was $823,880. Comparison of the first ten months in 1916 shows the total cost far in excess of the first ten months of this year, due largely to the fact that the new $2,500,000 courthouse is included in the 1915 figures. The comparison is as follows:

1915, 13,659 permits; receipts, $28,084.60; cost, $12,121,258.

1916, 13,931 permits; receipts, $30,323.80; cost, $9,058,840.

The Acme Box Co. finds that its fast growing business is too large for its present quarters, and last week leased the two-story building 75 x 120, at the corner of Western avenue and Dayton street, for five years at $1,200.

The Norwood Sash & Door Co., one of the largest mill work concerns in this section, is looking out for the future in planning to increase its facilities for storing cut stock material. Plans will be placed on the market immediately for the building of a large new warehouse, the dimensions of which will be 36 x 213 feet.

As was predicted some time ago, Cincinnati lumbermen were advised last week that the lum-

We Can Put a Tract of Timber on Your Directors' Room Table in such complete form as to show the size, location, species, quality of the trees; the height, slope and contour of the ground; with a running commentary from the pen of experienced men on all interesting conditions—in short, a virtual miniature of the tract. This is a FULL LACEY REPORT.

By means of it you can make a purchase, a sale, a loan or intelligently consider a logging operation without setting your foot outside the door.

36 years devoted to all that pertains to timberland matters have made a LACEY REPORT equivalent to a guarantee.

We have an interesting booklet for you. Please write.

ber mills at Baskin, La., of the West Virginia Lumber Co., headquarters at Charleston, W. Va., would be closed indefinitely after January 12. The concern announces that it has plenty of orders, but the shortage in freight cars makes it impossible to guarantee shipments with any degree at all of regularity. Several other big Louisiana mills already have quit operations for the season, it is announced here.

The Cincinnati Manufacturing Co. last week purchased the Kinngar-Gager Metal Door Co., of Columbus, Ohio. The plant will be moved to this city in the near future, and will employ more than three hundred men. The J. K. Nickerson Co. will have charge of the selling output of the concern. H. H. Suydam is president of the company.

Among the new incorporations of interest to this section is the Federal Box Co., at Cleveland, Ohio, authorized capital stock of $20,000, F. A. Shepard, R. G. Morrison, J. Vanderhoof, Lawrence G. King and J. A. Kingsley, composing the directorate.

* * *

EVANSVILLE, IND.

Evansville, Ind., Nov. 7.—The building permits for Evansville during the month of September broke all records for that month. The permits also exceeded the permits for any other month of the present year.

Evansville shippers are feeling a car shortage of national scope at the present time. The heavy shipment of military supplies to the east, grain movements and coal shipping is calling for a major part of the available rolling stock into service all over the country.

The next meeting of the Evansville Lumbermen's club will be held at the New Vendome hotel on Tuesday evening, November 14, and a large attendance is looked for by President Daniel A. Wertz and Secretary Mertice E. Taylor. The various standing committees that were recently named by President Wertz will make their reports.

D. B. MacLaren, of the D. B. MacLaren Co., who recently returned from a business trip through the southern states, says the business outlook in that section is most promising.

Fire on Wednesday, November 1, destroyed white and red oak lumber in the yards of Maley & Wertz here at a loss of from $30,000 to $40,000. The loss is covered by insurance.

Plow manufacturers say that reports from the southern states, where the cotton crop was good, are most encouraging, and they are looking for a fine business in that section during the coming year.

Pacific Coast News

SEATTLE, WASH.

Seattle, Wash., Nov. 4.—With a better demand for almost all items on the list, and with a continued car shortage the lumbermen of the Pacific northwest are in a dilemma. Prices have stiffened considerably, and are now on the average $1.50 higher than two weeks ago. The unfilled orders on the books of lumber concerns in this section now exceed those at any time in the history of the industry. Not even during the severe car shortage of 1907 were orders piled so high as they are now. It is estimated that at least 9,000 carloads of lumber and shingles have been ordered and could be shipped if cars were available. The enormous business now in sight from the west, and also the great amount of freight that has been moving through Puget sound ports to the Orient has caused eastern railroads to take added interest in this section of the country. Many eastern lines that never before have sent their representatives here have had men in the northwest in the last few weeks.

Shingles are one of the strongest items on the list. Almost any price can be had for shingles in cars. Stars are quoted around $1.75 and clears at $2.35. The demand is good.

Another factor in the firmer market is the better condition of the cargo trade. Shipments were fairly free in the last two weeks, and exceeded new orders received by more than 8,000,000 feet.

* * *

SAN FRANCISCO, CAL.

San Francisco, Cal., Nov. 7.—Headquarters of the Douglas Fir Exploitation & Export Co. will be established at once at San Francisco, Cal., under the management of A. A. Baxter. Branch offices will be opened later at Seattle and Portland.

The White & Friant Lumber Co. plans to construct a flume from Friant, Cal., to the mountains to flume lumber from its large timber holdings.

F. M. Thatcher has closed the Stirling mill at Stirling City, Cal., the cut for the season having exceeded 13,000,000 feet. A logging road for next season's operations is now being constructed.

The Benson Logging Co., which brought four log rafts from the Columbia river this season to San Diego, Cal., is preparing to construct five for next summer.

R. G. Gracy has purchased the Euer Bros. mill near Truckee, Cal., and will operate it at Deep Creek next season.

The Davies Box & Lumber Co. has practically completed the erection of its plant at Blairsden, Cal., and will commence operations in November.

The Swayne Lumber Co., whose plant and yards near Oroville, Cal., were destroyed by fire on October 25, with a loss of $500,000, will rebuild the mill as quickly as possible.

The C. A. Smith Co. has disposed of 11,000 acres of redwood timber land near Eureka, Cal., to the Sage Land & Improvement Co., the largest owner of redwood timber in the world. The company owns 45,000 acres in Humboldt county and 20,000 acres in Mendocino county.

* * *

GRAYS HARBOR, WASH.

Grays Harbor, Wash., Nov. 3.—Some idea of the effect of the car shortage in the Grays Harbor district as it pertains to the shipment of lumber may be gleaned from a statement made by Clarence G. Blagen, manager of the Grays Harbor Lumber Co., who says that fully 80 percent of the lumber that usually goes direct from the mill to the car is now piled up so that it must be handled again when the supply of cars is normal. Concessions from buyers is making it possible to ship considerable quantities of lumber in flat cars although contracts call for box cars. This concession has relieved the situation somewhat. No relief from shortage of cars is in sight, lumbermen say.

Five foreign bound vessels will clear Grays Harbor this month, carrying cargoes totalling 5,170,000 feet of lumber. At least five wind-jammers chartered to load foreign cargoes are en route to Grays Harbor and will arrive here prior to the middle of next month. The present month should record a total lumber shipment equal to that of any recent month and perhaps even better. So far eighteen vessels have cleared, five others are loading here and a number are due.

Plans have been drawn by C. G. Blagen and his father, N. J. Blagen, of the Grays Harbor Lumber Co., contemplating increasing the capacity of the plant to about 1,250,000 feet for a 21-hour run, according to information given out. The cost of the improvements would mean an outlay of $75,000 it is understood. The plans call for a distinct departure from the usual mill design and arrangement.

Central Southern News

BIRMINGHAM, ALA.

Birmingham, Ala., Nov. 6.—The city council has adopted an ordinance creating a new fire district in which wooden shingles may be used on residences. The shingles must be five and one-half by sixteen inches and not more than four and one-half inches must be exposed to the weather. The city building inspector will pass upon the requirements of the ordinance. Further requirements are that the shingles are to be painted with a fire retarding paint. A great fight was made for the ordinance by property holders and lumbermen. The matter has been before the commission for four months and its passage is considered a great victory by the lumbermen.

One of the largest contracts for lumber that has ever as yet been made in Chilton county was entered into by the Pine Tree Lumber Co. at Clanton, Ala., and the L. & N. railroad company. This contract was the sale of 3,000,000 feet of lumber, the delivery of which will require some time, and has already been commenced.

Lumber mills at Baskin, Louisiana, of the West Virginia Lumber Co. will be closed indefinitely by January 12. The company has plenty of orders, but shortage of freight cars prevents shipments with any regularity. Several Louisiana mills have already quit operations for this reason.

Digitized by Google

The Current Trend of the Lumber Market

General Market Review

At least two factors have conspired to restrict the lumber movement, one of them the ante-election agitation and the other—and greatest—the scarcity of cars. Complaint is heard from every section of the country and in spite of the best efforts of shippers and consignees to promptly load and unload and of carriers to expedite their equipment, nothing has been of avail to alleviate the general situation. In fact, it has been helped in some quarters and correspondingly tightened in others, but the result is a widespread scarcity of cars that is entering into the calculations of lumbermen to a greater extent than ever before. The election is no longer a factor and those whose attention was distracted by politics for the few weeks before last Tuesday have rolled up their sleeves and returned to work with the determination to give their business every available ounce of their energy.

It cannot be expected that demand for lumber will increase very considerably at this season of the year, as this is the time when a natural falling off of consumption takes place in building lines, as well as in some others. However, the interior finish mills are quite busy and their trade is keeping up remarkably well and may continue at full tilt throughout the winter.

The export trade is rather uneven, there being only an occasional opportunity to send lumber out of the country, either hardwoods or pine. The scarcity of bottoms is also a dominating factor on the Pacific coast, where foreign shipments have been decidedly few in number and small in volume. There is somewhat more animation in the yellow pine trade from gulf ports than there has been lately, as a number of vessels have been loading lately for neutral countries and for the European allies, but the total of this movement has not served to materially relieve the situation in exports.

As to lumber prices, there is no visible tendency in either direction, nor is there especial firmness shown in any item, with one or two exceptions. Western and northern pine are inclined to be quiet, without much demand or uncomfortable supply. Southern pine is picking up to some extent in price, but has shown no substantial gain over the situation existing a fortnight ago. Cypress is one of the few woods that is holding its own, and this is due in large measure to the magnificent advertising campaign which its producers have inaugurated. Hardwoods are generally unchanged in demand and price, there being only a few items of the list which show any activity whatever, movement being generally hampered by car shortage.

NORTHERN AND WESTERN PINE.

There is considerable talk of expected business in soft pine in the near future, but up to the moment no evidences of increased demand are visible. Manufacturers are selling northern pine, they say, without being obliged to force it on the market and orders on their books and inquiries coming in make the future look rather satisfactory. Western pine shippers have been greatly handicapped by lack of cars. Apparently the market there has held its own and holders are adhering rigidly to the price level that has existed for some weeks, namely, around $40 to $42 for No. 1 shop; $30 to $32 for No. 2 shop, and $25 for No. 3 shop, these quotations being on the 5-4 and 6-4 thicknesses only. Considerable spruce shop has made its appearance in the eastern markets lately and No. 1 shop in that wood is quoted around $32 for 8-4 and $30.50 for 5-4 and 6-4. The large supply of spruce shop has been caused, it is said, by heavy demands for aeroplane stock, which takes the best of the product, leaving a large quantity of No. 1 and No. 2 shop for eastern distribution.

SOUTHERN PINE.

Distributers of yellow pine say that they are having an especially good call for lumber from the car building industry, which has revived materially within the last two or three months. However, there is not so much demand for yellow pine as the manufacturers would be able and willing to supply, but it is sufficient to strengthen values, or at least steady them. For some time the mills catering to this industry have been fairly well supplied with orders for sills as well as for decking, framing and siding, it appearing that most of the steel items have been too high in price and too distant in delivery to make it possible for car builders to buy them to advantage.

The car shortage is interfering very materially with the movement of yellow pine—more so perhaps than in any other wood and whenever any cars are available the shipment brings satisfactory figures. As a rule a majority of the yellow pine concerns who are equipped to ship to the yard or industrial trade will not accept orders unless they are able to see their way clear to make delivery within a reasonable period. A scarcity of fuel is bothering some of the plants and the car shortage in addition has caused the closing down or shortening hours of more than one operation. A few transit cars are occasionally shipped from the mills and these are bringing high prices, sometimes as good as $4.50 to $5 off the list.

NORTHERN AND SOUTHERN HARDWOODS.

Birch is in steady demand at the northern mills and the supply is not at all large. In fact, the demand for good birch is considerably above the ability of the mills to supply, and consequently it is bringing satisfactory prices. Even low grade birch is in better position, as the box trade has recently become more active. Inch maple has continued in fair request and thick stock is in somewhat improved demand. The piano and furniture industries are taking considerable of this material in the better grades, while the flooring trade remains fairly active. Soft elm, rock elm and basswood are moving only in normal quantities, but prices are being well upheld.

In the southern woods the principal attraction continues to be red gum, for which demand has shown little, if any, lessening. In fact, the position of gum has become steadily enhanced and it has beyond question attained the goal which its promoters have been seeking so long, in that it is now recognized as one of the most active and substantial staples. Considerable low grade stock is going into box making and this industry has recently undergone a pronounced stimulation.

Red and white oak move rather indifferently but there is nevertheless a continued inquiry and shipments are being made right along at satisfactory figures. However, the southern car situation is a serious obstacle in the way of any pronounced movement into consumption and if cars were plentiful perhaps values of oak would not be so well maintained as they are. Quartered white oak is in only fair demand and prices are not holding as well as they should. Ash has been decidedly active and continues to be in good request at satisfactory quotations. Stocks of dry ash are not at all heavy. The entire situation as regards the staple southern hardwoods is largely controlled by the ability to ship, and anything that can be moved to destination within a reasonable period may be assured of a ready market at fairly profitable prices.

There is some call for black walnut, cherry and the other high class hardwoods, and this is being met with an ordinary degree of promptness. All of the factory hardwoods, especially those used in interior trim, are foremost in the movement into consumers' hands.

CYPRESS.

The cypress industry is in much better shape as regards demand and supply than almost any of the softwoods industries. There is a good call for mixed cars of cypress at mill and distributing points, and also from those industries which use straight cars. The car supply in the cypress territory is reported as being better than at other points in the south, as empties appear to be much more plentiful west of the river than in the eastern south. Tank lumber is selling in excellent volume and is bringing the usual firm prices. Considerable stock is going into eastern territory in the way of shop and tank grades, as well as mixed cars. Unusual interest has recently been caused by the demand for pecky cypress for interior trim because of its decidedly beautiful and novel effects. In some instances high prices have been paid for peck and people of taste in the use of finish woods are looking upon pecky stock with great favor.

HEMLOCK.

Prices on hemlock have been steadily hardening and, although the car shortage is affecting shipments, hemlock producers, by reason of their usually short haul, are able to get cars where their yellow pine competitors find it impossible. At latest accounts sales of hemlock were being made mostly around $1.50 off the list on yard stock, which indicates a right firm market. There have been some advances on small dimension and as high as $1 off the list has been paid for 14 and 16 foot lengths. The stocks of hemlock at the northern mills are only of restricted proportions, and the condition of the market remains decidedly firm. Logging operations thus far entered upon indicate that there will be very little, if any, increase in the stock of hemlock available next spring, although the extent of northern logging operations is not yet clearly defined.

SHINGLES AND LATH.

The market on Pacific coast red cedar shingles has been rather wild in the last few days, sales of clears having been made all the way from $3.56 to $3.71, but the ordinary run of the market is nearer the lower than the higher quotation named. The demand for clears has been good and the transit supply has not been heavy. Stars are quoted at from $2.87 to $2.92 and the market is easy, this being a slight falling off from two weeks ago. In clears, however, the advance ranges from 5 to 20 cents. The scarcity of red cedars has had a favorable effect upon northern white cedars, which have lately sold as high as $3.15, as against $2.90 Chicago delivery last month for extras. There is also a slight advance on standards. Lath are in good inquiry, recent sales being made on the basis of $4.50 for No. 1 hemlock f. o. b. mill. No. 1 mixed pine lath are quoted at $4.20 at the mill.

Gulf Coast Markets

NEW ORLEANS, LA.

"Cypress continues to rule strong, according to local manufacturers and sales agents, with a steady and substantial demand from all parts of the country. In spite of car shortage, which continues extremely bad, shipments are going forward in a fairly satisfactory manner, and inquiries are heavier than for some weeks.

"The unusually good business done this fall is a reflection of the extensive building operations going on everywhere, and the general prosperity of the country.

"Conditions in the labor market continue unsatisfactory. There has been a very heavy movement of negro labor to the north and east recently, and while Florida and Georgia appear to have been hit hardest by this exodus the work of the labor agent is beginning to be felt severely in Louisiana now. There is always at this period of the year a general movement of negroes to the plantations, which they appear to prefer at crop harvesting time, and this natural loss has been intensified by the demand of the north for additional help.

"Cypress manufacturers have been doing everything possible to lessen the stringency of the car shortage, but see little betterment in the near future. Charges of agents for the carriers that empties are frequently allowed to remain idle for an unreasonable time, have aroused protests on the part of millmen. Lumber operators point out that the carriers frequently let loaded cars remain on siding for two or more days after they are notified to get them.

"Hardwoods show a falling off in both orders and inquiries recently, and gum, which for some

The Lumber World Review

608 South Dearborn St. Chicago, Ill.

time has been the strongest item on the list, is weaker than ten days ago.

"So serious has become the car shortage that indications are for a shutdown of two or three dozen good sized yellow pine mills during the next few days, unless there is an unexpected improvement in the situation. Business has been cut down fully 50 percent by the scarcity of rolling stock, and at many points it is reported almost at a standstill.

"Many mills have been out of the market for nearly a month, and except for the fact that they have entered on a period of extensive curtailment lumber would be piling up in the yards to an alarming extent. As a matter of fact, however, pine manufacturers have learned so many bitter lessons from overstocking during a temporary stringency that they are in no danger of burdening the market. Most mills are manufacturing just what they think they can dispose of, even if it is on a delayed delivery basis. Best grades of cypress shingles are now selling at the mills at $4, which is indicative of the strong tone prevailing in the market. This is an increase of 25 percent over quotations of six weeks ago. Most mills are unable to take care of orders for the large number of shingles demanded. Lath is firm, with orders plentiful. Little is doing in yellow pine shingles of late."

South Atlantic Markets

We have received this from a well known manufacturer in Florida: "We find the demand for both pine and cypress exceptionally good.

LIVE OAK, FLA.

In fact, we are getting more orders for some items than we can handle to advantage.

"We are securing good prices and have every reason to believe prices are going to improve right along.

"All the mills in this territory are well supplied with orders. The only trouble now is the matter of getting cars, and it looks now as though the car shortage is going to get worse."

* * *

These views on the cypress market were expressed by a leading cypress man of Florida in a letter to us: "As to our views on the

PERRY, FLA.

market conditions and the outlook for the present and immediate future, we will state that we see nothing at present that does not indicate that cypress prices will remain firm for the balance of this year and the early part of next.

"Nearly everyone, so far as we hear, is shipping more or less stock that is not thoroughly dry, at least not as dry as the cypress people usually like to ship. Most of their stocks are below normal. The low grades which compete with other woods to a greater or less extent are pretty well cleaned up. We see nothing to change the values of cypress very materially in any direction in the very near future."

* * *

From a North Carolina manufacturer we have the following: "As to market conditions here, we have had a little revival

WILLIAMSTON, N. C.

in the lumber business during the past thirty days for the first time since March of this year. We are hoping conditions will continue to improve. However, our car shortage is giving considerable trouble."

* * *

A manufacturer of cypress writes from South Carolina as follows: "As to our opinion of the lumber market, present and the immedi-

GABLE, S. C.

ate future, we wish to state that the cypress market is apparently steady with an increasing number of orders.

"It looks to us as if the car shortage will very much interfere with the movement of lumber for the next sixty days."

Pacific Coast Markets

A correspondent writes us as follows: "Almost every manufacturer and wholesaler is optimistic over the outlook for business. It is

SEATTLE, WASH.

felt that when the seasonable freight of the west has been moved that cars will again be freed and available for the lumber trade. It is declared that spring business should be exceedingly heavy, owing to the large amount of building planned in the middle west and east.

"As a direct result of the car shortage curtailment has become greater among the mills. Although all the yard space has not been filled by the mills, space is becoming tighter, and the manufacturers feel that they should operate at smaller capacity rather than run full time and be forced to close entirely later."

* * *

A correspondent reports conditions in San Francisco as follows: "The demand for lumber in the San Francisco Bay district

SAN FRANCISCO, CAL.

has shown a slight gain during the past two weeks, as weather conditions have favored building operations, and work is being rushed on structures now in course of erection in anticipation of the rainy season, which will commence shortly. Building permits indicate a gain in construction work, as compared with last year, in almost all the cities of the state. The light crop of fruit has reduced the quantities of box shooks needed, so that just about the same amount of lumber is being used as last year. Larger quantities are being shipped out of the state, however, despite the scarcity of cars and vessels, and this is largely responsible for the greater activity being shown in lumbering.

"The handling of lumber at San Francisco is not being affected in the least by the fact that the strike of lumber handlers is still supposed to be on. Ten retail yards are being boycotted, but these are doing business as usual, and the lumber trade scarcely knows that there is any labor trouble. The strike is not curtailing the demand for lumber, nor is it interfering with receipts or shipments.

"The demand for redwood lumber continues to be stronger relatively than the demand for fir, due to the energetic campaign being carried on by redwood interests.

"There is a good demand for redwood lumber for shipment to Hawaii, but it is impossible to secure vessels to care for shipments. A large fleet of lumber schooners is being built on the coast, and it is believed that by next spring sufficient of these will be ready, and that lower freight rates will prevail."

Central Southern Markets

A manufacturer of yellow pine writes us from Louisiana as follows: "Beg to advise that the present outlook indicates that the

KENTWOOD, LA.

shortage of cars will continue until after the New Year. We have our files well filled with orders calling for stocks we have on hand, ready for shipment, but which are being delayed on account of shortage of car supply.

"We find the market advancing almost daily on all items in the list, and we believe prices will remain strong for the balance of the fall and the coming winter, and there will undoubtedly be a heavy curtailment in the output of yellow pine."

* * *

A correspondent writes us from Memphis as follows: "The car situation has shown no improvement, so far as the manufacturers

MEMPHIS, TENN.

of lumber are concerned. The majority of those in this city and throughout the Memphis hardwood territory are unable to secure more than 25 to 50 percent of their requirements. The head of a large firm, which operates a big plant at Isola, Miss., is authority for the statement that it has not been able to obtain a single car for loading with lumber during the past three days, whereas its normal requirements are five cars a day. Other manufacturers with mills at outside points, say that they are not getting more than 25 percent of the number of cars wanted. It is emphasized by all members of trade that there is an exceptionally good demand for hardwood lumber, that the stock is available for filling them, that orders are obtainable on a profitable basis, and that everything is all right, with the exception of the necessary cars for handling it.

The situation is reported somewhat better from the standpoint of flat cars for the handling of logs. An official of the Valley Log Loading Co. said today that his firm was receiving about 70 percent of the cars necessary, and that it was operating on the basis of approximately 70 percent of its capacity, as compared with 50 percent ten days ago.

"The hardwood market is in exceptionally healthy position. A prominent member of the trade said today that he could sell every stick of dry lumber on his yards at prices that would yield a good return, and from every direction come reports that

Digitized by Google

there is nothing whatever the matter with the demand for lumber, or with the prices obtainable therefor. It is further emphasized that dry stocks are available in large enough quantities to insure a big business, if the cars could be had, and that transportation conditions alone are responsible for the difficulties being experienced at the present time, by both manufacturers and wholesale handlers of hardwood lumber."

* * *

The crippling effect of the car shortage on the Louisiana trade is indicated in this letter from a yellow pine mill man: "The inadequate car supply makes conditions such that we can hardly talk anything but about how many cars we are short. If a man had plenty of cars now, he could promise immediate shipment and get his own prices for anything he had to offer in the lumber line.

ELIZABETH, LA.

"There seems to be a particularly healthy condition throughout the country, and we feel that even with a liberal car supply, we would still be getting a better price for our lumber than formerly maintained, and we cannot help feeling that we will have a strong spring trade and at materially better prices.

Northern States Markets

A correspondent writes us as follows: "Buying of northern pine and hemlock has been active, the majority of retailers taking from northern mills because car shortage makes it difficult to get quick action from the western and southern districts. Prices are firm and well up to full list. Dealers are short on many items and are filling in, as both country and city building is active, owing to the fine weather. Country yards are finding heavy calls from farmers who have gathered in their crop and have about finished fall plowing.

MINNEAPOLIS, MINN.

"Hardwoods of all kinds are moving briskly at good prices. The most active demand is for thick stock of birch, maple, basswood and elm. Maple and birch flooring is becoming harder to get, manufacturers saying they can make better profits on rough materials. The demand for southern stock, especially hickory and red gum, is good. Furniture factories are running at capacity, and sash and door factories are busy filling orders for city and country building lines. Glazed goods are somewhat higher in price, and all finished goods are well up in that respect."

* * *

A letter from one of the best informed men in the lumber industry gives us this information: "Car shortage is seriously interfering with our shipments. Prices, while nominally higher for all grades of lumber, are actually lower now than at any time during the past two years.

MARINETTE, WIS.

"With the index value of all commodities around 135 on basis of 1914 prices, and with lumber prices advanced about 20 percent, we are getting 15 percent less for our lumber than two years ago. In other words, the labor and material that enter into the production of our lumber has advanced 35 percent and the prices for our product only 20 percent, leaving a smaller margin for the tree than we obtained two years ago.

"The demand for all grades is steadily increasing and the visible supply steadily decreasing. Prices will be much higher during the winter and early spring, particularly No. 3 birch, maple and hemlock."

Ohio Valley Markets

Conditions in Cincinnati are reported as follows: "The general tone of the yellow pine market is rather deceiving, inasmuch as the actual volume of business is quite large, although many of the big southern producing centers have been forced to abandon operations, owing to the car and labor shortage, and stocks are piling up in their yards. The retail trade, not only in yellow pine, but most of the hardwoods is very good, and judging from the present rush of business will finish the season with their stocks pretty well thinned out. The rural trade is much better than a few weeks back. In the hardwoods the larger retailers in the city district are having a big run of business, many of the large consumers who formerly bought direct from the producers diverting their orders to the large retailers, on account of the inability of the southern mills to ship their stock. Oak is beginning to regain some of its normal activity, white quartered being especially active within the last couple weeks. Red birch continues to be a big factor in the market, easily leading the northern hardwoods. Poplar is moving in fair volume, while ash is in better request than for some time back. The furniture factories are ordering in somewhat increased volume, especially in oak, although their requirements in gum still feature their trade. Thick tank stock cypress is selling well and lath is scarce, readily moved when available."

CINCINNATI, OHIO.

* * *

A man well informed on the hardwood lumber situation in Evansville and southern Indiana, writes as follows: "Trade with the hardwood lumber manufacturers in this section has been very good for the past few weeks, and indications are that this year will finish with a bigger volume of business to the credit of the local manufacturers than last year. All of the uptown mills are being operated on a steady schedule, while the river mills report that trade is better than it was this time last year. Collections are good, and prices are holding up very well.

EVANSVILLE, IND.

"The demand for quartered white oak and red oak is strong, and, in fact, has been for some time past, while red oak is also moving along briskly. Hickory is strong, as well as ash and gum.

"The various furniture factories in Evansville continue to operate on steady time, and the plants have been in the market for a great deal of gum this season. Elm and quartered sycamore are in fair demand. The river mills have been receiving a good many inquiries for quartered sycamore.

* * *

Conditions in the Louisville district are described as follows: "While August and September were fairly active months with the hardwood lumber industry of Louisville, there has been an added snap to the buying during the past month, and there are about five orders being booked for one that is being shipped. This condition is due to the shortage in cars. As predicted shortly after the summer furniture shows the furniture manufacturers have been extremely busy, and have been buying heavily all fall.

LOUISVILLE, KY.

"An encouraging feature of the market is the steadiness of prices, and it is claimed that prices will continue as firm, if they do not become firmer, until next summer, and it is also thought that the demand will hold up until that time.

"Prices are now strong on almost every variety of hardwood timber, and such lines as were moving slowly are now in good demand. Collections are fairly active, and no trouble is being experienced on this score. The demand for gum, in both red and sap, continues to feature the market. Oak, in plain red and white, has shown a vast improvement, while cottonwood, elm, cypress, ash and walnut are all in good demand. The mahogany demand is good, and some chestnut is moving. Good reports are received from veneer and panel mills.

Inland Empire Markets

One of the leading lumbermen of the Inland Empire writes us as follows: "At the present time, in fact, for the whole year, our volume of business has been very satisfactory, indeed. Our shipments have exceeded our cut by approximately 30 percent, and the demand right now is better than it was a year ago.

SANDPOINT, IDA.

"While the farmers in the middle west have not harvested as large a crop as they did last year, a great many of them were fortunate enough to carry over last year's crop until this year. As a result, this year they are disposing of the products of two crops at what one might say almost fabulous prices. The farmers in this western country, therefore, generally speaking, are prosperous. They will do a good deal of building; the supply of lumber in the hands of the retailers is not large. The supply in the Inland Empire is very materially less than it was a year ago.

"The input this winter will not exceed the input last winter; possibly will be not so much.

The Lumbermen's Headquarters

A manufacturer writes as follows from Spokane: "The lumber business is good and customers are all anxious for quick shipments. Owing to the extreme and serious car shortage, they cannot all get their lumber as fast as desired, but nevertheless about the same amount of lumber is being shipped as usual, and the railroads are taking better care of the lumbermen this year than usual, giving them their full share of cars as compared with other industries and products shipped. We find considerable complaints from our customers on account of slow movement of cars.

SPOKANE, WASH.

"We believe there will be a better demand than usual the balance of the year and in consequence anticipate somewhat higher values for all of our lumber products."

* * *

A manufacturer of Idaho white pine writes us as follows: "We will say that the lumber trade has been quite satisfactory to us so far this year, excepting on mixed timber. All the mills out here are up against a hard proposition in disposing of their red and white fir, cedar and larch lumber at a profit. I do not think there is a mill in the Inland Empire making a dollar on this product, and most of the mills have cut from 50 to 75 percent of it. Scarcity of labor affected a good many mills, so they were compelled to take off the night shift, and even now the cost of logging is much more than a year ago.

ST. MARIES, IDAHO.

"We are all handicapped for want of cars, which I think is having something to do in stimulating the demand. The mills here are not getting more than 50 percent of the cars they need to fill their orders, and we are informed by the railroads that we have not seen the worst. There is a great call for cars in the handling of fruit. If labor continues high lumber has got to advance or the mill men will be working at a loss."

Middle States Markets

Conditions in the Buffalo district are described as follows: "The demand for lumber continues good in almost every line, but the difficulty is to get prompt delivery of the stock, if it has to be brought from the mill. Buffalo has a fair number of cars right along, owing to the large number of railroads entering here, as well as the lake boats, though the latter freight route is hampered by a shortage of boats, so that the lumber moving by water this season is much curtailed. Prices held firm, and in some cases advances are looked for.

BUFFALO, N. Y.

"The yellow pine market displays much firmness, and mill representatives and wholesalers are obliged to turn down orders, simply because they are unable to promise any early delivery from the mills.

"Hemlock is in strong demand, and prices are fully holding their own, with a prospect of advances soon. Some sizes are getting low at the mills, and there is no abundance of anything.

"White pine has been displaying more strength during the past couple of months, and trade has shown improvement. The situation in this wood points to higher prices next year, as the result of greatly curtailed supplies.

"The shingle market is bare of supplies from the Pacific coast, and stocks will be light here this winter. The last of the lake-and-rail shingles will be here soon, and there are not enough to go around."

* * *

A well known lumberman writes us from Pittsburgh as follows: "Every one knows from experience, and actual knowledge of the lumber industry, that it matters little whether a shortage of supply is caused by the lack of equipment, or a shortage in production, the effect with the consuming trade is practically the same. We believe the car shortage now is as acute, and as serious, if not more so, as our country has ever known, and it looks as if it would be worse before there is any material relief.

PITTSBURGH, PA.

"Hence, we believe we can hardly hope for much of a change for the better before the first of January, if at that time. That will be in the dead of winter and much will depend upon weather conditions as to whether or not the railroads will be able to give us much relief.

"In addition to the car shortage, we are confronted with the shortage of labor, and the exorbitant demands made by such men as we are able to get. Inasmuch as we are unable to get more than 50 percent efficiency as long as these conditions last, we see little chance of there being any surplus in production, therefore, the shortage in production, coupled with the car shortage, seems to indicate that no relief is in sight.

"In fact, it looks as if there would be demand enough for immediate consumption to more than take care of the lumber that can be moved on cars that are available for that purpose.

Southwestern Markets

A sales manager of one of the largest companies eparting in the south, with headquarters at St. Louis, writes to us as follows: "As regards the lumber market at the present time, and the prospects for the immediate future, we can say that conditions at the present time are, of course, very unsatisfactory on account of the car shortage which exists with all mills throughout the south. We are only receiving about 40 percent of our empty equipment requirements, although there is a heavy demand for material. We have a big order file and prices are fairly good, but as stated above, we cannot take advantage of the situation on account of our inability to ship. We look for increasing demand and advanced prices throughout the fall and early winter.

ST. LOUIS, MO.

"As regards the conditions for the immediate future, this is pretty hard to say as it appears as though there will not be very much relief in the car situation for some little time to come. Demand, however, seems to be quite strong, especially for railroad material.

"The stocks in the hands of the dealers are very light generally, while some of the mills have pretty good stock, at the same time, there are any number of mills that are curtailing even at this time and their stocks are badly broken, which is the case with practically half of our mills."

Another St. Louis lumberman writes as follows: "We believe the lumber market will be very strong for the next sixty days at least. The car shortage has been a serious problem for the lumber people and there is no immediate prospect for improvement. We are behind on our shipments and if supplied with plenty of cars believe it would take us sixty days to catch up with our orders under normal conditions.

"We have a good volume of business on our books, our inquiries are increasing and we consider the prospects for the next three or four months are very good indeed."

* * *

Conditions in Kansas City are reported as follows: "Yellow pine business here is greatly handicapped by the severe car shortage. Most mills are receiving only about one-third of the box cars that they need. With this condition prevailing prices are fluctuating rather sharply. The retailer who has to have stock is paying unusually high prices to get deliveries. The wholesaler who can positively guarantee that the stock will arrive in some cases can name his own price. Of course, the man who can make good on such promises now is scarce, but prices from $2 to $4 higher than prevailed a short time ago have been paid for yard stock recently here.

KANSAS CITY, MO.

"There is an excellent demand for lumber of all kinds in this territory. Perhaps it should be said for lumber of any kind. Sales of heavy timber are not exactly in the same position as other items, because there has been little trouble so far in getting flat cars to carry this kind of stock.

"Cypress has been in excellent demand, both in mixed cars and in larger quantities. The delivery problem has been acute recently, and no relief is in sight. Cypress lath is still scarce.

"Hardwoods generally are in worse position than other woods, as regards the car shortage, because they require closed cars.

"West coast woods are in good request and selling at unusually high prices, owing to scarcity and the car shortage."

* * *

A manufacturer writes us from Arkansas as follows: "The present yellow pine market is exceedingly strong, orders are plentiful and prices are advancing. It would be extremely difficult for any one to state accurately how long this condition will last, because it is at least in part due to the excessive car shortage—one more severe than has ever been known to us in the past.

BIGELOW, ARK.

"However, we do not look for any weakening in the market in the next sixty days."

ZELNICKER

FOR SALE.
MODERN SASH AND DOOR FACTORY.

This is an exceptionally well located, well arranged and well built plant, located at North Bend (Coos Bay), Oregon, having the Southern Pacific Railroad on one side and deep water on the other, and covers a ground area of about 4½ acres.

The plant has a capacity of about 500 doors and 800 sash per day, and an additional capacity for other mill work.

Coos Bay is the home of Port Orford cedar, generally known as white cedar, which is the best known wood for doors, sash, and inside finish. Tributary to this location is also a large quantity of fine old growth fir, spruce, and red cedar.

The Southern Pacific Railway has just completed its line into Coos Bay and has granted us a Pacific Coast Terminal rate. This will enable the manufacturers to ship to all Eastern points at as low a rate as any factory situated on the Pacific Coast.

This plant is not a run down proposition, having lately been thoroughly rebuilt, and with our terminal rate, deep water shipment, and low cost of raw material, we know of no better location on the Pacific Coast for a sash and door factory.

We want to sell and will make the right price.

PLAN FOR THE UTILIZATION OF LOGGED OFF LANDS IN THE STATE OF WASHINGTON.

Spokane, Wash., Nov. 2.—In an effort to work out a satisfactory solution of the logged off land problem of eastern Washington, an important conference was held at Spokane, October 21, which was attended also by Professor H. K. Benson, of the University of Washington, and Professor Ira D. Cardiff, of the Washington State College. The meeting was supplementary to a previous conference of western Washington lumbermen, that had been held in Seattle.

The program outlined by the lumbermen for the state of Washington provides:

1. The creation of a state forest reserve, through the withdrawal from sale of logged off lands of a non-agricultural character now owned by the state and by the gradual acquisition of similar lands now owned by private individuals, corporations or counties.
